It is true in the Port Medway River they seem to be abundant, and come to the fly as readily as do the sea trout, but with much more dash and activity; but I never saw or heard of one being taken in either of the rivers I have named, with the exception of the Liverpool, and in this stream I made a discovery several years ago that threw a little light on the subject. As I was fishing for trout at Loon Lake Falls, which are situated about two miles below the outlet of Kegemacougie, I captured four or five of the parrs, which were really smolts, the bands having disappeared and the bright coat been taken on. When the landing net encompassed the first one, my guide exclaimed, "Good enough, you have taken one of our graylings." On a brief examination of the fish I assured him that it was not a grayling, but was really a young salmon. It was difficult at first to convince him that he was wrong, for he, with others of the natives, had for a number of years spoken of, and believed it to be, the fish he had named. But on my pointing out structural peculiarities, he admitted that I was right. On the following day I captured several more in the quick water of the so-called Eel-Weir, near the outlet of the lake, and in the succeeding year I caught three or four below the mill dam at Maitland. They were all gamy little fellows, jumping clear of the water in pursuit of the fly, and resisting capture in a way greatly disproportionate to their size and strength. Those which were not badly injured I returned to the river, hoping that some day they might come back as grilse or salmon.

Now, it is a curious fact that neither salmon nor grilse ascend beyond the confines of Lake Rossignol, and, to be accurate, I will say that none have ever been seen further up the lake than the so-called Indian Gardens, in the

neighborhood of which are probably their spawning beds. Now, those little parr, in order to reach the dam at Maitland, had a long and perilous journey; they must have traversed Lake Rossignol from six to eight miles, struggled for several miles against the waters of the river which in many places are quite rapid, surmounted the falls I have named, and up through the heavy water to the outlet of Kegemacougie, pushed their way through that lake, which is about five miles in length, up the river two or three miles to another series of high falls, surmounted those and traversed a stretch between one and two miles of still water and some rapids until they reached the dam, which at that time was a structure they could not surmount.

It seems almost incredible that those little fish could have traveled such a great distance, and that they should have successfully run the gauntlet among the rapacious trout which are numerous in almost every portion of the water I have named, is also wonderful.

Now, while this fact may be of no very great importance, it proves conclusively, to my mind, that the young salmon, until they are ready to descend to the sea, ascend to the fountain heads of streams, just as the small trout do, perhaps to evade their numerous enemies, possibly because the water is brighter and purer, but probably because it is an instinct inherent in their natures.

## Hearing in Fishes.

From Our Animal Friends.

THERE are few questions connected with the comparative physiology of the special senses more curious and interesting than that of hearing in fishes. It is assumed by some naturalists that because fishes have no vocal organs and produce, of course, no vocal sounds, they should have no hearing, although all fishes have an internal ear. Apparently it is not remembered that Aristotle, more than twenty-two hundred years ago, described several genera of fishes that are capable of producing sounds more or less intense. In the "History of Animals," Aristotle described the sound produced by gurnards (grunting fish), but made the distinction between those produced by rubbing or by internal parts about the stomach, and true vocal sounds. In the middle of the last century, Johann Müller made a list of "vocal fishes," which was extended by Dufossé to the number of fifty-two. It would be out of place here to describe the mechanism of the sounds produced by fishes; and it is sufficient to say that grinding of the teeth, vibrations of parts in the swimming bladder, etc., produce sounds that may be distinctly heard under suitable conditions. The sounds thus produced are well known to fishermen; and among the "vocal fish" are gurnards, some varieties of herring and particularly a kind of fish found in the Mediterranean called umbra. Cuvier and Valenciennes, in their great work on the "History of Fishes," say that they were assured by fishermen that umbras produced sounds that could be heard at a distance of twenty fathoms (120 feet), and that the fish could be called by whistling. It is also related by Milne Edwards that the fish in the Mediterranean, at the time of spawning, often emitted a variety of sounds, some like the droning sound of the double bass, some like the tones of the hautbois and some resembling the sound of the harmonicon or accordeon, "a sort of submarine concert." In whatever manner these sounds may be produced by fishes, that many, like the familiar grunting fish, moonfish and drumfish, actually produce sounds under water, there can be no doubt. If, indeed, according to the views of some naturalists, fishes are deaf, it is not because there are no sounds under water or because they have no auditory apparatus; for fishes have parts corresponding to structures in the internal ear of mammals, although there is no apparatus adapted to the appreciation of anything more than the intensity of sound.

In the article "Visionary," I wrote: "Possibly, rays, invisible to us and not capable of penetrating the human eye are emitted at night by a multitude of objects and pass into the eyes of nocturnal animals." In like manner, sounds inaudible to us in the air may be distinctly heard by fishes under water.

More than a century ago, Franklin demonstrated that the striking together of two stones under water, even not forcibly, could be distinctly heard by a person with his head immersed, at a distance of a half-mile. The rate of conduction of sound by the atmospheric air is about eleven hundred feet in a second; in water the conduction is more than four times as rapid. Indeed, the rate of sound-conduction in water was determined (Colladon and Sturm, 1827) by listening to the sound of a bell in water through an ear-trumpet also immersed in water. It is not essential to hearing that sound-waves shall be conducted to the labyrinth through the external and the middle ear, parts that are wanting in fishes. Otologists constantly, as a means of diagnosis, test the hearing by placing a tuning-fork against the skull, the sound being conducted by the bones of the head; and with the head under water, it is probable that the external ear does not play an important part in audition.

I am led to discuss the question of hearing in fishes rather fully, for the reason that, on what seems to be good authority, it is assumed that fishes are deaf as well as dumb. It has recently been argued "that as fishes have no *papilla acustica basilaris*, and as, with few exceptions, they are dumb, it is highly probable that they have no sense of hearing." (Lee, quoted in Schäffer's "Text-Book of Physiology," London, 1900, vol. II, p. 1167.) The *papilla acustica*, in air-breathing animals, is a part of the organ of Corti; and its absence in fishes is assumed to be the strongest argument in support of their deafness. It is added, that "actual experiment seems to justify this contention." By such a process of reasoning—directly opposed to the Baconian system—it is attempted to make the experiment agree with the postulate.

The following is an experiment which seems to me to show conclusively that fishes hear: the author (Zenbeck, 1903) endeavored to eliminate "mechanical waves," such as would be produced, in addition to sound-waves, by the striking of a bell under water or the dropping in of a stone. Such a precaution would be unnecessary in an experiment on the human subject, who could readily distinguish and describe sound-waves. To remove this possible source of error, the author immersed a clock-

work in a vessel of water which was placed near the surface of a stream running under a bridge from which the action of the fishes could be observed. The clock-work could be set in action at will by electric connections. In the mornings, large numbers of fishes collected under the bridge; and by observing their movements when the clock-work was acting, it was found that the fishes promptly responded to the sonorous vibrations, but seemed insensible to mechanical waves.

It seems to me that hearing in fishes no longer admits of doubt, and it remains only to study its mechanism. In fishes there is no vestige of an external or a middle ear; but in all fishes, a vesicle or vesicles exist in the head, connected with nerves which correspond to parts of the internal ear of air-breathing animals. These vesicles are sometimes connected with the swimming-bladder. For hearing in water, there could be little or no need of an external ear, a tympanic membrane or a tympanum. It is probable that sound-waves are received by the general surface, especially the head, and possibly by organs existing in what is known as the "lateral line," being then conducted to the internal ear. As no cochlea exists in fishes, it is not to be supposed that they can recognize the pitch of sounds; but they have parts which enable them to appreciate "mass-movement" in sound-waves, and its different degrees of intensity. The fact that we can hear sounds under water that would be inaudible in the air almost justifies the assumption that fishes are sensitive to sounds that would make no recognizable impression on the auditory apparatus of air-breathing animals under ordinary conditions.

Like the other organs of special sense, the auditory apparatus is always found to be exactly adapted to the requirements and surroundings of different animals. Its highest development, especially as regards discrimination of sounds, is in man; although, probably, hearing is more acute in some of the lower animals. The differences between the ear of man and of lower orders of being are in some instances very great. In oviparous vertebrates, the external ear beyond the drum membrane is wanting, excepting that in some birds—owls—vestiges of this part remain. In birds and in some reptiles and batrachians, the drum-membrane is on a level with the skin of the head and is either uncovered or covered merely with the feathers in this region. In these animals, the ear begins with the tympanum, which has a free open communication with the pharynx. In serpents, the lower batrachians, and in all fishes, there is no tympanic cavity. It is almost unnecessary to say that serpents are not deaf and that the adder is no exception, although the psalmist wrote—"the deaf adder stoppeth her ears, and will not listen to the voice of the charmer, charm he never so wisely." In serpents, the waves of sound are received directly by the membrane which closes the oval window of the internal ear. It is a curious fact—which has some bearing on the question of hearing in fishes—that in the aquatic animals, such as whales, sea-lions and seals, the external ear is either wanting or rudimentary, and there is a very small auditory canal. In the Greenland right whale, this canal will scarcely admit a small probe. In respect to the external ear, there is a close analogy between aquatic mammals and subterranean animals, such as moles. In burrowing animals, and in some rodents, the external ear is imperfectly developed; and it is well known that moles hear much better under ground than on the surface, sound being conducted better by the earth than by the air.

The external ear—confining this term to the part which projects from the head—is more developed in nearly all mammals than in man. It usually is in the form of a trumpet, with its oblique opening directed forward. In man, the quadrumana, elephants and some other mammals, the external ear is flattened and lies close to the sides of the head. Both in timid and in rapacious animals, hearing is very acute, and the appreciation of the direction of sound seems to be exact. Taking the horse as a type of timid animals, it is found that the external ear is capable of a great variety of movements, no less than ten muscles, some of considerable size, being attached to the auricle. In man, there are but three muscles attached to this part. These muscles are rudimentary and, with rare exceptions, do not move the ear. It is well known how difficult it is for us to determine the direction of sound by the unaided ear. The cropping of ears in dogs and horses not only impairs appreciation of direction of sound but sensibly dulls the hearing. It has been observed that in cats, when one external ear has been destroyed or removed, there is very great dullness of hearing on that side. There is, indeed, no possible justification for mutilation of the ears in dogs, horses or other animals, a practice that happily has fallen into disuse. In non-domesticated animals of the genus *canis*, the ears are erect; while in the dog, the ears usually are pendent. This is probably due to the protection which man has extended to his devoted canine friend for untold generations. A curious instance of the adaptation of organs to peculiar requirements of animals exists in bats. These are the only mammals capable of rapid and continuous flight. The parts of the external ear are so arranged that the external auditory canal can be closed by voluntary action, so as to protect the ear against violent currents of air while flying. A similar arrangement exists in the water shrew-mouse.

The internal ear, especially the cochlea, reaches its highest development in mammals. While its analogue exists in birds and reptiles, it is small and comparatively simple in its structure, and the rods of Corti are wanting. These facts in comparative anatomy are favorable to the view—entertained by some physiologists—that the simple sacs of the internal ear are concerned in the appreciation of sound as sound only, including intensity, while structures in the spiral canal (cochlea) admit of the discrimination of musical pitch. Still, it can not be doubted that parrots and other birds are educable in auditory appreciation and recognize different human voices and other peculiar sounds. This certainly is true of all singing and chattering birds. Parrots imitate articulate language; mocking-birds counterfeit the notes and calls of other birds; females are attracted by the songs of their mates, and many birds are monogamous; piping bull-finches, mynas and other species of starlings, and canaries may be taught to whistle simple tunes with perfect intonation. The range, however, of these whistling birds is very restricted. It is to be regretted that no extended observa-

tions have been made into the structure of the cochlea in singing birds.

Many animals certainly are affected by music. Trained horses recognize trumpet calls; seals, wild animals of the genus felis, dogs, cats and other mammals are said to be soothed by plaintive music and agitated by harsh or loud tones; but the literature on this subject is largely anecdotal and wanting in scientific accuracy. The wonderful tales of snake-charmers are sufficiently well-known; and many of them are as credible, perhaps, as the legend of Orpheus.

Darwin, in his "Animals and Plants under Domestication," discussing the relations of the sense of hearing to certain anomalies of color in animals, says that "white cats, if they have blue eyes, are almost always deaf. I formerly thought that the rule was invariable, but I have heard of a few authentic exceptions." In 1895, I saw a white cat that had blue eyes. I was able to test the hearing most satisfactorily and found no defect. In October, 1903, I saw a white cat with one eye blue and the other yellow. This cat had no defect in hearing. According to Darwin, if a white cat has but one blue eye, the other being of the ordinary color, the animal hears. It is not easy to explain why a white cat with blue eyes is deaf, but this seems to be the rule with few exceptions.

AUSTIN FLINT.

## Fish and Fishing.

### The Canadian Season is Opened.

THE ice has gone from all the lakes of the Quebec and Lake St. John country. Ten days of extremely hot weather worked wonders with it. The last of it disappeared from both Lake Edward and Lake St. John on the 13th inst. At the commencement of the month it had looked as though it might remain until after the middle of the month. At present writing the waters are still very high, consequent upon the rapid thaw of the snow in the woods during the recent very hot spell, which has now given place to more seasonable weather. Just now it is not very easy for the fish to see either bait or fly, in consequence of the heavy condition of the water; but by the time this letter appears in print, both rivers and lakes should be in fair fishable condition. In fact, local anglers are already preparing for their spring visit to their northern club lakes and to Lake Edward, where the bottom fishing is always good within a few days of the departure of the ice. Because of the very large extent of this lake, it is not affected to a very great degree by the spring thaw, situated, as it is, so near to the height of land, and receiving the waters of no very long rivers. Lake St. John, on the other hand, receiving an enormous volume of water, suffers a tremendous rise of level in springtime. For this reason it is nearly always the middle of June before the water in the Grand Discharge is sufficiently low and clear to permit of fly-fishing, though the residents of the neighborhood take the ouananiche in large numbers—chiefly with bait—all along the shores of the big inland seas from the time that the ice breaks up. It is not probable that the steamer will commence its trips across the lake to the Grand Discharge, or that the hotel there for the accommodation of fishermen and guides will open before the middle of next month.

### The Salmon Fishing Season.

Present indications are that the opening of the salmon season will not be so much later this year as was expected

from the length of the winter. Reports which reach me from both the north and south shores of the Gulf, as well as from the Baie des Chaleurs, indicate that by the 8th or 10th of June the early rivers at least should be in proper condition to receive the first salmon run of the season. The north shore steamers are preparing this season to make more trips than ever before from Quebec for the accommodation of anglers, and the Government authorities who control the Intercolonial Railway of Canada are to run special sleeping cars on stated days as far as Metapedia, for the exclusive use of salmon fishermen.

### Another Big Club of Americans in Canada.

Mr. Allan D. Wilson, of Philadelphia, is at the head of a party of prominent people from the same city which has secured very extensive and valuable fishing and hunting rights in eastern Quebec, and proposes to form a club to take them over. These gentlemen have purchased Government leases of the famous Squattick territory, situated in the county of Temiscouata, and lying east of Lake Temiscouata on the Temiscouata Railway. These leases give them the control of 375 square miles of hunting and 150 square miles of fishing privileges. Included in the latter are Lakes Squattick, Eagle, Horbon, and several others, and also some excellent brooks and rivers. The territory is well stocked with moose, caribou, and deer. There is no salmon fishing in the waters acquired, but very large brook and lake trout. The purchase price of the leases is understood to have been about \$6,000, and the purchasers will at once proceed to develop their property and to erect both club houses and camps, and probably some family summer residences as well.

### Frozen Fish Come to Life.

In connection with the oft-repeated story of the reviving of frozen fish, a correspondent writes from Rapid City, Mich., to say that several instances of this apparent phenomena came under his notice in western Ontario. He describes at length two cases in particular. He says:

"In the winter of '74-'75 I was living in an inland town of Lambton county. The ice for summer use was cut and hauled from the River St. Clair, some eighteen miles distant. One of the hotel keepers of the town, during the winter mentioned, had stored a large quantity. During the first week of June, on passing my office, he called me in to show me a curiosity, as he called it. It was a pike—jackfish they are called up here—imbedded in the center of a block of ice eighteen inches thick and about twenty-two inches square on the surface. Several persons examined it, and the main point in the discussion was: Would that fish come to life if thawed out? It was finally decided to have the proprietor of the house place the ice in a washtub of water. It took about two weeks to thaw the ice, and, when that was accomplished, the fish was as lively as if just taken out of a river. The fish was about twelve inches long, and, in the course of a day or two, would come to the top of the water for crumbs of bread thrown to it. The other instance was that of one of the same kind of fish having been put in a well—a surface one—on a farm in the township of Moore. The water froze clean to the bottom, and yet for three years, during which time I saw it frequently, the fish would resume its normal life in the summer. In talking to some of the Lake Huron fishermen about these matters they told me it was nothing unusual."

It would be instructive to hear from scientists some

explanation of the manner in which this animation for months at a time, while frozen into a solid block of ice, is to be accounted for.

American sportsmen will perhaps be interested in learning that no amendments to the existing fish and game laws of the Province of Quebec are to be submitted to the Legislature at its present session. After all, it is a better enforcement of existing laws that is needed, rather than the enacting of new ones.

E. T. D. CHAMBERS.

### A Voracious Sucker.

PITTSBURG, Pa., May 7.—*Editor Forest and Stream.* The following incident may be of interest as illustrating what unexpected things some fish will do.

Last summer, with three friends, I spent a couple of weeks fishing in the South Branch of Potomac, stopping at Mr. Johnson's, about six miles above Romney. One day while fishing at the head of what is called Ben's Eddy, and casting from shore with an artificial minnow, the bait was suddenly shot into the air about fifteen feet. The cast was about sixty feet, and not more than five feet of line had been recovered when the bait was hit. I had only a glimpse of the fish, but the light color and flash of red told me it was no bass, and might be a wandering trout.

After unsnarling the line, I made another cast over the same place, and the bait had hardly hit the water when the fish struck hard and I successfully landed—a sucker of about 14 inches. A sucker taking an artificial bait was a new experience to me, and seemed the more strange as the water was quite deep and the bait hardly under the surface. In the hope that he might teach others of his family better things, he was put back.

This may not be the unusual occurrence it seemed to me and to others whom I told about it, and probably some of your readers who are up on sucker lore could venture an explanation.

E. L. W.

### Michigan Trout.

BAY CITY, Mich., May 10.—*Editor Forest and Stream.* Mr. Wm. Hanson, of Harrisville, Alcona county, Mich., caught, Monday morning, May 2, a genuine speckled trout 28 inches long and weighing 9 pounds 6 ounces. The catch was made in Mill Creek at Harrisville, and the fish is supposed to be the largest trout of its kind ever caught in Michigan. The Detroit & Mackinac Railway Company has secured the fish, have taken photographs of it, and will have same stuffed and mounted.

Trout fishing in Michigan is said already to be very good, and a telegram received May 6 at Bay City stated that streams were in normal condition, and that 3,000 trout had been taken out of creeks and rivers near Rose City. These were captured by several hundred fishermen, the largest individual catch having been 42.

FRANK.

### The Angler's Secret.

The Angler's Secret. By Charles Bradford. 206 pages. G. P. Putnam's Sons.

The Angler's Secret is a series of short essays on a variety of subjects connected with angling, and does not appear to contain anything new, nor indeed anything newly put. It contains twenty-one chapters, in which there is more or less about the equipment of an angler and his ways, and some few hints which should aid him. The frontispiece is a half-tone engraving from the well-known etching by Wm. M. Cary. Price, \$1.00.

## The Cruise of Minota.

### A Cruise on Lake Michigan from Chicago to Charlevoix and Return.

BY REGINALD MACK, CHICAGO, ILL.

THE yacht in which I shipped as a working passenger last August for a cruise up Lake Michigan, was the sloop Minota, built in 1899 as a Canada's cup defender by James M. Andrews, of Oakville, Ontario, and described in the February 10 and 17, 1900, issues of FOREST AND STREAM. For the last three years she has been flying the flag of Fleet Captain Atkin, of the Chicago Y. C.

Her over all length is 40.75 ft.; waterline, 31.31 ft.; breadth, 9 ft., and draft, 6 ft. She carries 6,000 pounds of outside lead ballast, which makes her very stable, and enables her to easily carry 1,416 square feet of sail, 375 of which is in the jib.

To withstand the racketings and buffetings of Lake Michigan a boat must be strongly built, with not too much overhang, and the Minota fills these requirements very well. Her cabin has sleeping accommodations for four, with a pipe bunk forward for the professional sailor; and, while the head room is low (owing to the fact that she is a flush-deck boat), we found her very comfortable during the two weeks we lived aboard.

Wednesday night, August 5, 1903, had been decided as the date on which the cruise of the Chicago Y. C., on which the Minota was to sail, should start. The boats

were provisioned, the crews selected, and the hour of starting set for 7 P. M., in order that the workers could put in a good day's work before beginning their summer vacation. When the evening edition of the papers was brought to them they were much chagrined to see that the amiable Professor of Weatherology who roosts at the top of the Auditorium had issued a warning to all mariners to be sure to keep in port that evening, as the worst storm of the year was bound to arrive and wipe all sailing vessels from the face of the waters. There was consequently a good deal of telephoning and canceling of engagements, and when the skippers reached the club house for dinner, they found that nine-tenths of their sailing mates had a very bad attack of what is commonly known as "cold feet," and there was a strong disposition to postpone the start (which, by the way, was to be a race from here to Milwaukee) until the expected tornado had passed away. At 9 we called up the weather bureau, and were informed that it had passed over and that no trouble need be anticipated, but only two boats were found willing to start out—the schooner Hawthorne and the sloop Minota—and at 10 o'clock they rounded the Van Buren street light neck and neck, and headed for Milwaukee, with a brisk S.W. wind behind them. The puffs that always accompany a S. W. wind compelled the sloop (which was carrying full sail) to occasionally luff up, but the heavier schooner kept on her course, and off Waukegan, at about 2 o'clock, 35 miles on our journey, she was a quarter of a mile ahead. The wind still kept fair, and by 7 o'clock in the morning both boats were off Wind Point, 20 miles this side of Milwaukee. The

wind changed round to the N.W. and began to breeze up. The schooner promptly took in her topsails, and Minota followed suit by putting in two reefs, and from there to Milwaukee harbor it was a beat against a strong wind and a heavy sea.

Hawthorne had to give us an allowance of 20 minutes, and she passed the Milwaukee pier head at 10 minutes past 10, the Minota following her at 10:42, thereby losing the race by 12 minutes, corrected time.

We worked up the Bay and anchored near the Milwaukee Y. C. house, and were almost immediately visited by the affable fleet captain, Mr. Adam Strachan, who extended to us the courtesies of the club during our visit. After calling at the club house, we began to get our boat ready for the regatta which was to open the next morning.

This regatta was a success in every way; the weather was perfect, and the races well contested. We were entered in the 35 ft. class, and had as competitors Milwaukee, Illinois, and Prairie. It really seemed a farce to enter a race with as little preparation as we had. The boat was laden down with provisions, etc., for the cruise, and part of the crew had never raced the boat before, consequently the showing we made was not very good, with the exception of the first leg, where we beat the rest of the fleet by about 5 minutes, owing to the wind being very light and fluky—which, I am told, is Minota's best point.

On Saturday the captains met on the flagship Charlotte R., and agreed to get under way for Charlevoix (their next stopping place) as soon as possible after 6 o'clock in the evening, and preparations were made with that end in view. In the meantime, the other yachts of our fleet—

namely, Vanenna, Minstrel, Siren, and Rosamund—had arrived at the Milwaukee anchorage, and we were all anxious to start for the north.

At 6 o'clock, however, a bad thunder squall came up, and we decided to abandon our start until later. At 9:30 P. M. everything looked promising, and the Minota started on her trip, but a few miles out clouds gathered quickly, the northern sky darkened, and, as there was every indication of dirty weather, we deemed it prudent to put back to the safe anchorage of Milwaukee harbor, and arrived there about 11 o'clock. We were jeered at by our fellow yachtsmen, but agreed to start with them as soon as the weather cleared at any time during the night, and at 1 o'clock were aroused from our slumbers by megaphone hails from the other boats. They were about to make sail, and we rapidly followed their example—Mistral, Siren, Vanenna, Charlotte R., and Minota all leaving the harbor between 1 and 2 o'clock in the morning. The sky was perfectly clear, the stars were all twinkling, and the moon lightened up the horizon, and everything looked very promising for the northern trip. When we were about 4 miles on our course, and well away from the protecting influence of the land which runs out into the lake north of Milwaukee, and forms the southern arm of Whitefish Bay, the wind shifted around to the N., and in a very short time started up a vigorous head sea. We, fortunately, had in two reefs, but even that amount of sail was too much for comfort, and the prospect of bucking the head sea for 200 miles was not alluring, so we eased off our sheets and again started for Milwaukee, arriving there at about 3 o'clock. Shortly after dropping anchor, we noticed that the Charlotte R. had followed our example, and was coming in, and then the Vanenna followed suit. Mistral (as you will learn further) kept on, and Siren changed her course and ran before the wind to Grand Haven, Michigan, which place she safely reached the next afternoon, but after a wet and tempestuous voyage. After two attempts and disappointments, we determined to have a thoroughly good night's sleep, and wait until the wind was fair and everything more propitious than had so far been our luck.

After breakfast we were visited by Vice-Commodore Burton, and discussed the weather and the prospects for the voyage down the lake. We agreed that we would leave between 10 and 11 that morning. The wind was from the N.E. when we passed the gap in the breakwater at 10:15, and we stood out on the lake for about 4 miles E. by N. with a N. wind, closely following Mr. Wm. T. Starr's auxiliary yawl Rosamund. We came about shortly after she did, when fortunately the wind swung around to the E., which made a close reach for Sheboygan and Manitowoc. Before leaving, the various captains had decided that with a fair wind they would keep on up the coast as far as Manitowoc, 75 miles north of Milwaukee; and if, on arriving there, the wind was still right, would keep on for Charlevoix, cutting across the lake north of Manitowoc, where the distance to Point Betsey is about 85 miles.

It certainly was a perfect Sunday; there was just enough sea running to give that easy motion that makes sailing so enjoyable, and we had a whole sail breeze. The two reefs in our mainsail and one in our jib which we had put in the night before were still in, and we soon saw that we had little hope of overhauling Rosamund unless we shook them out. Captain Starr evidently had his eye on us, for he very quickly unfurled his topsails and still kept away from us. At 1 o'clock we took the dinghy on board, and made better time, and at 3 in the afternoon were abreast Port Washington, which is 25 miles north of Milwaukee. Away to the southward we could see Vanenna and Charlotte R. coming up. At 6 in the evening we were nearing Sheboygan, still making good time, and after being busy for some time in the cabin with his charts, the Skipper came on deck and announced that the barometer was steady, and that if we had a promising sunset and the weather kept fair, we would change our course after supper and head across the lake for Manistee. This was evidently the determination of those on Vanenna, now well ahead, and to windward of us, as we saw them haul in their sheets and head for the Michigan shore, 75 miles away. The sunset was all that could be expected, the moon rose early, and everything gave promise of fair weather and a fine run throughout the night. I shared the Skipper's watch from 8 until midnight. With sheets just started, the lee rail under, and everything drawing finely, we ripped off 7 and 8 knots every hour. The night was magnificent. Our course was E.N.E., the wind keeping steadily from the S.E. and shortly before we went off watch we were crossing the course the steamers all take from Chicago to Point Betsey, and throughout the night we rarely had less than 4 or 5 steamers and 2 or 3 schooners in constant view. When midnight came and the other watch, consisting of Olaf, our sailorman, and Harris (who, on account of his enormous appetite and love of sleep, had been promptly nicknamed the Boa Constrictor), came on deck, our log showed that we had reeled off 48 miles since 6 o'clock. The moon made it almost as bright as day, and we lingered on deck for a while for a final pipe and glass of grog before we turned in to have a scant three hours of sleep.

At a quarter to 2 in the morning the lookout sighted the Big Point Sable light bearing due E., as the Skipper had predicted. This is a fixed white light, visible 20 miles. In the daytime this lighthouse is one of the most conspicuous landmarks on the east shore, as it stands 100 feet high, and is painted with three broad bands, the upper and lower being white and the middle black.

When we came on deck at 4 o'clock we were abreast of Manistee and steering N. up the coast. The wind had changed slightly and was now S.S.E., and the morning clouds gave every evidence of a good breeze through the day. We were having more wind than we could comfortably use with full sail, so we shortened it and kept on up the coast under two reefs.

About 8 o'clock, after breakfast, we noticed some distance astern a large sized sloop yacht which we took to be Vanenna, assuming that she had taken a southerly course, and was now coming up the coast. Her hull seemed black like the "Van's" and the cut of her sails also made us feel quite confident that it was she, and we were very much elated at the idea of having steered a more northerly course, and that we had a prospect of reaching Charlevoix the first in the fleet after all—that was, assuming Mistral had been overlooked, and had

been one of the "ships that pass in the night." We were close inshore when we passed Point Betsey, and the life-saving crew saluted us as we went by.

"Point Betsey" is the mariners' method of pronouncing Pointe Aux Becs Scies, the name evidently given by some of the early French voyageurs to this point of land, which resembles very much a bird's beak. This light is placed on a yellow tower 34 feet high, and at night is a flashing

Minota.

white light, with an interval of 10 seconds between each flash. It marks the turning point for vessels bound to and from the south end of the lake, when headed for the Manitou passage, and is about 24 miles S. by W. of South Manitou Island.

After passing Point Betsey, the next prominent landmark we sighted was Sleeping Bear Point, which is opposite the Manitou Islands. It is a freak of nature well

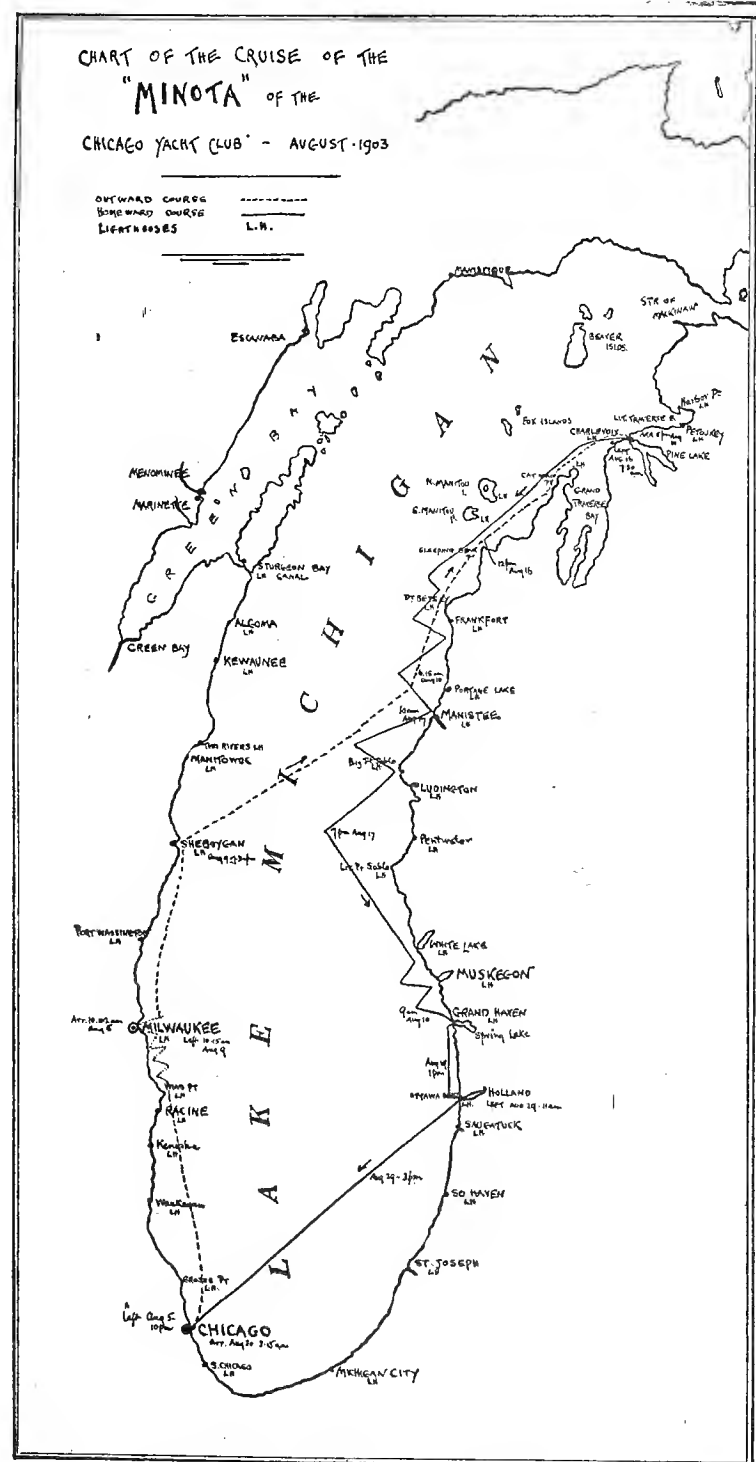

Chart of Course Taken by Minota.

named. The sand hills at this point rise to a height of 500 feet, and, seen from the lake, it appears as if an army of engineers had carefully leveled off the sky-line for a distance of two miles and built in the center a huge monument representing a sleeping bear.

By 10 o'clock the wind had blown up some rain, and oilskins for all hands were the order of the day. Away to the W. it began to cloud up and look squally, and we watched with some anxiety a small trading schooner take in her topsails and reef; the rainfall over there was evidently much heavier than we were experiencing. We

started through the Manitou passage about 11 o'clock, and at lunch-time the rain had stopped and we could see far astern of us a schooner following in our wake. As the wind was fair and she had no raffays up, we assumed that she must be a yacht, and as she drew nearer to us we made her out to be Mistral, which left Milwaukee 8 hours before we did. We learned later from Lawrence that he had kept on that night, notwithstanding the dirty weather that drove us back to Milwaukee, and had made an E. course for many miles before heading N. They had experienced some very bad weather, which, fortunately, we had missed by spending the night in the safe anchorage of Milwaukee harbor.

The water is wonderfully clear at this end of the lake, and it is somewhat startling to look down and see yourself passing over great rocks that seem close to your keel, but which a heave of the lead discloses are 4 fathoms below.

The wind was now blowing E.S.E., which meant that when we crossed Grand Traverse Bay we should get the full force of the breeze now tempered by the protecting heights of the shore, and the Skipper prudently decided to stand in under the shelter of Cathead Point and put in two more reefs and a small jib. While we were busily engaged in doing this, I noticed Mistral's people were conning us anxiously through their glasses, wondering what had happened to us, but they evidently divined our reasons, and did some reefing on their own account. By the time we were snugged down under our four reefs and No. 3 jib, and wore away on our course, the Mistral had passed us; as we crossed the wide entrance to Grand Traverse Bay we got all we expected, but bowled along very comfortably with our shortened canvas at a 7-knot clip.

Between Fishermen's Island and Charlevoix we witnessed a grand battle of the elements. The clouds which we had noticed earlier in the day to the W. had now banked up in large numbers, their colors were constantly changing from black to green and red and back to black again, and the lightning flashed throughout the western sky. The wind had been blowing steadily for 24 hours from the E. and S.E., and had now become sufficiently strong to make a very good fight against any W. wind that should attempt to gain the mastery, and as we watched this contest between the E. and the W. we all agreed that the W. wind would finally have to give in, but no sooner had this decision been reached than the E. wind received a knockout blow from somewhere or other, and instantly a fierce squall broke, the wind switched round to the W., and before you could say "knife," down came our jib, the strong iron snap-hook at its head parting as if it had been a piece of stopping twine. It was fortunate that this happened, as it made the bringing up of the boat into the wind a very easy matter, and under a 4-reefed sail Minota rode out the blow, which lasted 10 minutes, as nicely and more comfortably than we should have done if we had doused our mainsail. The rain poured down in torrents, so that it was impossible to see the length of the vessel. As soon as it had passed over, the jib was again hoisted up, and we saw Mistral about a mile to the N. E.; she had dropped every rag of canvas, and was waiting for a tug that was then steaming out to her from the mouth of the Charlevoix harbor. We headed for the piers, and arrived there just as Mistral was towed in. They very kindly threw us a line, so we swung in behind them, and cast off when we got into Round Lake, which is the small lake between the entrance to Charlevoix harbor and Pine Lake. Here, very much to our astonishment, we found Vanenna at anchor, and also the schooner Hawthorne. Normandia (Mr. N. W. Harris's power boat), was anchored in Pine Lake, so we found quite a gathering of Chicago Y. C. craft. Captain Cameron and his crew, of Vanenna, were very much surprised to see us there so soon, as they had arrived themselves only a few minutes before, having been becalmed 5 or 6 hours between Sleeping Bear Point and Traverse Bay. We anchored alongside Vanenna, and, looking up our log, found our actual sailing time from Chicago to Charlevoix had been 44 hours, and the distance covered 333 miles, being an average of 7½ miles an hour. We were elated over this, as we all felt, and still feel, that it will be a record hard to beat for a 40ft. boat cruising on Lake Michigan. The wind had been favorable and kind to us throughout the trip, and the success of the run was in a great measure due to the fact that we started out from Chicago with the determination to carry out the old saying: "Never make a port when your sheets are started."

We visited the Vanenna and talked over the run, and then called on Hawthorne.

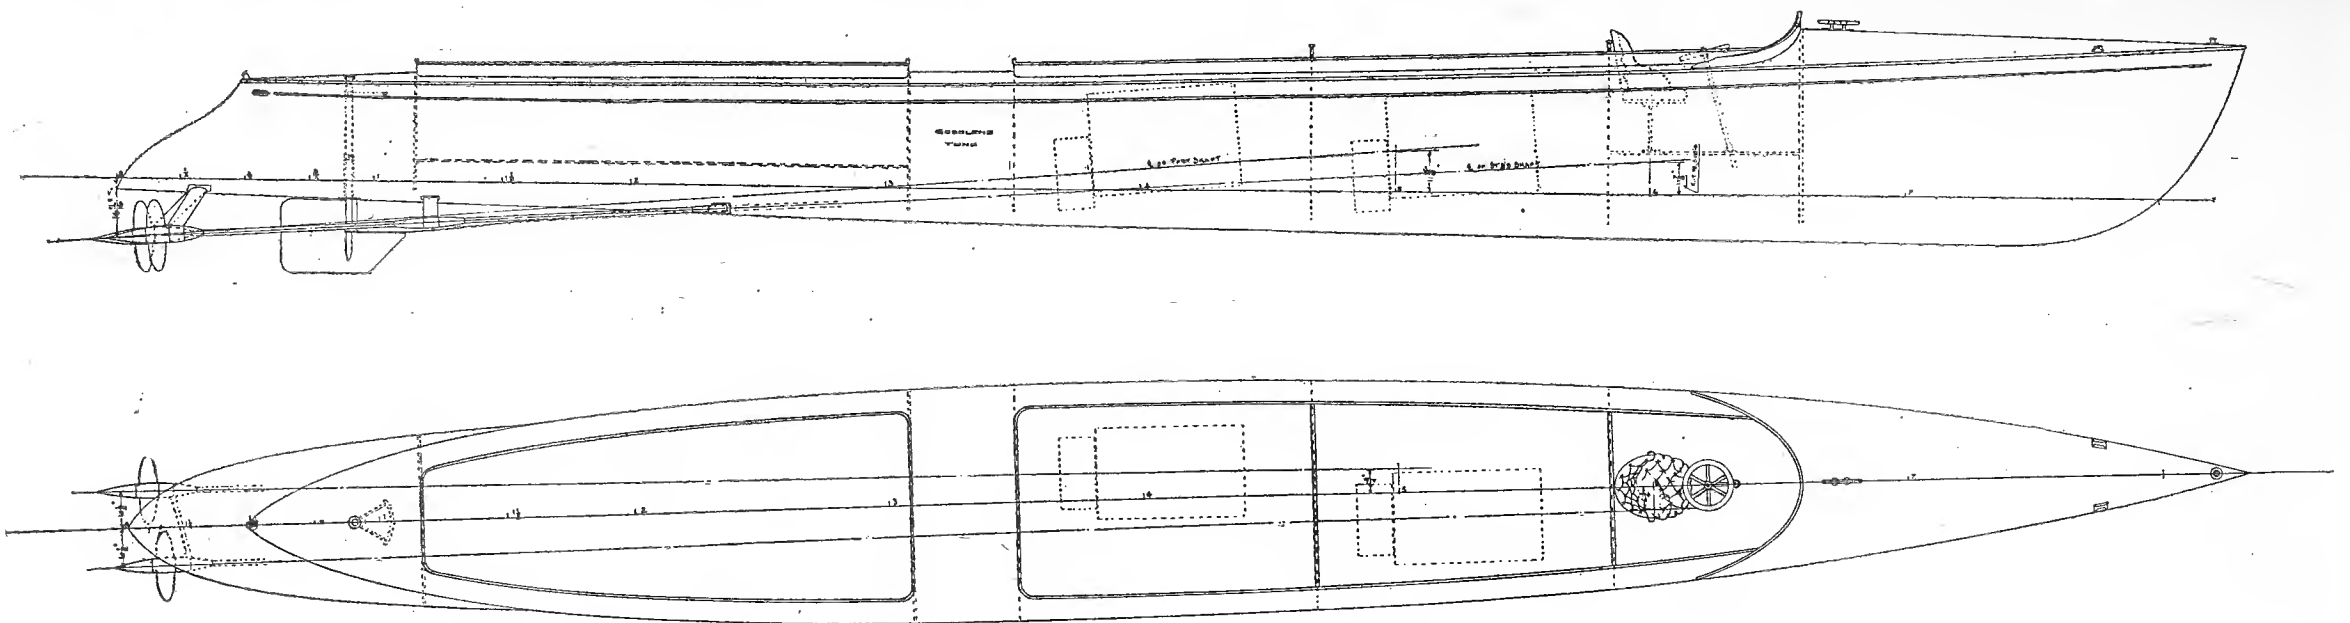

Mistral was to start the next day for Harbor Springs, and Hawthorne was awaiting her owners, Messrs. McConnell, Fox and Clinch, who were expected to arrive on Thursday and take her up to the North Channel.

Charlevoix is an ideal place for a yacht club fleet to rendezvous. The piers run out into the lake a distance of about 1,000 feet, giving a deep channel about 250 feet wide, crossed at the shore end by a swing bridge for road traffic. With a fair wind it is unnecessary to hire a tug, as the tug men here are like the rest of seafaring people and have the impression that a yacht owner ballasts his boat with silver dollars, and the tariff rate for towing in and towing out is \$5. The bridge tender will swing the bridge in response to three blasts from your horn as you go up the channel, and as soon as the bridge is passed the river widens to form Round Lake. Here the anchorage is good throughout, but the best course to pursue is to sail to the further end of the lake and round up on the starboard hand and anchor. You are then within easy reach of the shopping district, and later on you can do as we did—drop down the stream into Pine Lake, which is connected with Round Lake by a short channel crossed by a railroad bridge which is only closed at train time, occasionally during the day. Pine Lake is very beautifully located, and runs up into the country about 20 miles, and is divided into two arms, the E. one being much wider and giving more room for sailing. There is a good depth of water throughout; in fact, steamers with their tows go to the extreme end of the lake for lumber cargoes; but care should be taken not to go too close to the shore points jutting out in the lake where the water is shoal.

We stayed at Charlevoix for the balance of the week, each day having a sail on Pine Lake.

[TO BE CONTINUED.]

HIGH SPEED LAUNCH—DESIGNED BY TAMS, LEMOINE &amp; CRANE, AND BUILDING BY FRANK WOOD.

### Design for High Speed Launch.

HIGH speed launches are in great demand this year. None of the new boats are attracting more widespread interest than those turned out by Messrs. Tams, Lemoine & Crane. Through the courtesy of this firm we are able to publish this week the designs of one of their most interesting boats.

Her dimensions are as follows:

Length—	
On deck .....	47ft. 2 in.
L.W.L. ....	47ft. 7 in.
Breadth—	
Extreme .....	5ft. 7 in.
Draft of hull—	
Extreme .....	1ft. 1½ in.
Freeboard—	
Forward .....	3ft. 8 in.
Aft, lowest .....	2ft. 4 in.

The boat is being built in a most superior manner by Mr. Frank Wood at his City Island plant. She is of very light but strong construction. The planking is double, the inner skin being of cedar and the outer of mahogany.

There are two cockpits. The forward one is 18ft. 6in. long, and divided into three parts; the after one is 11ft. 6in. long and water-tight. There is 2ft. 6in. deck space between the two cockpits, and under this is located a gasoline tank.

In the low compartment of the forward cockpit is a place for the helmsman. The two 90 horse-power Mercedes engines are just aft of the steering gear, each one having a separate compartment. With this power it is expected the boat will do better than 25 miles an hour.

### Boston Letter.

BOSTON, May 13.—Nearly all of the yachts that have been built during the winter for the racing classes have been put in the water, and have been tried out in impromptu scraps. The number of new 18-footers far exceeds that of any other class, and these boats have had several tryouts off Marblehead. *Mirage II.*, which was one of the first of the new ones to be put in the water, is showing up very well in the preliminary races. On each of the past two Sundays, four of the 18-footers have been in scrub races off Marblehead, and *Mirage* has won each time. It is said that in a little rub with Mr. T. K. Lothrop's new 30-footer, *Sauquoit*, the smaller boat gave the larger all she wanted to take care of. *Mirage* was designed by Mr. E. A. Boardman.

Not only the new boats, but many of the older ones are getting ready for the opening of the racing season, especially among the 18-footers. The first race will be on Memorial Day, given by the South Boston Y. C., and this will make the twenty-eighth consecutive year that this club has opened the racing season in Massachusetts Bay. Classes will be provided for 30, 22, 18, and 15-footers of the Y. R. A. classes, and in addition to these there will be provided handicap classes.

Down in Buzzard's Bay preparations are being made for the racing season by the Beverly Y. C. As the bulk of the membership of this club is composed of summer residents, however, the season does not open as early as in other sections. The 30-footers will be most prominent in the racing. *Zingara*, one of the 30-footers, has been sold by Mr. E. M. Farnsworth to Mr. Alexander Forbes. She will remain in the club, however, and as Mr. Forbes is one of the new members, he will probably try to make a record with her. Two new yachts will join the 21ft. class. They are owned by Mr. Joshua Crane, Jr., and Mr. C. N. Baker. A new class of 18-footers has been organized which should furnish good racing. This is a one-design class, for which five boats have been turned out by Herreshoff. This class will compete later in the season with a one-design class, built under the restrictions of the Massachusetts Eighteen-foot Knockabout Association, from designs by Mr. E. A. Boardman. The regatta committee of the Beverly Y. C. has arranged the following fixtures for the season:

June 17, Friday—Club race.
June 18, Saturday—Club race.
June 25, Saturday—Club race.
July 2, Saturday—First Corinthian.
July 4, Monday—Open sweepstakes with prizes added by club.
July 9, Saturday—Second Corinthian.
July 16, Saturday—Third Corinthian.
July 23, Saturday—Fourth Corinthian.
July 30, Saturday—Fifth Corinthian.
Aug. 6, Saturday—Sixth Corinthian.
Aug. 13, Saturday—Club race.
Aug. 27, Saturday—Seventh Corinthian.
Sept. 3, Saturday—Open race.
Sept. 5, Monday—Open race.
Sept. 10, Saturday—Club race.

In the above schedule all of the races are to be sailed off the club house, Wings Neck, with the exception of the open race on September 3, which will be sailed at Mattapoisett. Only the Corinthian races count for club championship.

The new club house of the Winthrop Y. C. which is to

take the place of the one that was destroyed by fire last fall, is rapidly taking shape, and it is expected that it will be ready for occupancy early in July. Although minus a club house, the members of this club are not lacking in enthusiasm. The floats have been out for some time, and many yachts are at the anchorage. The regatta committee has arranged the following list of fixtures:

June 4, Saturday—Class handicap.
June 18, Saturday—Class handicap.
June 26, Sunday—Club run.
July 2, Saturday—Class handicap.
July 16, Saturday—Class handicap.
July 24, Sunday—Club run.
July 30, Saturday—Class handicap.
Aug. 6, Saturday—Class handicap.
Aug. 20, Saturday—Class handicap.
Aug. 21, Sunday—Club run.
Sept. 3, Saturday—Class handicap.

The following fixtures have been announced by the regatta committee of the Columbia Y. C.:

June 4, Saturday—Club handicap.
June 17, Friday—Cruise to Gloucester.
July 2, Saturday—Cruise to Portsmouth.
July 16, Saturday—Club handicap.
July 17, Sunday—Ladies' day.
Aug. 6, Saturday—Club handicap.
Aug. 14, Sunday—Ladies' day.
Sept. 3, Saturday—Squadron run to Salem Willows.
Sept. 4, Sunday—At Salem Willows.
Sept. 5, Monday—Squadron run, Salem Willows to Nahant.

The regatta committee of the South Boston Y. C. has announced the following fixtures:

May 30, Monday—Y. R. A. open.
June 17, Friday—Club cruise.
June 18, Saturday—Club cruise.
June 19, Sunday—Club cruise.
July 9, Saturday—Club handicap.
July 24, Sunday—Ladies' day.
Aug. 6, Saturday—Club handicap.
Aug. 20, Saturday—Club handicap.
Sept. 10, Saturday—Handicap, City Point to Hull.

Last Tuesday morning the steam yacht *Visitor*, designed by Swasey, Raymond & Page for Mr. W. Harry Brown, of Pittsburg, Pa., was launched at Lawley's west shop. The yacht was christened by Mrs. Brown. *Visitor* is a twin-screw, high speed, steel steam yacht. She is 98ft. over all, 93ft. waterline, 14ft. beam and 4ft. 3in. draft. She is of the torpedo boat type, with low cabin trunk and raised deck house forward. It is expected that she will make 24 miles an hour.

JOHN B. KILLEEN.

### Rhode Island Letter.

PROVIDENCE, R. I., May 14.—Work has been very active at the Herreshoff shops at Bristol for the past few weeks, both in completing new work on hand and in getting a number of craft out of winter quarters and into shape for the season. Several of the new boats of the 21ft. class for sloops are now nearly ready for launching. They are finely modeled craft, with moderate overhangs, and are expected to prove very speedy. A new steam yacht of about 120ft. waterline, under construction for M. C. D. Borden, of New York, is about half completed, and work on her will be rushed.

Mr. Cornelius Vanderbilt's steam yacht *Mirage* has been repiped, and is nearly ready to leave for New York. Mr. August Belmont's steam yacht *Scout* has had a number of improvements in the engine room, and is now in the hands of the painters.

Rear-Commodore W. O. Todd, of the Rhode Island Y. C., has a new 58ft. cabin launch, built by the New York Yacht and Launch Engine Company, at Morris Heights, N. Y. She arrived here early this week. She is called *Roberta*, is 58ft. over all, and 12ft. breadth, and is equipped with a Twentieth Century motor of 12 horse-power. The finish is mahogany throughout. The engine room is at the after end of the cabin house, and forward of this are toilet room, galley accommodations, and a 13ft. main cabin and a large pilot house. She has two pole masts, carries a tender swung on davits, and all in all is one of the handsomest cruising launches in Narragansett Bay.

Mr. Jesse H. Metcalf's steam yacht *Endion* has been purchased by Mr. Leroy Fales, of Barrington, who is a member of the Rhode Island Y. C., so that the boat will still remain in the club fleet.

C. F. Tillinghast's new 22ft. knockabout, built at the Chase Pulley Company's shop in this city, will go into the water in a day or two. She is called *Little Rhody*, and was designed by Mr. George Owen, of Toronto, Canada, a former resident of Providence. She has a model of more than ordinary beauty. She is a keel boat, with about 3,000 pounds of outside lead, and is double planked inside with cedar and outside hard pine. The framing is of the best quality of white oak, and there is a double planked water-tight cockpit. The after end of the cabin and the hatch and companionway are of mahogany. She is 34ft. 6in. over all, 21ft. 9in. waterline, 8ft. 6in. beam, and 5ft. 6in. draft. *Little Rhody* will probably be one of the contestants in the Brooklyn Y. C.'s ocean race in July. Her sail area as yet is uncertain, as she was built for the Narragansett Bay Twenty-two Foot Sailabout Association, organized last winter, and as there

are no other boats building for the class, it is not probable that her owner will hold her sail plan down to the 650ft. named in the restrictions.

At the Chase shop there is also a 22-footer, designed by Mr. W. H. Hand, of New Bedford, for Mr. D. D. Allerton, of New York, to race under the rules of the Gravesend Bay Y. R. A. She is combination keel and centerboard, with 2,500 pounds of outside ballast. The model is peculiar, showing a very long forward overhang. At the same shop, a Messrs. Burgess & Packard design, an auxiliary sloop, *Keewaydin*, has just been finished for Mr. G. F. Holmes, of Plymouth, Mass. She is 35ft. 6in. over all, 22ft. waterline, 10ft. beam, and 2ft. 6in. draft, and is fitted with a 6 horse-power Murray & Tregurtha engine. She has a good sized cabin, and makes a comfortable cruiser.

Mr. David Stranger has sold his 25ft. cat *Idler* to a Barnegat Bay yachtsman. She was built last year by Mr. A. C. Davis, of this city.

The Edgewood Y. C. took in 27 new members this week, bringing the total enrollment to more than 450, and it is expected that the limit of 600 members will be reached before the end of the season. The annual cruise of the Edgewood fleet this year will be in August, the same week as the racing series of the Narragansett Bay Y. R. A., the fleet following the different racing events, and being at Newport for the Astor cup races.

F. H. YOUNG.

### Interlake Yachting Letter.

CLEVELAND, O., May 13.—Yeota, the first of the 21ft. restricted class, is overboard. She was launched at Grassy Island last Thursday. Yeota was designed for Mr. Kenneth Stevenson, of Detroit, by Messrs. Burgess & Packard, and built by Edward C. Bryan, of Wyandotte, Mich. The boat is of the compromise keel and centerboard type. She will carry 1,000 pounds of outside ballast. Her gaff, boom and mast are hollow, and the sails were finished by Messrs. Cousens & Pratt, of Boston. She is designed right up to the top of the class, and her owner looks for Yeota to give a good account of herself in the Lipton races at Chicago and the Waker races at Detroit. It is for these two series of races that she was especially built. She will be sailed by R. D. Potter, of Toledo, assisted by Geo. Wilds, of Detroit, John Barch and Douglass Perkins, Jr., of Cleveland. Her dimensions are: Length over all, 35ft. 11½ in.; waterline, 21ft.; beam at waterline, 10ft. 5in.; extreme beam, 10ft. 8in.; draft at post, 2ft. 11in.; sail area, 949 square feet.

Several of the others will be launched next week. Mr. E. L. Ford's boat, designed and built by Joe Pouliott, of Wyandotte, has been finished for some time, and will be launched in a day or two. She is a good looking boat, and almost an exact counterpart of *Little Shamrock*, the craft that won the Walker cup last year. Mr. H. T. Schmidt's boat, built at Marine City, Mich., is just about finished, and will be shipped to Detroit in a few days. John H. Smedley, Jr.'s, announcement that he was having a 21-footer built in the East came as a surprise. The Smedley boat was designed by Mr. Chas. L. Seabury, and is being built at Morris Heights, N. Y. Mr. Chas. L. Seabury also sold the *Vesta*, Commodore Smedley's yawl, to eastern parties, and the Commodore, in turn, purchased the *Vennessa*, a 76ft. over all auxiliary yawl, from eastern parties. A letter received from E. T. Affleck, Jr., of Toledo, O., now on his way to the lakes with *Hussar II.*, recently purchased by Commodore E. T. Affleck, states that good time is being made, and the craft will reach Toledo, her new home, about June 1.

Several new boats are building at Toledo, and the yachtsmen of that place are looking forward to a good season. At the Harrison Boat Works a number of launches, including five high speed boats, have been built, the most conspicuous of the lot being one for Lacy Bros., also of Toledo. She is an improved *Dolphin*, and her owners hope to do better than 12 miles with her. She will be equipped with a 12 horse-power Lacy engine. The *Puritana*, Commodore W. C. Richardson, Jr.'s schooner, was launched two weeks ago, and left yesterday on a fishing trip to cover a period of several weeks. Commodore W. C. Sterling, Jr., of Monroe, Mich., bought the *Æola*, of Buffalo. *Æola* is of the sharpie type. The 21-footer built by Wier, of Hamilton, and designed by Mr. W. H. Hand, Jr., has been finished and delivered to Mr. H. L. Chamberlain, of Buffalo.

The original idea of racing the new 15-footers from Port Colburn to Buffalo on their initial trip has been abandoned, and they will be towed from Hamilton to Buffalo instead. Dr. E. P. Hussey's 30ft. yawl has been completed, and is an excellent looking craft. For a boat of her size, she has a remarkable amount of room. She should also have a fair amount of speed, especially in a breeze. *Lucinda*, of Sandusky, was sold to a member of the Buffalo Y. C.

Things are doing in the Lakewood Y. C., of Cleveland. Messrs. W. F. Nash, Geo. I. Hall, and H. P. Wheton purchased the *Rooster II.* from Hon. Chas. Francis Adams 2d, of Boston, and hope with her to wrest some

of the honor from Chloris, a boat of the same type and class, but purchased last season by Commodore Phelps and A. J. Primett. The regatta committee of the L. Y. C. has decided to use the waterline rule and make a special class of these boats, which means that White Ribbon, formerly a 30-footer, will be allowed to compete with the aforementioned two. White Ribbon is decidedly a larger boat, but is only 22ft. on the water, which allows her to make the class handily.

The 21ft. open boat built at Maltby's yard has been finished, and will be launched Monday. She is considerable of a freak, but should be exceptionally fast. Her owners are out with a challenge to race anything in her class on fresh water. Myth, recently purchased by Ben Davis, Jr., from Fred Pritchard, of Toledo, has been delivered and placed in commission. A match race between her and the Nadje, the boat for which she was bought to beat, has been arranged, and will take place July 2, 3 and 4. The yawl built by J. W. Hepburn, of Toledo, for R. L. Lockwood, has been finished, and will be shipped to Cleveland the latter part of next week.

The first big regatta of the season is scheduled for July 2, 3 and 4, and will be held at Monroe Piers, Mich. Entries have been received from Buffalo, Erie, Cleveland, Sandusky, Toledo, Detroit, and Port Huron. A fine list of prizes has been offered, and it is believed that from 80 to 100 boats will line up with the gun on the opening day. Nearly all of the fresh-water yachting organizations have scheduled races for Decoration Day.

C. W. SCHMIDT, JR.

## British Letter.

Two months ago the outlook for the season was particularly gloomy for almost all classes; but with the advent of summer weather a considerable stir has been made in fitting out quarters, with the result that quite a fair number of boats will be found ready to hoist colors in most of the small rater and all the handicap classes, while the recent launches of several new vessels of large size have added much interest to the larger handicap fleet. Perhaps the most important event of last month was the launch of the fine fast cruising yawl White Heather, built by Fay & Co., of Northern Hants, for Mr. Myles B. Kennedy, a flag officer of the Royal Albert Y. C., who has for many seasons successfully raced the famous old Watson 60-rater Yarana under the now equally famous name of Maid Marion. As Maid Marion Mr. Kennedy has sailed the fine old ship with great success in the handicap class, and many a battle royal has she had with another of Watson's successes, the 40-rater Creole, which has also a wonderful record of wins. Both these vessels have been unaltered as to hull since they were first launched, but both have had large additions made to their spars and canvas, and are much faster under most conditions of wind and weather than when they were pure racers. The march of time, however, has found them outclassed by the present-day fast cruiser, with her great beam, small body and modern overhangs, to say nothing of her superiority in comfort and weatherliness, and Mr. Kennedy has at last abandoned his old love for a better type of ship. White Heather took the water on April 16. She is from designs by Fife, of Fairlie, and has all the typical sweetness of that famous designer's lines, as exemplified in his latest creations, while her construction has been made sufficiently strong to enable her to be classed twenty years at Lloyd's. Speed and comfort have been combined in an unusual degree in White Heather, and Mr. Kennedy will have no reason to regret his old ship after he has tasted the sweets of victory and discovered the dry and seaworthy qualities of his new one. Everybody wishes him all success with his new venture, which is as pretty a vessel as can be wished for.

Fife has been busy, indeed, this winter, with designs. Another noteworthy vessel is the schooner Susanne, built by Messrs. Inglis for a German yachtsman, Herr Oscar Huldshinsky, of Berlin. Like White Heather, she is about 150 tons. She has more the appearance of a pure racer than any other schooner Fife has turned out, but of course her scantlings are heavy and her internal fittings are of the most comfortable description. Her appearance is said to be of the most taking description, and if she is a handsomer vessel than Cicely, which Fife designed two years ago for Mr. Cecil Quentin, she will indeed be a beauty. Susanne will have an unusually large spread of canvas, and will be skipped by Wringe, who had charge of Shamrock III. With such a good man at the helm and a British crew, Susanne should make a flutter among the fleet of schooners in German waters.

Two other noteworthy vessels, also from the board of the Fairlie, are the 65-footer for the Messrs. Cornell and the 62-ton yawl for Mr. A. K. Stothert. The former vessel was commenced two years ago, but the disappearance of the 65ft. class with the sale of Khama caused her owners to have the work of construction stopped. Now, however, they have determined to fit her out and run her in a handicap class with Netty and Carina.

Mr. Stothert's craft is an up-to-date cruiser-racer for the second handicap class, which goes the usual rounds in British waters, beginning with the Thames fixtures and working westward to Plymouth. For some seasons Mr. Stothert has been racing his 36-ton yawl Nebula in small handicaps, but although a fine, wholesome boat, she wanted half a gale to drive her, and in spite of sticking to it pluckily, he had but indifferent luck. If report be true he has in his new vessel something that he will be proud of. She is slated to be a real beauty, and will be more of a light-weather craft than his old vessel. Like all modern cruiser-racers, she has good overhangs, a moderate body and a large sail spread. It is hoped that she and White Heather will both be ready for the opening matches on the Thames at the end of this month. Fife has yet another vessel completing for sea, and that is the 52-footer, which is to be in charge of Charles Bevis. This vessel will fill up the gap created by the withdrawal of Viola and the racing in the 52-ft. class will be the keenest and prettiest to be found around the coast. It will be interesting to see whether the new boat is a great improvement upon Moyana or Lucide, and it is certain

that in the hands of such a capable skipper as Bevis, the utmost possible speed will be got out of her.

The 36ft. racing class on the Clyde is not to be allowed to fall through after all. Mr. J. A. Leckie has purchased Falcon from Messrs. Connell, consequently Mr. MacIver will fit out Barabel. In all probability Eusay will also be brought into commission, in which case some keen struggles will ensue.

Small yacht racing on the upper reaches of the Thames and in the estuaries is now in full swing. Another three weeks and the season proper will have commenced, and so far there is every reason to hope that yachtsmen will be favored with better weather than that which prevailed in 1902 and 1903. E. H. KELLY.

## St. Paul Letter.

ST. PAUL, May 14.—A greater number of new boats are being built at White Bear this season than ever before, many to remain there, but the majority to be sent to different lakes in the West. I was out at the lake a few days ago and the place had the appearance of a veritable shipyard, so full was it with half-built boats of all sizes and models.

It might be interesting to give a brief account of the White Bear Y. C. from the time it started in 1889. The club was organized by a few enthusiastic members, many of whom knew practically nothing about sailing. There were few boats, and those were of the sand-bagger type, about as wide as they were long. They all raced in one class, the larger giving the smaller time allowance. Gradually they began to make the boats narrower, and with overhanging bows and slightly increased waterline when heeled, until about seven years ago the first scow was built. In 1899 the Yankee raced against the double hulled Dominion of the Royal St. Lawrence Y. C., at Montreal, and, although she made a fine showing, was beaten. The following year the White Bear challenge was again accepted, and they were defeated. Therefore this year they are doing everything in their power to procure the best boat for the third attempt to lift the cup.

Four years ago the White Bear Y. C. bought its present quarters and remodeled the building, making it into a very convenient club house. It has a large porch with sliding windows, where one can get a fine view of the races. White Bear has been very regular about its sailing, not a Saturday having passed from June to September for years that there was not a race if the weather was permissible.

White Bear is a small but pretty lake, and has deep water nearly everywhere. There are few shoals, and none of these in the race course.

The lake has an island and a peninsula which divide it into three divisions, so that it affords several different courses. During the last few years the lake has been gradually receding, and as it has no inlet or outlet or visible springs, it is feared that it will eventually dry up. To prevent this, artificial wells are being constructed, and will probably be completed within the course of the summer. This year, however, it seems as though the wells were scarcely needed, for the lake is higher than it has been for some time. Of course, White Bear has not the high waves common to larger lakes, and for that reason the fastest boats will be tried on Winnebago.

The syndicate has decided to build another boat, on the Crowninshield plan, only larger, so that it will make a better heavy wind boat and be more able to stand the large waves of Lake St. Louis. It will be built by Johnson, of White Bear, who is likewise building the smaller boat on the same lines. The hull of this smaller boat is already nearly completed, as well as the hull of that being built by Amundson. There are in all five boats being constructed for the syndicate, and they will undoubtedly all be completed by Decoration Day, when the regular races of the White Bear Y. C. commence. The syndicate would like to build the boat designed by Burgess and Packard if it did not already have so many on its hands.

The Inland Lake races at Lake Winnebago will, in all probability, be more interesting in class B than ever before, for not only will there be a great many more boats, but there will be three or four on the same model rigged exactly alike from different lakes.

SAM ORDWAY.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

ERIE Y. C.—The yacht club held their first spring meeting on the 11th, and mapped out their season's work. On Decoration Day, May 30, the first race will be sailed by the whole squadron. A handicap race is down for July 4, and in July and August, on alternate Saturdays, four races will be held, the same as last year. Some new members have been taken in, and the club contemplates a number of improvements.

COBWEB Y. C. FIXTURES.—The regatta committee of the Cobweb Y. C. announces that their spring regatta will be held on Decoration Day, Monday, May 30, 1904, and the fall regatta will be held Labor Day, Monday, September 5, 1904. Both are open regattas, and will be sailed over club courses.

WEST END Y. C. FIXTURES.—The regatta committee of the West End Y. C., composed of Wm. Ridley, H. Madden, and H. Lawson, have arranged for the following regattas: June 12 and September 11. Both races will be sailed on the Hudson River, off the club house.

NEW RACEABOUT FOR MR. HARRY MAXWELL.—There is building at Wood's yard at City Island a raceabout for Mr. Harry Maxwell.

THREE CHALLENGES FOR THE MANHASSET BAY CUP.—Three challenges have already been received by the Manhasset Bay Y. C. for the challenge cup. The following is a list of the clubs and boats that will be represented: Seawanhaka-Corinthian Y. C., sloop Nyxe, ex-Oiseau; Atlantic Y. C., sloop Bobtail; Penataquit-Corinthian Y.

C., sloop Arrow. It is more than likely that the Shelter Island Y. C. will be represented by the Crowninshield sloop Woglind. The cup will be defended by Alert, owned by Mr. J. W. Alker.

GLOUCESTER (N. J.) Y. C.—At the meeting of the regatta committee of the Gloucester Y. C., it was decided to hold the annual regatta on Sunday, June 12. The regatta will start from Market street at 11 A. M., and will consist of seven classes, as follows: Second class, double-enders; third class, double-enders; special class of double-enders for Tacony boats, Whitehall boats, open yachts and cabin yachts.

SEAWANHAKA-CORINTHIAN APPOINTMENTS AND GENERAL ORDERS.—General Orders No. 2—Mr. Beverley R. Robinson is hereby appointed signal officer in charge of making colors, and of making and returning salutes and signals from the club house at Center Island. He shall, ex-officio, rank as senior captain in command of the anchorage during the absence of the flag officers, and will be obeyed and respected accordingly.

General Orders No. 3—(1) The squadron will rendezvous at Seawanhaka Harbor, Oyster Bay, on Saturday, May 28, in order to take part in the opening exercises at the club house. (2) On signal from the flagship at 3 P. M. (Saturday) the club burgee will be mast-headed on the club flagstaff, and all vessels in harbor will dress ship simultaneously. (3) On Sunday, May 29, divine services will be held on board the flagship at 11 A. M., conducted by the fleet chaplain, Rev. George R. Van De Water, D.D. (4) In observance of Decoration Day, Monday, May 30, all ensigns will be half-masted, and the fleet will dress ship at eight bells. (5) At 10 A. M. all yachts will be inspected by the commodore, and the fleet captain's cup (offered for the best commissioned yacht) will be awarded. (6) At 4 P. M. a reception will be held on board Aloha, to which all captains, members and their guests are cordially invited. Captains are earnestly requested to have their yachts in harbor during the ceremonies.

Official: FRANKLIN A. PLUMMER, Fleet Captain.

KNICKERBOCKER Y. C. GOES IN COMMISSION.—On Saturday, May 14, the Knickerbocker Y. C. went formally into commission. The club's racing programme is as follows: Annual regatta—June 4. Ladies' day race—July 16. Annual cruise—To start August 6. Power boat race—September 17.

YACHTS CHANGE HANDS.—The following sales have been made through the agency of Mr. A. J. McIntosh: The schooner Varuna by Mr. Fred F. Ames to Mr. H. von Harten. She will be used as a pilot boat off Port Royal; the cabin launch Chic by Mr. Whitney Lyon to Mr. J. Henry Vaile; the auxiliary sloop Gladys, by Mr. J. Griffen to Mr. E. C. Roseman; the launch Ben-Hur to Mr. James L. Lawrence; the knockabout Reverie to Mr. H. C. Southwick; the twin-screw launch Carola to Mr. A. Bleeker Banks; the knockabout Phyllis to Mr. J. N. Steel, Jr.; and the knockabout Heron to Mr. John Le Boutillier.

DEFENDER FOR THE LIPTON CUP.—Mr. Morgan Barney has received an order for a 21-footer that will compete in the races for the Lipton cup. She will, in all probability, defend the trophy. The boat will be put together by Thomas Fearon, of Yonkers. The craft is for Dr. F. W. Holmes, and will be named La Paloma.

CAPE MAY Y. C.—A special meeting of the Cape May Y. C. was held in Philadelphia on the evening of May 12. The club was formed last July, and the organization has made great progress since that time. They now have 51 members, and 11 more were elected at the meeting. The officers of the club follow: Com., J. Wesley Allison, sloop Irene, flagship; Vice-Com., Chris Gallagher; Rear-Com., J. Clifford Wilson; Sec'y, Adam Suelke; Treas., J. Spicer Leaming; Fleet Captain, Benton S. Bond; Fleet Surgeon, Dr. F. J. Haerer. Trustees—Dr. Emlen Physick, J. Spicer Leaming, Alfred L. Belfield, R. R. Miller, and A. C. Thomas, while the Membership Committee consists of R. R. Miller, Valentine Heaton, James F. Lucas, Peter Shields, and Alfred L. Belfield. Race Committee—A. J. Bowman, W. K. Holman, John Monroe, A. C. Thomas, Joseph L. Kelly, and B. J. Gibbons.

A club burgee was adopted, formed of white bunting fringed with blue and containing twelve small white stars and one large blue star as the central figure, symbolic of the thirteen original States.

Plans were presented and adopted for a luxurious club house, and it was planned to issue bonds to the amount of \$5,000 in amounts of \$50 each. The building is to be constructed on property leased for a term of years, now owned by Dr. Emlen Physick, and will be a typical yachtsman's home.

MANHASSET BAY Y. C.—The Manhasset Bay Y. C. went into commission on Saturday, May 14.—Nearly one hundred members and guests were on hand, and the opening was a great success. Two of the new one-design dories raced in the afternoon, and Mr. C. J. Lincoln's boat beat Mr. Thomas Wilson's craft handily. The latter boat was ahead at the end of the first round, but on the second time around Mr. Wilson had trouble with his centerboard, and could not get his boat out to windward. The regatta committee of the club has arranged the following racing schedule:

May 30—American power boat race under the auspices of the American Power Boat Association.  
June 11—Annual regatta.  
June 27, 28, 29—Challenge cup series.  
July 9—Club handicap for boats of cruising type.  
July 23—Power boat race. Open to all clubs.  
September 3—Special club races.  
September 17—Fall regatta.

A. C. A. National Meet, Sugar Island, Thousand Islands, St. Lawrence River, August 5-19, 1904.

## A Canoe Cruise.

BY WM. H. L'ESTRANGE, DULUTH, MINN.

THIS is a description of a canoe cruise taken by myself and one companion on the waters of the Canadian boundary directly north of the western end of Lake Superior. We reside in Duluth, Minn., and, except for a two days' trip, neither of us had ever been up in that country before. With a good map, showing the portages, and a compass, any one can find his way about in the lakes of the boundary. There is a continuous waterway from Pigeon River, on Lake Superior, to the Lake of the Woods, which forms the international boundary. This was formerly the highway of the Hudson Bay Company's trappers, westward bound. It is best reached from Duluth by the Duluth & Iron Range Railroad, which runs north about eighty miles. The water in all the lakes we traversed, flows northwest into Rainy Lake. East, over the divide, the water empties into Pigeon River. One can travel by canoe from this region to the Rocky Mountains to Hudson Bay, or to the waters of the Mississippi. This is the country par excellence of the canoeist and voyageur.

The geological formation of the country we explored consists of a series of ridges of up-ended strata, none more than roof-top high, with a lake between almost every ridge. The ground is all rock, with a thin covering of soil, and is useless for agricultural purposes, though covered in many places with a thick growth of small timber. All the lakes contain pickerel, and some of them bass and wall-eyed pike, and in a few places there are landlocked salmon. Ducks are not very plentiful east of Basswood Lake, though we saw some every day we were out. West of Basswood there is more rice, and consequently more ducks. Further west, in the Bow String country, is the greatest duck shooting in the world. We saw a great many Indians traveling about on the lakes.

We started on our ten days' cruise with a 14ft. Peterboro canoe, but, owing to the failure of the express company to deliver the canoe on time, we were forced to hire one at Ely. We were fortunate in securing a splendid canoe at very reasonable rates. It was a 16ft. canvas covered canoe, made by B. N. Morris, of Veazie, Me. These canoes are made of cedar, with wide splint ribs, after the fashion of a birch, and are covered with canvas, painted and rubbed to a smooth finish on the outside. They are the best all-round canoes I have ever seen, strong and light, and free from the great defect of all basswood canoes, that of soaking water. They are nicely finished, with spruce gunwales and cane seats, and give one an impression of "the best is none too good" style of workmanship that is gratifying in this day of factory made products. They stand rough treatment and pounding on rocks better than any other style of construction, and when the canvas is cut, it is easily repaired. The one we had had an outside keel, which stiffens the canoe, and takes some of the wear off the bottom; it also seems to steady the boat, though it did not interfere with ease in turning. We took three paddles, to be one the safe side.

Our tent was a peaked arrangement, designed by a Duluth man. It was 5 by 8ft. on the ground and came to a peak nearly over the front. There was an 18-in. wall at the back. The tent hangs by the peak between two crossed poles, and there are no guys, except at the back, to distend the wall. It is admirably adapted for a two-man trip, weighing no more than an A tent of the same floor size, and being much more roomy and comfortable. It gives ample standing room in the front, where needed, and can be pitched quickly by one man. It weighed about seven pounds.

We had three light blankets and one tarpaulin made of good duck, treated on one side with linseed oil and beeswax. This makes a fine, pliable waterproof, as comfortable to handle as a rubber blanket, besides being much cheaper and more durable. It insures a dry bed in any kind of weather, and serves to cover the duffle when traveling in the rain. We had two pack-sacks, of the kind universally used in the Northwest, and they held all our outfit. They weighed 75lbs. a piece on starting. We found that the list of provisions given would have been ample for fifteen days. We carried a folding tin reflection baker, commonly used by the cruisers here, and a set of three oval nesting pails.

The expenses of the trip, outside of the camera and our railroad fares, including hotel bill, was \$23.40.

### OUTFIT.

- |                               |   |
|-------------------------------|---|
| 1 tent, 5 x 8ft.              | 2 teaspoons.  |
| 1 ax.                         | 1 large iron spoon.                                       |
| 3 pairs blankets.             | 1 qt. mixing pan.   |
| 1 oiled duck blanket.         | 1 fry-pan, with socket for wood handle, dish towels, etc. |
| 2 pack sacks.                 | 1 Winchester repeating shotgun.                           |
| 1 haversack for lunches.      | 50 cartridges.  |
| 1 Marble folding hand ax.     | 1 Bristol rod, lines, spoons, etc.                        |
| 1 sheath knife.               | 1 3/4 x 4 1/4 folding Kodak, 4 doz. films.                |
| 1 set of three nesting pails. | 1 16ft. Morris canoe, 3 paddles.                          |
| 1 folding tin baker.          |   |
| 2 plates, knives and forks.   |   |
| 3 tin cups.                   |   |

### PROVISIONS.

- |                       |                            |
|-----------------------|----------------------------|
| 10lbs. flour.         | 3lbs. brick cheese.        |
| 12lbs. bacon.         | 1lb. lima beans.           |
| 5lbs. bread.          | 2 jars extract of beef.    |
| 2lbs. coffee.         | 2 packages pancake flour.  |
| 1/2lb. tea.           | 1 package Quaker oats.     |
| 3lbs. loaf sugar.     | 6 cans evap. cream.        |
| 2lbs. brown sugar.    | 2 packages Uneceda wafers. |
| 1/2lb. baking powder. | 1lb. rice.                 |
| 1lb. salt.            | 8lbs. potatoes.            |
| 1 can pepper.         | 1lb. onions.               |
| 5lbs. butter.         | 1/2 doz. wax candles.      |
| 2lbs. hardtack.       | 2 boxes matches.           |
| 2lbs. dates.          |                            |

### Our Log.

Monday, Oct. 5.—We shipped our canoe to Ely by express the day before starting, to avoid possible contingencies, and left Duluth on the Duluth & Iron Range train at 7:30 this morning, reaching Ely at noon. Our canoe had not arrived. The express company was to blame, to be sure, but that did not help us on our way. After a delay of several hours, telegraphing fruitlessly, we abandoned our canoe and hired one on the spot, a little beauty. We engaged a team to take us and our duffle over to Winton, on Fall Lake, a distance of about four miles. Winton is nothing but a sawmill town, but it has two big mills, and is a pretty busy place. We put our canoe into the water about 4 o'clock and paddled two miles down the lake and camped for the night within sight and sound of the mills, for they run night and day, and the big steam-feeds could be heard plainly at that distance. The weather was ideal, and we congratulated ourselves on an auspicious start. However, we found that we had left our camera at Ely and would be obliged to return for it to-morrow.

Tuesday, Oct. 6.—This morning broke cloudy and threatening, and by the time we had breakfast despatched it was raining quietly. We paddled back to Winton and tramped over to Ely in the mud. We stayed only long enough to get the camera and buy a tin of boot grease and started back. We took the railroad track back, which proved a little the shorter. We got back to camp by 12:30, having eaten our cold lunch as we walked, and immediately struck camp and proceeded down the lake. Our map did not show Fall Lake, as we thought we could find the first portage easily, but when we got there, we could not find the portage. It is in behind several islands, and we circled round the islands several times, and must have been very close to it more than once. When it grew dark we abandoned the search and ran for the railroad at the extreme eastern end of the lake. There was nothing here but a deserted warehouse, in which we decided to camp, for it was still raining and we were pretty wet. The roof leaked badly, but we pitched our tent on the floor, using nails for tent stakes, and slept dry, though, as there were no boughs in the vicinity, we found the planks rather hard. A small package of nails is a useful item in a camp kit, though one would seldom need them to nail up the tent.

Wednesday, Oct. 7.—The train arrived this morning at 8 o'clock from the other end of the road, and we loaded our outfit on a flat car. We waited half an hour before the tug arrived from Winton with a load of supplies going into the woods, and they were promptly transferred to the train. The distance across is four or five miles, and this landed us on Basswood Lake. Here is a log hoist for taking logs out of the water and loading them on cars, then they are hauled over to Fall Lake and dumped into the water again, to be towed to Winton. Here was a considerable depot of supplies and the shops and roundhouses of the "railroad." The road belongs to Swallow & Hopkins, who own one of the mills at Winton. We got on the water at 10 o'clock and paddled four miles around a point into a bay running southerly. The portage here is a little obscure at a distance, and we might have had some delay in finding it, but for some Indians who were going our way. They were going into Moose Lake. We got several snap shots of them, but owing to the dark weather the negatives were no good. It began to rain about this time, and kept up the rest of the day. The portage is about half a mile long. About half way across, it crosses a little creek, and here we put the light canoe in the stream and floated it down, and shipped the packs at the head of Wind Lake. We found our packs very much easier to carry than the canoe, although the canoe weighed little more than one pack. We ate lunch here, and started down the lake. Tried the trolling line here, but did not get anything; we hooked one on Basswood, but lost it.

The portage at the east end of Wind Lake was not marked on our map, but we ran down to the extreme end and fell right on it. It was now raining briskly, and we started to portage. This was a long hard carry and we did not get all our stuff over until 4 o'clock. We made a good camp, but could not get any wood that would burn well. Supper was cooked finally, with much pains and was thoroughly appreciated. We were pretty well soaked by this time, and were glad to get into the tent and tie the flaps tight and roll into the blankets

by 8 o'clock. It was comfortable enough there to suit any one, and we swapped lies about previous experiences of a similar nature, and decided that, with a good supper and a snug bed, we had no reason to kick. We prayed devoutly for fine weather before going to sleep, and, as it proved later, our piety was rewarded.

Thursday, Oct. 8.—In the morning we woke early and looked out to find it still raining, so we went back to bed for a couple of hours. By 8 o'clock, however, it ceased raining, and we emerged to get breakfast. While we were eating, the Indians overtook us. After breakfast we embarked on Moose Lake and paddled across the lake to an island on the opposite shore. From here we could see that we had camped within half a mile of a logging camp. The loggers had strung a boom across here between two islands, and we had to unload and lift the canoe over. The opposite shore was straight and bare, and we could see no indication of a portage. We decided to head straight south and approach the shore in a slanting direction; but when we got out from under the island we found so much of a sea running that we swung around and ran almost before it, and by good luck struck the shore right on the portage. The only mark distinguishable at 50yds. distance was the blaze on a big stump, for the shore has been burned, and the trail up the bank cannot be seen at any distance. By this time it had cleared off nicely. We started over the trail with our packs, but it is a stiff pull over to the other side, about a mile, and hard going. This was the hardest portage we made. These trails are all well traveled, but run over rocky ridges and down into swamp holes. When we got back to Moose Lake it was nearly 2 o'clock, and we ate lunch on the shore, before shouldering the canoe. This portage ends on a small lake, and when we got over there, we decided to camp. It was early still, but the sun was out and we wanted to dry out our stuff, which had all got more or less damp in the two days' rain. Here we made soda biscuits, for the first time and for a first attempt they were very successful, though not what an expert would call perfect. However, they were very much better than the remains of the bread, which had dried up and crumbled from rough handling.

Friday, Oct. 9.—This morning we started on the portage to Snowbank, it is about a mile long and nearly as bad as the one of the day before. We got our canoe over the trail by noon, and ate lunch in the sun on Snowbank Lake. We took several good pictures here. Snowbank is a large body of water, and would be a beautiful spot for a summer resort, if easily accessible. It took us until about 4 o'clock to paddle to the other end, the wind was light and we did not paddle very fast. We had no trouble in finding the outlet of the lake, which tapers off into a beautiful little arm, from which a little tumbling stream runs down over the rocks to a small pool about three hundred yards below. The stream runs through a cedar wood, and its waters are as clear and sparkling as champagne—the portage follows the bank of the stream, which is little more than a succession of falls and rapids. This place, the outlet and the portage and the surrounding woods, as we found them, in the evening flush of a splendid October day, made a scene of surpassing loveliness entirely beyond my powers of description. We camped on the little lake at the lower end of the portage on the moss carpet of a dried cedar swamp, and I never hope to find again such a beautiful spot for a camp. We tried fishing around the foot of the stream, but could not get a bite.

[TO BE CONTINUED.]

### A. C. A. Membership.

The following have been proposed for membership to the A. C. A.: Hilton H. Slayton, Frank P. Felton, J. H. Preston, Charles D. Dunnington, James Edmund, William L. Fitts, Alfred K. Hobbs, all of Manchester, N. H.; John B. Prazier, of Winchester, Mass.; James H. Darrah, of Winchester, N. H.; Charles F. Mighill, of Haverhill, Mass.; T. M. Josselyn, of Boston, Mass.; Alan Patterson, of New York city; Robert P. Nichols, of Ithaca, N. Y.; DeForest Candee, of New York city; Will N. Fox, of Baltimore, Md.

### Commissioners of the Palisades Interstate Park

OFFICE OF THE SECRETARY,

31 Nassau street, New York City, May 9, 1904.

Mr. Louis C. Kretzmer, Vice-Commodore Atlantic Division of the American Canoe Association.

DEAR SIR—The members of Yonkers C. C., Hiawatha C. C., Fort Washington C. C., Knickerbocker C. C., Brooklyn and New York C. C.'s, of Gravesend Bay, and also unattached members in good standing of the Atlantic Division of the American Canoe Association, are hereby authorized to camp during the summer of 1904 upon the lands belonging to the Commissioners of the Palisades Interstate Park, at such unoccupied points as they may select.

I desire to request you, in making announcement to the clubs and members of your association of the privilege thus extended, to call particular attention to the responsibilities which the commissioners consider accompanies it, namely, to preserve all property, especially trees, from destruction or injury, and to leave camp-sites in good order.

The commissioners rely upon the well-known self-respect of the men who will avail themselves of this camping privilege to observe these proper requirements, and also to actively co-operate with the commissioners in preventing depredations by others.

Very truly yours,

J. DU PRATT WHITE,  
Sec'y Commissioners Palisades Interstate Park.

### To Members of the Atlantic Division, A. C. A.

THE Division Meet will be held at Hermit Point, on the Hudson River, opposite Riverdale station, on the N. Y. C. & H. R. R. R., May 28-30, 1904. The location is at what is known as "the plateau," formerly occupied by a stone crusher—a landmark well known by canoeists of this section. It has the advantage of running water piped from a near-by spring, and affords facilities for a large camp, as well as an unobstructed view up and down the river.

A launch will be in attendance during the meet, for the convenience of the regatta committee, guests, etc.

If arriving by way of N. Y. C. & H. R. R. R., the station agent at Riverdale will arrange to signal for launch.

I would earnestly request that every member of the division attend, if possible, and can promise a most enjoyable time to those who do.

M. OHLMEYER,  
Purser Atlantic Division.

Messrs. J. K. Hand, chairman; W. D. Andrews and T. T. Craven will act as regatta committee for the racing events.

## Rifle Range and Gallery.

### Fixtures.

June 12-20.—National Schuetzenbund Festival, Union Hill, Schuetzen Park, N. J.

### New York Central Corps.

THE near approach of the National Bund festival is having its effect upon our local riflemen. At the practice shoot of the New York Central Corps at Union Hill Park, May 12, the members turned out in large numbers for practice. Fine weather conditions were in force. The ring, man, and bullseye targets were well patronized, and many good scores made. H. D. Muller made 73 out of a possible 75 on the ring target. Henry Koster was first on the man target, with 58 out of a possible 60.

Ring target, 3 shots, possible 75: H. D. Muller 73, R. Busse 70, H. Koster 70, Wm. Koch 68, B. Eusner 66, H. Kroger 64, F. Rolfe 63, C. Oltman 63, J. von der Lieth 62, Val Horn 62, H. Bockmann 62, D. Scharninghaus 62, W. J. Daniel 61, C. L. A. Gerken 61, F. Schroeder 59, Wm. Wessel, Jr., 59, Jos. Jordan 57, H. A. Ficke 56, Geo. A. Viemeister 54, D. Meersse 52.

Man target, 3 shots, possible 60: H. Koster 58, R. Busse 57, F. Schroeder 57, H. D. Muller 56, Wm. J. Daniel 56, Val Horn 55, D. Scharninghaus 54, Geo. A. Viemeister 54, C. Oltman 52, Jos. Jordan 50, H. Bockman 50, F. Rolfe 50.

Company bullseye flags: R. Busse 3, H. D. Muller 2, Wm. Koch 2, H. Koster 1, H. A. Ficke 1, C. Oltman 1, E. Richards 1, J. von der Lieth 1, F. Rolfe 1, D. Scharninghaus 1, H. von der Lieth 1.

Cash bullseye: F. Schroeder 4, H. D. Muller 3, Val Horn 3, Wm. Wessel, Jr., 3, Jas. Jordan 1, J. von der Lieth 1, C. F. Tietjen 1, A. Ritterhoff 1, Wm. J. Daniel 1, D. Scharninghaus 1, D. Meersse 1, F. Jaeger 1, H. Bockman 1.

Trophy bullseye: D. Scharninghaus 3, H. D. Muller 2, Wm. Koch 2, H. Bockmann 1, C. L. A. Gerken 1, F. Rolfe 1, R. Busse 1, F. Jaeger 1, H. Roffmann 1.

### Zettler Rifle Club.

A FEW of the members of the Zettler Club were on the Union Hill range on Saturday of last week. Only three members kept their scores for record. Geo. Schlicht's shooting was first-class, and his scores were of a high order.

Geo. Schlicht, 226, 223, 221, 223, 227, 219; W. A. Tewes, 225, 219, 214; Geo. J. Bernius 192, 186, 184.

### Rifle Notes.

The New York Independent Corps will hold its annual king and prize shoot at Union Hill Park on May 24 and 25. The ring and bullseye targets will be open to all visiting riflemen. Captain Gus Zimmermann, who was elected captain of the corps in January of the present year, will be in charge of the festival, and with his shooting masters, Lambert, Schmidt, Wm. Soll, and Secretary Henry Behrens, will look after the comfort of all visiting riflemen.

The Zettler Rifle Club will hold its third practice shoot at Union Hill Park on Saturday, May 21.

The many improvements that are going on in the Union Hill Park, West Hoboken, N. J., in preparation for the great festival in June, will be a pleasant surprise to the riflemen who will attend the coming festival. Ten new targets have been added to the range, 200yds., making in all that will be used at the festival thirty-two. This coming festival will be the first Bundesfest that has been held in this park since 1878. Much is expected by the riflemen of the country in this coming festival, for the reason that there seems to be a revival of interest on the part of the people in the rifle.

## Trapshooting.

### Fixtures.

May 18.—Wellington, Mass.—Fifth annual team shoot and target tournament of the Boston Gun Club.  
May 18.—Boston, Mass.—Gun Club annual team target shoot. H. Kirkwood, Sec'y, 23 Elm street, Boston.  
May 18-19.—Auburn, N. Y., Gun Club tournament. Jos. H. Knapp, Mgr.

May 18-20.—Columbus, Neb.—Nebraska State Sportsmen's Association's twenty-seventh annual tournament. G. A. Schroeder, Sec'y.

May 19-20.—Oklahoma City.—Territorial Sportsmen's Association fifth annual tournament; \$300 added money. J. C. Clark, Sec'y.

May 19-21.—Minneapolis, Minn., Gun Club handicap target tournament. Fred E. McKay, Sec'y and Mgr.

May 20.—Charlotte, N. C., Gun Club tournament.

May 21.—Princeton, N. J.—Princeton University vs. University of Pennsylvania.

May 23-25.—Houston, Tex.—Texas State Sportsmen's Association tournament.

May 24-25.—Marshalltown, Ia., Gun Club two-day target tournament.

May 24-25.—Olean, N. Y., Gun Club two-day tournament. B. D. Nobles, Sec'y.

May 24-25.—Natchitoches, La., Gun Club tournament.

May 24-25.—Mt. Sterling, Ky.—Kentucky Trapshooters' League tournament. Frank Pragoff, Sec'y, Louisville, Ky.

\*May 25-26.—Brownsville, Pa., Rod and Gun Club.

May 25-26.—Shamokin, Pa., Gun Club Spring shoot. S. C. Yocum, Sec'y.

May 27.—Brenham, Tex.—Contest for Houston Chronicle challenge cup between Otto Sens, holder, and Dave Curren, challenger.

May 28-30.—Butte, Mont.—Montana State Sportsmen's Association eleventh annual tournament at targets; \$500 added. C. H. Smith, Sec'y.

May 30.—Utica, N. Y.—Riverside Gun Club all-day target tournament; free merchandise prizes. E. J. Loughlin, Sec'y.

May 30.—Newport, R. I.—Aquidneck Gun Club's third annual tournament. J. S. Coggeshall, Secretary, Box 9, Newport, R. I.

May 30.—Albany, N. Y.—West End Gun Club tournament. H. H. Valentine, Sec'y.

May 30.—Detroit, Mich.—Winchester Gun Club fourth annual Decoration Day tournament. T. M. Brodie, Sec'y.

May 30-31.—Norristown, Pa.—Penn Gun Club holiday shoot. A. B. Parker, Sec'y.

May 30.—McKeesport, Pa.—Spring tournament of the Enterprise Gun Club. Geo. W. Mains, Sec'y.

May 30.—Ossining, N. Y., Gun Club Decoration Day target shoot. C. G. Blandford, Capt.

May 31.—Dayton, O.—Rohrer Island Gun Club spring target tournament. W. E. Kette, Sec'y.

June 1-3.—Watertown, S. D.—South Dakota State Sportsmen's Association tournament. F. J. Cory, Sec'y.

\*June 7-8.—Ligonier, Pa., Rod and Gun Club.

June 7-9.—Sioux City, Ia.—Soo Gun Club's tenth annual amateur tournament; added money. W. F. Duncanson, Sec'y.

June 8-10.—Huntington, W. Va.—West Virginia State Shoot. F. H. Merrick, Sec'y.

June 9.—Westchester, Pa., Gun Club target shoot. F. H. Eachus, Sec'y.

June 9-10.—Peru, Ind., Gun Club eighth annual tournament. Wm. Daniels, Sec'y.

June 13.—Middleton, Wis., Gun Club tournament. Frank L. Pierstorff, Mgr.

June 14-15.—Wilkes Barre, Pa.—Hanover Park Shooting Association target tournament. E. L. Klipple, Sec'y.

June 14-16.—Akron, O.—Ohio Trapshooters' League target tournament. G. E. Wagoner, Sec'y.

June 14-16.—New London, Ia., Gun Club midsummer tournament. Dr. C. E. Cook, Sec'y.

June 14-17.—Warm Springs, Ga.—Target and live-bird tournament. Chas. L. Davis, Mgr.

June 15-16.—Battle Creek, Mich.—Tournament of the Michigan State Trapshooters' League. L. K. Forsythe, Sec'y.

\*June 16-16.—Millvale, Pa., Rod and Gun Club.

June 15-17.—Lincoln, Ill.—Illinois State Sportsmen's Association tournament. James Davis, Sec'y.

June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Coltart Square, Pittsburg, Pa.

June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club; strictly amateur; \$500 added money. John M. Lilly, Pres., Indianapolis.

## DRIVERS AND TWISTERS.

The Peru, Ind., Gun Club will hold their eighth annual tournament on June 9 and 10. Mr. J. L. Head is the president; Wm. Daniels, secretary.

Mr. John Ingersoll, president of the Eastern Michigan Gun Club, Armada, Mich., informs us that his club will hold a two-day shoot on July 21-22, and that \$100 will be added.

Mr. W. H. Heer, of Concordia, Kansas, one of the U. M. C. Co.'s most expert trapshooters, is ill with malaria at his home; but fortunately he is not severely afflicted, and it is expected that he will resume his trapshooting duties in a few days.

Mr. Edward Rike, of Dayton, Ohio, will represent the U. M. C. Company for several months as its shooting representative in place of his friend Mr. R. O. Heikes, who is convalescing from typhoid fever. Mr. Rike will visit gun clubs in Pennsylvania and Ohio in the interest of the U. M. C. Company.

In the contest for the automobile, held by the South Side Gun Club, of Newark, on Saturday of last week, Mr. J. Hendrickson, of Freeport, L. I., was high, with a score of 94 out of a possible 100. In the professional competition for the cup, Mr. J. A. R. Elliott was high with a score of 93.

In the third trophy event of the Garfield Club, at Chicago, May 14, Dr. Huff and Mr. Richards tied in Class A on 22. Mr. Bullard was first in Class B with 25, and Mr. Hathaway was first in Class C with 20. In the cup shoot the winners were: Class A, Dr. Huff, 23; Class B, Mr. Thomas, 21; Class C, Mr. Weydel, 15.

The match at 50 trained birds, \$500 a side, 21yds. rise, gun below the elbow, use of one barrel; between Messrs. Fred Coleman, of Philadelphia, and Fen Cooper, of Mahanoy City, Pa., was held at the latter place on May 14. Coleman won by a score of 45 to 42. The birds were a trained lot, and a gusty wind helped them. Mr. Frank E. Butler acted as referee.

At the shoot of the New York Athletic Club, held at Travers Island on May 14, the May cup was won by Dr. J. G. Knowlton with a straight score of 25. He also made a straight score of 25 in the shoot for the special cup, but was tied by Mr. W. P. Norton whose handicap of three allowance was needed to make the tie. Mr. Knowlton and Mr. Barnes tied on 50 for the Sauer trophy.

Mr. E. L. Klipple, of Wilkesbarre, Pa., writes us as follows of the target tournament to be held there on June 14 and 15: "The shoot held here last year was a big success, being attended by fifteen experts, one of whom was Annie Oakley. All were more than satisfied with the accommodations and management. This is a good field for the manufacturer, as the tournaments here are attended by large crowds of spectators—1,500 on the last day of the shoot last year." The programme provides ten events each day, at 10, 15, 20 and 25 targets, entrance 70 cents, \$1.30, \$1.90 and \$2. Shooting begins at 9 o'clock. Targets, 2 cents. Manufacturers' agents may shoot for targets only. High amateur average each day, \$3. Moneys divided 40, 30, 20 and 10 per cent. Lunch will be served on the grounds. Guns and ammunition can be shipped, prepaid, to the manager, Mr. Edgar L. Klipple, 71 S. Main street.

We are informed that Capt. H. C. Aspinwall, manager of the Lafin & Rand powder works, at Haskell, N. J., is suffering from a severe illness, the nature of which we do not learn. Capt. Aspinwall has many devoted friends who will deeply sympathize with him in his illness. Besides his admirable social qualities, he, in his profession, is considered one of the highest authorities on ballistics and the manufacture of powder. May good health speedily return to him.

The Chicago Trapshooters' Association provided twelve events, 10, 15 and 20 targets, \$1, \$1.50 and \$2 entrance, for competition at their tournament on May 29 and 30. Added money \$60. All shoot from 16yds. The Rose system will govern. In the Watson Park handicap at 100 targets, the handicaps will be from 16 to 19yds. The trophy in this event will be a silver cup. Conditions, 50 targets each day, entrance \$5. The secretary-treasurer is Mr. E. B. Shogren, 940 First National Bank Building, Chicago.

The Missouri League of Trapshooters have selected Du Pont Park, St. Louis, as the place, and May 23 as the date of their second tournament. There are twelve events on their programme, at 15, 20 and 25 targets. The former two are \$1.50 and \$2 entrance. Events 11 and 12, 25 targets, entrance \$2.50, are respectively the champion event and the 2-man team event. All shooters will stay at Canvasback Camp, comfortable waterproof tents on the shooting grounds, concerning which address Mr. Alec D. Mermod.

The Decoration Day tournament of the West End Gun Club, of Albany, N. Y., provides twelve events, all at 15 targets save one at 25 targets. Entrance to 15-target events, \$1.30. The 25-target events is the Ithaca gun contest, entrance \$1.50. Targets, 2 cents. The purses are for amateurs only. Shooting commences at 10 o'clock. Purses divided 40, 30, 20 and 10 per cent. High averages in events 3 to 12 inclusive, \$3, \$2 and \$1, first, second and third respectively. The secretary is Mr. H. H. Valentine.

There are fourteen events, each at 15 targets, on the tournament programme of the Waterloo, Ia., Gun Club, for each of the two days, May 26 and 27. Entrance, \$1.50. Added money, \$100. Shooting commences at 9 o'clock. The competition is restricted to amateurs. Professionals may shoot for targets. Moneys divided 40, 30, 20 and 10 per cent. Ship shells to H. E. Weitnauer, prepaid, and they will be delivered on the grounds free. Mr. Fred Whitney will have charge of the office. Mr. E. E. Hageman is the secretary.

Mr. Oswald Von Lengerke, of the firm of Von Lengerke & Antoine, Chicago, was a visitor in New York during the past week. He contemplated returning to Chicago on Tuesday of this week. He participated in the shoot of the South Side Gun Club of Newark on last Saturday. The cares of business, however, leave him less time now for the pleasure of trapshooting than formerly. In the course of ten years, from a modest beginning, his firm has built up a great sporting goods establishment, employing eighteen salesmen. Nevertheless, Mr. Von Lengerke retains his active participation in field shooting, in which specialty he is an expert shot as he is at the traps, whether at live birds or targets.

At the tournament of the Wawaset Gun Club, held at Wilmington, Del., May 12 and 13, Mr. J. A. R. Elliott on the first day made the excellent average of 173 out of 180 from the 18, 19 and 20yds. mark. He made one run of 86 straight. Mr. E. D. Fulford was second with 167; E. C. Griffith, third, 165; Mr. L. H. Schortemeier, fourth, with 164. On the second day the high averages were: J. Mowell Hawkins, first, 169 out of 180; second, a tie on 168, between Messrs. J. A. R. Elliott and E. C. Griffith; third, Mr. Luther Squier, with 164; fourth was a tie between Messrs. Ed. Banks and F. C. Bissett, on 160. For the two days, shooting at a total of 360 targets, high averages were as follows: Mr. J. A. R. Elliott, 341; Mr. E. C. Griffith, 333; Mr. J. Mowell Hawkins, 329; fourth, Mr. E. D. Fulford, 325.

A letter from Mr. R. O. Heikes, of Dayton, O., to us conveys the welcome information that he is convalescing from his recent severe attack of typhoid fever which lasted eight weeks, and which reduced his weight about fifty pounds. He expresses gratitude for the many expressions of sympathy and heartfelt wishes for his recovery, and in particular for the beautiful tribute signed by so many of his friends at the recent Indianapolis tournament. All these solicitous remembrances have been very comforting to him and helped to pass hopefully the long hours of anxiety and illness. And yet the expressions which were sent to him were but a small fraction of the kindly words and earnest wishes for his recovery which were uttered at every place where shooters were gathered in any numbers, for "the Daddy of them All" deservedly holds a very high and warm place in their esteem and affection. May his perfect return to health be speedy, and high averages again be his as of old.

The twenty-seventh annual tournament of the Missouri State Game and Fish Protective Association, to be held under the auspices of the St. Louis Shooting Association, at Du Pont Park, St. Louis, May 23 to 28, has a programme of target and live bird competition. On Monday, first day, there will be shot the State Association 4-man team medal shoot, 15 targets per man, entrance \$20 per team; the Missouri State individual championship, 25 birds, entrance \$12.50, including birds, \$20 in cash added; and the Interstate individual championship shoot, 25 birds, entrance \$12.50, \$20 added. The two latter events are to be shot together. On the second day the main event is the pigeon wing championship, emblematic of the live bird championship of America. It is open to the world. Conditions, 25 birds, entrance \$25, handicap. How this and other events can be a handicap, and at the same time have a championship significance, is not explained. Championship contests are never handicaps. There are eight target events on this day, at 15 and 20 targets, \$1.50 and \$2 entrance, \$15 and \$20 added. The third day has eight target events, of which three are merchandise. The main event of the fourth day is for the Mermod-Jaccard cup, for the amateur live bird championship. This is a handicap at 25 live birds, \$15 entrance. There also are eight target events, 15 and 20 targets, entrance \$1 and \$1.50. On the fifth day, there is a 10-bird event, entrance \$7, handicap, open to the world. Ties on the Mermod-Jaccard cup will be shot off on this day. There also are eight target events, of which three are merchandise. The sixth day will be a "special and novel features at live birds and targets." Shooting will commence at 9 o'clock. Messrs. Hart Bronaugh and Mr. Leslie M. Standish will have charge of the cashier's office. For further information, address Mr. Alec D. Mermod, 620 Locust street, St. Louis.

BERNARD WATERS.

## WESTERN TRAP.

## Texas State Tournament.

(Continued from page 410.)

The third day of the big shoot, May 5, was started with some of the events delayed, owing to rains, but all went along fast and the traps were tested to their utmost capacity.

The principal event was that of the individual target championship. If ever a man shot and sweat and then sweat some more, it was Faurote. Having held the badge for the past year, he finally won it again with a score of 49 out of 50, though not without a tie. Dr. E. L. Hann, of Denton, came on slow but sure, and made the last 25 straight. The Doctor was so wrought up by the congratulations that he fell down in the shoot-off and made but 16, while Faurote busted 24.

In shooting at 220 targets, Gilstrap, of Taylor, finished with 201; Louis Moeser, of Houston, 198, and M. E. Atchison, of Gidding, third, 195. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	Broke.
Targets:	20	20	20	20	20	20	20	20	20	20	20	
F. M. Faurote, 19.....	20	20	19	17	19	16	20	20	49	15	18	14

## Fourth Day, May 5.

Last night the entire shooting party were conveyed over the principal streets of the city in "trolley party" cars. The band accompanied the party, and when it played "Hot Time" and "Dixie," there was much cheering and singing. Several of the visitors were called on for speeches, but none was equal to the occasion, save that of Mr. Hildreth. He gave some ideas on shooting, and especially urged every one to teach the rising generation how to shoot.

Besides the regular 200 target events for the day, the special event was the two-man team championship of the State. It was won by Hubby and Fosgard, of Waco. It was a nerve-trying race, as the missing by either of a target would have tied the score of Faurote and V. C. Sens and Mather also made 48, as did Skannel and Bosley; but their scores did not count, being from outside the State.

Last year it was won by Heard and Moeser, of Houston, but for some cause Heard is not quite himself at this shoot.

During the evening the annual business meeting was held, and some changes were made that will bar out such good ones as Faurote, Hubby, Miller and Wade. The by-laws were amended so as to bar out professionals from the contests, and made the medals subject only to annual contest, instead of being subject to challenge every thirty days, as heretofore.

The next State meeting will be held in Waco. The officers elected were: President, F. K. Sterritt, of Abilene; Vice-President, J. A. Jackson, Austin; Secretary, George Tucker, of Brenham. Before adjournment a resolution was passed returning thanks to President Bryan Heard and the citizens of Houston for the many courtesies extended during their visit. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	Broke.

No. 8 is for team medal, 25 targets per man, teams and scores as below:

Austin—J. A. Jackson, Miller, 44.  
 Houston—Heard, Cleveland, 42.  
 Houston—Sens, Moers, 48.  
 Nacogdoches—Wade, Ingraham, 45.  
 Dallas—Faureto, Dorgan, 49.  
 Brenham—Lockett, Tucker, 42.  
 Brenham—Graber, Gardiner, 36.  
 Albany—Mr. and Mrs. F. K. Sterritt, 43.  
 Waco—Hubby, Fosgard, 50.  
 Ennis—Currant, Diunkerly, 43.  
 Shreveport—Skannel, Bosley, 48.  
 Shreveport—Pickett, Boisseau, 38.  
 Shreveport—Marsden, Bryan, 42.  
 New Orleans—Chaudet, Kaufman, 33.  
 Houston—Sublett, Thomas, 41.  
 Houston—Parker, Raper, 41.

It has been suggested that the next annual tournament to be held at Memphis shall be open to all. The dates will soon be set, and programmes issued. Those having charge of same are J. C. Crook, 331 Main street, and A. H. Frank, 16 Union street. Rhinelander, Wis., May 6.—H. W. Cadwallader, traveling for the Peters Cartridge Company, dropped in and a club shoot was organized. Shooting at 50 targets each, the scores were: Cadwallader 46, Reardon 42, Weemer 41, Dr. Ganner 41, Morgan 40, Dume 39, Forbs 39, Gilligan 33, Daux 32.

At Hammond, Ill., May 7, the club members got interested, and as L. S. Carter was finding every one of them and broke 100 straight, it encouraged the others until all shot at 100 targets. Interest is growing and the membership is increasing. The scores, each shooting at 100 targets: Carter 100, Somous 94, E. A. South 93, Smith 93, South 92, Silvers 89, Bryson 82, Ryan 80. The shooting was done over expert traps, and unknown angles. Carter has broken the last 200 straight shot at on these grounds.

July 18, 19 and 20 there will be, at South Platte, Neb., a tournament with \$200 added money and two handsome trophies, one of which will be that of the Denver Post. This tournament will be given by the Buffalo Bill Gun Club.

### Ohio Trap.

#### Cincinnati Gun Club.

The second match in the series for the amateur championship of the club was shot on May 8, Gambell being high man with 91, Barker second with 90, and Harig third with 87. The conditions were quite favorable, and good shooting was done by all. Williams is getting back into his shooting form, and has been doing good work lately, both at practice and in the regular events.

May 14 was a cold, cloudy day, with strong wind, and the unfavorable weather prevented a large attendance. Seventeen men took part in the Parker prize gun shoot, but only six succeeded in making the full score. Max Hensler and F. Priddy were at the grounds, the former making high score in the main event, breaking 89, but shooting for targets only. Of the contestants, Randall was high in actual breaks with 87; Peters second with 85. For the first time in several weeks Jack was on hand and lacked but one of making the full score.

The club will hold an all-day shoot on Decoration Day, and it is hoped that a crowd will be present, as an interesting programme has been prepared by Supt. Gambell.

The club held its annual meeting on May 13 at the Stag Cafe, when the following directors were elected: E. B. Barker, Joseph Coyle, E. A. Donnelly, R. F. Davies, H. Jergens, Geo. Krehbiel, H. Osterfeld, A. M. Norris and R. West. The board will hold a meeting for organization very soon.

Parker prize gun shoot, 100 targets, handicap of added targets: Randall (15) 100, Peters (20) 100, Boeh (40) 100, Harig (40) 100, Herman (30) 100, Kramer (40) 100, Williams (18) 99, Bullerick (30) 99, Jack (30) 99, Maynard (18) 97, Captain (25) 94, Steinman (22) 93, Ahlers (10) 91, Roanoke (40) 90, Medico (12) 83, Block (18) 82, Hensler (for targets) 89.

#### Phellis Trophy Shoot.

The six-man team of the Cincinnati Gun Club visited Dayton on May 10 and shot a match with the Buckeye Gun Club, for the above trophy, which the latter won from them in April. The match was very closely contested, and the result remained in doubt until the last shot was fired, when the totals showed in favor of the home team by 244 to 242.

The Cincinnati boys arrived in Dayton at about 10 o'clock. They were met at the station by Messrs. Craig and Curphey, and after lunch, proceeded to the grounds and indulged in practice shooting for a while.

The conditions of the match were 50 targets per man, 16yds. rise. At the close of the first round the Cincinnati team led by two targets, with 121 to 119. In the second round most of the Buckeye shooters improved on their previous work, though Craig, for some reason made a poor showing. The visiting shooters improved a little, but Barker did not show up as well as he is capable of, and Gambell and Faran fell off a little, giving the round to the home team by 4 targets, 125 to 121.

Barker's falling off from his usual good form is unaccountable, as in the practice events he lost but 8 out of 75, and broke 46 out of the last 50. Faran is also capable of better work, as his scores at home will show.

Gambell tied with Rike on 45 for high gun in the match. Second and third high guns went to Garlough and Raymond, of the home team, with 44 and 43 respectively.

The visitors were entertained at dinner in the evening by the Buckeye boys, who, as usual, treated their guests to the best of everything, and took as much as possible out of the sting of defeat. The Cincinnati will have another try, and the cup will surely reach their club house once more.

Phellis trophy match, six-man teams, 50 targets per man. Scores:

Buckeye Team.					Cincinnati Team.				
Rike	23	22	45	Medico	20	22	42		
Lindemuth	17	22	39	Harig	19	21	40		
Miller	18	21	39	Maynard	17	22	39		
Garlough	21	23	44	Faran	20	18	38		
Raymond	20	23	43	Gambell	24	21	45		
Craig	20	14	34	Barker	21	17	38		
119 125 244					121 121 242				

#### Springfield Gun Club.

The tournament of the Springfield, O., Gun Club on May 11 and 12 was a success, thirty-seven shooters taking part on the first day, twenty-one of whom shot the entire programme. There was a good representation of visiting sportsmen from Cincinnati, Dayton and other cities. The tournament was in charge of Capt. Ben Downs, which is assurance that everything was well arranged, and that no hitches occurred. The weather was fine on both days.

The shooting began at 9 o'clock promptly, and proceeded smoothly, so that the last of the eleven events on the first day were finished at 5 P. M.

Among the visitors was A. W. Ryan, of Troy, who did some shooting, and a lot of good work in the interest of the new Dayton Gun Club.

R. Trimble and Taylor tied for high gun on 166; C. O. Le Compte, of Eminence, Ky., second with 164; Hensler third with 161.

On the second day the crowd had thinned out somewhat. A few new shooters were present and twenty-two took part in the programme, fourteen shooting in all events.

Le Compte was high gun with 167; Trimble second with 165; Young and Fisher tied for third on 160 each; Gamble fourth with 159.

Eleven events at a total of 180 targets were shot each day; \$50 added and all surplus added.

High average was tied for by Le Compte and Trimble on 331; Young second with 324; Taylor third with 320. The scores:

First Day.												Shot	at.	Broke.
Events:	1	2	3	4	5	6	7	8	9	10	11			
Targets:	15	15	20	15	15	20	15	15	20	15	15

#### Notes.

The East End Gun Club, of Toledo, O., entertained Mr. Hensler, the well-known crack shot of Michigan, on May 8, and a pleasant afternoon of sport was enjoyed by the twelve men present. No. 23 was high gun with 93 out of 100; No. 44 second with 91 and Hensler third with 87. The next shoot will be held on May 22, and on Decoration Day the club plans to have a big tournament.

Twelve shooters took part in the regular semi-monthly shoot of the Here He Goes Gun Club, of Cincinnati, on May 8. The weather conditions were good, and Geo. Osterfeld headed the list with the good score of 45. H. Osterfeld was second with 40. The club extends a cordial invitation to trapshooters to attend their shoots, and visitors may feel assured of a welcome. The next shoot will take place on May 22.

At the Rohrer's Island Gun Club shoot, fifteen members took part in the regular weekly handicap, for the medal on May 11. Hanauer and Ballman tied on full scores of 25, and in the shoot-off the former won by one target. C. Smyth did excellent work at doubles, beating W. E. Kette by a score of 18 to 14 out of 10 pairs.

#### Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., May 12.—Two new contests were begun in this club to-day that should, before they are completed, become very interesting to those competing, as well as stimulate the shooting.

Mr. H. W. Bissing has donated a medal to be shot for on the sliding handicap system, and to-day being the first shoot, all men were started at 19yds., and the race fell to Capt. Traver. The other prize, 1,000 Peters highest grade shells, donated by H. E. Winans, will be shot for weekly until won five times by some one, when they become his own. The shell contest will be conducted on the added break system, the allowances being determined from the average taken from last five trophy shoots of each competitor. The Bissing medal must be won four times by some one man before the contest will close.

The shell race, although a tie at first between Traver and Perkins, was won by Traver.

Events:	1	2	3	4	5	6	7
Targets:	10	15	10	25	25	25	10
Traver (3)	9	11	6	18	22	20	7
J Rhodes (5)	7	9	8	15	17	19	7
Hans (5)	9	6	8	..	17	20	11
*Winans	7	13	..	12	20	..	..
Perkins (5)	9	11	..	13	22	17	..

Wilmington Tournament.

THE amateur tournament of the Wawaset Gun Club at Wilmington, Del., on May 12 and 13, was favored with delightfully pleasant weather. Both days were clear, warm and comfortable. They were the best of the spring time. And good fellowship prevailed.

The tournament was a success in every particular. There was an ample attendance of shooters; indeed, the number of contestants was quite sufficient to comfortably tax the capacity of the two sets of traps, one set expert, Sergeant system, the other a Leggett trap.

There was a crowd of spectators, brave gentlemen and fair ladies, who each day watched the competition with unabated interest.

The cashier's and scorer's departments were presided over by Messrs. L. D. Thomas and Luther J. Squier, assisted by Mr. J. T. Skelley. Each of these gentlemen participated in the competition also, and therefore it is unnecessary to mention that they were very busy men indeed. Mr. Squier, having the handicaps and entries to care for, was busy incessantly, and must have experienced a sensation of relief when his tournament labors were ended. Several of the club members acted betimes as squad hustlers, of which the duties were unusually laborious, owing to the heedlessness of many of the contestants. Mr. W. M. Foord was chief hustler, and shot in the competition also.

The manufacturers' agents present were Messrs. T. H. Keller, New York; J. A. R. Elliott, Kansas City; J. Mowell Hawkins and E. H. Storr, Baltimore; E. D. Fulford, Utica; Luther J. Squier, Wilmington.

The nearby cities were well represented. From Baltimore there were the famous shots, Messrs. J. R. Malone, J. W. Chew, Dr. Lupus and Lester German. Mr. and Mrs. W. K. Park, of Philadelphia, shot through the programme on the first day, and tied on the total result. Mrs. Park's shooting was watched with much interest by the spectators, and the graceful, quick manner in which she handled the gun and the admirable precision with which she shot it, evoked much praise. Mr. W. Wagner, of Washington, after a practical retirement of two years, was again in the competition, and was warmly welcomed. Mr. E. C. Griffith, of Pascoag, R. I., famous as a first-class expert, was present, and was among the leaders. Media, Pa., was represented by Messrs. H. Powell, A. Evans, Pennington and Sweeney. Mr. L. H. Schortemeier, of New York's experts, was among the leaders in the competition. The local shooters gave the tournament strong support.

Every courtesy and attention was extended to the visitors. On Thursday evening, through the courtesy of the Messrs. duPont, a large party of the shooters witnessed an excellent vaudeville performance in the Garrick theatre. It was an entertainment most thoroughly enjoyed by all the party.

As a whole, the conditions were favorable for high scores. The targets were not thrown hard. The grounds are open and pleasant. A large level, green field extends about 200yds. in front of the traps, and thus the contestants have a reasonably clear view. Yet, aside from the performances of the experts, the scores as a rule were below the average.

A large open tent, well provided with camp-chairs, afforded a pleasant place for rest, lunch and refreshments.

The high averages of the two days were as follows: Mr. J. A. R. Elliott, 341; E. C. Griffith, 333; J. M. Hawkins, 329; E. D. Fulford, 325. These averages were made on a total of 360 targets.

There were twelve events each day, each at 15 targets, \$1.30 entrance; \$5 added. The totals therefore each day were 180 targets, \$60 added; entrance, \$15.60. The Rose system, ratios, 5, 3, 2, 1, governed the division of the moneys. The winnings, therefore, were not high, and the losses were correspondingly at a minimum. Event 1 on the first day paid as follows: 15 targets, \$3.40; 14 targets, \$2.05; 13 targets, \$1.35; 12 targets, 65 cents. Some of the events ran more, some less, but the foregoing will convey a fair idea of the average purses. The sliding handicap, 16 to 20yds., maintained a constant equity. Five per cent. of the net amount of the purses was deducted to be divided pro rata among the amateurs who did not win their entrance.

First Day, May 12.

On the first day sixty-six shooters participated. The feature of the competition was the phenomenal shooting done by Mr. J. A. R. Elliott. He broke 173 out of 180, over 96 per cent. Of the events, one was at 18yds., three at 19yds., and eight at 20yds. He made a run of 56. This was an extraordinary performance, and so far as we know, it is unequalled. Mr. E. D. Fulford was second with 167, an excellent performance also. Mr. E. C. Griffith was third with 165, and Mr. L. H. Schortemeier was fourth with 164. The weather was clear and pleasant. A stiff breeze from 12 o'clock

blew in the faces of the contestants at the firing points, but it soon died away to a perfect calm. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot

Second Day, May 13.

The day was soft and balmy, a delightful spring day and favorable for good shooting. A breeze blowing from the shooters toward the traps tended to depress the targets, and consequently the shooting was harder.

In the ninth event the Leggett trap failed to work properly, thereby seriously impairing the scores of the back-mark men. Owing to the rubber of the trap being worn, the targets failed to rotate, and the scores fell off astonishingly. Elliott, who was making a great race for the day's average, suffered most, scoring only 10 out of the 15 targets of that event.

The high averages of the day were: First, Mr. J. Mowell Hawkins; second, Messrs. J. A. R. Elliott and E. C. Griffith, tied on 168; third, Mr. Luther J. Squier, 164; fourth, Messrs. Edward Banks and F. C. Bissett, 160. Mr. Hawkins made a run of 57 from the 20yd. mark.

About 17,200 targets were used during the tournament. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	at.

### COLORADO DEER HIDE DECISION.

THE opinion of Judge Maxwell of the Court of Appeals of the State of Colorado in the famous deer hide case, is one of great importance, and offers much encouragement to all friends of game protection. Owing to the fact that most game law cases are criminal in their nature, as well as to peculiar local conditions, convictions under these laws have been very unusual, and this is the first case of the kind in Colorado that has found its way into an Appellate Court. Here it has been handled with that breadth of view which might have been expected.

Judge Maxwell decides that the plaintiff in this case of replevin was in unlawful possession of 300 deer hides, and that the plaintiff was able to show by the testimony in the case no ownership or right of possession. The statute of Colorado prohibits traffic in the game of the State or any part thereof, no matter when killed, unless such traffic is expressly permitted by law.

Judge Maxwell therefore reverses the decision of the lower court, and remands the case back to that court, with definite instructions to dismiss the action. The effect of this reversal and instruction is to uphold the statute and to make the possession of deer hides in quantity, and so presumably in contravention of law, very dangerous business.

The case for the State was ably handled by Mr. S. G. McMullin, the District Attorney, assisted by Hon. D. C. Beaman, so well known for his efficient and unwearying work for game protection. Both these gentlemen deserve great credit for able work done.

### A PERPETUAL BENEFACTION.

It is but a few weeks since we alluded to the importance of the establishment by the various State governments of reservations set aside for the use of the people, but where the native life occupying these reservations should be protected from harm or molestation. The idea is a natural sequence of the proposed government forest game refuges, first suggested in *FOREST AND STREAM* some years ago.

No argument is needed to prove the desirability, and the usefulness to the public, from the points of view of pleasure and of health, of such reservations, parks, breathing places—we may call them what we will—where for a season the current of the busy man's thought may be changed, and he may rest and recreate. The idea is grasped by the public mind slowly, but if grasped slowly it is firmly held; more than that, an appreciation of its importance is constantly growing.

It is many years since complaints first began to be made about the private game preserve. Americans had always been free to hunt where they pleased, to fish in any waters that they could reach, and when farsighted people saw that the game and fish must go, and began to purchase fishing rights, or to lease shooting lands for their own private uses and to keep the public off, there was much bitter grumbling. There is complaint still, and we have lately heard much of it about the huge preserves of the Adirondacks; yet this establishment of private preserves is confined to no section of the land. Rivers, lakes, and square miles of territory by the hundred are leased in Canada, while in the South the marshes of the sea coast are taken up from Maryland to Florida; further inland, quail grounds are leased in blocks of 20,000 or 30,000 acres by single associations. What, then, is the American citizen to do, provided circumstances do not admit of his belonging to some club which owns a preserve? Obviously he must turn to free land for his game supply, and this free land must be controlled by State or Federal Government. This precise point was made by the President of the United States a year or two since, when he declared that in this democracy it was the part of the Government to set aside tracts where the game should be absolutely protected in order that it might overflow into unprotected territory, and so might furnish hunting and shooting to the people who otherwise could have none.

Some States have offered fine examples of what might be done in setting aside these refuges, but there are many where the drive and rush of business have been too great for them as yet to give attention to this matter.

An interesting example of how the importance of such reservations is coming to be understood has been recently given by Mr. Jos. Battell, of Middlebury, Vt. Mr. Battell has lately purchased Ellen Mountain, which rises 4,000 feet above the town of Warren, Vt., with the purpose of converting this mountain into a park for the benefit of

the citizens of his State. The act is an interesting one, and shows not only originality but foresight. It means far more to the State than any gift that could be made. Library or public building is not to be compared with it, for libraries can be had from many men and in the far future, but the time is coming when wild land and wild creatures to stock that land cannot be had.

In an adjacent State the late Austin Corbin established his famous Blue Mountain Park as a hunting preserve, in which, however, so little hunting was done as hardly to interfere with the rapid increase of the wild animals there. Mount Ellen may become a lesser Blue Mountain Park. Let us hope that in many another State men will be found who will purchase for the benefit of their fellows large tracts of land to be used as parks or game refuges, free—under proper limitations—to the whole public.

### "THE GOOD OLD TIMES."

WITH the ceaseless struggle for existence enjoined on all mankind, there are associated many discomforts which evoke innumerable complaints. Many of them refer to real or imaginary physical ills; many more are the results merely of unhappy states of mind.

It is a peculiar phenomenon of the average human intellect that a pet idea—existing in idea only—is likely to be accepted by its possessor as sound knowledge of universal application. Of these, none is more fallacious than the cherished plaint of many elderly or provincial people declaring how much happier and better life was in the past than is life in the sordid present. The past is referred to tenderly and regretfully as "the good old times."

Few men realize that the human nature of to-day is precisely the same human nature which existed in "the good old times;" that manners of living have been constantly and comprehensively progressing toward the betterment of all classes; that the common comforts of to-day were the limited luxuries of "the good old times," and that many comforts at present enjoyed by all classes were unobtainable in "the good old times," for the sufficient reason that they did not then exist.

The deteriorating changes which the elderly individual attributes to the world at large, are changes chiefly within himself. As a man advances in mature years, his ideas of enjoyment become changed from those of his youth. In youth the sham and real, if pleasurable, are alike accepted as being good and true; in mature years, the sham is easily discerned and rejected.

The "good old times" of boyhood were simply the days of juvenile happiness, and did not represent the feelings of a community. People to-day have better homes, better food, better means of travel by land and water, and better standards of living in general than obtained in "the good old times."

In no particular has the American people developed more beneficially than in matters which concern rest and recreation. Statistics show that men are becoming better developed physically, and the world's progress is a testimonial concerning mentality.

The time is not beyond the memory of that ubiquitous individual and highest authority—"the oldest inhabitant"—when the man who went a-fishing or camping, or, in short, who took an outing for pleasure on land or water, was viewed very much askance in a financial way by his business confreres, besides being the subject of much unpleasant gossip socially.

From the viewpoint of "the good old times," such man was negligent in business, and, as a loafer, was a bad example to the youth of the land. And the gospel of ceaseless toil in "the good old times" applied alike to employer and employee impartially. Contrast the customs of to-day with those of "the good old times." It is, indeed, an exceptional business institution which does not give its employes a two-weeks' vacation with salary. It is an exceptional institution which has not on its executive staff men who fish or shoot or canoe or yacht.

Even as recently as ten years ago, while the American people at large indulged in sport, there were no formal indications of national sanction. At the Columbian Exposition at Chicago there was but an insignificant recognition of practical sports. However, the Louisiana Purchase Exposition is in gratifying, magnificent contrast in this point. So-called Olympic games will be a feature during the Exposition and in connection therewith, on ample and specially prepared grounds. The Stadium, with its generous allotment of space, has a 220-

yard straightaway track, 25 yards wide, jumping paths, a baseball field, etc., for the thorough competition of athletics. A special feature will be intercollegiate competitions. In "the good old times" such competitions in an important way did not exist, and, indeed, such a mammoth exposition could not exist.

The latter-day doctrine of recreation is incomparably superior to the doctrine of ceaseless toil which obtained in "the good old times."

### TRAPSHOOTING STANDARDS OF SKILL.

DURING many years past the 16-yard mark, in target tournaments, has been generally accepted as the standard of shooting distance. Coincidentally shotguns have been improved in many practical qualities, ammunition has been perfected to an excellent degree of uniformity and effectiveness, and expert trapshooters have multiplied till they are numbered by hundreds. Every section of the United States has its experts. Yet the 16-yard standard remains unaltered.

From the 16-yard mark straight runs of 100, by different shooters everywhere, are so common and have been so common for many years past, that they excite no more than passing comment. Indeed, some years ago a run of several hundred was made at Interstate Park, L. I., by a professional expert.

It has been demonstrated also that the modern shotgun and ammunition are effective at 30 yards in target shooting. The recent tournament at Wilmington, Del., on May 12 and 13, furnished a demonstration that at 20 yards an almost perfect score can be made by a skillful shooter. Why, then, shoot at 16 yards?

There are so many shooters now who are capable of breaking 100 targets straight, or who have records of 100 targets straight, that there is no special distinctiveness—one expert compared with another—in respect to the matter of superiority.

The standard distance—16 yards—is so well within the skill of the shooters and the capabilities of gun and ammunition, that it is really an unworthy test when compared with the possibilities of trapshooting.

It is true that in some tournaments the distances are from 14 to 20 or 25 yards, but these are special temporary handicap distances which apply only to those tournaments, and they in nowise disturb the established standard.

At least 18 yards should be established as the standard distance at target trapshooting. It is not good argument to maintain that some shooters cannot even now shoot well at 16 yards. There again is a class of shooters which cannot shoot well at 14 or 12 yards.

The real issue is that there is such a multitude who can shoot well at 18, 20, 22 and 24 yards, that the standard of excellence should be raised. The raising from easy to difficult standards has been done extensively in rifle and pistol shooting. In trapshooting at targets, however, the 16-yard standard of its infant days seems to be satisfactory likewise as the standard of its manhood days.

THE suggestion made recently that the States generally should prevent the killing of female deer, while not new, and already acted on by a number of the States, should receive attention by all legislatures. Maine forbids the killing of cow moose, and Ontario the killing of female moose, caribou or elk, while in a number of States the killing of deer without horns, and of antelope without horns, is forbidden.

As Mr. Carney says, anything that makes for greater deliberation on the part of the hunter tends to help the game, to make it safer to travel in the forest, and to prevent the unnecessary wounding of animals.

The best sportsman—as shown by their individual writings and by the constitutions of their clubs—are agreed that only males should be killed. Thus the constitution of the Boone and Crockett Club, Article V., says: "The term 'fair chase' shall not be held to include \* \* \* the killing of the female or young of any ruminant except the female of white goats or muskox." The reason for the exceptions is not because the females of the accepted species ought to be killed, but because it is often impossible in these species to distinguish females from males.

The constantly lessening numbers of big game make it important to use every means to preserve and assist in the propagation of that game. Of these means, one of the most effective is the protection of the females.

# THE SPORTSMAN TOURIST

## Floating Down the Mississippi.

### VI.—Senor Carlos, Student of Sociology, Political Exile.

Morning comes cold in late autumn on a Mississippi sand bar. Evaporation from the water, cold zephyrs of night and one's warm, moist breath, combined in alternate shivers and clammy discomfort. I drew under my canvas after my little glance at the dawn, and waited for the slanting rays of sunlight, unconsciously imitating the old river man who says if a man keeps out the night air on the water, he'll never get the malaria. The diseases of the river—the horrible, yellow ones like chills and malaria are of summer growth. Cold weather on the Big River is not unhealthy, unless one is caught by pneumonia, or swallows a couple of mated typhoid germs just below some city.

I ate a cold breakfast—biscuits, canned meat, and began it after I pulled out from the shore. It was a foolish thing to do; to start out without something hot, though it be only a cup of coffee. A cup of cocoa goes better still. The result was, I traveled on with an uncomfortable feeling of haste, and going somewhere in a hurry—not commensurate with the hundreds of miles ahead—and the months likely to elapse.

Just above Carruthersville I made some photographs of the dredge Iota, and of the pile-line which the Government put in to narrow the channel, and save the bank on which Carruthersville depends for safety in high water. The bar was formed, and the Iota was having a nice time pumping up the sand and putting it somewhere else.

At Carruthersville, I intended to see Jack Stevenson, but, while talking to the watchman living in the eddy at the landing, heard of the Sugg and Poole outfit somewhere not far ahead. I went on looking for them, but failed to overtake them at Kennemore, or just below.

Having hoped to meet friends, I was a bit put out at the thought of going on alone. Below Cottonwood my map showed a long island chute, and I ran down this, seeking a place to tie up. It was quite a long chute—more than a mile, and as I got toward the foot, I saw a boat tied in. It had on a tent over the top, and I thought of the two men who had come down from Cairo to Tiptonville, apparently on the one trail. It being near night and the open river not far beyond, I felt dismayed, but ran down close to take a look. When I got nearer to it the boat was a puzzler. It had two hulls—so it wasn't my fearsome D-liner—and on the bank was a little old man, with a gray mustache, very long hair and a slow smile. "An old-timer!" I thought, having in mind only the river people. But one finds more than these on the river. As I have already said, there are many has-beens on the river. Carlos J. San to Carlos is not only a has-been, but a man who is.

I greeted him. He greeted me. Could I drop in below him for the night? I could, and use his fire and wood if I wished for supper. His boat is a center-wheel catamaran, run by crank shaft, with the wheel box painted with red stripes on one side and blue on the other, like a sunburst, the body and background being white. Where had I seen that boat before? After a time I remembered. On the day I pulled out of St. Louis with Jimmie, in a little eddy just above one of the rip-rap piles, I had seen that curious craft as we bounced along in the tumble of waves. Four hundred miles below, and six weeks later, we had met. After all, the river is not so wide. One can see across it, and even find a man if he sticks to the looking.

One does not know what to make of some people—who or what or why they are. Carlos seems to be somebody; he is a good deal more than anyone else that I have met on the river. I can tell the story he tells me—I would like to know that it is true. I believe it is—and yet this man is on the river. He explains it quite as plausibly as I do my own presence here. Personally, I am not doubting him, but each one who reads what I tell of his sayings must judge for himself. It was entertaining to me, and illustrates one fact about the Mississippi. There is no kind of man who does not get to it sooner or later, from orphan boys to learned men.

The winter of 1902-3, Carlos spent at Toronto. He built seven or eight catamarans there, with a paddle wheel between the hulls, and a deck 14½ feet long by nearly 6 wide. He sold all but one, and this he had to keep because the man who ordered it was unable to pay. On the sixth of last June he left Toronto in this catamaran and went to Montreal, going the length of Lake Ontario and down the St. Lawrence. He had lost the money he received for his other catamarans, and started with but \$42. He had been making certain studies of Americans to find from which locality it would be best to take colonists for Cuba. He now started westward along the Great Lakes, passing through the Welland Canal, among the Islands of Georgian Bay, through the Soo, into Lake Michigan, into Green Bay, up the Fox River, down the Wisconsin and into the Mississippi. He was on his way down the Mis-

issippi when I met him. When he reached Memphis on November 20, he said he had \$2 left, and had not earned a cent on the way. Here at Memphis he went to work on a house-boat to get more money with which to continue his journey to Cuba.

"I am 72 years old," he said one day, "I can't get around like I used to when I was young." He meant in physical alertness. "I have grown thin," he said, "See! My waistband." He could lap it almost half way around him a second time.

"My home is in the United States of Colombia, but in the Revolution of 1892, I was obliged to leave. I had shops, a plantation, I had been Senator for many years. I came away in the night. A man brought me silver to a little stream side by appointment and this was about \$2,000—all he could carry of silver. I went to Panama."

"For three years I was teacher of manual training—the use of tools—in the State school of Vermont." A bill head that Carlos gave me shows that "C. St. Charles & Co." were manufacturers of Revolutionary flags of Cuba, Porto Rico and the Philippines. He talked with so easy a familiarity of South American streams that I could not help suspecting he was a very sophisticated river wanderer, rather than the "educator" he claimed to be. Sometimes he shrugged his shoulders in good Spanish-American style, and his use of the English language showed him to be a native of the South American continent, and the topics he chose to discuss indicated the cultivated gentleman. Where there are so many has-beens as are found on the Mississippi, one need not be surprised at finding anything or anyone, or any kind. It was the violence of the contrast that brought suspicion to one's mind. Had the man's dreams and hopes been all very high, it would have been different. But in connection with his project of colonizing some section of Cuba, he planned to use his catamaran in conveying steamer passengers to and from the boats in Havana Harbor—"might so make four of five dollars a day." However much one may try to associate labor with vast enterprises, a colonizer running a 15-foot ferry boat does not jibe—unless anything is possible on this river where the high and low meet and there is nothing but harmony—as one finds harmony in a sand beach, though some of the grains are black, some white, some yellow and some red.

"I happen to be the man who discovered the preservative qualities of boracic acid," Carlos, or St. Charles, remarked, "It was far up in the Andes Mountains, near the head of the Amazon River, where I found the native Indians making a precipitating solution of the crystal of borax and dipping their meat in the solution. They hung their meat up and it was preserved indefinitely from the germs of decay. This was in 1863. Afterward I introduced the subject to the attention of the learned world and carried on my experiments in Brooklyn, in the presence of such men as old Dr. Bryant, and many others"—he named several, whom the writer has forgotten—"and they offered all kinds of suggestions. They said it did this and that and some other thing to the human system, but we failed to detect any of them. Indeed, I made the offer to take a dram of the precipitating—about 6%—solution daily for any period they might name, and did so for upward of forty days, and not a single ill effect could they determine to have come to me from this wholesale absorption of borax."

One morning after we had been together several days, St. Charles served a cup of milk apiece. I knew he had not been ashore or near a cow, and yet this milk was sweet, rich, uncurdled. It was this sweet milk that brought out the borax talk. I don't know whether borax is harmful or not, save as I've read the newspapers and listened to this man, but I've a solution of borax in my skiff now, and I use it in milk, and shall use it on meat, washed with the solution, should occasion arise. I can't detect the flavor of the stuff in the milk, though I use a liberal amount of it.

Here is my solution—as per the St. Charles directions: I bought a pound box of powdered borax for fifteen cents. I put about an ounce and a quarter in a quart whiskey bottle, and filled the bottle up with water slightly warm. A tablespoonful of this solution in a quart of milk kept the milk Carlos served for six or eight days so well that it seemed to my taste to have been only just cooled from the cow. I shall try it on meat one of these days. A slab of meat is merely thoroughly covered with the solution—6% is about all that will dissolve in water—and then hung up in a shady place covered from the flies.

This little matter of the borax, however, was only a circumstance to what Carlos had done in the medicinal line. His name must be familiar in medical literature, for he says that he verified the use of upward of 160 different kinds of herbs and things used by natives of South America for their curative or preventative properties. I was over my head in mere spelling when he came to tell the names of some of these. Just fancy the experiences of a man who went among the Indians of the mountain and lowland South America, and learned what they chewed up, or stewed or applied for bugs and germs and cuts. He told me some of them,

and there were indications that he was in some measure like the learned professor of tradition.

He called a "cabin boat," or "house-boat" a "boat-house" showing a bit of the foreigner's misapplication of words. This was puzzling to the unaccustomed. We came down behind Island 41, looking for what he called "a hole to hide in"—a "pocket" or "eddy" in river nomenclature. We found a tolerable place alongside the "boat-house" of a negro couple. St. Charles did not notice the color, but chuckled the "chilluns" under the chin and cooked "a stew" on their stove. It was a pretty strong smelling boat, but the stew was good enough to quite make the odor forgettable. After we had eaten at the table, the Señor, as usual, began to explain to the colored people certain things political, economical and liberal to the man, woman, a colored visitor and the "chilluns."

"The temperature of my country, 34 miles north of the Equator and among the Andean Mountains is equable," he said, "By the thermometer the variation is only a couple of degrees—from 60 to 62—what would you think, if I were to describe to you a country almost under the sun where we must have a fire, for the purposes of warmth, and in order that we may be comfortable, all the year around?"

"Well, I declare!" one darky said, "Well, I dc-clare!"

"Our institutions are different. Our political manners are dissimilar. In my country we change our government by revolutions—here you exercise the right of franchise."

"Well, I declare!"

Later, when we bunked in on the floor of his catamaran—ought one say deck?—he remarked:

"When I'm in the parlor. I want to be right there, and when I'm somewhere else, I want to be right there, too. When I'm home, I'm pretty particular, and here"—an inimitable shrug. On another occasion, among people scarcely more literate than the darkies, he talked for a long while far away above his listeners, and later said, with a dry little smile: "They do not understand what I'm talking about. They have some native wit, but it is uncultivated."

Sometimes I had the uncomfortable suspicion that the little old man was having a little fun with me, there being a curious twinkle in his eyes, as he drew his brows down and looked me fair in the face—clear, limpid, blue (?) eyes, giving one the impression that their owner lived just a little above those with whom he met up, pleasing himself, by showing others through a sort of intuition, that there were heights to which it would be pleasing and profitable to attain. I wondered, afterwood, what the old man could have done that would have pleased those darkies more, than that discourse on topics, thousands of miles away from their comprehension?

"When I left Toronto there were some of my friends there, and one of them was a cigar store keeper," St. Charles said. "He gave me a lot of pipes, and said that there would be people I'd meet on my way who would appreciate one of those pipes more than money." He gave away a pipe now and then at cabin boats, and also knives for paring vegetables to the women folks. There was no begging on his part, and he paid his way, though coming close to his last dollar. He was under obligations to no one, and pursued his sociological studies in a way that caused him to arrive at some conclusions very uncomplimentary to some of the nation.

"You will hear it said that such and such a place is rich; that they never use anything less than five cents in their financial affairs. They are not rich. It is the poor region that has no small change. You go to a store here and ask for a pound of sugar, or two pounds of beef, and what do they say? They answer, 'Ten cents worth?' 'Twenty-five cents worth?' If you want a penny-worth of shoemakers' wax you must buy four cents worth for which you have no use."

On the Majdelava River, in the United States of Colombia, Carlos built a bridge 54 meters long to stand a strain of the weight of ten pairs of oxen—16 feet clear inside rails—of timber eight feet long, which a tribe of Indians brought on their backs from distances up to sixty miles. The wood is called "Juanprietto," or "Black John" wood—a wood like dark cherry. It sinks in water and was both sawed and hewed for the contract. The hewing was done with hand-adzes, with which the native is expert, making a surface almost like planed wood. When tested the bridge sprung 3¼ inches.

Traveling with a man who could do such things, was more than interesting—it was an education. When a little twister of a hurricane came along, it became even an experience. It is cheering to have along a man who has met emergencies, when one is up against one himself.

Carlos J. San Carlos, as I have said, was in a catamaran, or, in Mississippi parlance, "a double-hull" boat. At St. Louis there is a catamaran ferryboat, with a paddle-wheel in the center of the craft, and at the mouth of the St. Francis River a store boat of the same clumsy design, but the model of the boat used by Carlos was a long, lean one for the hulls, instead of clumsy scows, and

a turtle-back effect for the top. He explained to me how it happened he adopted that model:

"After losing everything I had by reason of canoes upsetting, sometimes with dangerous consequences, on those Amazonian streams, I concluded that this thing must be brought to a termination. So I made me a catamaran. It was in '67 I first used one. It was 32 feet long, 10½ feet wide, with a single wheel in the middle. It was all of wood—cranks, shafts, paddles, and it required all my mechanical ability to construct it. My motive power was Indians. They are more reliable than an engine would be—which must be a wood-burner on those headwaters of the Amazon in any event. It was on the Caqueta River, about the time when I became an educator. I was on a botanical expedition, and my men found my catamaran exceedingly comfortable. We slept on board; we tied to snags in the midstream, far from the mosquitoes, and no more irksome packing and unpacking of canoe life. In later years I made catamarans with two wheels, and handles which two men could grasp on a side, and so there were eight men giving their power. The advantage of the catamaran is that it needs no skill to turn the crank. Boats that I built of this size—14½ feet long and 5½ feet wide—could be intrusted to women and children, and no doubt be had but what they would stay right side up. I was caught in a storm up the river somewhere—I've forgotten just where. I was in a hole safely enough, but the wind, he jammers, come up and the waves ate the little point away that protected me, and I had to go out in the middle of the river in all that wind and rain.

"Ah, but the waves rolled and the wind it blew! The water came over everything. My trunk was wet through, my clothes all soaked, my provisions damaged, or lost—at least everything that I had in paper. These holes in the deck here were full of water, but I have seven airtight compartments, and these buoyed me up, and I kept turning the crank and trying to steer, and when the storm was gone I bailed it out, and again I was going on."

The old man would keep his crank going all day long from seven or eight o'clock till along toward night pulling up, saying that so far it was like the stroke of an oar. He claimed 72 years, but his monotonous grind at the wheel indicated more muscle and the needful perseverance than many younger men could show. His boat was so much heavier than mine, however, that a moderate stroke would keep me at his side; even so, it was at times just a bit irritating to be obliged to keep so everlastingly at it. When I stopped or pulled to some sandbar to look for geese tracks or hunted a flock of ducks, a long, steady pull was needed to overtake the man, who said, "My arms have become automatic—they are regular pistons and my hands hooks. I am Old Wind in the Face. Since I left Toronto I have been able to sail on but two days; all the rest of the time I have had to fight the winds."

RAYMOND S. SPEARS.

[TO BE CONTINUED.]

## A Bear Hunt in Norway.

BY WINTER.

SEVERAL years ago I was in charge of the regulation of a system of rivers and lakes in the central part of the Scandinavian Peninsula. The little valley in which the main part of the work was being done, and which was my headquarters for nearly three years, was surrounded on all sides by uninhabited woods, where small game was abundant, and where the big, husky moose and the peace-loving bear roamed nearly undisturbed. The nearest town lay more than one hundred miles away, and the railroad's nearest approach was sixty miles distant from the little community, whose whole population was about four hundred souls. The place was an ideal one for the hunter, and what time I could spare from my work was spent in the woods with dogs and gun. I managed to keep our larder plentifully supplied with birds, hare and moose meat; but my eager desire for an encounter with the lord of the woods—the bear—was still ungratified, when, one day in the middle of November, I got a message from my old hunting companion, John, announcing that the chance had come. John wrote that one of his woodsmen had "ringed" (located) a bear in his den, and had offered to sell the "ring" for twenty-five dollars. Further correspondence resulted in the deal being closed, and the bear belonged to John and myself—if we could shoot him. John came to see me at Christmas, and we decided to have the hunt take place late in the winter, when the snow would be better fit for fast ski running, and our business would permit of some days' absence.

Late in the afternoon of one of the early days in March, I drew rein in the yard of John's house, and was heartily welcomed by him, his wife and five small Johns. I missed my old friends—Finn, the veteran bear dog, who had no less than fifty-two bears to his credit, and his ambitious son, Bamse. In reply to my inquiries, John told me that he had sent the dogs and supplies ahead with Nils, the ringer, to an old lumber camp in the vicinity of the bear's den, and that we would take the shortest route through the woods, thus saving a day's time.

"Now, come into supper, and afterwards you silly wood-runners can talk hunting," was Mrs. John's mandate, and we had but to obey. After supper the pipes were lit, and, seated comfortably before the glowing fire, we recalled past experiences of moose and reindeer hunts, to the great delight of John's sons, who listened with an eagerness that promised a good future in their father's footsteps. As the younger boys finally dropped to sleep and the older ones' heads began to nod, John said:

"To-morrow we will have Ole drive us to the ford over Big River, where we will put on the skis; and as we have nearly forty miles to make from there to the old camp at Lynx Lake, where we will spend the night, we had better get to bed."

Next morning we were up early, and, after a solid breakfast, we started on our fifteen-mile drive. It was a clear, cold morning; the sun rose pale over the mountains, the air was quiet and nipping, and the snow responded crisply to the beat of the horses' hoofs. It was beautiful, bracing weather and typical of the country. The road was well broken, and it took our spirited team less than two hours to carry us to the ford, where we fastened on our skis and shouldered our light packs and our heavy, double-barreled express rifles. After working

our way laboriously up the steep sides of Hatten, we had fine rolling country. The snow lay over five feet deep, slightly packed, and was ideal for ski-running, and mile after mile was covered at a good rate of speed. The route led through dense spruce woods, where the snow lay heavy on the boughs, across frozen lakes, and over small hills and valleys. Occasionally we passed the track of a fox, moose or wolf, and, just before noon, we secured a couple of ptarmigans from a large flock that we scared out of a small marsh. At noon we made a short halt, cooked coffee, and had a dinner of dried meat and bread, after which the march was resumed. Shortly after sunset, at Lynx Lake, we reached the deserted cabin that had so often been our headquarters on previous hunting trips. The beds were quickly fixed up with spruce twigs and blankets, and after a good supper, in which the two ptarmigans figured prominently, we took a short smoke and went to bed to a much needed rest after our day's exercise.

Next morning the travel was continued, and about two o'clock in the afternoon we reached our destination—the old lumber camp—where we were welcomed by Nils and the dogs. Nils had been at the camp for a couple of days, and had it fixed up in good shape, so there was nothing to do but get supper; after which, as we faced the blazing logs in the open fire-place, I asked Nils to give me the particulars of his ringing of the bear. Nils filled up his pipe and began:

"One day, early in October, while I was marking trees for the choppers, I ran across the track of a fair sized bear. Somehow I didn't take as much interest in marking trees after that as I had earlier in the day, and I found it hard to get very far from the bear track. I managed to put in the rest of the day, but when I got back to camp that night I hunted up Mr. John here and got permission to lay off a week and track the bear. So next morning, instead of my ax, I took my rifle and some grub and went back to the bear track. This led in a nearly straight line across the ridges and valleys, over streams and through brush, and I soon made up my mind that the bear was headed for his winter den after his summer trip. He had gone up the south side of Spruce Hill, where I found he made his bed the night before. Then he went on to Finnedalen, over Moose Creek, and into the big woods east of Long Lake. It was nearly dark when I got to Long Lake, so I fixed up a bed in the old Finne cabin and staid there all night. Next morning I followed him to High Ridge, where the country was some rougher. He had commenced to make big loops, so I knew he was getting near home, and I was extra careful not to scare him. The track finally led me to a small creek, where I thought I had lost him, but after a while I found where he had come out. Then he went up into the rocky "Owlback." I made a ring around this and thought at first that I had him, but on the other side I found his track. He went down the hill and across a little valley into a small gulch. In the gulch I saw where he had been clawing the trees and gathering moss and leaves for his bed, so I got out of there as quick as I could. Then I made a good sized ring around the spot and found that I had him. I went back to the cabin and staid all night, and in the morning I went back and ringed the place once more, and found that he had gone out and over toward the Fox Hills. I didn't know whether he had stopped on Big Fox or had crossed the valley to Little Fox, so I made a ring around both of them without finding any track out. The next day I ringed them again, and as he was still inside I went home. Five days after I went back and ringed the place once more, and there he is, either on Big or Little Fox," concluded Nils.

The next morning we were up long before the sun. The air was quiet and cold, the thermometer registering 23 degrees below zero. There was a thin crust on the snow, sufficient to carry the skis but not thick enough to hold up the dogs. We entered the woods on Big Fox Hill, I on top of the ridge, John about half-way down the slope, and Nils in the valley between the two Fox Hills. Finn hunted the open woods between us, Bamse making investigations across the little valley on Little Fox. As the snow bothered the dogs, we advanced slowly. At eleven o'clock no trace of the bear had been seen. Suddenly Bamse scented the bear, and, giving a couple of angry barks, rushed to where he was lying, snowed down in some thick brush. Finn immediately rushed across the valley, and a little later we heard the frantic barking of both dogs and the bear's angry growling. There was evidently a lively tussle going on in the thicket, but soon I saw the bear making his way up the steep hillside, hotly pursued by the eager dogs. The heavy snow impeded the dogs' movements, and they dared not approach the bear too closely. Nils, who had advanced too rapidly, now came back at top speed while John hastened down the valley to get around Little Fox and meet Mr. Bruin on the other side.

I was on top of Big Fox, and too far away to take part in the "doins," but in a favorable place to watch the hunt and take advantage of a flank movement on the part of the bear. He was now half way up the hill, where the snow was harder, and the dogs became more and more annoying. Every time he turned his back to them they tackled his hindquarters, jumping out of his reach when he turned to catch them. He soon reached a step about eight feet high which he tried to jump, but the dogs were so attentive that he couldn't get a chance to make the leap. Several times he chased them to right and left, but when he attempted the jump at least one of them was at his heels. The younger dog, Bamse, behaved with greater bravery than discretion, and it was with considerable uneasiness that I saw him again and again almost within reach of the paws of the furious bear. At last bruin got an opportunity to make the jump, but old Finn was so close to him that he secured a hold on his left hind foot and kept it. The bear reached a small spruce on top of the ledge, and hanging there he tried to shake the dog loose. After a little he succeeded and made his way up the mountain, while the dogs had to make a detour around the step.

The bear now bore off to the south, so I turned my skis in his direction. As the woods were pretty open, I let my speed increase, and I soon fairly flew down the hillside. My attention was fixed too much on the fight between the bear and the dogs and too little on my own business, and my right ski running under a bowed spruce, I turned a complete somersault. It took me sometime to get out of

the deep snow, and after getting the snow out of my neck and sleeves, I tried to locate my rifle, while the fighters rapidly made off. The language I used at this stage of the game would not look well in print. It took me nearly ten minutes to find my "iron," get the snow out of it, and resume my way. The bear and dogs were by this time nearly three-quarters of a mile ahead of me; but running fast down the slope, I gained rapidly on them, and in about twenty minutes I was only a few hundred yards behind them, occasionally getting a glimpse of the bear between the trees. I now reached level country, and hurrying along at top speed I would, in a short time, be ahead of the fight. Suddenly I saw John five or six hundred yards ahead of me standing behind a tree in the bear's course, and I stopped where I was to observe the proceedings, not caring to disturb John's chance for a shot.

The bear made a stand in the thick underbrush a couple of hundred yards ahead of me, and, the snow here being a little harder, the dogs attacked him at close quarters. The now enraged bear tried in vain to catch the dogs, but when he chased one of them the other one would secure a hold on his least dangerous end, immediately jumping out of reach as the bear tried to strike him. The snow was flying in all directions, and the fast movements of the fighters made it impossible for me to get in a shot without the risk of hitting the dogs. The bear worked his way toward John, growling, snarling, and fighting the whole way, the brush being so thick that I could no longer see him. Presently he reappeared, about sixty or seventy feet from John, but hidden from the latter by a very large fallen tree, that the bear tried in vain to get over. The scene on the hill was repeated; as soon as the bear tried to jump the tree he had both dogs at his legs. Finding this wouldn't do, he turned, and with his back to the tree he made his last fight. It was a splendid sight to see this big, strong animal cornered by two small, active dogs that eagerly attacked him, but always kept just out of reach of his powerful paws. As John was unable to see the combat, he could only await developments. Seeing this, I made my way toward the hairy fighters; when suddenly the bear, having driven the dogs a little further away, turned and jumped on top of the log. Here he stood for a second, then John's heavy rifle cracked, and bruin slowly sank back and fell between the dogs with a .550 express bullet in his head.

The hunt was over, and, proud as boys, John and I met at the body of the bear, which the dogs were pulling and shaking to their heart's content. Nils soon arrived, and, seeing the bear, he exclaimed, "This is better than last year, when we looked for three days for a bear and then spent two more to get him." We had the bear, but the next proposition was to get him out of the woods. This was done by cutting down and peeling a spruce about six inches in diameter. We cut this off about ten feet long, and splitting it made two runners, bending up one end of each, fastening back the bent ends with a stout cord; the runners with cross-pieces made of spruce limbs, we had a fairly good sled. On to this we loaded the bear, but it took our united efforts to get him over the deep snow to a lumber road, about a mile and a half away. The killing had occurred about one o'clock, and it was nearly dusk when we got our trophy to the road.

Leaving Nils to attend to the bear, John and I started next morning at five o'clock on the back trail. We reached the ford on Big River about eleven o'clock that night, having covered a little over sixty miles. Coming up with a sled going our way, we were glad enough to bundle ourselves into it, and, burrowing into the straw with which the box was filled, we slept as only a tired ski-runner can, the entire distance home. Nils arrived the second day after with the bear, and that evening we enjoyed one of his hams for supper. He weighed a little over four hundred pounds.

## Philadelphia Zoological Society.

THE thirty-second annual meeting of the Zoological Society of Philadelphia was held April 28 last, at which was read the report of the Board of Directors for the year ending February 29, 1904. The total membership of the society is 1,859. The admissions for the year were 233,604, to which must be added 125,000 tickets issued to the Board of Education for the admission of pupils of the public schools. The receipts for admissions for 1903-4 were \$33,918.55, an increase of \$14,042 over the previous year. During the year there were exhibited in the gardens and menageries more than 3,000 animals in all classes, and among these there were 53 species that had never before been exhibited in the collections.

Among the many animals born in the garden may be named tigers, prairie wolves, gray wolves, brown bears, black bears, two hybrids between a grizzly and a black bear, Burchell's zebra, Persian wild ass, buffalo, Indian antelopes, and a number of kangaroos, with some birds and reptiles. The difficulty of rearing bears is well known, but the black bear born January 30 was still alive at the end of April.

Dr. Penrose continues his pathological investigations through the year; studies which cannot fail to be of great use.

## American Museum of Natural History.

THE annual report of the president of the American Museum has just come to hand. The Museum is now the greatest in the country, and promises to continue to increase in importance and value. As it grows, however, it is hampered more and more by lack of endowment funds, though receiving many special gifts, which are used to the best advantage. The collection of mammals, birds, of vertebrate paleontology, archeology and ethnology are very large, and all the departments of the museum are in the hands of most able specialists, and in most flourishing condition.

The library is continually growing, and the list of publications of the Museum is continually increasing. The Museum is becoming more and more a place for meeting men interested in science, and scientific bodies and associations constantly use the Museum's lecture rooms and libraries for their meeting places.

On the whole, the Museum is being managed on a broad and liberal scale, which reflects credit not only on the trustees, but on the city as well.

## Natural History.

### The Birds of Laysan.

(Concluded.)

UNDER the title, "The Albatross at Home," we published in our Christmas Number some delightful observations made by Mr. Walter K. Fisher on the birds of the Leeward Islands of the Hawaiian group. Some further notes and photographs made by Mr. Fisher are given here.

Much less abundant than the white species on Laysan, but in many of its habits closely resembling it, is the blackfooted albatross. The puffins, or shearwaters, in burrowing in the ground, loosen the soil with bill and feet, showing the loose sand and soil beneath their bodies, and then kicking it in little jets

GANNET AND EGGS.

far behind them. The burrows enter the ground at a slant and then become horizontal. They are usually three feet long and often more. These birds are nocturnal in habits and are especially active on moonlight nights. The Christmas Island shearwater digs a very shallow burrow or none at all, sometimes depositing its eggs on the sand under a bush.

The white-breasted petrel is a nocturnal bird nesting in long burrows, which honeycomb the sandy soil in all directions over the region which they occupy. They are about the size of the domestic pigeon, and occur in great multitudes.

Gannets of three species are found here, the blue-faced, red-footed and the common booby.

The man-o'-war bird proved scarcely less entertaining to the observers than the albatrosses. The birds are extraordinary in appearance, and their antics, especially in the case of the male, are as singular as their appearance. "During the courting period, the gular pouch of the male is enlarged, and before the brooding cares have begun he inflates it to a large size, and at the same time it becomes a bright red color. The bird looks as if there were fastened to his throat a balloon, such as children dangle on a string.

At Laysan these birds built their nests on the tops of low bushes, in colonies, sometimes of few and some-

GANNET AND YOUNG.

times of many members, laying one pure white, glossless egg. The parents take turns in covering the egg, which must always be protected, since, if a nest is left without an occupant, other birds take its material to repair their nests. After the egg has hatched this watchfulness must still be continued, for fear that the young birds should be eaten by some other frigate bird. On Necker Island a few nests of frigate birds were found on the rocks.

The powers of flight of this species have often been described, and Mr. Fisher thinks that there is justification for all the eloquence that can be devoted to such description. He says: "To maintain any continuous sailing, the albatrosses need a fresh breeze, and they always move with considerable rapidity. Not so with the frigate bird, however; on comparatively calm days they are able to rest on motionless wing, or slowly to describe circles high in air. Some wind or motion of air is, of course, always necessary, but they seem to be able to do with a minimum amount. They frequently rise so high that one can scarcely detect them against the shimmering blue of the tropical sky. Suddenly some individual aloft takes a notion to descend, and

promptly does so by a series of long leaps or swoops that make one fairly dizzy. It is a pleasant occupation to watch them soaring about the mastheads when the peculiarly short 'arm' and 'forearm' and the disproportionately long quills are seen to advantage; and their deeply forked tails, likewise, which help to keep them balanced and which open and shut occasionally like a pair of shears. Their feet are small and their legs weak, so that, although still totipalmate, they never alight on the water, but pick up floating bits of food as they swoop down on the broad parabolic curve. They can judge distance so accurately that no disturbance is created when the object is seized.

"On Laysan this good judgment was made use of when the birds drank from a small pond. They flew back and forth about twenty feet above the water, then suddenly darted downward a long curve, and, when directly over the surface, like a flash bent the head down, dropped the lower mandible and scooped up a little water."

Curiously enough this little island of Laysan, which is scarcely three miles long, harbors a peculiar species of duck. Of these birds there are not more perhaps than a hundred specimens on the island. They lived about the little fresh water ponds already spoken of, were tame, spent most of their time walking about—for they seldom flew and never flew far—one of them used to come up to the house after nightfall and walk about like a barnyard duck.

Another curious bird is the Laysan rail, which is extremely abundant, and which has lost the power of flight. "The Laysan rail is a wide-awake, inquisitive little creature, with an insatiable thirst for firsthand knowledge. It is one of the most knowing, unsophisticated and wholly unsuspicious birds in the whole avian catalogue. At times it is confiding and familiar in deportment, yet at others holds aloof with some show of reserve. It will occasionally hide behind a bunch of grass as if afraid, and then suddenly come forth with entire change of demeanor, and examine the intruder with a critical eye. One can never tell how he will be received by the next rail. Often they scurry away as if pursued by a *bête noir*, but an insect will stop them in their mad career, and having partaken of the interruption, they seem to forget their former fright and

MAN-O'-WAR BIRD SHOWING DISTENDED POUCH.

walk about stretching their necks in a highly inquisitive manner. It is evident that they are incapable of pursuing the same thought for more than an instant. Their ideas seem to flash by in kaleidoscopic succession, and within a minute they make as many false starts as a healthy monkey. One can scarcely imagine more amusing and foolish little birds than these."

There were four migrants, a tattler, a curlew, a plover and a turnstone, seen on the island. And besides this, three other land birds, a honeyeater, a finch and a warbler.

### Wild Animals in Semi-Domestication.

PITTSBURG, Pa.—*Editor Forest and Stream:* River-view Park, Allegheny City, Pa., is a magnificent stretch of wild woodland, with deep, rocky, well timbered ravines in their primitive state of nature, magnificent hills overlooking the Ohio River Valley—the "Belle Rivière" of the early French explorers—for miles, on the highest of which the imposing new Allegheny city astronomical observatory is nearly completed.

At the head of Killbuck Hollow, in a large inclosure having preserved nearly all the natural surroundings of the virgin forest, are a cow elk and her half-grown fawn. They have preserved their natural habit of resting in the shade during the heat of the day, feeding toward evening. The cow elk with the bull have been in the park for several years, and pay little attention to the many people who pass them continually. The cow especially has lost completely the habit the species has in the wild state of lifting the head every few moments while feeding, turning the ears in every direction and sniffing the breeze for scent of danger. The fawn, on the other hand, has all the characteristics of the wild deer family; always on the watch, lifting its head and turning the ears in every direction every few moments while feeding, and at the least noise turning the ears forward in the direction of the sound, assuming a magnificent attitude of alertness and readiness for action. It makes also that peculiar motion of pointing the nose upward and turning the head rapidly, which I have observed among wild elk.

I have spent many delightful hours in the cool of the evening watching the beautiful creatures from the lee side from a secluded position. Wonder if the little fellow will gradually lose its instinctive watchfulness when it finds out there is no danger? If it does, it will not be half as pretty and interesting as now.

JULIAN THE FOX HUNTER.

### Snake Venom on Snakes.

TOPEKA, Kansas.—*Editor Forest and Stream:* Is there a belief among zoologists that poisonous snakes are immune to their own venom? If there is such a belief, it is an erroneous one; and while I do not want to set up my opinion as an authority, I will state that I have never yet found a rattlesnake, cotton-mouth or water-moccasin, that did not commit suicide, if caught and teased for awhile, and then given an opportunity to sink its fangs into its own body.

From January to July, 1897, four of us were living in a cabin in the mountain region of Southwestern Arkansas, while prospecting for minerals, and as one of the four stoutly maintained that all poisonous reptiles were immune to their own poison, to settle the question, we began our experiments by making a snake trap of a slim, dry pine pole, about twelve feet long,

GANNET FEEDING YOUNG.

with the top end notched and a strong cord passing over the notched end up through staples on the pole to the hands at the butt end of the pole. By drawing the string down to the small end we could have as long a loop as desired, and this we would drop over a snake's head and then by a quick pull upon the string we would have our victim fast at the end of the pole.

With this trap we captured many copperheads, cotton-mouths, dark timber and diamond-back rattlesnakes—as they are called, on account of coloration by the native Arkansan—and the water-moccasins, and by tests we found that the water-moccasins could and would strike more times, and discharge more venom at a time, than any one of the others of the same size would. We also found that after we had held any one of these snakes by the neck by the string for half an hour or so, if we dropped the snake end of the pole on the ground and loosened the string, so as to allow the snake to draw about one-half its body through the loop, and then draw the string tight enough to hold the body of the snake tight against the end of the pole, it would, after squirming a few times, always strike its fangs into its own body, one or more

PAIR OF GANNETS.

times, and within five minutes by the watch, never longer, the snake would stretch out limp and dead.

We also learned that if we could catch a rattlesnake out in the woods and whip him with a long switch, keeping out of his reach, that after four to six strikes and jumps, he would sink his fangs into his own body and die within five minutes.

A singular result we also noted, that within two days the ants would reduce this self-poisoned snake to a finely polished skeleton; but we never could find any dead ants on the surface of the ground. Whether the effects of confinement would destroy the deadliness of their venom, I know not. I only write of the results of the tests we made.

W. H. R.

[The observations of our correspondent are quite opposed to those of scientific observers generally, and we are bound to conclude that the snakes which he believed to have committed "suicide," died from some cause other than their venom. This question has been frequently investigated by scientific men, and in Dr. Stejneger's important paper on the "Poisonous Snakes of North America," published in the Annual Report of the U. S. National Museum for 1893, pp. 345 to 484, the matter is referred to in the following words:

"It has been long known, though occasionally doubted or contradicted, that poisonous snakes are proof against their own venom. Big doses of snake venom have repeatedly been inoculated into the bodies of the producers themselves absolutely without effect. The current stories of 'suicides' of rattlesnakes are easily explained, and in none of the many cases reported is there any conclusive proof that death resulted from a self-inflicted wound. It is also well known that a number of the so-called harmless snakes remain unaffected whether bitten by a venomous snake or inoculated in the laboratory with enormous doses."

We have made recent inquiry of Mr. Raymond L. Ditmars, Curator of Reptiles in the New York Zoological Society's Park, to learn the last work on the subject. Mr. Ditmars very kindly writes:

"A rattlesnake, moccasin or copperhead may bite one or the other named, and, though considerable venom be injected by the fangs, no damage is done, except the wounds inflicted. Any of the poisonous snakes may bite themselves without producing anything but a simple wound. Several species of harmless snakes, which are cannibalistic in habit, are immune to snake poison, and are frequently bitten while subduing venomous prey. The majority of harmless snakes, however, die quickly if injected with snake poison.]

### Some Southern California Mammals.

In No. 16 of Vol. III. of the Zoological Series of the publication of the Field Columbian Museum, Dr. D. G. Elliot gives a catalogue of mammals collected by Mr. E. Heller in Southern California. The counties traversed by Mr. Heller are chiefly Kern, Inyo, San Bernardino and Riverside, with excursions over into Tulare and Los Angeles counties. The range of country covered is thus wide, including the Colorado and Mojave deserts, Death Valley, and the neighboring lofty mountain ranges. The large collections made contain a number of new forms. An interesting observation made as to the antelope (*Antilocapra americana*) found in Antelope Valley, near the eastern base of the Tehachapi Mountains appears to show a difference in the time of the rut and of the shedding of the horn sheath between southern antelope and those found further to the north.

In Nebraska, Wyoming, the Dakotas and probably Montana, it is fairly well established that the rutting season begins toward the end of September; the bucks beginning to chase the does from Sept. 10 to 20. In these northern localities the horns are shed in November and December, commonly not earlier, we think, and the young are born about June 1.

Mr. Heller's notes show a different state of things in Southern California: "The rutting season is evidently in midsummer, as the horns are shed in the early part of October or late in September. A male shot in the middle of October had small, soft horns, and a female taken the same date had shed one horn but still retained the other. This specimen contained two embryos about two months old."

Mr. Heller took his two specimens—a male and female—from a herd of thirty antelope, which live on the western border of the Mojave Desert. Protected by law, they have become quite tame and would increase rapidly were it not for the destruction of the young by coyotes, which constantly harass the band. While this herd was being stalked several coyotes were observed following it, and old bucks were seen pursuing a coyote and striking at it with the forefeet. The settlement of the country has obliged this little herd to live in the open desert, usually in a compact bunch, and here they are much exposed to the attacks of the small wolves. A bunch of seven antelope is said to live at the head of the San Joaquin Valley, and one or two very small herds occupy the plains near Buena Vista Lake and the Carisco plains.

### A Florida Pelican.

THE photograph of Little Billee, the government pelican at Key West, was taken by me on the Fish Market wharf, Key West, January, 1904.

It was a snap-shot, the camera being held not two feet away and the bulb pressed just as Billee was in the act of swallowing a snapper thrown him by one of the market men.

Little Billee has quite a history. He was rifled from the parent nest on Woman Key (about seven miles south of Key West) on September 11, 1903, by Engineer James Haskins of the marine service.

"There were four of them," said Engineer Haskins, in telling the story, "and the ugliest little creatures you ever saw, with nothing on but a few pin feathers just pricking through the skin. The nest was little more than a big bundle of sticks in a fork of a mangrove three or four feet above the ground. I took three and started in to bring them up by hand. Two the boys stoned to death, but Billee I brought through all right."

LITTLE BILLEE.

Photo copyright, 1904, by Charles B. Todd.

"He's a fisherman, sure enough, but it isn't necessary for him to work, because the marketmen around at the fish market throw him a snapper every morning and afternoon besides what he gets at home. Billee calls around them for his rations pretty regularly, I guess."

"He's a spoiled bird, all right. He had a battle royal with a couple of Cubans yesterday. They were fishing and had thrown a snapper on to the wharf, which Billee seized and had in his pouch in no time. They rushed on him, but the bird stood them off with his sharp beak and outspread wings. But the fish was still attached to the hook, and they tautened the line and yanked Billee on board, when he disgorged the fish."

Billee is the mascot of the Jackies of the United States Naval Station at Key West.

CHARLES BURR TODD.

### City Bred Sparrows.

MANY changes of habits, and some of plumage, have been noticed and commented upon in FOREST AND STREAM in respect to forest birds raised in cities. These have been especially remarked of the sapsuckers bred in the suburbs of St. Louis, many of which build in old shade trees near the houses, and do visible damage by pecking at roofs and telegraph poles. They seem to have abandoned their primitive forest habits as entirely as caged canaries born in captivity forget the woodland environment of the Hartz Mountains.

A notable instance of domestication is shown in the imported English sparrows which have become so intrusive and bold in their usurpation of our household belongings as to be a decided nuisance, and very dirty withal. Since their introduction here some forty years ago, their plumage has unquestionably brightened and assumed richer and various hues, especially in the males. Females we know are doomed to wear some positively dingy colors always, whether wild or house-bred. Even these occasionally show a variation from the uniform brown color. But no change whatever has come under the notice of observers to compare with the motley worn by the sparrows of London, as stated in a recent letter of a correspondent of the Boston Globe, who declares that one "will scarcely ever see two birds alike. Some are of a smoky blackness, others a severe gray, others bright with orange brown feathers, others of a delicate green, others have the wing bars so pronounced as to make you think you see a chaffinch, others are streaked like mallards, and others are spotted like thrushes. Quite 1 per cent. of the central London sparrows are blessed with white feathers on parts of the body where they are not expected to appear on sparrows."

We notice here occasional white markings in our sparrows, with combinations of black and rufous with brown and gray and rich mahogany. Some of the males have become really pretty.

But there is something more interesting than coloration involved in these operations of nature, which touch the matters of evolution and reversion, seeming to corroborate the theory that civilization and culture, as a rule, produce varieties of color in birds, animals, and plants; while degeneration through neglect harks back to the dull grays and browns of feral types. At any rate, we see proofs and demonstrations in our graded cattle as contrasted with range cattle; in our thoroughbred horses as compared with the marsh tackies of the coast and prairie mustangs; in our barnyard fowls and barnyard swine as contrasted with the Mexican javalinas and pine root hogs and razor-backs of our Southern States. The testimony of the Sable Island rabbits, off the coast of Nova Scotia, and the "banker" ponies there and elsewhere along the Atlantic Coast, which are known to be degenerates since three hundred years ago, is most interesting to science. As to plants, we know what skillful gardeners and florists can do in multiplying their hues. In chrysanthemums alone there are one hundred and fifty named varieties. It is to be hoped that the changing sparrows will wear their new liveries as modestly as do the lilies of the field their own.

CHARLES HALLOCK.

Mountain climbing is taught systematically at Moedling, near Vienna, where the low but abrupt mountains present many of the most difficult Alpine problems.

Horses, Guns and Dogs. By J. Otho Paget, Geo. A. B. Duwar, A. B. Portland and A. Innes Shand. Illustrated. 254 pages. Longmans, Green & Co.

This is a book for boys, full of instruction and intended to help the youthful sportsman to take his pleasure afield in a sportsman-like way. It treats of the care of the horse, riding lessons, choice and handling, and gives various hints in riding and driving. It instructs as to how to shoot and handle a gun, and tells of rabbit, partridge and pigeon shooting, and finally of advanced shooting. Dogs are treated by Mr. Shand. There are four full-page plates in colors. Price, \$2.00.

### Colorado Deer Hide Decision.

Appeal from the District Court of Mesa County.

No. 2921.

E. W. Hornbeke, Appellant, vs. C. M. White, Appellee. Mr. S. G. McMullin, District Attorney, and Mr. D. C. Beaman for Appellant.

Mr. S. N. Wheeler, and Mr. A. J. Hunt, for Appellee. Maxwell, J.

This was an action of replevin involving 300 deer hides. The amended complaint upon which this case was tried averred that, prior to January 28, 1901, plaintiff was the owner and entitled to the possession of, and is now the owner and entitled to the immediate possession of 300 deer hides of the value of \$300; that about December 10, 1901, the defendant, representing himself to be a deputy game warden, wrongfully, unlawfully and forcibly, took said deer hides from plaintiff's possession; that on said date "the defendant as such deputy game warden, in consideration of the sum of \$30 to him in hand paid by this plaintiff, re-transferred and delivered the said deer hides

to this plaintiff, stating to said plaintiff at such time that as such deputy State game warden he had the right to transfer the same to this plaintiff and receive the consideration therefor;" that thereafter, and before the commencement of this suit, the defendant again took possession of said hides, and, upon demand, refused to deliver the same to plaintiff, to his damage in the sum of \$300.

An answer and replication presented the issues, upon which the case was tried.

A determination of the questions involved in this case involves a consideration of several sections of Chapter 98 of the Session Laws of 1899, entitled, "An act to protect game and fish," Session Laws of 1899, page 184, as follows:

Sec. 16, Div. A, page 188. "All game and fish now or hereafter within this State not held by private ownership, legally acquired, and which for the purposes of this act shall include all the quadrupeds, birds and fish mentioned in this act, are hereby declared to be the property of the State, and no right, title, interest or property therein can be acquired or transferred or possession thereof had or maintained except as herein expressly provided."

Sec. 18, Div. A, page 189. "As used in this act, unless

otherwise specifically restricted or enlarged, the words herein and hereof refer to the whole act; \* \* \* and whenever the possession, use, importation, transportation, storage, taxidermy, sale, offering or exposing for sale of game or fish is prohibited or restricted, the prohibition and restriction shall, where not specifically otherwise provided, extend to and include every part of such game or fish, and a violation as to each individual animal or part thereof shall be a separate offense."

Sec. 19, Div. A, page 189. "The possession at any time of game or fish unaccompanied by a proper and valid license, certificate, permit or invoice, as herein provided, shall be prima facie evidence that such game or fish was unlawfully taken, and is unlawfully held in possession."

Sec. 1, Div. B, page 191. "No person shall at any time of the year, or in any manner, pursue, take, wound or kill any bison, buffalo, elk, deer, antelope \* \* \* or have the same in possession, except as permitted by this act."

Sub. Div. 1, Sec. 7, Div. B. "The open season for deer having horns and antelope having horns, shall begin August 15 and end November 5 next ensuing."

Sub. Div. 7, Div. B., Sec. 7, page 192. "The right given by

this section to take or kill game and fish is limited to food purposes \* \* \* and no person shall take, kill or have in possession in any one season more than one elk, and one deer, and one antelope; or instead of one deer and one antelope, he may have either two deer or two antelope."

Sub. Div. 8, Sec. 7, Div. B, page 193. "No game or fish shall be held in possession by any person for more than five days after the close of the season for killing the same, except as in this act otherwise provided."

Sec. 11, Div. D, page 207. "When any person lawfully in possession of game or fish shall desire to transport the same within this State, the transportation of which is not herein otherwise provided for, or out of this State, the Commissioner may, upon being satisfied that the possession and transportation is not in violation of the spirit of this act, grant a permit therefor and thereafter during the period of ten days after its date, such transportation shall be lawful between the points therein named. Such permit shall be substantially in the following form:

"Form 11.  
"State of Colorado.  
"Department of Game and Fish.  
"Transportation Permit.

"No. .... DENVER, ..... 189  
"This certifies that Mr. .... is entitled to transport from ...., Colorado, to ...., the following game and fish, to wit: ..... This authorizes possession and transportation between the points named herein only, but not sale or storage. Void after ten days from date.

".....  
"Commissioner."

Sec. 13, Div. D, page 209. "Game or fish may be transported out of this State only when accompanied by a permit from the Commissioner authorizing the same, as provided in Section 11 of this division."

Sec. 11, Div. A, page 187. "The Commissioner and every warden throughout the State, and every sheriff and constable in his respective county, is authorized and required to enforce this act and seize any game or fish taken or held in violation of this act."

Sec. 9, Div. D, page 206. "All game and fish seized under this act shall, without unnecessary delay, be sold by the officer seizing the same, or by the Commissioner, except when a sale is impracticable or is likely to incur expenses exceeding the proceeds, in which case the same shall be donated to any needy person not concerned in the unlawful killing or possession thereof. Possession by virtue of such sale or donation shall not be unlawful. The proceeds thereof, after deducting the costs of seizure and sale, shall, if made by the Commissioner or any warden, be paid into the State Treasury, but if made by a sheriff or constable, shall be paid, one-half to the Commissioner and one-half into the treasury of the county where the seizure was made."

Sec. 10, Div. D, page 207. "In case of such seizure and disposition the officer making the same shall sign and give to each purchaser or donee an invoice stating the time and place of disposition, the kind, quantity and weight, as near as may be, of the game or fish disposed of, and the name of the purchaser or donee. Such invoice shall authorize possession, transportation within this State, storage and sale for thirty days after date, and shall be substantially in the following form:

"Form 10.  
"State of Colorado.  
"Department of Game and Fish.  
"Officer's Invoice.

"..... 189  
"Disposed of by me this day to ..... the following game and fish, to wit: Kind .....; number .....; weight .....; the same having been seized and disposed of by me under the provisions of the game law. This authorizes possession, storage, transportation within this State, and sale. Void after thirty days from date.

".....  
"(Title of Officer.)"

Sec. 16, page 209. "Any person having the lawful possession of game or fish killed within this State, may, upon proof of such fact, have issued to him by the Commissioner, a storage permit which shall authorize storage, possession and use of the same not longer than ninety days next ensuing the open season therefor. Such permit shall be substantially in the following form:

"Form 12.  
"State of Colorado.  
"Department of Game and Fish.  
"Storage Permit.

"No. .... DENVER, ..... 189  
"Mr. ...., residing at ..... being in the lawful possession of ..... killed within this State, is entitled to have the same kept in storage until ..... next. This authorizes storage, possession and personal use until the date last mentioned above, but not transportation or sale.

".....  
"Commissioner."

It appears by the admissions of the answer and the evidence, that the first seizure of the hides made by defendant as deputy sheriff, was December 10, 1900; the second seizure, and the one complained of in the complaint, was made by defendant as deputy game warden January 28, 1901.

The case was tried by a jury, resulting in a verdict and judgment against defendant for \$350, from which this appeal.

In their final analysis, the errors relied upon for a reversal of the judgment rendered by the court below, present but one question, viz., Was the plaintiff the owner and entitled to possession of the 300 deer hides sued for?

This is the first case under the game and fish laws of this State which has found its way into an Appellate Court, probably due to the fact that most cases of this character are of a criminal nature, and, owing to peculiar local conditions, convictions have been almost, if not quite, impossible, thus leaving the State without remedy to enforce these most salutary laws.

In view of the foregoing statement, and the importance of the subject, the presentation of some of the general

principles upon which such laws are based may not be considered untimely.

The leading case on this subject is *Geer vs. Connecticut*, 161, U. S. 519, in which Mr. Justice White delivered the opinion of the court. *Geer* was convicted under a statute of Connecticut which made it unlawful to have in possession certain game birds with the intention of transporting them beyond the limits of the State. The main question presented was whether the statute applied to birds which had been killed in the open season. The case found its way to the United States Supreme Court, upon the point that it was in violation of the interstate commerce clause of the Federal Constitution. Mr. Justice White, in the course of his opinion, reviews the origin, growth and development of game laws. He says, *inter alia*:

"From the earliest tradition, the right to reduce animals *feræ naturæ* to possession has been subject to the control of the law-giving power."

He then traces the growth and development of such laws from the earliest times down to the common law of England, and says:

"The common law of England also based property in game upon the principle of common ownership, and therefore treated it as subject to governmental authority."

"Blackstone, while pointing out the distinction between things private and those which are common, rests the right of an individual to reduce a part of this common property to possession, and thus acquire a qualified ownership in it, on no other or different principle from that upon which the civilians based such right. 2 Br. Comm. 1. 12. \* \* \*

"The practice of the Government of England from the earliest time to the present has put into execution the authority to control and regulate the taking of game. Undoubtedly this attribute of government to control the taking of animals *feræ naturæ*, which was thus recognized and enforced by the common law of England, was vested in the colonial governments, where not denied by their charters, or in conflict with grants of the royal prerogative. It is also certain that the power which the colonies thus possessed passed to the States with the separation from the mother country, and remains in them at the present day, in so far as its exercise may be not incompatible with, or restrained by, the rights conveyed to the Federal Government by the Constitution. Kent, in his 'Commentaries,' states the ownership of animals *feræ naturæ* to be only that of a qualified property (2 Kent Comm., 347.) In most of the States, laws have been passed for the protection and preservation of game. We have been referred to no case where the power to so legislate has been questioned, although the books contain cases involving controversies as to the meaning of some of the statutes. [Citing a large number of authorities.]

"While the fundamental principles upon which the common property in game rest have undergone no change, the development of free institutions has led to the recognition of the facts that the power or control lodged in the State, resulting from this common ownership, is to be exercised, like all other powers of government, as a trust for the benefit of the people, and not as a prerogative for the advantage of the Government as distinct from the people, or for the benefit of private individuals as distinguished from the public good. \* \* \*

"The foregoing analysis of the principles upon which alone rests the right of an individual to acquire a qualified ownership in game, and the power of the State, deduced therefrom, to control such ownership for the common benefit, clearly demonstrates the validity of the statute of the State of Connecticut here in controversy."

The constitutional question involved in the case was then disposed of by declaring that the statute under consideration did not violate the Federal Constitution.

Referring to some cases in Kansas and Idaho holding otherwise on the question of export, Justice White says:

"The reasoning which controlled the decision of these cases is, we think, inconclusive, from the fact that it did not consider the fundamental distinction between the qualified ownership in game and the perfect nature of ownership in other property, and thus overlooked the authority of the State over property in game killed within its confines, and the consequent power of the State to follow such property into whatever hands it might pass with the conditions and restrictions deemed necessary for the public interest."

Thus, it will be seen, the highest judicial authority in the land has laid down the principle that the State, in its sovereign capacity, has power to limit and qualify the ownership which a person may acquire in game with such conditions and restrictions as it may deem necessary for the public interest, and that there is a fundamental distinction between the ownership which one may acquire in game and the perfect nature of ownership in other property.

There is another view of the power of the State to enact such legislation as that under consideration, which is equally conclusive. The right to preserve game flows also from the undoubted existence in the State of a police power to that end.

In *State vs. Rodman*, 58 Minn., 393, 400, the Supreme Court of Minnesota said:

"The preservation of such animals as are adapted to consumption as food, or to any other useful purpose, is a matter of public interest; and it is within the police power of the State, as the representative of the people in their united sovereignty, to make such laws as will best preserve such game, and secure its beneficial use in the future to the citizens, and to that end it may adopt any reasonable regulations, not only as to time and manner in which such game may be taken and killed, but also imposing limitations upon the right of property in such game after it has been reduced to possession, which limitations deprive no person of his property, because he who takes or kills game had no previous right to property in it, and when he acquires such right by reducing it to possession, he does so subject to such conditions and limitations as the Legislature has seen fit to impose."

In *Magner vs. People*, 97 Ill., 320, the Supreme Court of Illinois said:

"So far as we are aware, it has never been judicially denied that the Government, under its police powers, may make regulations for the preservation of game and fish, restricting their taking and molestation to certain seasons of the year, although laws to this effect, it is believed, have been in force in many of the older States since the

organization of the Federal Government. \* \* \* The ownership being in the people of the State—the repository of the sovereign authority—and no individual having any property rights to be affected, it necessarily results that the Legislature, as the representative of the people of the State, may withhold or grant to individuals the right to hunt and kill game, or qualify or restrict, as in the opinions of its members will best subserve the public welfare."

So also *Geer vs. Conn.*, *supra*.

In *ex parte Maier*, 103 Cal., 476, after recognizing the doctrine that it is within the police power of the State to enact such legislation as may be deemed necessary to protect the game, it is said, page 483:

"The wild game within a State belongs to the people in their collective sovereign capacity; it is not the subject of private ownership, except in so far as the people may elect to make it so; and they may, if they see fit, absolutely prohibit the taking of it, or any traffic or commerce in it, if deemed necessary for its protection or preservation or the public good."

In *State vs. Snowman*, 94 Me., 99, 111, the Supreme Court says:

"The fish in the waters of the State and the game in its forests belong to the people of the State in their sovereign capacity, who, through their representatives—the Legislature—have sole control thereof, and may permit or prohibit their taking." [Citing a number of cases.]

In *Stevens vs. State*, 89 Md., 669, 674, it is said:

"That the total prohibition of having game, from whatever source derived, in possession during the closed season is a reasonable, if not necessary, means of protecting the domestic game of the State making the prohibition, has been held in a number of the cases." [Citing them.]

In addition to the power of the State to enact such legislation, based upon its right to its sovereign capacity, and as an exercise of its police power, the Legislature of this State has vested the ownership of game in the State as a proprietor.

The statutes of Colorado and other States vesting the ownership of game in the State as a "proprietor," take away from the people the right to capture and kill the game, unless *permitted*, leaving under these statutes no right, except as *permitted*. Otherwise expressed, in the absence of statute vesting the ownership in the State, the game was like the water of the streams, open to the first appropriator, except as *prohibited* by law, while under statutes vesting the ownership in the State the game is like the land and timber of the State, it can be appropriated to use or held in possession only as *permitted* by law.

It therefore follows that under the facts of this case plaintiff's right to the possession of the deer hides could not be established by showing that possession thereof was not *prohibited* by law, but it was incumbent upon him to point out some provisions of law which permitted him to have possession, and that a failure upon his part to allege and prove facts which would entitle him to possession under the law would defeat his recovery.

Viewed in the light most favorable to the plaintiff, the evidence in this case shows that December 10, 1900, plaintiff was in the unlawful possession of 300 deer hides, which were taken from his possession by an officer authorized so to do. On the same date, by some sort of a deal with the officer, the merits of which it is unnecessary to discuss, the hides were re-delivered to plaintiff. There is no pretense that the re-delivery was made pursuant to the terms of the law, relating to the sale of game seized by an officer (Secs. 10 and 11, Div. D, *supra*), as no "officer's invoice" was demanded by plaintiff or issued to him. January 28, 1901, plaintiff was again found in the unlawful possession of 300 hides, which he claims were the same hides; whether they were or not is immaterial, and it is also immaterial whether or not the officer acted within his authority in redelivering the hides to plaintiff December 10, 1900, as even if he did and the "officer's invoice" had been issued to plaintiff, by the terms thereof it expired thirty days after December 10, 1900, or January 9, 1901, so that in any event under the law his possession January 28 was unlawful, for the reason that the "officer's invoice" provided for by Sec. 10, Div. D, above quoted, is essential to the lawful possession of game or any part thereof, acquired by purchase from the officer, and possession of the game or any part thereof became unlawful thirty days after the date of such invoice.

The testimony did not establish plaintiff's ownership or right of possession; the motion for judgment and the request for an instruction to that effect should have been granted.

Every one is presumed to know the law, and persons who acquire such property take it subject to the provisions of the law. They can acquire no title or right to possession of it, unless the same is permitted by the terms of the law, and such title and right of possession is subject to termination under the provisions of the law.

It is said, there being no statute *prohibiting* possession of hides lawfully taken, because Secs. 5 and 6 of the Act of 1891, which provide for the "tagging" of hides, and the possession and shipment of the same when "tagged," had been repealed by the Act of 1899, therefore the State had abandoned its right to the hides.

With this conclusion we do not agree.

By express statutory enactment the provisions of the law with reference to possession, transportation, sale, etc., are made to "extend to and include every part of such game," Sec. 18, Div. A, *supra*.

Appellee has not cited a single authority involving a discussion of the principles which control this case.

A number of authorities, in addition to those above quoted might be cited in support of the principles herein announced, but we forbear, as this opinion is already too extended.

The explicit language of the Act of 1899, and an examination of the various changes which the laws relating to the protection of game and fish have undergone at the hands of the Legislature, from the earliest territorial days, is convincing of the intention upon the part of the Legislature to do just what this act does by its terms, to wit, *entirely prohibit traffic in the game of this State, or any part thereof, no matter when killed*, unless expressly permitted by law, and it need hardly be suggested that such a provision, if enforced, will tend greatly to the attainment of the object sought.

The facility and ease with which laws for the protection,

of game have been evaded in the past is matter of common knowledge. As counsel for appellant well state in their brief:

"With the possible exception of the mountain lion, the coyote and the wolf, the most persistent and heartless enemies of the game, and at the same time the most difficult to detect and punish, are the meat and hide hunters and buyers. If, with the law declaring the limit in possession for one person to be two horned deer (or any part thereof) and that in the open season only, a man can successfully get away with 300 hides of all sexes and ages in the close season, then game laws are ineffectual, and the game department had as well be abolished."

These and like considerations, no doubt, actuated the Legislature in the premises, and induced the enactment of the statute in its present form to meet just such cases as this record presents.

We know of no reason why the statute should not be held to mean what it says; the language is clear and free of ambiguity; in such case there is no room for construction, and we are not at liberty to place a limitation upon the meaning or intent of the Legislature, which its language will not clearly support.

In the view which we take of the law, it will be impossible for appellee to establish his right to the possession of the property in controversy herein.

The judgment will be reversed and the cause remanded, with instructions to the court below to dismiss the action.

Reversed.

MAY 10, 1904.

## Wolves and Forest Reserves.

KENDALL, Wyoming, May 3.—*Editor Forest and Stream:* I have just read an article in a recent issue of your valuable paper written by William Wells, of Wells, Wyoming, entitled, "Wolves and Forest Reserves." This article is so misleading, and contains so many erroneous statements, that I think it merits a reply. I am now, and for over one year have been, a forest officer in charge of the Wind River Division of the Yellowstone Forest Reserve, and know that Mr. Wells has made misleading representations in regard to the management of this reserve. Such statements as he has made reflect on me as well as on my superior officers in the management of the affairs of the reserve.

Mr. Wells makes the statement that wherever one goes on the reserve are found abandoned ranches, tumbled down fences, filled-up irrigation ditches, and deserted houses on which appear the notice, "This building has been taken possession of by, and is the property of, the United States. All persons are hereby warned against trespassing thereon." This statement is not true, for the reason that there has not been a single instance where a cultivated and improved ranch on the forest reserve has been abandoned in consequence of the establishment of the reserve. In only two instances on this division of which I have charge, and which embraces over seventy-five townships of the Yellowstone Forest Reserve, have people been ordered to leave the reserve. One of the two is that of a saloon conducted for the sale of liquor and as a rendezvous for immoral characters. The other is that of a hunter, occupying a cabin in the vicinity of Kendall, Wyoming, and on the main traveled road. The occupant was ordered to leave the reserve because it was known that liquor was stored there, and was being peddled and sold to the employes of the Green River Lumber and Tie Company in the vicinity. In neither case did the occupants have any filing on the ground occupied, nor any improvements except the cabins in which their business was conducted; and they were ordered to discontinue their business and vacate the premises for the good of the community, and in compliance with the wishes of the best people owning homes and wishing to live in a respectable settlement and away from evil influences. These statements can be verified by the records of the supervisor's office at any time.

Mr. Wells challenges the superintendent of the reserve to publish the amount of stock actually allowed to graze on the reserve, as against those kept off, and on behalf of the management of the reserve, I accept the challenge, and publish the figures, which will show that Mr. Wells does not know what he is talking about. For the grazing season of 1903 the limit number of horses and cattle allowed to graze on the Teton and Wind River divisions of the Yellowstone Forest Reserve was placed at 45,000 head, and not a single stock owner in the State barred. The limit number was reached, and the full quota of 45,000 head of horses and cattle grazed under permits on these two divisions. When the limit number had been reached and cared for by permits, it was found that there were still in the office of the supervisors applications for 2,617 head of cattle and horses to graze on the reserve that could not be granted permits, the limit number having been reached; nevertheless not a single one of this 2,617 head of stock was kept from grazing on the reserve, for the reason that this small number of stock was found to belong to residents of the State, and adjacent to the reserve; and, considering the owners of this stock entitled to the privilege to graze their stock on their accustomed range, the forest rangers were directed to allow them to do so. Therefore, I say, and can prove by the records, that not a single head of stock was deprived of the privilege of grazing on the reserve, where the owners made application for them to do so.

After a careful examination of the ranges at the close of the grazing season of 1903, the supervisor's reports showed that more horses and cattle could be grazed on the Wind River and Teton divisions without detriment to the reserve, and therefore a limit number of 30,000 head of cattle and horses was asked for by the supervisor of each division in order to allow them to care for all the stock upon and adjacent to the reserve for the season of 1904. The superintendent, Hon. A. A. Anderson, having made a personal tour of the reserve, and formed the acquaintance of the majority of the residents of the reserve, and a great many people living near the reserve, and being desirous of administering the affairs of the reserve in the interest of the people and for the people, granted the request, and this season we are allowed to graze 30,000 head of cattle and horses on the Wind River Division, and an equal amount on the Teton Division. Does this look as if A. A. Anderson were not competent, or did not wish to improve the stock interests of the reserve? Mr. Wells' assertion that "a heavy blow had

been struck at the development of Wyoming, and very little good accomplished," is idle talk. It would seem, from his article, that he would like people to believe him to be one of the leading stockmen of Wyoming, when the facts of the case are, Mr. Wells does not own a single head of cattle, but that his wife does own seven head, and a permit has been granted to graze this herd on the reserve. Mr. Wells claims to own fifteen head of Indian ponies, and a permit has been granted him to graze them upon the reserve. Not long after his settlement on Green River at the Big Bend, the Green River Lumber and Tie Company established a tie camp near him. Mr. Wells fought the company very bitterly for a while, and then, finding that he could do nothing, he took a contract to haul ties for them. In the meantime, he located and filed on a homestead and desert claim, and proceeded to reclaim the land and raise native hay, for which the past two seasons he has found a good market with the Green River Lumber and Tie Company, which is located four miles south of his ranch. The past season Mr. Wells put up about seventy-five tons of hay, fifty-two tons being sold to the company and its contractors. Now that this company has about completed its cutting of timber on their lands in this vicinity, and will probably discontinue operations at this camp, Mr. Wells sees that he is going to lose his market for his hay, and makes the statement that on account of mismanagement of the reserve—in not allowing stock to come on the reserve—he expects to burn two hundred tons of hay on the ground this coming fall.

Mr. Wells boasts that he can leave his home in the morning and before night have a hundred dollars' worth of elk tusks in his pocket, and in a month have a thousand dollars' worth of heads cached ready to pack out in the spring, and no one the wiser, and that "he might just as well do it." Now, while it is true there are quite a good many elk in this country, I am sure Mr. Wells has overestimated his ability as a hunter. Two years ago Mr. Wells was out and personally guided one Colonel Berry, of Edinburgh, Scotland, for three weeks, and succeeded in getting only one small head for his man. I rather doubt if he is able to do all these things and no one know about it. Does Mr. Wells remember when he attempted to take his party out the State via the National Park, a year ago last November, with heads of game in his possession that had been legally killed, but without obtaining from a justice the required permits, when he was apprehended by Game Warden Cunningham, and escorted to the justice and required to conform with the State game law? Does this look as if the forest rangers and game wardens were not keeping an eye on Mr. Wells, as well as any other possible violators of the game law? Such remarks from a resident of the State showing a desire to violate the laws of the State in which he resides do not elevate any man as a citizen.

The insinuation that there were pot-hunters in this country hunting for elk tusks and heads illegally is unfounded. Mr. Wells knows that the game wardens are attending fairly well to their business. He surely has not forgotten so soon the pleasant horseback ride he took in a blinding snowstorm last December—at the request of our State game warden—to make his report relative to the number of people guided by him, and the number and kinds of animals killed by his party, as required by the State game law, and which, it seems, Mr. Wells had failed to do. The various wardens and forest rangers have been fairly attentive to business, and are fully able to take care of such would-be violators as Mr. Wells would have the public believe him to be.

Mr. Wells speaks of the superintendent making a royal progress through the reserve during the summer months, attended by a retinue of would-be bad men, loaded down with firearms. It is the duty of every forest ranger to carry arms. This equipment is necessary in the performance of their duties as protectors of the forest reserve, and I wish to say that every ranger employed in the forest reserve service is a person of good repute, and has passed an examination under oath, and vouched for by two reputable witnesses living in the community and personally acquainted with the applicant. We have no would-be bad men on our force, and everyone of them would at least have the good manners to lay aside his firearms when entering a social gathering, which some people bear the reputation of not having the moral courage to do.

This is some of the "plain talk" that Mr. Wells said was needed.

ZEPH JONES.

## This is a Bird.

FIGURES of speech ever dear to the heart or chest of the orator are mighty handy to the propagandist in bringing the blind to see the great benefits to come to mankind from a proper acceptance of the policies of conservative forest management and the reclamation of our arid lands. "Perpetuate the Forests by Wise Use," "Annex Arid America," "Save the Forests and Store the Floods," and "Make the Desert Bloom Like a Rose," are slogans familiar to all our readers. And the great and beneficent work of "making two blades of grass grow where only one grew before" has been glorified all the way from the United States Senate to the backwoods school house. A new figure was born the other day at Cheyenne, Wyo., at an irrigation meeting. A local orator, expatiating on the glorious work of the Reclamation Service, warming to his subject, exclaimed in rapturous tones, "What a wonderful thing it is to be engaged in such a noble work, making two drops of water flow where only one flew before."—Forestry and Irrigation.

## Vespertina.

PITTSBURG, Pa., May 19.—How beautiful and calm is the evening! How well we know the road, my horse and I. How many times, winter and summer, in all kinds of weather, at all hours of the day and night have we traveled it. Leisurely and slowly, when time was cheap, admiring its beauties always new, and sometimes, at a killing gallop, when called to save life.

An old Indian trail traverses by the line of least resistance the ridge dividing the water shed of the lower Allegheny and upper Ohio rivers; it winds through a varied and picturesque country, whose wild beauty has charmed me for the last twenty years. Not ten miles from town you travel through an old-fashioned hamlet—Perrysville

—for all the world looking like a Flemish village 1,000 years old, houses and natives included.

Pine Creek Valley, with its dark woods full of bird life and wild flowers and the smell of the rich woods mould at this time of the year after a rain; how it discounts all the perfumes ever invented by man!

A robin is singing his vesper hymn on a branch overhanging the spring. Wildwood notes come from everywhere, and the air is as calm and balmy as in Italy; there is an indescribable hush and majesty over the whole scene, and unconsciously I uncover myself, thanking the Creator of the Cosmos for this blessing.

But we must hurry up, Jenny: somebody may be suffering below, and we may be needed. Good-night.

JULIUS THE FOX HUNTER.

## Spring Bull Moose.

RILEY BROOK, Victoria County, N. B., April 20.—*Editor Forest and Stream:* Here is a photo that may be of interest to the readers of FOREST AND STREAM—four bull moose in one group. These moose yarded last winter about half a mile from my home camp. I photographed

them April 15. They had all shed but one spike horn; the one on the left with his head up.

Game of all kinds wintered well, and the coming season promises to be the best for years.

When this photo was taken there was about five feet of snow where they were yarded.

CHAS. L. BARKER.

## New Publications.

The Birds of California. An Introduction to More than Three Hundred Common Birds of the State and Adjacent Islands. By Irene Grosvenor Wheelock, with 10 full-page plates and 78 drawings in the text by Bruce Horsfall. A. C. McClurg & Co.

The title to Mrs. Wheelock's book is rather an ambitious one and somewhat misleading. As a matter of fact, the title should have been A Part of the Birds of California. Three hundred of the more important species are described, and something is given about the life history of each. The book makes no pretensions to being scientific, but is an effort to make interesting to the casual reader something about the birds of the State which Mrs. Wheelock has chosen.

She divides her volume arbitrarily into Water Birds and Land Birds; and the Water Birds into Birds of the Open Sea, Birds Near the Shore or in Bays, Birds found along the Beaches, and Birds found in Bayous and Marshes. The Land Birds are divided into Upland Game Birds, Birds of Prey and Common Land Birds in Color Groups. This arrangement may be simple for some people, but to some others we imagine it will be very confusing.

The descriptions are drawn from reliable sources. The bits which deal with the life histories of the birds are often original, but on the other hand, often quoted. A very pleasing bit is that which describes the gray crowned finch.

"Where the range of the Pipilo ends that of the Leucosticte begins. Far above the timber line, amid a wilderness of snow-clad peaks, these Alpine dwellers have their home. Only the severest storms of winter are able to drive them to the shelter of the forest. Flying high over the topmost peak of the range, searching in the snow for beetles and bugs that a kind Providence sends there for their special nourishment, they lead charmed lives. Even bumblebees and butterflies are on their menu, coming as mysteriously as do the birds themselves. When storms swirl over the summit, they crowd together in the shelter of a rock or a snowbank. When the sun comes out again, they are off for a frolic over the chasms and gulches, or a dip in the icy water of the glacial lake. They are constantly in motion, and their clear, low "churr" is the embodiment of gaiety. Somewhat shy during the breeding season, as soon as the family cares are over they become as friendly as possible with the few who invade their haunts.

"The nest is snugly hidden in a cleft in the rock underneath a crag, where the fury of the storm will pass it by. It is not an elaborate affair, but composed of weed stalks, and lined with deer moss and occasionally a few feathers. Late in June, incubation begins, and it continues fourteen days. The newly hatched young are only thinly sprinkled with hair-like gray down, and look not unlike baby juncos. They remain in the nest fully three weeks, and by the middle of August are able to fly nearly as well as the adults. In September the broods of the vicinity unite in bands of one or two families, frolicking and chattering about the summit as if it were midsummer, and braving the snowstorms until the cold dark November days drive them to the first for shelter at night. Even then the adults fly back to the crests during the sunny hours, as if homesick for the bare, bleak crags and the broad vista of snowy peaks. By December they are well within the forest, whirling from place to place in masses like juncos, and sleeping huddled together in the heavy firs, sometimes almost buried in the snow, but always sure of a joyous resurrection in the morning."

The illustrations by Mr. Horsfall are of varying quality; many of them are excellent; others not so good. On the whole, the full-page plates seem more life-like than the pen and ink sketches, and the drawing of Brandt's cormorant and of the water ouzel are especially beautiful. Price, \$2.50 net.

Stella Fregelius; A Tale of Three Destinies. By H. Ryder Haggard. 8vo. 361 pages. Longmans, Green & Co.

This is a novel, a wild, weird tale, the scene of which is laid in England, the hero of which is an inventor, and the heroine the beautiful witch maiden from the Far North. It abounds in surprises, and has a rather melancholy ending.

Along Four-Footed Trails; or Wild Animals of the Plains as I Knew Them. By Ruth A. Cook. Illustrated. 265 pages. James Potts & Co.

An attractive book, giving many personal experiences with wild animals of a little girl brought up on the prairies of Nebraska. The coyote, the antelope, the prairie dog and many other familiar Western creatures are described with much feeling.

## Why Not?—II.

THE experience of one of my friends who a year ago introduced his wife to the pleasures of angling in Florida and other States, led me to write for *FOREST AND STREAM* an article which I called "Why Not?" This article called forth an editorial on "Women Afield."

The recent experience of another friend, who seems to have simplified the problem of field companions, leads me to another effort to show that many women have the same taste and desire for out-door life that men do, and in time can become just as expert in the art of angling as their stronger brothers. Still further, a more sensitive organization, with more delicacy of touch, enables the women to enjoy the sport much more keenly than some men do.

men. Men think they need recreation and change, and say so; while women know they need it and don't talk so much about it.

It was about thirty days ago that my friend drifted into my den one evening and filled his pipe from my tobacco jar, and after settling himself comfortably in my easy chair, declared with a fine display of enthusiasm that he was going trout fishing and that he was going to take his wife and her dear friend, Miss Mabel, along. He added that he considered men at best a selfish lot, looking only to their own pleasure, and forgetting that a wild rose bush by a brookside makes a prettier background in the picture of a woman than of a man. Continuing, he said that, to his mind, there was no reason why Miss Mabel and his wife should not become expert fly-casters, and take advantage of the physical good that one naturally derives from such diverting exercise, and gladden his hours by the camp-fire as well as at home. I liked the thought so well that I begged him to go on, telling him that he was always interesting, but to-night more so than usual.

"Well," said he, "my theory may seem a bit foolish, and I know it to be expensive, but I am going to put it to the test. Men are capital companions at the lunch table, they talk flies and rods, tell fish stories, and entertain one splendidly, but many of them, if given the chance, will crowd you away from the best pools of a brook. Not so with a woman; she is willing to be led."

I have had the pleasure of meeting my friend a good many times since the visit when he said these things, and each time I saw him he seemed more and more anxious to be off on this proposed fishing trip, declaring that he was glad enough on his own account but that by multiplying his own keenness by the number in his party, he was made four times glad.

Since he returned from his trip I have had a delightful evening with my angling friend, and I declare it makes life better worth the living to see a man so stripped of his cares that he becomes a boy again. It was quite late when he left me sitting in an atmosphere blue with smoke but sparkling with the remembrance of the delightful sensations of some glad hearts along the rushing waters of a trout stream.

Late as it was, it occurred to me that while the atmosphere he had created remained unchanged, I ought to tell of his experiences in introducing these dear ones into the somewhat strenuous mysteries of trout fishing.

After he had filled his pipe he declared that he had just had the best fishing trip of his life, and then he went on: "Never was there fairer sky or more perfect infant summer than the day we left New York. Every plant and tree and blade of grass was a graceful flag of shaded green. The cowslips were resplendent in their yellow beauty, and the whole world just looked as though it had put on a new frock as we sped along northward on our errand of fish, feast and fun."

"The weight of years seemed to slip away from the shoulders of Miss Mabel's father just as though the load were in the wrong place; my wife drifted back through the haze of time to the 'jack-straw' period, and I looked at her with the blindness of a boy again. Miss Mabel's eyes assumed the color of the late afternoon heavens, and seemed as peaceful, and thus we journeyed on."

"At 8:15 we reached Livingston Manor, and there found Mr. Royce's team from DeBruce waiting for us. It was during that six-mile drive that I personally felt the retrogression of time. As we approached a meadow and heard the chorus of its inhabitants chanting their evening hymns, sweet and solemn in the gloom of night, thirty odd years seemed to disappear, and again I was a bare-footed boy on the farm driving home the cows for the evening milking. I seemed to be moved back to that time of youth when the whole world is full of mystery, and when the rough and soiling phases of life that we must learn later are then unknown, to the days that then seemed long and hard—days that I know now were of the halcyon sort."

"Royce's roosters did not have the heart to crow at the time tender voices bade us awake next morning, saying that it was time to go fishing. You ought to have seen those angelic anglers at breakfast; they wore their waders, sweaters, and landing nets. This was their day, indeed; that is, they thought it was, and here is where it was proved that a woman's reasoning power is greater than a man's. I was willing to concede the longest half of the day to them—surely they begun it early enough—but I was sure noon time would mark their finish until

another sun. Events proved the folly of my judgment, as you will see.

"The sun had climbed the eastern side of the mountain, and was peering with glowing eye into the valley of the Willowemoc as we entered the pretty brook near the bridge in the hamlet of Willowemoc and commenced fishing—and laying a lasting and rock bottom foundation under my dear old theory. One of the many causes of my lack of sleep the night before was how to bait, and handle

SAFE FOR THE TIME BEING.

my charges, and maintain my peace of mind. As I am somewhat the junior of Miss Mabel's father, I naturally wanted to see him fish undisturbed, and being the stronger man of the two, it seemed fitting that I should be the one to be leaned on. Any suggestion to the ladies of angling with worms was certain to be repelled; then, too, the father and I both used flies, why shouldn't they? Why not, pray? And yet the Willowemoc is no ten-acre lot, either. So flies were decided on—the dull hues and woolen body of a Cahill.

"While Miss Mabel's father was arranging his attractions, I led the daughter to the opposite side of the stream and placed the wife in an equally advantageous position, and called time, at the same time filled my waders dodging under the bridge.

"Never before in my life had it been my fortunate lot to commit to the laughing waters so many attractions. Flies went swirling through the air in all directions, oc-

"FROM BROOK TO MAN."

asionally including the right one; my warmth in the way of admiration warmed the brook water in my boots. Those anglers plunged and slipped, struck anxious attitudes wonderful to behold, cried, 'Isn't it lovely?' 'Doesn't the water feel splendid?' 'Isn't the air charming?' 'Did you ever see such a morning?' 'Isn't it glorious?' and—'Oh, dear, my flies are caught!' and, 'Dear me, so are mine!' 'Did you ever see anything so stupid?' Now, did you?"

"I tell you, old fellow, it was glorious—sort of a series of joyousness and anxiety, smiles and frowns; mostly flowers, few thorns. Supposing I did have two trees to climb on two sides of a river at the same time, what difference did it make? I was thankful for each climb, and I was getting everything I went after, except trout, and at this time the thought of not getting some fish didn't annoy me. Wasn't I to have the afternoon to myself on the brook while the tired novices slept? Rises there were, sometimes in plenty; mystification set in; theories were advanced; Miss Mabel's father instructed and I preached. In the meantime we had moved down the brook just a

hundred yards, mostly in bunches, and we had four miles to do to meet the carriage and lunch basket.

"Now, I remember when I was a boy my father dropped me over the side of a boat to teach me to swim, and I swam. It was rough water I made, but I got ashore. Why not abandon our charges and let them wade? It seemed a good idea; so with Miss Mabel's father as a rear guard to gather up the fragments, I struck off down stream, and I tell you, my boy, that was where I made a big mistake, and nearly lost my job and popularity at the same time. When I got back an hour and a half later I was sorry I hadn't gone an hour and twenty-nine minutes sooner. I found them within a hundred yards of where I had left them, and Miss Mabel's father was as completely blocked as a trolley car would be with a broken down truck on the track. A smile has saved many a life, but on this occasion it would have been fatal. I got busy, instead, and once more the procession got in motion. I would move Miss Mabel down stream a hundred yards or so and then take the wife a lap further, and then a lap for Miss Mabel. Then it occurred to me that four miles for them meant sixteen miles for me, and at that rate we would get our lunch at midnight exactly; so we all moved together, and wasn't I a proud one, though? I had a clinging woman hanging on each arm depending on me for support and lunch over as slippery a way as was ever trod by a woman. I have often wondered since whether it was laughter, fatigue, heat, or hunger, that made Miss Mabel's father take to the woods. We reached our camping place at two o'clock, about as jaded an outfit as ever struck a trail.

"Here was where we all came into contact with the mysterious pleasures of the camp-fire. Water from a near-by spring was soon boiling, the coffee was made, and the feast to the hungry was spread. Personally I felt in perfect sympathy with King Richard during his first visit with Friar Tuck.

"When we had finished eating, I selected just the right spot, dragged extra robes from the carriage, made beds, and bade those fair ones rest. This—I thought—was to be the men's half of the day, or rather that portion of it that was left; but not so. Before that camp-fire had died out, those two trout brook explorers were at it again; the repacking of dishes was left to the driver of the carriage; that carriage we had ordered to take the ladies to the hotel went back empty, while three miles of brook laid between us and dinner.

"On this memorable afternoon I undertook a new rôle. Instead of climbing trees after flies, I only had two small hooks to bait with angleworms. I also became an adept in the way of draping skirts (those skirts have been shortened since). If it hadn't been for the baiting of hooks, Miss Mabel's father and I would have had some great fishing that afternoon. You see, in bait-fishing we could lead the ladies to the edge of the pool and tell them to stay there until they got a bite, and the pools were a nice distance apart; or get them on a rock in the middle of a rapid and tell them to wait there for a bite; but at this stage of fishing one of them couldn't touch an angleworm at all, and the other one couldn't without gloves, and she hadn't brought her gloves along, and thus we journeyed on until night found us with bodies weary but spirits untamed. We dined at eight o'clock in rubber boots, sweaters and landing nets, as at breakfast, and, strange as it may seem, we had plenty of trout for dinner.

"The older chickens had filled their craws and were scratching for the young ones next morning when we reminded our sleepy companions that it was time to go fishing again, and it was wholesome and reassuring to note the alacrity with which they responded to the call. I tell you that a woman in a game she likes is a wonder. I sometimes think a man gets his grit from his mother.

"This morning we entered the brook where we had left it the night before, and all with a greater degree of confidence. The day before both Miss Mabel and my wife knew they would fall down; this morning they only thought they would. You see, they were learning fast. Miss Mabel could take her eye off her uncertain and uneven path long enough at a time to behold with critical eye the wondrous beauty of her surroundings, while the wife concluded she could stand alone, and give thanks to heaven that she had married a fisherman. They saw every bird that crossed the brook, and every bubble created by a trout. They had got their eyes open, and my, oh, my, weren't they using them, and it was then and there that I came to the conclusion that I didn't care if I never caught another trout if I could only have them along to do it for me.

"They found pretty settings of forest and stream, and used the camera; they each caught some trout; they waded many parts of the brook unassisted, and put away the foolish thought of falling down.

"By a shaded pool we rested; the lunch basket arrived, and I built a fire on the rocks by the margin of water; Miss Mabel's father cleaned the fish, the wife continued fishing, while Miss Mabel photographed the evolution of the trout from brook to man.

"Night again came on us while we were in the brook, but only a short distance from the Hearthstone Inn. We regretted the shortness of the day, yet were grateful, indeed, for the rest known only to those whose ears know the sound of a brook; and whose feet have felt its rocky bottom.

"Another day came—but why talk on? Give your imagination full play, join us on that third day of life and happiness, and the day after, which was one of those days of rest called Sunday. On this day we sat by the big open fire-place and fished the three days all over again, while outside it rained, refreshing mountain and valley alike. Nature took a bath and looked sweetly refreshed as we drove to Livingston Manor Monday morning at an hour so early that the sun could not see us off."

T. E. BATTEN.

## In Violation of Law.

### A Jacking Experience.

IF THE quantity of game killed is to be any criterion of the amount of pleasure obtained from hunting expeditions, I must say, that our day had been nearly a failure. Since early morning my friend and I had been tramping over bog and meadow; but evening found us at home, hungry, thirsty, and exceedingly tired, with only a paltry half dozen birds between us. But, after a generous meal had banished the gnawing demon inside, and the genial warmth of the open fire-place soothed us, as a loving mother soothes a fretful child, the recollection of the glorious October day, the keen, clear air, bracing, rejuvenizing the very scent of the departing vegetation, almost intangible, yet ever present, and over all the great, round sun shining from the deep blue sky, unobstructed by even a single cloud, soon put us in a frame of mind to appreciate the pleasures which we had enjoyed, and to philosophically moralize that it is possible to obtain sport without necessarily harming a living creature; but, a few more birds would have been wonderfully acceptable.

Under these circumstances it was not strange that our conversation eventually turned upon the method of extracting the greatest amount of pleasure from the least amount of sport; I maintaining that the pleasure was more in the anticipation than in the realization, while my friend stoutly declared that the things which yielded the most enjoyment were those which were accidental in nature. In defense of his views he told me the following anecdote:

"Some years ago I was in charge of the erection of an electric power station in a small town in Northern New York, and in a more lonely place I was never located. I managed to keep fairly busy during the day, but when the long summer evenings came, all I could find to do was to sit and think, and smoke a corn-cob pipe until I was so pickled with tobacco smoke that if some mosquito, braver than its comrades, dared to bore a hole in my epidermis, after one draw, it would drop over on its back, and, with a few convulsive movements of legs and wings, give up the ghost.

Realizing that I should get desperate before long, I began building a boat to while away the time, although what I should do with it when finished was more than I knew. As I intended it for individual use, it was quite small, perhaps ten feet in length by three feet beam, and of the sharpie build—flat-bottomed, sharp at one end and square at the other.

"By no means did I lack for company while building this boat, as the workmen soon began to gather at the carpenter's shop, as soon as their suppers were bolted, and sat around and smoked and offered advice in solid chunks—advice generally about as valuable as a pauper's promissory note. Among the workmen was a Canadian Frenchman, one Joe La Fontaine by name, who, while saying very little, watched the completion of the craft with an eager eye. He was a magnificent specimen of physical manhood, standing over six feet in height, broad of shoulder, upright in bearing and with that grace of movement which only perfect physical health and spirits can bestow. His only blemish was the loss of his left eye, the absence of which he informed me was occasioned by 'One man Canada hook it out wit' hees thumb, w'en Ah'l have des'pute 'bout some fish w'at she'll ketch, an' bimeby she'll fin' on ma string'.

"The boat finished, it was put overboard on Saturday, and the next day I gave it a thorough trial. I think I can truthfully say that a more cranky boat never floated on the surface of that stream, at least; talk about a canoe being easily capsized, this boat was as bad as any canoe ever thought of being. Why, for the first hour I had to breathe through my mouth; for if I drew my breath through my nose and one nostril chanced to be stopped up, the equilibrium would be destroyed to such an extent that it would dip water on the opposite side. Fact.

"Well, I finally found the hang of the thing, and every pleasant evening and some Sundays were passed in leisurely floating around the pond and up and down the creek. One-man pastime soon palls, however, and I began casting around for something to sandwich in between.

"It being the close season, hunting was out of the question, even had I the time to devote to it, which I had not; so fishing was the only thing I could think of. Now, some imagine that the height of pleasure is reached when they take a coach whip in hand, place a gold plated reel on the butt, load themselves down with a few dozen leaders, four hundred and fifty-six different kinds of flies, the like of which no mortal or piscine eye beheld in nature, put on boots reaching to the waist, and tramp up and down a trout stream two feet wide and occasionally yank a three-inch trout from its erstwhile happy home. Others, not content or financially unable to indulge in what they consider childish pursuits, hie themselves to the nearest coast, get aboard some sort of craft, go out to the dumping place of city refuse, and throwing overboard a half-inch rope with a ten-pound weight attached, and baited with a passé clam, proceed to pull in by sheer muscular effort whatever sculpins, dogfish, and flounders, kind fortune and a voracious appetite may send their way.

"Either of these may be of great pleasure and profit to those engaged, but for my part there is no method of fishing like spearing them at night with a boat and jack. I realize that jacking is somewhat under the ban, and justly so in most cases, but for the coarser

varieties of fish, a good boat, a bright light, a spear, a good eye and a strong arm, will furnish more sport than anything else I know of in the way of fishing. This being my opinion, you may realize how glad I was when Joe came to me one scalding hot afternoon, and the following conversation ensued:

"Mr. G—, Ah'l s'pose you ain' prob'ly wan' let me borry dose boat some night w'en you ain' goin' use him?"

"Why yes, Joe, of course, you may use it any evening you wish. I would have offered it, had I supposed you cared for rowing."

"Oh! Ah'l don' wan' for goin' row, Ah'l wan' him for spear some h'eel. Me an' ma ole h'oman got ten young La Fontaine, an' she's jus' good for feed it on h'eel and sucker, w'at a'n't cos' not'ing as feed him on good salt po'k w'at'll cos' ten cents poun' any way, prob'ly six."

"Well, you may have it any time. By the way, have you anyone in view whom you intended taking with you? If not, I would like very much to go along."

Joe's eye twinkled as he replied: "Say! Ah'l been wan' ask it you for come all de tam, only Ah'l git scare; so if you wan' go to-night, we go soon as she'll git black."

"I suppose you have a spear, jack, etc., haven't you?"

"Ah'l got spear, an' if you wan' fetch couple gallon sker'scnc, Ah show you somet'ing will mek you eye bung out."

"I saw at once why Joe was timid about asking me to go, but as I thought the fun would be worth far more than two gallons of kerosene oil, I poured that amount into a tin pail, and as soon as twilight had fairly departed, set forth for the landing, where I found Joe stretched at full length, softly singing 'Roulant ma boule,' to keep himself company. He pulled himself together as I came up, and proceeded to show me something in the way of jacks, which I had never encountered. At the prow of the boat he had secured an old fork stake, on the end of which was fastened a piece of half-inch round iron, in such a manner that it projected over the water about two feet, at a height to be well above a man's head when kneeling in the bottom of the boat. This iron was bent into a hook at the end, and from this hook hung two pieces of ordinary fire brick, such as is used for lining the fire-box of boilers. The bricks were perhaps four inches square by seven or eight long, and were depended from the hook by a few strands of iron wire.

"These bricks Joe placed in the pail of kerosene, and noticing the bubbles which arose, I was well assured in my own mind that they would absorb enough oil to give a brilliant light when they were ready.

"We placed the duffle in the boat and started out, Joe in the bow and I in the stern, using an oar as a paddle or a push pole as occasion required. I do not remember a more perfect night for jacking, or for being on the water either, for that matter. After the severe heat of the day the cool evening air was most refreshing; the surface of the water was almost without a ripple, and reflected back a myriad of stars from its inky depths, while from all sides were heard the voices of the night issuing from hundreds of unseen frogs. These voices were of many tones, like the keys of an organ, ranging from the treble e-eep, e-eep, e-eep, of the wee green fellow, to the alto and tenor e-e-ecper, e-e-eeper, of his larger brother, while from some old log or patch of lily pads rose the basso profundo, ur-urunk! ur-ur-urunk! of some gigantic patriarch of frogdom.

"I took in all these sights and sounds almost unconsciously, as I watched Joe get his jack in working order. First he lifted one of the bricks from its bath of oil and hung it on the hook, next he pulled a piece of paper from his pocket, lit it with a match, held the paper under the brick, and as it became heated, gas was generated and soon a brilliant light illumined the water, revealing every stick, stone, fish and what not on the bottom better than by any other jack which I ever beheld. It was with considerable difficulty that we kept our balance in such a cranky craft, but by dint of eternal vigilance we managed to keep right side up.

"I paddled slowly along, keeping an eye on Joe, as he knelt in the bow, motionless as though hewn from stone, as he waited with poised spear for the first eel or sucker to come within striking distance. A slight motion of his hand caused me to swing the bow slightly to the right, then with a movement quick as a lightning flash his arm darted down; then I felt that quiver of the boat, which indicates the impaling of a large fish, and soon Joe swung his spear up with a huge eel squirming and twisting between the tines.

"Carefully turning around he opened the mouth of the bran sack which lay beside him, thrust both eel and spear within, gathered it around the eel and stripping it from the tines, dropped it in the bottom of the sack, the mouth of which he tied loosely. Joe turned to his work again with the remark:

"Ah'l t'ink dats mos' one meals for two, t'ree young Peasoup."

"We proceeded with varying success, capturing now an eel, then a sucker, and occasionally missing a stroke. By this time the light began to grow dim, so Joe took the other brick from the oil, hung it in the place of the first one, and lighted it by holding the old one underneath. I expected to see him dip this one in the water to extinguish it before placing it in the pail to fill with oil once more; but instead, he dropped it into the pail, submerging it so quickly, that the oil had no time to ignite before the flame was put out. To say that I was frightened would be drawing it mildly, as I certainly expected to see the whole painful set on fire, while Joe grinned with delight at having caused my eye to 'bung out,' as he expressed it.

"All this time we had been skirting the right bank of the pond. Ever ahead of us, and now close at hand, we could hear a two-pound frog pouring forth his tale of the inebriety of a certain Irishman whom he called 'Paddy,' in a voice of muffled thunder.

"Joe looked toward the spot whence rose the sound, saying, 'S'pose you let me look it putty close on dose frawg. Le Doctaire say ma healt' been mos' so bad

lak I can't h'eat not'ing on'y frawg hin' leg.' Accordingly, I paddled the boat slowly toward the sound, and soon beheld the old fellow seated on a mossy log, apparently undecided whether to consider the unwonted radiance harmless, or to dive to his safe retreat at the bottom of the stream. While he was 'makin' off hees min', as Joe said, the flat of the spear struck him on the head and he rolled off his perch into the water, from whence Joe scooped him, saying, as he did so: 'Ah'l guess prob'ly she ain' good for you t'roat, stay so much in de wataire; mek you putty hoarse in you sing.' So saying, he dropped him into the bag with the eels and suckers, then resumed his watch for more.

"Slowly paddling, my mind intent on Joe's spear, I was startled by a blow on the leg, followed by something cold, wet and heavy striking me full in the face, nearly knocking me overboard and frightening me nearly out of my wits. Whatever it was fell back into the boat, and my shout of astonishment causing Joe to turn, we found the mouth of the bag untied and the floor a wriggling mass of suckers and eels, in the midst of which the once stunned, but now decidedly lively frog, rolled, crawled, kicked and occasionally jumped whenever he could secure a foothold to get a start from. I never saw any living creature act so bewildered before or since, he would jump straight up into the air, striking flat on his back when he fell and lie there feebly waving his forelegs and kicking vigorously with his hind ones, until one of the squirming eels would roll him over; just as soon as any two legs came in contact with the floor he would jump, no matter which way he was headed, most likely to strike his nose against the side of the boat and fall back to commence all over again. He seemed more like a bundle of steel springs than a creature of flesh and blood. I have it all figured out in my note book, that if the amount of energy which that frog wasted in his struggles could be utilized, it would take only six such frogs to run a threshing machine; and I think that some day when I have more time I shall draw up a paper to the American Society of Mechanical Engineers, calling attention to this fact.

"Joe made a grab for the frog, and with a 'sac-r-r-ee' as long as your arm, dropped him into the bag, picked up the eels, one by one, and threw them in after him, while I sat and laughed to see him sprawl around in the slime and dirt. After Joe had caged his animals we got under way once more, and by the time our oil was nearly exhausted I had begun to think that if Joe intended all those eels, frogs and suckers for the consumption of his own family, he must have at least twenty children, instead of the ten which he owned up to.

"Our jack was burning low, so I said: 'We will light up once more, and then I think we had better go home.' Joe lit the new brick, and, reaching out, dropped the still blazing old one in the pail, but, sad to relate, so much oil had been used that there was not enough to submerge it and extinguish the flames. Instead, a column of fire rose twenty feet in the air, singing Joe's hair and eyebrows, causing him to jerk his body backward with a shout of terror. As he did so, he lost his balance, sliding over the side of the boat, like a turtle off a log, boring a hole ten feet deep in the water, soaking me to the skin with the splash, and half filling the boat with water, though for some unknown reason not overturning it. Before he reached the surface I had jumped forward, seized the pail and thrown oil, pail, bricks and all overboard. No sooner was it out of the pail than the burning oil spread over the surface of the water, giving it an appearance at though the whole river was afire; although owing to the small quantity of oil and the unlimited room over which it could spread, there was absolutely no danger whatever.

"The absence of actual danger was unknown to Joe, however, as he rose from the depths spouting water and French oaths in about equal quantities, and as he scooped the water from his eyes and saw the whole world apparently on fire, he gave utterance to a yell, compared to which his first one was as the cry of a puling babe is to the roar of the hungry lion, and promptly tried to get under water once more.

"Did you ever come suddenly upon a bullfrog when he had inflated himself and seen him try to dive with his throat still distended with air?"

"Well, that was just the way Joe acted. For some reason he seemed to be unable to get more than his head, shoulders and arms under the water, while the seat of his baggy Canuck pants distended with the air confined within, rose from the surface like the top of a balloon, and two sturdy legs kicked and thrashed in such a manner that the boat rolled, and tossed like a fisherman's dory in a ground swell, and the waves dashed on the nearby shore like those on a miniature Nantasket Beach. Paddling as close as possible, I seized an opportunity and the slack of the aforesaid pants at the same time, I placed the end of my oar on the bottom of the stream, which was now rapidly growing shallow, and giving a push, managed to get into water not more than four feet deep. Jumping overboard I stood Joe on his feet, for he was too bewildered to know what he was doing, and held him upright while he coughed, choked and tried to replace with air the space now filled with water.

"Finally he drew a long breath and managed to sputter: 'By Gar! Ah'l t'ink ma ole h'oman been putty close bein' orphans doze time. An't you s'pose so?'"

"We drew the boat to shore, emptied the water from it, and reembarking, soon reached the landing, where I earned Joe's everlasting gratitude by refusing to take any share of the 'h'eel, sucker and frawg,' and his invitation to 'come on ma house tomorry, an' ma h'oman he cook it some frawg, some h'eel, some sucker an' many odder good t'ing,' was sincere and heartfelt, although I felt obliged to decline.

"Now, although I had personally secured no trophies of hook or spear, although I was wet to the skin, and with a new suit of clothes completely ruined, I felt that I was more than repaid for my coming."

E. E. DAVIS, M. E.

## Angling Notes.

SAYRE, Pa., May 20.—*Editor Forest and Stream.* While the trout season was late in developing, it has, during the past two weeks, furnished the angler with some exceptionally good sport. Indeed, reports indicate that for this particular section of country more and larger brook trout are being taken than for several years past.

From Owego Creek have been taken a number of unusually large trout, two or three at least weighing a bit over 1½ pounds each.

The streams about Harford Mills, Richford, Speedsville, Slaterville and Cortland, are all yielding plenty of trout, but it is seldom that large trout are taken from these streams. They are very delightful waters to fish from, however, and traverse a country easy to reach from Auburn, Ithaca, Sayre, Owego, Cortland or Elmira. The angler not physically robust can work that section of out-of-doors without much inconvenience, and at no risk of becoming over fatigued.

In the immediate vicinity of Sayre there are no trout streams worth mentioning. Shrader's Creek, below Towanda, annually yields some good creels of fine trout, and smaller streams traversing the same country as Shrader's, contain trout. In former days, before the lumberman desecrated the country with his ruthless ax, Shrader's Creek was famed for its trout supply, and while its glory has largely departed, it still hath charms.

A line from Ithaca advises that the local trout anglers have apparently forgotten the fascinations of the field and the stream, and are lost amid the excitement of hauling mammoth pickerel and pike from the Cayuga Lake Inlet. Nothing quite like the pickerel and pike fishing now prevailing at that point has been known in years. Nine and 10-pound pike, and pickerel scarcely less heavy, are being taken in large numbers. Game Protector John Vann diplomatically declares that the present unsurpassed fishing, and the exceedingly large fish taken, are due to the rigid enforcement of the law in respect to the use of nets in the local waters.

The pike and pickerel fishing is equally good at the north end of Cayuga Lake, great numbers of the above fish having been taken during the past fortnight below Cayuga village, and from the waters overflowing the Montezuma marsh.

Since writing the above, word reaches me that a 17-pound pike was taken from the Ithaca Inlet one day this week. So far as I am informed, this is a record pike for the local waters. In fact, it is a prodigious pike for any waters.

M. CHILL.

## Lake Champlain Bass Fishing.

P. O., LAKE VIEW HOUSE, May 19.—*Editor Forest and Stream.* We have not had such good bass fishing in the Great Back Bay of Lake Champlain for years as we are having at the present time. They are running very large this year, and big catches of big bass is the order of the day.

## The Kennel.

## Rabies.

From Hill's "The Dog, Its Management and Diseases."

(Continued from page 401.)

**Incubation.**—The incubative period of rabies is extremely uncertain. My experience, with a few exceptions, has been from two to five weeks.

"In the dog, Lafosse states that the shortest authenticated period that occurred in his experience was seven days, and the longest one hundred and fifty-five days. Roll gives, for the same animal, from three to six, and rarely from seven to ten weeks. Blaine asserts that the majority of cases occur between the third and seventh week, though some are protracted to three, four, or even a greater number of months. A week was the shortest period he had noted. Youatt has known instances in which the first symptoms have only become manifest after from five to seven months, and he never knew of a case occurring before seventeen days intervening. Other authorities have related cases in which the disease was developed within from three to ten days after contamination. Of nine cases which Peuch could rely upon, the symptoms appeared after the bite, in each, at an interval of 95, 88, 35, 26, 24, 22, 18, 15, and 10 days, respectively."

"In 1863, Renault reported that of 68 dogs inoculated experimentally or bitten, the malady was developed in:

1	from the	5th to the	10th day.
4	"	10th	"
6	"	15th	"
5	"	20th	"
9	"	25th	"
10	"	30th	"
2	"	35th	"
8	"	40th	"
7	"	45th	"
2	"	50th	"
2	"	55th	"
4	"	60th	"
1	"	65th	"
4	"	70th	"
2	"	80th	"
1	"	100th	"
		118th	day.

"In St. Cyr's 87 cases of confirmed rabies in 1865, there were only 26 the date of whose inoculation could be positively ascertained. In these the latent period was:

Cases.	Days.	Cases.	Days.
1	16	1	18
3	21	2	24
1	30	1	31
2	32	1	33
1	35	1	36
1	38	1	41
2	50	2	60
1	62	1	86
2	55 to 100	2	105 to 115

"Bouley has known instances in which the latent period was twelve days and seven months, though they were rare; it was usually from six to twelve weeks.

"According to Haubner, in 200 cases the appearance of

the disease within two months was 83 per cent.; three months, 16 per cent.; four months, 1 per cent. He mentions an instance in which the incubative period was from seven to eight months, and another in which it was fourteen months. He gives an average of three months."

With such variations in the incubative period, it is little to be wondered at that persons, after being bitten, and under what condition of the animal they know not, should be filled with dread, and exhibit—especially those of nervous temperament—great mental excitement.

What takes place during this incubatory or latent period we know not; but it may be confidently asserted that in no other malady is this interregnum more variable and uncertain; indeed, if we are to credit some reports, the duration of the latent stage is indefinite. The capriciousness of the virus of rabies in this respect is certainly very remarkable and unaccountable. The wounds produced by rabid animals generally heal up readily, and leave but slight trace, and to all appearances those who have been injured appear to be as well as usual. True, in some rare instances in the human subject, pain has been experienced in the region of the wound for a considerable time after the receipt of the injury, and still more rarely a quickened pulse and slight fever have been present from this time until the disease became manifest. In other exceptional cases silent changes seemed to be taking place in the constitution, evidenced by general debility, a quick, weak, and easily excited pulse, sallow looks, and sunken eyes. But, as a rule, the health remains to all appearance the same as before the inoculation; and so subtle is the poison that, according to Van Swieten, persons who afterwards die of hydrophobia may, in the incubatory stage, contract diseases of various kinds, even virulent diseases, such as variola, without the course of the rabies being thereby modified in the least, or its evolution retarded.

"What occult influence is at work, what changes may be taking place previous to the manifestation of the first symptoms, is a matter of pure hypothesis. The venom of the cobra, hydrocyanic acid, strychnine, and other poisons, produce effects more or less prompt and decided, according to the amount introduced into the body of any animal, and we can exactly prognosticate not only the result, but the time about which it should occur. The virus of contagious diseases, and more particularly hydrophobia, differs from these, inasmuch as a minute quantity is as potent in inducing its particular malady, in a certain time, as a large quantity; and in the special disease now under consideration it may lie in a latent condition for a long period without affording the slightest indication of its presence."

**Duration.**—The duration of rabies is rarely long—from one to ten days may be taken as the two extremes. A few cases have been noted over the latter period; but they are very exceptional instances, and attended with some degree of doubt. Those in my own experience have been from four to five days; most of them have died on the fifth.

Fleming observes: "The progress of rabies in the dog is always very rapid, and the termination, it may well be said, invariably fatal."

Its duration in no case appears to have exceeded ten days; and in the majority of instances death takes place about the fourth, fifth, or sixth day after the appearance of the first morbid symptoms. Of course, it also occurs much earlier. Out of several tables we will only refer to those of Professors Saint-Cyr and Peuch, of the Lyons School, as they afford a fair idea of the duration of the disease in a number of cases. In 1864, fifty-four rabid dogs were reported. Death took place at the following periods:

Two days	4 instances.
Three	5 "
Four	10 "
Five	8 "
Six	7 "
Seven	8 "
Eight	2 "
Twelve	1 instance.
Thirteen	1 "

The last case recovered spontaneously. The duration of the remaining eight cases could not be satisfactorily determined.

In the sixty-eight dogs that were rabid at the school in 1865, the duration of the disease was:

Two days	1 instance.
Three	6 instances.
Four	15 "
Five	20 "
Six	12 "
Seven	8 "
Eight	4 "
Nine	2 "

In 1868, in seventeen cases at the same school, it was:

Two days	2 instances.
Four	8 "
Five	4 "
Six	1 instance.
Seven	2 instances.

**Symptoms.**—Rabies assume two forms—the furious, and the tranquil or dumb.

I shall commence first with furious rabies.

The earliest symptoms usually observed are a change in the dog's natural manner and habits; he becomes all at once sullen, or, as it were, melancholy; retires into obscure corners and dark places; when called, instead of obeying with his usual alacrity, he languidly and apparently with unwillingness approaches, and as suddenly slinks off again. Companionship renders him uneasy; in fact, throughout there is an unmistakable desire for solitude. If the eyes at this period are closely observed, a vacant expression will be seen in them; and immediately they meet the gaze of the observer they are dropped in a weary, sleepy manner.

As the disease proceeds, other and more marked symptoms become developed. A tendency to mischief is suddenly manifested. Boots, slippers, hearth-rug, carpet, chair-legs, and what not, are worried. If the animal is in the kennel, the straw is mangled and scattered about, the brick-work scratched, flooring torn up, and the whole place, more or less, shows signs of destruction.

The eyes assume a still more vacant expression; the

\* Fleming's "Rabies and Hydrophobia."

gaze appears to be fixed on some distant object. Then a change takes place: the animal proceeds to examine most minutely every crevice and brick round his kennel; this done, he retires again into obscurity, and in a few minutes repeats the operation. Or the eyes are directed with earnest attention to some imaginary moving object, as a beetle or spider, which they appear to be tracing in its course. Suddenly he jumps forward with a snap at the supposed offender; and then, as if ashamed at the hallucination, he crouches down, crawls away and hides himself.

A flow of tenacious saliva is now present. The animal champs his teeth and smacks his lips. As its tenacity becomes greater and its secretion more rapid, he strives to free his mouth of it with his paws, and this latter act has sealed the fate of more than one individual by being mistaken for a bone fixed in the teeth or throat.

4 Last year I was requested to visit a small toy terrier belonging to a lady of title. The messenger informed me the animal was supposed to have a bone in its throat. On my arrival, which was between 9 and 10 P. M., I found the subject, which the keeper's wife was nursing, sitting with mouth slightly open. On removing my hand, after closing the jaws, the lower one again dropped half an inch. External manipulation about the throat produced no indications of pain or irritability. I then—not suspecting anything serious or unusual from the information I had received, proceeded with the aid of a candle light to examine the posterior part of the mouth. This was discovered to be inflamed, but no bone could be detected. I then passed my two forefingers down, with the same result. Thinking it possible the bone had passed on, and probably left some laceration behind, with paralysis from its long retention in a fixed position, I ordered a hot linseed meal or mustard poultice to the throat, and a little warm beef tea or broth to be given, promising to call the following day. This I was prevented from doing, and an assistant was sent instead. I, however, omitted to tell him the nature of the case, but he came back with the idea, probably from being also told the same tale, viz., that the dog had "swallowed a bone." The following day I again visited the patient, when, upon opening the door of the room, the animal, without barking, made a rush at me. Pulling the door to quickly, I waited a minute or so, and then cautiously looked in. He was crouching in a corner with his eyes half closed, and his head nodding in a drowsy manner. He gave a start, or, as it were, awoke suddenly, changed his position, and fell off again in the same drowsy state; the lower jaw still remained dropped. I immediately became impressed with the belief that it was a case of dumb rabies; but, to make the matter more certain, I ordered the animal to be placed in security, and carefully watched. Next morning, unmistakable symptoms of rabies manifested themselves, and the dog was shot. Another animal, a companion, sickened in like manner, and was also destroyed. Fortunately, I had no abrasions on my hands, or I might have shared a similar fate.

I mention this case as illustrative of the great care and suspicion with which such cases and their history should be received.

[TO BE CONTINUED.]

## The Homing Instinct.

WYMORE, Neb., May 14.—*Editor Forest and Stream.* The pages of your good paper are so full of good reading just now, that I feel a delicacy about butting in; but I have a good dog story, which won't keep, and is right in line with the articles lately published in regard to the back-tracking instinct of animals, so I will give it to you. Horace Scudder and O. J. Collman have run the Paddock Hotel, at Beatrice, for a number of years, and during all that time I have put in lots of my time there while attending court; and am well acquainted with the parties, as well as old Duke, the dog.

A few months ago Horace Scudder moved to Idaho Springs, Colorado, taking old Duke with him. Day before yesterday, the following appeared in the Gage County Democrat, published in Beatrice:

"Some months ago, when Horace Scudder went to Colorado, he took with him his old bird dog, Duke. A couple of weeks ago, O. J. Collman received a letter from Mr. Scudder, in which he said that Duke had disappeared, and to look out for him. Yesterday the old dog came into the Paddock Hotel office, tired and footsore, and showed that he had not had a square meal for a long time, and that he had been on a long tramp.

"This is a wonderful display of animal instinct. This dog had been taken on the cars to Colorado, 600 miles from here, and becoming home-sick, returned on foot and alone to his old home.

"He will be cared for, fed up and given a needed rest. The dog that thinks enough of his old home to walk several hundred miles shows that he is willing to stand up for Nebraska, and is entitled to good treatment."

I was in the hotel office when old Duke came in, and he was just as glad to see me, as though he had found a snake. Yesterday, the following appeared in the Express, a rival paper, published in Beatrice:

"O. J. Collman received a letter several weeks ago from Horace Scudder in Colorado Springs saying he was going to send Duke, his well-known hunting dog, back to Beatrice. Yesterday Duke, who had reached town, and was being kept at the home of Dr. Starr, trotted into the hotel, having broken his leash. Mr. Collman, who enjoys a joke, at once exclaimed that Duke had walked all the way back from Colorado, and called attention to his sore feet as evidence of the truth of his assertion. Now Duke's feet, worn thin by fifteen years of tramping over stubble field in front of would-be hunters, have long been in a condition to elicit the sympathy of observers, but this fact was not known to the office full of traveling men and a few others who are equally gullible, and now a wonderful story of how a dog's instinct and love of home led him to walk 600 miles to his old home where all is sunshine and joy and every prospect pleases. It was a hot story, just the same, and it worked out most beautifully."

The old Paddock seems more homelike, since old Duke got back, and it will seem like old times, to have him come up and nudge me, then go to the door and wait for me to open it for him.

Beatrice is a beautiful little city, on the banks of the Big Blue River, and was the boyhood home of Shelley Philips, the author of the little book, "Just About a Boy," in which boyhood life along the Blue is so picturesquely described. Shelley's school mates tell sad tales of how he used to play hockey there.

## The Cruise of Minota.

A Cruise on Lake Michigan from Chicago to Charlevoix and Return.

(Concluded from page 423.)

BY REGINALD MACK, CHICAGO, ILL.

ON Wednesday (August 12) we dropped down the river behind a tow of logs and anchored in Pine Lake, Vanenna doing likewise, and late that afternoon Rear-Commodore Wilber, of the Chicago Y. C., arrived on his steam yacht Marcia on his way from Mackinac to Chicago. The next morning at breakfast-time we were visited by Captain Merriman, of Josephine (also belonging to our fleet), who had been towed up from Chicago behind a lumber barge, and was waiting to continue on up to North Channel. We walked down with him to the life-saving station and saw the steamer Illinois, with Messrs. Fox, Clinch and McConnell (owners of Hawthorne) aboard, come in from Chicago; and, very shortly after their arrival, they towed their yacht out into the lake and tied up alongside Josephine, behind the lumber barge. The schooner Alice, flying the Chicago Y. C. burgee, anchored near them, and left later in the afternoon for Harbor Point. On Saturday the Skipper and the Boa Constrictor took the train to Petoskey, and from there went across Little Traverse Bay to Harbor Point, where they found Mistral at anchor, and learned that Spray (both of our fleet) had left two days before in charge of two sailors for Chicago. That morning at colors all the yachts "dressed ship," and later on in the day we met on the flagship Marcia and agreed to start early Sunday morning for Grand Haven. All hands then went up town to lay in ice and supplies for that trip.

On Sunday, August 16, Marcia took a line from Vanenna, we towed behind, and the procession started for Lake Michigan. It was a dead calm. About 9 o'clock a very faint breeze came out of the N.W.; Minota, as usual, responded, and gradually drew away from Vanenna, Marcia having cast off our lines about a mile from the pier head. The steamship Manitou, on the way from Chicago to Charlevoix, passed us about 10 o'clock. The wind varied from NW. to N.N.W., and we were able to make a fair course for Cathead Point. At noon the sloop Neva, of Chicago, passed some distance from us, bound for Charlevoix. At 2:50 the cutter Charlotte R., owned by Vice-Commodore Burton, of the Chicago Y. C., passed us, too far away for us to signal her.

Our crew had been augmented by the addition of George Brown, whom the Skipper had invited at Charlevoix to sail with us to Chicago and fill the vacant berth in the cabin. He was put on the watch with Harris and Olaf. Nature had favored him with a rich baritone

for a pleasant night, there was no occasion for our making use of South Manitou harbor on this trip, and we kept on, heading for Point Betsey. At midnight the wind was S.E., and our course S.W. by S., with a fresh breeze, but not enough to warrant our reducing sail. Away astern, on our starboard quarter, we could see Vanenna's port light, hour after hour. The wind was now beginning to head us. We trimmed our sheets, and the best course we could make was S.S.W. At 3 in the morning, a steamer was rapidly overhauling us, and, fearing that we might be overlooked, we burned a flare, which quickly made her change her course. Shortly after dawn the wind again dropped, and hauled around to the S.W. At about 5:30 the steamship Manitou passed us, this time on her way back to Chicago. Far astern—almost hull down—we could see our friend Vanenna, close-hauled, on the port tack, heading out into the lake.

Throughout this cruise we had made it a practice to

our canvas, but we had little sleep for the rest of our watch. At midnight, when we took charge again, the wind was fair and we were right on our course, and at 1 o'clock had made 7 knots in the hour. The breeze, though, was shortlived, and gradually died down, so that when the other watch came up on deck at 4 o'clock we were barely moving.

The last we had seen of Vanenna—the big, black 45-footer that had kept us company practically all the way from Milwaukee—was when we were standing out in the lake the evening before. She was then, as far as we could make out, about 10 miles astern. Much were our men surprised to pick her up at 4:45 that morning a mile ahead, standing in shore on the starboard tack. They evidently had just seen us, for they were busy shaking out a couple of reefs they had put in the evening before. It was now a question as to whether we could take more advantage of the light airs we were now getting, and reach Grand Haven as soon as they did. We had just had breakfast, and were then about a mile N. of the pier head at Grand Haven, when Marcia came out, spoke to Vanenna, and steamed over to us, offering us a tow, which we agreed to take, and suggested that they pick up the Vanenna first and we would string on behind. By the time Vanenna had come up into the wind and snugged down her sails, we were close to the pier, and, as the wind was fair, we megaphoned Commodore Wilber to tow Vanenna up to Grand Haven, and we would sail up behind, which we did.

The piers at Grand Haven run out a considerable distance into the lake, and are 400 feet apart. The light-house consists of a white open framework tower, 25 feet high, located near the end of the south pier. It has a fixed white light, visible 13 miles. Under ordinary conditions this port is easy to make, but in heavy gales from the S. or S.W. a strong current sets down the shore and across the entrance. The same condition is noticeable all along the east shore of this lake, and in such cases vessels should be careful to keep well to windward.

The city of Grand Haven is located half a mile from the pier head, and there the river narrows and runs in a northerly direction, through three draw-bridges, for half a mile, and then widens out into Spring Lake, an attractive summer resort where there is an active yacht club located.

By the time we were abreast of the city, Marcia and Vanenna were tied up to the dock, so we dropped our mainsail and kept on up the river under our jib alone. Fortunately, when we neared the bridges (which are all close together) an excursion steamer cut in ahead of us, and we followed her through the draws, but I understand the bridges will open for sailboats giving three blasts of the horn, the same as at Charlevoix.

We reached Spring Lake just as they were starting a

Anchorage at Charlevoix—Vanenna in Foreground.

take the log every hour, with the wind and the course, and by 10 that morning we had made only 33½ knots since midnight, and were standing inshore. We came about close to the Manistee pier head at ten minutes past 10, and then took a long tack out into the lake, heading W.S.W. The breeze was fresher than it had been in the early morning, and we were able to reel off 5 knots an hour. We kept on this tack for three hours, and then were 6 miles from shore. On the starboard tack we could sail S.E. by S., and run in close to the Big Point Sable light, coming about at 2:15. A careful examination of the chart showed that the shore forms a bay S. of this Big Point Sable, and then projects into the lake again at Little Point Sable, where the coast runs S.E., so that the Skipper calculated that by standing on this tack 15 miles, unless the wind changed, we could then come about, giving Little Point Sable a good clearance, and keep on down the coast to Grand Haven; so we sailed on for 15 miles, heading out into the lake until after supper-time. The Vanenna people afterward told us they saw us make this move and thought we had decided to take advantage of the fair wind and go across to Chicago; but, as a matter of fact, we stood on this tack longer than we intended owing to our having put too much oil in our patent log, which caused the indicating finger on the dial to get loose, and we were over-running the log every hour. We calculated that by coming about at 6:30 and taking our course S.E. by S., we ought to have a nice clearance passing Little Point Sable; but when night fell and the light at that point became visible (a fixed light flashing white every 30 seconds), we found she was away to leeward of us; certainly a good fault, but we might have come about an hour earlier and saved that much time.

We made the resolution when starting on the cruise that we would err on the safe side in the matter of carrying on canvas, and would always put in a couple of reefs before nightfall, no matter what the glass or clouds showed, but here we were, for our third night out, carrying on all sail, and it seems inborn in a sailor—be he professional or Corinthian—to make the best time he can. The crew were all experienced, and, on the occasions when we had to take in reefs, it was done very expeditiously. We therefore continued this night to have our full mainsail and jib, and at 11 o'clock, when the Skipper and myself were thrown from our bunks by the heavy swell, we thought we had been indiscreet to carry on so much sail. The Skipper put his head through the hatch and found that the trouble came from the big sea which is almost always to be found off Little Point Sable, rather than a heavy wind. We decided to make no change in

Milwaukee Yacht Club House.

voice, and we had numerous musicales on our homeward trip. Owing to his enormous capacity for food—which even exceeded that of the Boa Constrictor—we christened him the Anaconda.

Although the wind all day had been light, we kept moving on our course, averaging about 3 knots an hour, and at 11 o'clock at night we were well through the Manitou Passage, the fixed white light at South Manitou Island being constantly in sight. South Manitou seems to have been placed there by nature as a safe harbor of refuge in N.N.W. gales; and, in fact, from all winds except E. This splendid harbor is crescent-shaped, the distance between the two arms being approximately two miles, and a safe anchorage can be found close to shore. The island is 7,000 acres in extent, and has a population of 70, mostly engaged in farming. The life-saving station is close to the lighthouse, and near the landing pier, about three-quarters of a mile from the lighthouse is a general store, where ice, milk, and a few staple provisions can always be obtained. There is no connection with the shore except by boat, but I understand a telephone cable is being laid.

As the wind was fair and everything looked promising

Crew of Minota.

race of their lark type boats. It made a very pretty sight. We dropped anchor alongside Sallie, a handsome schooner designed by Mr. A. Cary Smith, and owned by Messrs. George and William Savidge, of Spring Lake.

Our log showed 158.75 knots (182.75 statute miles), and we had been 50½ hours out from Charlevoix. The trip had been a very pleasant one, indeed, although we had practically beaten all the way down the Lake from the Manitous; it had been enjoyable sailing, and we had made fairly good time.

As soon as we had everything snugged down, all hands took a swim in the warm waters of Spring Lake. The water is so cold up in the northern part of Lake Michigan that swimming is out of the question, and even the morning plunge over the side is not looked forward to with the keenest pleasure. Then we dressed and went ashore to stretch our legs after the two days' confinement on shipboard, and called on Commodore Savidge, of the Spring Lake Y. C., who gave us his usual cordial welcome. At noon Marcia came up from Grand Haven towing Vanenna, and in the afternoon a party of us made a trip around Spring Lake in an excursion steamer. The lake is irregular in shape, and consists of a number of

bays and inlets, with well wooded shores hiding numerous camps and summer residences. In the evening we took the trolley down to Grand Haven and spent the time engaging in competition as to who could fill the slot machines with the most money, and on our return aboard, before going below, Brown gave us "The Dungeon Deep," followed by a little close harmony which elicited applause from the surrounding yachts, possibly satirical.

The next day (Wednesday, August 19), Commodore Savidge very courteously towed us down the river to Grand Haven, with the steam launch Antelope; and, with the wind dead aft, we ran down under full mainsail, balloon jib and spinnaker to the Holland light, 21 miles to the S., arriving there at 2:10, after a three hours' run. There was quite a good sea running, and we took the precaution to top up the boom before jibing to enter between the piers. They are about two hundred yards apart, and the lighthouse is on the south pier. On the same side is the life-saving station. Shortly after passing the life-saving station, the channel widens into Black Lake. Behind the high sand hills which compose the shore line all along this part of the coast, nestles the summer resort known as Macatawa Beach. This is on the south side, opposite Ottawa Beach, another summer resort, consisting principally of a large hotel, and there is a good anchorage between these two places, but care must be taken in entering to pass the spar buoy, which you will find where the channel widens, to starboard. If you pass the buoy to port you will undoubtedly run aground on a sandbar.

The city of Holland is at the extreme end of the lake, five miles from the entrance to Lake Michigan, and good water can be found in midlake all the way up to Holland; most of the yachts, however, generally anchor opposite Macatawa Beach, where there is more festivity going on, and where the Macatawa Bay Y. C. is located.

We found Siren (of the Chicago Y. C. fleet) anchored there. The next day our old friends Marcia and Vanenna again joined us. Just before colors, Spray, belonging to Mr. J. W. Keogh, of the Chicago Y. C., arrived from Harbor Springs, after an eight-day trip. She left at day-break the next morning. It had been our intention to leave that day for Chicago, which is 95 statute miles S.W., but the wind blew steadily from the S. Thursday, Friday and Saturday, so we decided to leave Minota in charge of Olaf for a week at Macatawa Beach and return the following Sunday morning, and sail her to Chicago.

Two steamers a day run between Chicago and Holland, with good accommodations, and the following Friday night (August 28) found us, with a few changes in the crew, steaming across the lake to Holland. We arrived there bright and early Saturday morning in a pouring rain, and, owing to some mistake in time, instead of getting off at Ottawa Beach, as we intended, we were carried up to Holland, where we had breakfast, and returned by the electric cars to where Minota lay at anchor. The rain still came down in sheets, and it was not until 10 o'clock that we ventured aboard. The rain then stopped and a nice breeze began to come out of the N.W., which made an excellent fair wind for Chicago; so we hoisted the full mainsail and jib and ran down the channel into the Lake at 10:45. There was scarcely a ripple on the lake, but the wind pushed us along at a 5-knot clip, gradually increasing in strength. We ran up the balloon jib as soon as we got clear of the harbor. At 1 o'clock we were making 7 knots an hour, and the wind increased to such an extent as to carry away the bolt rope in our balloon jib. We quickly took it in, ran up our jib, and put in two reefs. The wind blew steadily from the N.W., gradually growing stronger and stronger. To allow for leeway, we kept on the course S.W.½W. Our big jib was pulling her down too much by the head, and we shipped a few big seas over our bows. It seemed prudent, therefore, to reduce the headsail, and we exchanged our large jib for No. 3 at 2:10. Away to the N. clouds kept banking up, and we watched them with much anxiety. The sea was fast getting up, and it looked as if we had an ugly night before us. Fortunately, we were straight on our course for Chicago, and we had our exact location at all times, so that, should the wind veer, we could readily make St. Joe, Mich., or Waukegan.

Before 4 o'clock we found four reefs all she could stagger under, and even under that shortened canvas we made 7 knots between 4 and 5.

The dinghy, which so far throughout the cruise had behaved very well, began now to give some trouble. The waves would curl up and break over her stern, sometimes over her bows, and twice Olaf got into her and bailed her out. We finally concluded that the better plan would be to take her aboard and lash her over the taffrail, which we did, with some trouble. Two of our crew—both good sailors—began to show signs of seasickness, and they suffered at intervals throughout the trip. Before night fell, the Skipper ordered the mainsail taken off entirely and the storm trysail hoisted instead, which was accomplished at the risk of being washed overboard by the waves, which now broke over our bows, and at times completely enveloped the vessel.

In carrying a storm trysail, the best plan is to lash the boom in the crutch amidships and make all snug, but the presence of the dinghy on the quarter prevented our doing this; so we lashed the clew of the trysail to the boom, which, to a certain extent, kept it from working, although not entirely, for we found next morning that one of the jaws had chafed an ugly mark in the mast.

All during the cruise we had had and the absence of stormy weather, but now we were making up for lost time with a vengeance. The gale howled through the rigging, the sea was now running high, the waves mounting 11 and 12 feet from crest to hollow. It seemed as if some of the big ones would engulf us, but Minota seemed equal to the emergency, and rode them easily. Occasionally the helmsman, with all his skill, could not dodge two waves that came at us at once, and one would strike the boat on the counter with a bang, and pour a deluge of green water into the cockpit. To have a regular meal was out of the question, and everybody, for some reason or other, seemed to prefer the deck to the cabin. By 10 o'clock we began to look eagerly for the Grosse Pointe light. It stands on a headland 10 miles N. of Chicago, and is a fixed white light, varied by a red flash every three minutes, and visible 19 miles. According to the chart, we ought to pick that light up first, before the Chicago light (which is visible the same distance, and is a red and white flashing light). After looking for a long while, one of our men suddenly cried out, "There is the

Grosse Pointe light," and we could see a white light which would be occasionally obscured and then come into sight again. We felt very much elated thereat, but our joy was turned to disappointment when we found it was the light of a steamer, hidden at regular intervals from our eyes by the heavy seas. I was struck at this time with the apparent utter absence of fear evidenced by the entire outfit. They had all had considerable experience of sailing, and I felt personally very thankful that we had not on board with us any tenderfoot, who certainly would have had every reason for feeling decidedly uneasy over the outcome of the trip. Knowing that the boat was strongly built, the only thing that could happen to us was to run into some floating log, and, with a broken plank, I do not think anything could have saved us; another possible menace was the chance of being run down by steamers, which experience we had, as you will see, before we reached our destination.

At 11 o'clock we readily distinguished the "loom" in the sky over Chicago, right on our course, and, at some distance south of this, a smaller "loom," evidently from the steel mills at South Chicago, and presently we could make out the Grosse Pointe light, and very shortly afterward the Chicago light.

By midnight the wind had moderated, but the seas were still as high and troublesome as ever. One of the party went down below and sent up some crackers and a can of cold milk, which we passed around, wishing it could be exchanged for hot coffee.

As we drew nearer to the Chicago light we got in the track of all the steamers going to and from that port, and we had a very festive time to keep from being run down. One large freighter bound north seemed bent on our destruction. She came lumbering along, bucking the head sea, the spray washing clean over her smokestacks, apparently indifferent to our existence or right to be on the lake. We could not imagine why she ignored our port light, and I ran forward to make quite sure it was lit. I found a ready explanation of the steamer's actions. The port light was out!

For such an emergency as this we kept hanging in the cabin, close to the companionway, our regular riding light, which had a six-inch fresnel lens, and the steamer's helmsman soon saw this light being waved, and changed his course. We lost no time in relighting our port light, and from that time on sent someone forward at frequent intervals to see that they were both burning.

We kept no regular watches on this trip, one hour being all a man could stand at the stick, as it kept his entire attention dodging the waves and receiving at the right angle those he could not avoid.

The steamers grew thicker as we neared port, and it seemed as if every vessel in sight had suddenly decided to cross our path. One fast passenger steamer coming down from the north was directly in our wake. The Skipper watched her through the tail of his eye for some time, and then waved our useful riding light, but no attention was paid to it. After a short interval it was waved again, still with no result. By this time she was getting dangerously close, and we were about to light the flare when another swing of our brilliant light caught the eye of the wheelsman, and the steamer swerved off her course as if by magic, and instantly a whole broadside of electric lights came into view, as she went past us to starboard, heaving and rolling in the heavy sea, with her propeller "racing" most of the time; and, I imagine, not a single passenger on board escaping *mal de mer*.

About 2 o'clock we took in our storm trysail and hoisted the four-reef mainsail again, which resulted in our making much better time, and we rounded the Van Buren street light at the entrance of the harbor shortly after 3 in the morning. As some other boat was lying at our mooring, we dropped anchor in front of the Chicago Y. C. house, and with a great feeling of relief. The cabin looked like a second-hand clothing store struck by a cyclone, and everything was wet and uncomfortable. We were so tired and worn out with our tempestuous trip that, after a light repast of cheese and crackers and a good stiff horn of whiskey, we dropped asleep in our wet clothes. At 9:30 we awoke, went over to the club house for a hot shower, and then returned to the enjoyment of a tremendous breakfast on board the boat, and a general discussion of our previous day's run: how Jones had been scared to death but didn't show it, and afterward said if he had known the boat was able to stand such a trip he wouldn't have felt worried; how the lookout kept imagining he saw lights and other things that did not exist, and how the Skipper, having changed all his wet clothes for a dry suit, had been caught by a wave as he came up the companionway and instantly drenched from head to foot. All these and many other incidents were discussed as we reflected upon the cruise, which had lasted for nearly three weeks, and, from my point of view, had been the pleasantest time of my life. Minota certainly had behaved magnificently throughout, and I bid good-by to my companions and left her, safely anchored once more in her own port, with inexpressible regret.

ATLANTIC Y. C. SCHEDULE.—The regatta committee of the Atlantic Y. C. has announced the following programme for the season:

Monday, May 30 (Memorial Day)—Classes L and below; short courses.

Saturday, June 4—First Havens' cup race; classes N and below.

Tuesday, June 14—Twenty-eighth annual regatta; all classes; long courses.

Monday, July 4—Water sports; start at half-past two o'clock in the afternoon; illumination of yachts, fireworks, etc., during the evening.

Tuesday, July 5, to Saturday, July 9, inclusive—Annual cruise.

Monday, July 11—Ocean race; Newport to Sea Gate.

Saturday, July 16—Power boats; American Power Boat Association's classification and time allowance.

Saturday, July 30—Power boats; two divisions—(A) between 40ft. and 60ft. load waterline, and (B) all 40ft. load waterline; no time allowance.

Saturday, August 20—Classes L and below; short courses; Gravesend Bay Association pennant.

Monday, September 5 (Labor Day)—Classes L and below; short courses.

Saturday, September 24—Fall regatta; all classes; long courses.

## Boston Letter.

BOSTON, May 21.—Entries for the ocean race of the Eastern Y. C. are coming in fast. Mr. Henry A. Morse, of the special committee on ocean race, has so far received twenty-three entries. Four of the entries are those of schooners of more than 50ft. waterline, and these entries are likely to lead to more in the larger classes. The four large schooner entries are as follows: Hope Leslie, 66ft., Commodore Laurence Minot, Eastern Y. C.; Undercliffe, 68ft., F. L. Clark, Eastern Y. C.; Chanticleer, 80ft., G. W. Weld, Eastern Y. C.; Sachem, 87ft., ex-Commodore F. T. Adams, Larchmont Y. C.

The entries under 50ft. waterline are as follows: Indra, schooner, 46ft., F. S. Eaton, Eastern Y. C.; Magnolia, schooner, 40ft., Vice-Commodore E. P. Boynton, Boston Y. C.; Nebula, sloop, 35ft., Dr. W. S. Smith, Eastern Y. C.; Cossack, sloop, 35ft., H. A. Morse, Eastern Y. C.; Takitesy, yawl, 35ft., J. E. Appleton, Eastern Y. C.; Nymph, sloop, 41ft., W. C. Town, Atlantic Y. C.; Effort, sloop, 36ft., F. M. Smith, New York Y. C.; Aspirant, 40ft., Hanan Bros., New York Y. C.; Mira, sloop, 36ft., C. L. Poor, New York Y. C.; Altair, sloop, 46ft., Cord Meyer, New York Y. C.; Surprise, sloop, 31ft., L. D. Martens, New York Y. C.; Sibyl, sloop, 45ft., G. G. Williams, New York Y. C.; Sakana, yawl, 27ft., R. S. McCreery, Larchmont Y. C.; Pajute II, sloop, 33ft., Vice-Commodore Walter Beame, Knickerbocker Y. C.; Redskin II, schooner, 35ft., J. L. and L. H. Sturtevant, Boston Y. C.; Gorilla, sloop, 40ft.; Joseph Battles, Corinthian Y. C.; Valhalla II, sloop, J. F. and Arthur Willis, Boston Y. C.; Nerine, yawl, 30ft., S. G. Etherington, New Rochelle Y. C.; Defiance, sloop, 33ft., Dr. C. B. Kellar, Norwalk Y. C.

In these entries there are seven schooners, three yawls and thirteen single-masted yachts.

The regatta committee of the Duxbury Y. C. has arranged for a fine programme of races for the season.

The 18ft. knockabouts hold chief interest in this club. It was by members of the club that the class was started in Massachusetts Bay, and the boats have been raced steadily ever since. There are several new 18-footers for the Duxbury Y. C. fleet this year, and many of the older ones. The schedule of fixtures, arranged by the regatta committee, is as follows:

May 30, Monday—Club race.

June 4, Saturday—Club race.

June 17, Friday—Club race.

June 18, Saturday—Club race.

June 25, Saturday—Moonlight sail.

July 2, Saturday—Club race.

July 4, Monday—Ladies' day.

July 16, Saturday—Club race.

July 23, Saturday—Moonlight sail.

July 30, Saturday—Club race.

August 6, Saturday—Club race.

August 13, Saturday—Ladies' day.

August 20, Saturday—Club race.

August 26, Friday—Y. R. A. open.

August 27, Saturday—Y. R. A. open.

September 3, Saturday—Club race.

September 5, Monday—Club race.

September 10, Saturday—Club race.

In addition to its racing programme, it is the intention of the club to provide shore amusements for its members and their families, most of whom are summer residents. A programme of dates for whist, golf, etc., will be announced by the house committee later.

The regatta committee of the Corinthian Y. C. has issued a pamphlet, in which the general programme for the season is outlined. The committee will give valuable silver cups for the midsummer series, which will be held the first week in August, and will also give cups for the club championships. Cups have been offered for the ocean race, to be sailed June 25, by Messrs. Henry A. Morse, Lawrence F. Percival and Harry H. Walker. In addition to the cups, cash prizes will be offered for each race. In the midsummer series, a yacht winning two out of three races in her class will be awarded the cup for that class. There will be eight races for the club championships, including two invitation races on July 4 and August 6, in which percentages will be awarded yachts enrolled in the club. The following special classes will be provided for in the championships: 30ft. class, yachts conforming to the limitations of the Massachusetts Thirty-foot Cruising Yacht Association; class A, handicap, yachts 23ft. and less than 30ft. waterline; class B, handicap, yachts 18ft. and less than 23ft. waterline, and class C, handicap, yachts under 18ft. waterline.

The steam yacht Pantooset, owned by Mr. A. S. Bigelow, was in Simpson's drydock at East Boston last week. As soon as the Pantooset comes out of the dock, the steam yacht Isis, owned by Messrs. W. S. and J. T. Spaulding, will be docked. The steam yacht Rambler, ex-Dreamer, owned by ex-Commodore Lewis Cass Ledyard, will go into drydock on May 28. She is to be in New York June 2.

At the Baker Yacht Basin, the schooner Corona is hauled out on the ways, receiving her last coat of paint before going into commission. The steam yacht Wakiva, under charter to Mr. L. V. Harkness, will leave for New York next week. The steam yacht Idalia, owned by Mr. Eugene Tompkins, is fitting out in the basin.

Messrs. Burgess & Packard, designers of the new 30-footer Sanquoit, are much pleased at her performance last week of beating the Sally VII. The 22-footer, Keewaydin, designed by this firm and built by the Chase Pulley Company of Providence for L. C. Holmes, of Plymouth, came around the cape last week in rough weather. The 26-footer, building for A. Lawrence Lowell, by the same company, is about half completed. Six one-design 15-footers for the Wianno Y. C. have been completed. The keel 15-footer for Dr. Morton Prince has been finished by Hodgdon Bros. of East Boothbay. The automobile boat for H. L. Bowden is partly planked.

JOHN B. KILLEEN.

## Southern Letter.

NEW ORLEANS, May 20.—In a season it is probable that the port of New Orleans sees upon its waters as varied a fleet of pleasure craft of the bird-of-passage sort as any other harbor in the country, with the possible exception of New York, and the fact has been quite marked during the past winter and spring, when we have had the pleasure of seeing yachts of all sizes and types, whether propelled by steam, motor or sail. The sailing craft have been of every rig and nearly all the ruling types, and a catamaran which crossed the Great Lakes and thence down the Mississippi River. Some of the most palatial steam yachts in the world have been anchored here, including Alcedo, of the New York Y. C., and the Clementine, of the Royal Manchester (England) Y. C., which was built, by the way, for the King of Belgium, and the fleet of gasoline motor cabin yachts has been large in numbers and interesting to observe during the past several months. The string of power boats coming down or going up this season was larger than ever, and there was hardly a time when there was not a representation of these sort of peregrinating craft here, they coming in by one entrance and out the other, as the case might be.

Just now the procession is headed up river, the St. Louis Fair being the objective point, and the passing launches being from Florida and the other lower Atlantic States. In this wise a number of the Florida colony have passed along on the way to their Northern homes, via the Louisiana Purchase Exposition, there being three boats here in company last week—Clara, F. D. Hughes, New York city; Palmetto, T. B. Snider, of Cincinnati, and Roamer, H. C. Roome, of New York city.

Roamer is making in leisurely fashion that 6,000-mile trip which comprises the circumnavigation of the entire eastern half of the United States by way of the Atlantic, the Gulf of Mexico, Mississippi River, canals and the Great Lakes. She left New York city last September, and her present itinerary is mapped out to end there some time hence. Roamer is 69ft. over all, 12ft. beam and 5ft. draft, with a 45 horse-power Globe engine. Her masts are hinged, and can be folded back to the deck by slackening away forward to pass under bridges. The electric installation of the yacht could hardly be improved upon, including, as it does, a dynamo and a motor, which cannot only be used to start the engine, but also to run the yacht on occasion. This is the second round trip of the kind undertaken by Mr. and Mrs. Roome, they having traveled from New York to New Orleans, and Chicago to New York again seven years ago in a smaller launch called the Waikiki. Roamer is the result of their having traveled thousands of miles in many kinds of boats. Economy of space and comfort is carried to the highest development in this vessel. The crew consists of three men—mate, engineer and steward. Of the two yachts now cruising up the river in company with Roamer, Palmetto is 65ft. long, 13ft. beam, and 3ft. draft; Clara is 40ft. long, with a beam of 10ft. and a draft of 2ft. The owners of these boats and their wives have been living aboard and cruising all winter, and it would seem that this mode of life was far more preferable to lovers of the water to traveling by train and putting up at hotels.

Of other notable yachts that were here lately, there can be mentioned, particularly for their size and fine appearance, Fortuna and Roxana. The former is 125ft. in length, 25ft. beam, and 150 horse-power engines, the owner being Mr. John W. Parmelee, of Chicago. Fortuna came from Lake Michigan, through Sturgeon Bay, Green Bay, the Fox River, Lake Winnebago (Wis.) into the Mississippi. She cruised through all the bays and bayous west of this city for a month or more, and then left for the Atlantic Coast, it being the owner's intention to wind up the 10,000-mile cruise at Chicago. Roxana, John W. Gates, owner, was built and launched last fall at Racine, Wis., and she got to the Gulf via Chicago, the Illinois and Mississippi rivers. She, like Fortuna, is a steel hull, and she is over 150ft. in length. Roxana was used for hunting and fishing along the Louisiana and Texas coasts all winter. She looks more like a house-boat than a regulation steam yacht, and she is now at New York having 15ft. added to her length amidships. She will be used on Long Island Sound this summer, and then away down the Atlantic to the Gulf and New Orleans. During midwinter the schooner Wasp was here, and cruised to the West under command of Mr. Harry Whitney, of New London, Conn., and young Mr. Carnegie, of Pittsburg, Pa. Last fall Robert Galloway, of Memphis, Tenn., purchased at New York the auxiliary yawl Coon from W. H. Langley, and the new owner sailed in her for Rockport, Texas. She cruised leisurely back to this port, where she was in and out on side pleasure trips for some time, when she was purchased by Mr. J. Z. George. Mr. Galloway will add to the fleet of the Southern Y. C. the 85ft. auxiliary yawl Daisy, designed by H. J. Gielow, and just completed by Wm. P. Kirk at Tom's River, N. J., which will be equipped with a 40 horse-power Craig gasoline engine. Daisy will reach the South by way of the Gulf of St. Lawrence, the Great Lakes, canals and rivers, sailing about the first of June.

The steam yacht Wachusett, Mr. W. A. Jamison, reached here in the height of the hunting and fishing season, and she is now enrolled in the Southern Y. C., having been purchased by Mr. Santo Oteri, one of the club's leading power boat enthusiasts. Another fine yacht to make the Atlantic Coast trip was the 50ft. gasoline launch Skirmisher, of Dorchester, Mass., which was built and owned by J. Scott McLearn. She was purchased and is now being used here by Col. Wm. P. Burk, and the S. Y. C. burgee replacing that of the New England club. Some months ago Capt. W. J. Milner purchased at Philadelphia the large auxiliary schooner yacht Ibis and sailed south in her, enrolling her in this club. The mention of these preceding craft emphasizes to what a great extent the fleet of the Southern Y. C. has been augmented by northern-built vessels during the past winter, there being included in the number representatives of all the divisions of yachts, including steam yachts, motor yachts, launches, schooners, yawls, cabin sloops, and racing sloops. While the importations have been numerous, the home-built additions to the fleet number three times as many more, but these will be written up later.

The annual sailing yacht regatta of the Southern Y. C. takes place Saturday, May 28, and that evening a smoker will be given in honor of boat owners and crews. The annual regatta for power boats—a new institution—takes

place Saturday, June 4, and in the late afternoon there will be a review of the entire fleet by the commodore, and that night will be given the annual dance and promenade concert. June 18 will be a cup race day. The racing circuit of the Southern Association opens July 4.

L. D. SAMPSELL.

## Designing Competition.

WE are able to publish in this issue Mr. Crane's criticism of the designs that received Honorable Mention in our recent competition for a 40ft. waterline cruising boat. We intend publishing the designs mentioned by Mr. Crane. All the drawings that were submitted will be returned to competitors.

Mr. Crane's letter is as follows:

The designs submitted for the FOREST AND STREAM Designing Competition were of unusual merit, making a choice of the best one extremely difficult. The boats in model, construction and rig were particularly desirable in most cases. There was a disposition on the part of some of the competitors to crowd too much into their boats. The arrangement plan is, however, so much a question of the wishes of the individual owner that it is a hard matter to lay down at best.

A boat of this size should not require a captain's stateroom. For comfortable cruising the galley and store-rooms should be commodious and comfortable, and the fore-castle fairly large and roomy. The owner's quarters should have two staterooms and a main saloon. Provision should be made on going below for a little steerage or chart room, as I know of nothing more disagreeable than going into a nicely carpeted cabin in dripping oilskins.

Many of the competitors have shown wonderful thought in the planning of provision for stowing all the necessities.

A rather common fault was the stepping of the mast too far forward for the sake of increasing the size of the cabin. A cruising sloop should be capable of going to windward under staysail alone in case of emergency, and this requires the mast to be stepped a certain distance from the forward end of the waterline. Runners should be so arranged that both can be set up when going to windward. In a cruising boat bridges on the boom should be avoided as much as possible.

In commenting on the individual boats of the first ten, outside of the three prize winners, I have not rated these boats at all, simply referring them all for honorable mention.

F. S. V., 283, ROBERT C. SIMPSON, BOSTON, MASS.—An excellent model, handsome appearance, and particularly well thought out rig, with the mast well placed for cruising. Marred by bad arrangement, particularly as the stove is so placed as to make the galley and fore-castle unlivable.

DIRK, NORMAN L. SKENE, BOSTON, MASS.—A very pretty, carefully thought out boat; good model and construction. I should criticize the companion on the port side, and comment on the good provision for crew, and the large galley. The owner, however, should have had another stateroom, and the captain's been omitted. As far as the model is concerned, in a cruiser more deadrise would be advisable.

ELI, CHARLES H. HALL, BROOKLYN, N. Y.—A nice cruising model, of good construction. In the rig the runners are set too far aft. In the arrangement the crew's quarters are too cramped. For a boat of this type the arrangement of the centerboard under the floor is a desirable one. The entrance to the boat should not be directly into the main cabin.

M. I. KADO, E. D. PURDY, NEW YORK CITY.—The beam of this boat is too great for her length. The arrangement is excellent; well thought out. Rig is marred by too large a mainsail.

MERLE, MARTIN C. ERISMANN, STATEN ISLAND, N. Y.—In this boat again the mainsail is too large, and there is one feature in the construction which is objectionable to most builders, and that is steam-bent frames. In the arrangement, the crew's quarters are rather too cramped.

MAINSAIL, MORGAN BARNEY, NEW YORK CITY.—Excellent construction and model, but again marred by too large a mainsail.

## Rhode Island Letter.

PROVIDENCE, R. I., May 21.—The schedule of the season's fixtures for the yacht clubs of upper Narragansett Bay is now decided upon, with the exception of a possible change in the dates of the Edgewood Y. C. It is as follows:

Monday, May 30—Fall River Y. C. open regatta, Washington Park Boating Association club regatta.

Saturday, June 11—Edgewood Y. C. club regatta.

Saturday, June 18—Rhode Island Y. C. club regatta.

Saturday, June 25—Bristol Y. C. open regatta.

Saturday, July 2; Monday, July 4; Saturday, July 9—Edgewood Y. C. special series for 30ft. cats.

Sunday, July 24—Rhode Island Y. C. annual cruise.

Saturday, August 6—Edgewood Y. C. club regatta.

Monday, August 15—Edgewood Y. C. annual cruise.

Monday, August 15—Narragansett Bay Y. R. A. series.

August 15—Edgewood Y. C. open.

August 16—Bristol Y. C. open.

August 17—Fall River Y. C. open.

August 18—Association race at Jamestown, open.

August 20—Rhode Island Y. C. open.

Saturday, Sept. 10—Bristol Y. C. open regatta.

In addition to the three races for the Rossner cup for the 30ft. cats by the Edgewood Y. C. early in July, the same club will probably hold another series for that class in September, the dates now spoken of being the 3d, 5th and 17th. The 30-footers are expected to furnish the most racing interest this season, as they did last year, and the class will also have another trophy to compete for in the cup offered by Commodore Peirce, of the Washington Park Boating Association, this series of races probably to be sailed during July.

The Herreshoff Company, of Bristol, has built for Mr. H. B. Wright, of the Rhode Island Y. C., a handsome 30ft. hunting cabin launch, finished in mahogany in trunk, cockpit and cabin, with comfortable cruising accommodations.

Mr. F. E. Chester, of the Edgewater Y. C., has a new

steel launch, Rocket, 18ft. long, 4½ft. beam, and 12in. draft, built by the Michigan Steel Boat Company, of Detroit. The boat weighs 785 pounds, and is equipped with a 2 horse-power Regal automobile engine. It is the first small launch of steel construction seen in these waters.

Mr. E. C. Ostley, of Providence, has sold his sloop yawl, Ragnild, through the agency of F. S. Nock, to Mr. Clinton R. Weeden, of Providence. The yacht will remain in the Rhode Island Y. C. fleet. Rear-Commodore Bliss, of the W. P. Boating Association, has bought the handsome 25ft. cat, Inez L., from Messrs. I. W. Bagley and H. T. Hammond. Mr. G. H. Emerson's 30ft. cat Victor has been changed to a sloop yawl rig at Davis Bros'. shop, and has been put in commission for the season.

For Mr. David Stranger, of Providence, the Davis Bros. have built a 25ft. cat, Mae Hope, constructed on a broad model and comfortably fitted for cruising. The boat is 25ft. over all, 22ft. waterline, 10ft. 10in. beam, and 2ft. 4in. draft without the board.

The 28ft. speed launch, Moya, built by Mr. F. S. Nock for Mr. L. A. Meacham, of Chicago, last year, has arrived at the Nock yard at East Greenwich to have a 15 horse-power Buffalo motor installed in place of the 14 horse-power motor previously used. She will also have a new deck, and the interior will be remodeled. Under her former power the Moya developed a speed of 15 miles an hour.

The Chewink IV., a 30ft. racing sloop built under new rules of measurement, was launched at the Herreshoffs', Bristol, this week. She is a keel boat, with full, handsome stern, and slender bows, and with moderate overhangs. Considerable secrecy was observed at the shop as to her lines, as her underbody was concealed with canvas while she was building, and also when she was hauled out on the railway a day or two after launching. She was designed by Mr. N. G. Herreshoff.

The 46-footer, Altair, owned by Mr. Cord Meyer, of New York, is ready to go into commission at Bristol, and the new 100ft. steam yacht for Mr. M. C. D. Borden, of New York, will be launched early next month.

The election of the Bristol Y. C. is not held until September, but a nominating committee has been chosen, consisting of Messrs. J. Winthrop De Wolf, William Bradford, and Charles K. Wheelwright, and Frank A. Ingraham has been elected to the executive committee.

F. H. YOUNG.

## Rules Governing Future America's Cup Races.

THE report of the New York Y. C.'s Committee on Challenge of the Royal Ulster Y. C., has been published. This brochure contains all the data relative to the matches between Reliance and Shamrock III. as well as the correspondence that has taken place between the club and Sir Thomas Lipton in regard to the measurement rules that will govern future contests for the America's Cup.

We publish the letters in full, as they are of considerable interest:

City Road, London E. C., Dec. 12, 1903.

To the Secretary, the New York Yacht Club, New York: Dear Sir—With reference to the conditions governing the races for the America's Cup, I should feel obliged if you would kindly inform me whether, in respect to future contests, it is the intention of the club to adhere to the original rules as regards measurement, or whether it would be disposed to consider a challenge under the new rule of measurement recently adopted by the club?

My reason for writing you now is that, in my opinion, the decision of the club on this matter must have a very important bearing on future challenges. I am yours faithfully,

(Signed)

THOMAS J. LIPTON.

New York Yacht Club, March 14, 1904.

Dear Sir—Upon receiving your letter of Dec. 12, I informed you that it would be laid before the club at its next meeting. This did not take place until February, when a committee was appointed, to whom the matter was referred. As the yacht club has no Board of Governors, this is the usual course in such matters.

On account of the absence of some of the members of this committee, it was unable to meet until the present week, and thus some delay has occurred, which we regret; but it has been unavoidable.

I am now instructed to answer your letter as follows:

You ask to be informed whether "in respect to future contests it is the intention of the New York Yacht Club to adhere to the original rules as regards measurement, or whether it would be disposed to consider a challenge under the new rule of measurement recently adopted by the club."

In a letter written you by Commodore Ledyard, under date of July 8, 1902, for transmission to the Royal Ulster Yacht Club, the right of a challenging club to sail a match for the America's Cup, without regard to measurement or time allowance, and the inability of the club holding the Cup to do any act or to impose any conditions which might in any respect impair this right, were explained at length. The following is taken from that letter:

"As I had occasion to explain to you when the question of towing arose in connection with the challenge of Shamrock I., the deed of gift prescribes no conditions respecting the kind of vessel which may compete, except (a) that she shall be within certain limits of length; (b) that no dimensions stated in the certificate may be exceeded; (c) that no restrictions shall be placed on centerboards, and, lastly, that she shall proceed under sail, on her own bottom, to the port of contest. This last-named condition imports all that the framers deemed wise to insert by way of limitation upon the type of vessel, viz., her actual and demonstrated ability to make the passage under sail."

As to measurement, the deed makes no provision whatever. That is left to be dealt with under the mutual agreement clause. The two clubs may agree upon any system of measurement they please. If they fail to agree, the terms of the match are prescribed by the deed; best two out of three races on ocean courses as described, 'subject to the rules and sailing regulations' of the challenged club, 'so far as the same do not conflict with the provisions of the deed, but without any time allowance whatever.'

"You will observe that under this provision the New York Yacht Club would have no power to make any change in its measurement rules apply to a challenging yacht without the consent of the club to which she belongs. All that the challenger would have to do would be to appeal to the deed and stand upon its right to sail the race, boat for boat, without any time allowance whatever, and therefore without the application of any rule of measurement. Indeed the New York Yacht Club, as the holder of the Cup, regards it as quite beyond its power to impose any restriction or any hindrance upon the challenging yacht, beyond those enumerated as specified in the deed."

"The enumeration of these qualifications by the deed excludes the idea that the challenged club could in any way vary from or add to them. Any yacht properly challenging through a qualified club of a water line length within the limits specified, complying with the deed as to notice and certificate, and proceeding under sail on her own bottom to the port of contest, is entitled to sail for the Cup, on the courses designated, best two out of three, boat for boat, without time allowance, and without any other or additional restriction being imposed upon her. She must sail, it is true, under the rules and sailing regulations of the chal-

lenced club, but any provisions of these would plainly conflict with the deed, if they operated to impose any other limit, condition or penalty upon the type, model, sail area or other factor going to the qualification of the challenger.

This will make it plain to you that what you refer to in your question as "original rules" in respect to measurement, by which I understand you to mean the rules under which the matches with the three Shamrocks have been sailed, were rules which applied to these contests, not because they happened to be at the time the measurement rules of the New York Yacht Club, but because the mutual agreement between the two clubs provided, in each instance, that the match should be sailed under these particular rules.

The normal match provided for by the deed of gift is one to be sailed without time allowance, and therefore without regard to any rule or system of measurement, for the only purpose of the measurement is to determine the amount of time allowance.

Any other match must be the product of an agreement between the two clubs, and therefore a rule of measurement for purposes of time allowance can become a factor in the match only by virtue of such special agreement.

The question you raise is doubtless an important one, but you will see that it really amounts to asking the club what agreement it would be willing to make if it should happen that some club qualified to challenge should desire to enter into an agreement upon the subject. This would seem to be a matter which can properly come before the club for discussion only in connection with a challenge from some club qualified to challenge for the Cup, for it is with such a club only that an agreement upon the subject can be made.

The New York Yacht Club does not feel that it can be asked to take a position upon such a question when no challenge is pending, or, so far as it is informed, even contemplated. Any view which might be expressed by the club under such circumstances would seem to be academic and of little avail, and it prefers to wait until the subject shall be raised in some manner properly calling for its disposition before expressing any views upon it.

It may be proper for me to add that the present rule of measurement has only been very recently adopted by our club, and that vessels have not yet been built under it, so that it cannot be regarded as having passed the experimental stage. Whether so untried a rule should be made applicable to an international match I think you will agree should not be decided without careful consideration by both the clubs concerned in settling the details of the match. I am very respectfully yours,

(Signed) G. A. CORMACK, Sec'y.  
Sir Thomas J. Lipton, City Road, London E. C., England.

City Road, London E. C., March 24, 1904.  
G. A. Cormack, Esq., Secretary New York Yacht Club, 37 West 44th St., New York.

Dear Mr. Cormack—I have received your letter of the 14th inst., for which I am obliged, and the contents I have very carefully noted. I am leaving to-morrow for abroad, and will be away for some little time; but on my return will give the matter under consideration my attention. Yours faithfully,  
(Signed) THOMAS J. LIPTON.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

**RAMONA AND NORMONA CHANGE HANDS.**—Mr. Stephen Peabody, N. Y. Y. C., has sold his schooner yacht Ramona to Mr. W. N. Wilbur, of Philadelphia, Pa., through the agency of Stanley M. Seaman. Ramona—ex-Resolute—is a well known craft, having been built by David Carll, of City Island, New York. She measures 133ft. over all, 110ft. waterline, 25.7ft. breadth, and 12ft. draft. Mr. Seaman has also sold the auxiliary ketch Normona to Mr. Paul G. Thebaud, N. Y. Y. C., by the Selwyn M. Taylor estate, Pittsburg, Pa. She was designed by R. M. Munroe and built 1903 by A. C. Brown & Sons, Tottenville, N. Y. She is 83ft. over all, 71ft. waterline, 22.2ft. breadth, and 3.10ft. draft.

**CHALLENGE FOR CAPE MAY CUP.**—The regatta committee of the Royal Yacht Squadron received on May 22 a formal challenge from Commodore Morton F. Plant, of the Larchmont Y. C., for the Cape May cup, with his schooner yacht Ingomar.

**POWER BOAT FOR H. H. ROGERS, JR.**—The Electric Launch Company, of Bayonne, is building a speed launch for Mr. H. H. Rogers, Jr. She is 31ft. long, 4ft. 8in. breadth, and 9in. draft. The boat complete will weigh 1,100 pounds, and will be carried on the davits of the steam yacht Kanawha. With a 35 horse-power engine a speed of 20 miles is expected. The boat is very lightly built, and is double planked.

**CALYPSO REACHES NEW ORLEANS.**—Calypso, the Hanley Y. R. A., of Massachusetts, 25ft. cabin sloop, arrived at New Orleans, her new home, on the Morgan Line steamer El Alba, on May 19. She was sailed from Boston to New York by Capt. Cromwell, the passage being rather a long one owing to fog and head winds.

Chewink III., another of the 25-footers of the same class as Calypso, will be shipped to New Orleans by rail, leaving Boston about May 25. Chewink III. is 49ft. in length, and Calypso 42½ft. long. Southern yachtsmen are finding a considerable drawback to purchasing large craft in the North, owing to the difficulty in getting transportation. The steamships do not care to handle craft over 45ft. long, as the space at disposal is athwart ship, and this is limited to the width of the ship, the largest of the vessels not having a beam much in excess of 45ft. On the other hand, the railroad cars are limited to a width of about 9ft., and boats of the Chewink III. length have a beam of 12ft. and over. It is presumed that in coming by train that the latter will have to be cradled and carried on her side. Several deals for large northern yachts are hanging fire until it is seen how Chewink fares on her long journey by car.

**ROYAL CANADIAN FIXTURES.**—The regatta committee of the Royal Canadian Y. C. has arranged for the following regattas:

Tuesday, May 24—Second class, 16ft. ballasted class, 16ft. skiff class, 12ft. and 14ft. dinghy class.  
Saturday, June 4—Cruising race; fleet in two divisions, first division 35ft. and over; second, all under 35ft.

Saturday, June 11—Fleet maneuvers, 16ft. skiff class, 12ft. and 14ft. dinghy class.

Saturday, June 18—First class cruising race, Murray cup.

Saturday, June 25—Second class, McGaw cup, 16ft. ballasted class.

Friday, July 1—Queen's cup.

Saturday, July 2—Handicap cruising race, entire fleet.

Saturday, July 9—16ft. skiff class, 12ft. and 14ft. dinghy class.

Saturday, July 16, 23—L. Y. R. A.

Saturday, July 30, and Monday, August 1—Cruising

race, fleet in two divisions, Beaver cup to winner in second division, 16ft. skiff class, 12ft. and 14ft. dinghy class.

Saturday, August 6—Second class, 16ft. ballasted class.

Saturday, August 13—First class cruising race, Lorne cup.

Saturday, August 20—16ft. skiff class, 12ft. and 14ft. dinghy class.

Saturday, August 27—First class, 15-mile triangle.

Saturday, September 3, 5—Handicap cruising race, entire fleet.

Saturday, September 10—Prince of Wales cup race, all classes.

Saturday, September 17—16ft. skiff race, 12ft. and 14ft. dinghy class.

Saturday, September 24—Handicap cruising race, entire fleet.

Additional races for 16ft. skiff class will be held on the first and third Wednesday of each month, from June 1 to September 7, inclusive, starting at 5.15 P. M. There will be a limit of one hour for these races. Also races for 14ft. and 12ft. dinghies every Wednesday afternoon over the short course.

The club cups and challenge flag will be awarded to the yachts making the best average during the season as follows:

R. C. Y. C. challenge flag to the first class; Lansdowne cup to the second class; Cosgrave cup to the 16ft. ballasted class; Gooderham cup to the 16ft. skiff class; Harman cup to the 14ft. dinghy class; Barber cup to the 12ft. dinghy class. A championship flag will also be awarded to yachts making the best average during the season.

## Canoeing.

### CANOEING NEWS NOTES.

ATLANTIC DIVISION CAMP, Hermit Point, opposite Riverdale-on-Hudson, May 28-30, 1904. Regatta programme:

1. One-man, single-blade paddling, ½ mile straight-away.
2. One-man, double-blade paddling, ½ mile straight-away.
3. Tandem, single blade paddling, ½ mile straight-away.
4. Tandem, double-blade paddling, ½ mile straight-away.
5. Fours, single-blade paddling, ½ mile straightaway.
6. Novice sailing, cruising rig, 1½-mile triangle.
7. Unlimited sailing—open to any canoe—3-mile triangle.
8. Open canoe sailing, 40ft. limit, 3-mile triangle.
9. Nomad class, 65ft. limit, 3-mile triangle.
10. Atlantic Division Elliott sailing trophy, 16ft. by join. class and handicap, 4½-mile triangle.
11. Tilting tournament.
12. Hurry-scurry.

A. C. A. regulations will govern all races, supplemented by necessary restrictions by regatta committee. Prizes will be awarded in all races, and second prizes where more than two contestants finish. While the camp is open to all canoeists, subject to the regulations of the camp-site committee, and specified camp dues, the races will be open only to members of the American Canoe Association, in good standing, or to applicants for membership therein who have filed their applications, with requisite fees with the purser of the division prior to the calling of the first race. Extra events may be called, if warranted in the judgment of the regatta committee.

J. K. HAND, Chairman;  
WILBUR D. ANDREWS,  
TRUXTON T. T. CRAVEN,  
Regatta Committee.

Starter, Charles Eastmond; Referee, H. Lansing Quick; Judges—to be announced at camp; Clerk of Course—to be announced at camp.

## Rifle Range and Gallery.

### Fixtures.

June 12-29.—Union Hill Schuetzen Park, N. J.—National Schuetzenbund Festival.  
June 26.—Zettler's Morrisania Park.—German-American Shooting Society's shoot.

### New York City Corps.

At the last practice shoot of the City Corps, held at Union Hill Park, May 18, the following scores were made, 200yds., off-hand:

Ring target, 10 shots, possible 250, 200yds.: R. Busse 213, Aug. Kronsberg 207, J. Facklamm 207, R. Bendler 205, C. G. Zettler 202, W. Grapentin 198, H. C. Radloff 196, O. Schwanemann 194, Ch. Wagner 193, R. Schwanemann 192, J. Keller 158, H. R. Caplan 156.  
Man target, 3 shots, possible 60: J. Facklamm 59, R. Bendler 56, Aug. Kronsberg 55, R. Busse 54, H. C. Radloff 54, Ch. Wagner 53.  
Point target, most points: R. Busse 11, Aug. Kronsberg 11, J. Facklamm 10, C. G. Zettler 9, R. Schwanemann 5, W. Grapentin 7, R. Bendler 7, O. Schwanemann 7, Ch. Wagner 7, A. Wiltz 5, G. Schroeder 4, J. Keller 3, H. C. Radloff 2, H. R. Coplan 1.  
Bullseye target, most flags: Aug. Kronsberg 12, J. Facklamm 8, R. Busse 6, R. Schwanemann 4, O. Schwanemann 3, Ch. Wagner 2, C. G. Zettler 2, R. Bendler 2, J. Keller 1, A. Wiltz 1.

### Miller Rifle and Pistol Club.

HOBOKEN, N. J.—The members of the Miller Rifle and Pistol Club, having in mind the near approach of the national festival next month, are busy each week trying to get into the best possible condition for the coming contest.

On May 10 Owen Smith led the group with a total of 249. On May 17 R. Dingman was high with 245.

The scores of May 17 follow, 10 shots, 25-ring target, distance 75ft.: R. Dingman 245, R. A. Goldthwaite 242, F. A. Williams 243, H. Bahn 241, Owen Smith 240, C. E. Doyle 239, C. Bischoff 242, R. W. Evans 239, T. Gabriel 239, H. Emmer 233, T. Fitzlaff 237, F. Unbehauen 237, G. J. Badgley 216.

### At Union Hill Park.

OVER fifty local riflemen were in the shooting house of the Union Hill range May 2. Fourteen targets were in use. A number of the Zettler Club members were present. Dorrier, Tewes and Schlicht had a 50-shot match. The winner was undecided up to the last two shots. Dorrier's grit and experience helped him out at the end, and he won by a margin of three points over Tewes. Schlicht was only five points behind Dorrier. Begerow and Fenwirth had a 20-shot match, in which Begerow won by a large majority. Tewes and Dorrier had a 10-shot match, in which Tewes buried the veteran. The scores are as follows: M. Dorrier 1122, Wm. A. Tewes 1119, Geo. Schlicht 1117.

Tewes vs. Dorrier, 10 shots: W. A. Tewes 230, M. Dorrier 208, Begerow vs. Fenwirth, 20 shots: Aug. Begerow 436, H. Fenwirth 386.

### Lady Zettler Rifle Club.

THE scores in total, made by the members of the Lady Zettler Rifle Club, in their winter practice during the season 1904-05, are as follows: Miss Millie Zimmermann 2945, Miss Kate Zimmermann 2922, Miss Anna Koch 2895, Miss Florence Muller 2892, Mrs. Hy. Fenwirth 2886, Mrs. W. H. Turbett 2825, Mrs. Hy. Scheu 2796, Miss Tina Eusner 2720, Mrs. F. Watson 2568, Miss M. Laut 2276, Mrs. Geo. J. Bernius 1849, Miss Nellie Hart 1848, Mrs. B. Zettler 1726, Mrs. C. Knaus 511, Mrs. Aug. Kronsberg 450.

### Sharpshooters' Society.

DAYTON, O.—The May cup contest was held at the Sharpshooters' Society's Oakwood range on May 19. John Boehner won with a score of 114. Conditions, muzzle rest, 5 shots, 125 possible: John Boehner 114, J. F. Beaver 112, Chas. W. Sander 111, G. R. Decker 111, M. J. Schwind 110, H. K. Schwind 107, John Rappold 104, A. Schwind 103, Gus Hodap 97.

In the free-for-all, 3 shots, 75 possible, A. Schwind won with 69. M. J. Schwind 68, H. K. Schwind 68. BONASA.

### Our Own Rifle Club.

HOBOKEN, N. J.—Fifteen members of the Our Own Club attended the weekly practice shoot, May 18. The scores made were not up to the general average.

Ten-shot scores, 25 ring target, distance 75ft.: J. D. Spinck 240, J. H. Kruse 237, F. Biehler 233, W. F. Diger 231, H. W. von Holten 229, W. Welz 228, Capt. J. Ortlieb 230, W. Harmsen 225, P. Kraemer 222, G. Cordes 220, Ch. Heyer 218, W. Brandt 218, W. J. Bruder 217, A. Temmler 215, M. Driesen 212.

### Rifle Notes.

On the Union Hill range, the Harlem Independent Corps will hold practice shoots, one on May 26, and the New York Corps will hold one on Friday, May 27.

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

\*May 25-26.—Brownsville, Pa., Rod and Gun Club.  
May 25-26.—Shamokin, Pa., Gun Club Spring shoot. S. C. Yocum, Sec'y.

\*Sept. 27-28.—Monessen, Pa., Gun Club.

\*Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.

\*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y, Pittsburg.

## DRIVERS AND TWISTERS.

The fifteenth annual tournament of the Pennsylvania State Sportsmen's Association, 1905, will be held under the auspices of the Herron Hill Gun Club, of Pittsburg.

In an 18-man team contest between the Media, Pa., Gun Club and North Camden Gun Club, the latter won by a score of 359 to 329. The possible was 450. Each man shot at 25 targets.

John M. Lilly, President of the National Gun Club, Indianapolis, Ind., informs us that the programme of his club's tournament will be ready for distribution on May 30, instead of on May 25.

Mr. M. H. Grant, East Walpole, Mass., informs us that the second annual target tournament of the Neponset Gun Club will be held on June 25. Sixty dollars in prizes will be subject to competition.

At the Dubuque, Ia., tournament, May 17 and 18, Mr. Fred Gilbert was high in the two-days' average with 387 out of 400. He broke 199 out of 200 on the second day. C. M. Powers was second, with 383. L. Foley and Guy Burnside tied on 368.

Mr. C. B. Wiggins, of Homer, Ill., informs us that the Homer and Ogden gun clubs have combined, and will hold a two-day shoot on July 6 and 7. Beautiful grounds have been leased and can be reached in a 20-minute ride by electric car from Danville and Champaign, Ill.

The fifth annual team shoot of the Boston Gun Club, at Welling-ton, Mass., May 18, was won by the Middlesex Gun Club, with a score of 119. Seven teams entered. There were five men to a team, and each man shot at 30 targets. Mr. H. C. Kirkwood made high score of the 35 team contestants, namely, 27 out of 30.

The Brooklyn Gun Club will hold a holiday shoot on May 30. Prizes will be offered for competition. The programme begins at 2 o'clock. Take Kings County Elevated R. R. to Crescent street station, where hacks should be in readiness to take shooters to the grounds, on Kaiser's farm, Old Mill road. Mr. John S. Wright is the manager.

Earnest effort will be made to evoke action on the part of the New Jersey State Sportsmen's Association, with a purpose to hold a tournament. Secretary Snyder has notified the executive committee that he is unable to act, and his duties will be taken up pro tem. by Mr. W. R. Hobart, the chairman of the executive committee.

The New Haven, Conn., Gun Club announces a grand Memorial Day tournament to be held on May 30. The programme consists of fifteen events at 10, 15 and 20 targets, 65 cents, \$1.22 and \$2.30 entrance. Totals, 190 targets, entrance \$15.33. Class shooting. Competition begins at 9 o'clock. The secretary is Mr. John E. Bassett, 5 Church street.

Mr. Fred Coleman, of Philadelphia, one of America's most skillful trapshooters, was too ill to attend the Pennsylvania State shoot, at York, last week, owing to a severe illness which confines him to his bed. Much regret was expressed by the shooters at that tournament, and they also expressed many kind words of earnest, friendly sympathy and wishes for his speedy recovery.

At the Southern Trap Shooters' thirteenth tournament at targets, held under the auspices of the Vicksburg, Miss., Gun Club, May 16 to 18, Messrs. Charles G. Spencer and Harold Money tied for high average with a total of 385 out of 400 shot at. Fletcher won the Pastel trophy, emblematic of the individual target championship of Mississippi. The next contest for this trophy will be held at Woodville, Miss., June 15 and 16.

In the contest for the automobile, at Newark, N. J., last Saturday, Messrs. H. M. Brigham, of Brooklyn, and George H. Piercy, of Jersey City, tied on the excellent score of 96 out of a possible 100. The tie will be shot off at the contest on Saturday of this week. There were two contestants for the professional cup, Messrs. J. A. R. Elliott and J. S. Fanning. They scored respectively 94 and 93.

The Rainmakers' camp, which was destroyed by fire last November, and which was really a house comfortably furnished and situated in the backwoods, is to be rebuilt in the near future. The site of the former camp will be used. Elmer E. Shaner, one of the owners, has had possession of the architect's plans during several months past, and has begun active operations in the matter of rebuilding. The new camp will be rebuilt with a view to roomy quarters and comfort. In the Rainmakers' camp, after exhausting tournaments, Mr. Shaner enjoys deserved rest and needed recuperation.

The programme of the Peru, Ind., Gun Club tournament, June 9 and 10, for each day consists of fourteen events, each at 15 targets, \$1.50 entrance. The purses will be divided 35, 30, 20 and 15 per cent. There will be a sliding handicap, 16 to 19yds. All start at 18yds. Straight scores go back 1yd.; one miss, 18yds.; two misses, 17yds.; all others 16yds. If fifteen stay through the two days, \$50 will be divided between those shooting through the programme. If there are not fifteen shooters on the second day, the shoot will close with one day. Shooting commences at 9 o'clock. Targets, 2 cents. Ship guns, shells, etc., to secretary, Wm. Daniels, and they will be delivered free.

The Democrat-News, of Warren, Ark., recounts a humorous incident in relation to the expert exhibition of expert rifle shooting, given in that town by Capt. Geo. E. Bartlett, recently. There was a trial in progress at 4 o'clock, the hour of the shoot. The jury deemed it necessary to adjourn for the purpose of deliberation, and judge and jury were all present at the exhibition, where they witnessed coins, brickbats, pieces of candy, walnuts, marbles thrown in the air and hit with rifle bullets with ease by Capt. Bartlett.

At the Pennsylvania State shoot, on Tuesday, the high averages were as follows: Shooting at 185 targets, J. S. Fanning, 178; J. A. R. Elliott, 176; Fleming, 175; Apgar, 174; Ford, 173; McSherry, 171. May 18, shooting at 150 targets: Elliott, 146; J. Mowell Hawkins, 141; Fleming, Fanning and Hatfield, 140. May 19, 200 targets: Elliott, 198, and also he made a sum of 124 straight. Out of 175, Fanning broke 169. On May 17, the Milt Lindsey trophy was won by the Carlisle team. On May 18, the Harrisburg trophy was won by the Luzerne team of Pittsburg. On May 19, the Reading trophy, four-man team trophy contest, resulted in a tie between the Florist Gun Club, of Philadelphia, and the J. F. Weiler Gun Club, of Allentown.

Mr. E. J. Laughlin, secretary, writes us as follows: "The Riverside Gun Club, of Utica, N. Y., has completed its new club house on its new shooting grounds at Riverside, three minutes' walk from all depots. The club will hold its dedication tournament on Memorial Day, May 30. From the numerous inquiries for programmes, the attendance promises to eclipse that of any previous tournament we have given. The programme numbers 150 targets; three 10, four 15 and three 20-target events. Entrance \$13.70. Moneys divided 40, 30, 20 and 10 per cent. Targets, 2 cents each, included. Added money, \$10. Trade representatives may shoot for targets only. Programme commences at 11 A. M. Traps open earlier for practice events. Free merchandise to winners. A good lunch will be served gratis."

BERNARD WATERS.

## IN NEW JERSEY.

### North River Gun Club.

Edgewater, N. J., May 21.—The scores made at the North River Gun Club shoot to-day are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	10	10	10	10	10	10	5	25	25
Tower	5	8	7	6	5	5	5	5	5	4	4	4
Dr Richter	5	7	7	5	5	5	11	5	4	4	4	4
C E Eickhoff	8	7	7	5	8	8	9	3	7	4	19	9
F Vosselman	5	7	7	5	8	8	9	3	7	4	19	9
T Monahan	6	7	7	7	9	8	4	4	4	4	4	4
H H Schramm	6	7	7	7	9	8	4	4	4	4	4	4
J R Merrill	6	7	7	7	9	8	4	4	4	4	4	4

JAS. R. MERRILL, Sec'y.

### Emerald Gun Club.

Carlstadt, N. J., May 17.—The weather was raw and nasty. The birds were a poor lot as a whole. Owing to the light shifting, most members were undershooting their birds. Charles and Whitley did not finish their scores, as there were not enough birds. They will shoot up at the next club meeting. Mr. Al. Schoverling shot in fine form, taking first money in optional sweep; Colquitt and Van Valkenburg divided 'second money'; Cotton third.

Colquitt's two dead out were rappers, and fell just over the line. Kall drew fast ones in his first five. Schorty was far below his usual form. Dr. Hudson, the only charter member of the club, "fudged" a bit in his first 10, but scored his second 10 beautifully. Jake Fisher shot steadily. The scorer was "Johnnie Jones"; trap-puller, F. C. Schneider, both of the American Handicap staff in times past. Mr. L. H. Schortemeier acted efficiently as referee.

Two events are for August and September. The club shoots for two months at each shoot so as to finish the year before July 1, when the New Jersey anti-pigeon shooting law takes effect.

### Montclair Gun Club.

Montclair, N. J.—Twenty marksmen faced the traps at the regular Saturday afternoon shoot to-day. Weather conditions were favorable to good scores.

Event No. 1, 25 targets, handicap, unknown traps and unknown angles, was won by Mr. H. W. Benson, who broke 24. Prize, a fly-rod and reel; the second prize, a box of shells, going to Mr. J. Seymour Crane.

Event No. 2 was a team race, eight men each. Nos. 1 to 8 in team No. 1; Nos. 9 to 16 in team No. 2, losing team to pay for the birds. Mr. Kendall's team won by 11 breaks.

Event No. 3, match at 10 birds straightaway and high, both barrels loaded, a break by first shot to count 2, a break by second barrel to count 1, was won by Mr. Ph. H. Cockeair, he breaking every bird with first barrel, thus scoring 20 points and winning a patent gun cleaning set.

Events 4 and 5 were for practice, and to apply on the Parker gun contest. Mr. C. W. Kendall made the best score of the day, breaking 47 out of 50.

The club has recently doubled the size of its house, putting in new gun racks and shelves to hold over 7,000 targets, and greatly adding to the comfort of its members.

EDWARD WINSLOW, Sec'y.

### Bound Brook Gun Club.

Bound Brook, N. J.—The Bound Brook Gun Club held its regular shoot Saturday afternoon, May 21. The weather was fine for shooting. The trap worked to perfection, and every one had a good time. Dr. Pardoe won first money in event 1. F. K. Smith won first prize in event 2, a pigskin covered flask. Mr. Dunning won second, a hunting knife, after shooting out Wilson, Van Nuis and Prugh. Stelle won third, a picture.

In event 4 Wilson won first, a mounted crane. The second prize went to Mr. Dunning after a shoot-off with Stelle and Prugh.

Wilson won first money in event 3. Mr. Dunning won the three-handled silver cup in the club race. Mr. Wilson won the small silver loving cup in event 5. Dr. Bache in practice broke 21 targets with a 16-gauge from 21yds. We shoot the third Saturday in each month. Shooters are cordially welcomed. Scores:

### South Side Gun Club.

Newark, N. J., May 21.—The entries and re-entries in the contest for the automobile to-day are appended. The 100 targets were shot in strings of 25. Brigham, after a number of re-entries, made the excellent score of 96. It looked good enough for high for a while, but Mr. Geo. H. Piercy was going quite a steady pace, and succeeded in scoring 96 also, making thereby a tie, which will be shot off on Saturday of this week. In the professional competition for the cup, Mr. J. A. R. Elliott was high with 94. Mr. J. S. Fanning was only one target less, 93. Scores:

## WESTERN TRAP.

## Dubuque Tournament.

Dubuque, Ia., May 19.—The annual tournament of the Dubuque Gun Club, with Chas. W. Budd, of Des Moines, Ia., and his side partner, Fred Whitney, manager and cashier, respectively, began Tuesday morning and continued for two days.

The Mississippi Valley was on its good behavior. The sun shone grandly. There was a good attendance of experts and amateurs present from Illinois, Iowa and Minnesota. Among the best known were Fred Gilbert, Tom Marshall, C. W. Budd, and the following list will show the remainder of the "gang": C. M. Powers, of Decatur, led at the close of the first day, with a score of 189; E. Cummings, Des Moines, Ia.; M. S. Highland, Chicago; John Willer, Chicago, J. L. D. Morrison, St. Paul; L. E. Parker, Minneapolis; F. H. Lord, La Grange; Joe Barto and N. W. Vietmeyer, Chicago; B. O. Seymore, Grand Forks, N. D.; T. A. Marshall, Keithsburg, Ill.; O. C. Rogers, Davenport; A. M. Ford, Central City, Ia.; Lou Foley and T. B. Nichols, Nichols, Ia.; A. J. Strauber, Streator, Ill.; W. S. Hoon, Jewell, Ia.; W. H. Sauser, Cascade, Ia.; Guy Burnside, Knoxville, Ia.; A. C. Connor, Pekin, Ill.; Dad Cleveland, Cincinnati.

It is said of many shooters who come here that they come more to meet the Dubuquers and have a season of good fellowship rather than to win prizes. True, it has always been that these are the princes of all good fellows when it comes to making a shooter feel at home, even if they do build some "castles in the air," like the boot that Gilbert was introduced to at one time.

Everything about the grounds has a fresh and pleasing look; flags everywhere, and traps and all houses painted in red and white.

The shooting was not so good the first day as the second, yet Gilbert made 188 and Powers 189, Smith 186, Marshall 185, followed. Just to show how smoothly everything ran, the second day Gilbert only "slipped a cog" on one target, 199 out of 200, and he was somewhat worried at that, as Chauncey M. Powers made 194, then Burnside, Lord, Barto and Heeb tied on 184. The total scores were: Gilbert 387, out of 400, Powers 383; L. Foley and Guy Burnside were tied with 368. The scores:

## Abilene Tournament.

Abilene, Tex., May 17.—The much-talked-of northern Texas shoot is now a thing of history, and last Thursday and Friday will for all time remain a red-letter day in the history of this place as a shooting center.

There were over forty shooters who participated, and the race for high averages was a hot one. F. M. Faurete beat out T. E. Hubby by just one target. The same thing happened in the amateur class, as Atchinson was one to the good over V. C.

The first day the wind caught the targets and sent them skyward. A fine dinner was served on the grounds, and all were pleased with the treatment received at the home grounds.

Wallace Miller did not shoot up to his usual form, but he was all right in the midst of sociability, and made friends.

A good delegation came all the way from El Paso, and they were the staying kind. It was a pleasure to watch the youngsters, Johnny Worden and Harry Faurete lining up and showing the old hands how the boys from Dallas can shoot.

Some Jack Rabbit events were indulged in on the side. The scores:

## First Day.

The Sauer gun event, 50 targets, handieap, was won by Mr. Geo. Bechtel, after shooting off a tie. The scores of this event follow: Dr. J. G. Knowlton 43, W. P. Norton (6) 39, F. L. Barnes (8) 45, M. McAlpin 46, G. Bechtel (10) 45, W. J. Elias (10) 45, J. S. Woodhouse (20) 45.

### Pennsylvania State Tournament.

THE fourteenth annual tournament of the Pennsylvania State Sportsmen's Association was held at York, Pa., May 16-21, under the auspices of the York City Gun Club. The grounds of the York County Agricultural Society, situated on the outskirts of the city, was the place of competition. Good trolley car service afforded quick and comfortable transportation from the hotels to the grounds. On the beautiful, level, green field, bounded by the race track, the five sets of traps were installed, and under the vigilant and expert management of Mr. Charles North, they gave unqualified satisfaction in their practical workings. Supplemented with expert workers in all the departments, the competition progressed smoothly and expeditiously. Mr. D. S. Daudt, of Philadelphia, was manager. He has had much practical experience in the management of tournaments, besides being also a renowned expert trapshooter. Under his able management the programme was run off without a skip, though bad weather caused an important loss of time on Wednesday. He had the tournament fully organized and equipped in respect to referees, scorers, squad hustlers, trappers, messengers, etc. He was ably assisted by the other members of the general committee, Messrs. Elias, Spangler and N. McSherry, of York, Pa., and Mr. Allen M. Seitz, of Glen Rock, Pa. The programme announced \$240 added money, \$125 average moneys, and \$600 in merchandise prizes and individual trophies.

There was a successful support given to the tournament by the shooters. The competition, in its expert features, was of a high order. Some remarkably high averages were made.

There was a number of trade representatives in attendance, among whom were Messrs. Harvey McMurchy, San Francisco; T. H. Keller, Neaf Apgar and G. R. Benjamin, New York; E. D. Fulford, Utica; J. A. R. Elliott, Kansas City; Luther J. Squier and J. T. Skelly, Wilmington; J. R. Hull, Meriden, Conn.; C. G. Grubb, Pittsburg; Frank E. Butler, Nutley, N. J.; Ed. Rike, Dayton, O.; J. Mowell Hawkins and E. H. Storr, Baltimore; J. S. Fanning, A. C. Barrell, Sim Glover, and H. P. Fessenden, New York, and M. L. Herbein.

The annual meeting of the Association was held on Wednesday evening. The officers elected were as follows: President, H. M. Worden, of Harrisburg; Vice-President, Allen M. Seitz, of Glen Rock; Secretary-Treasurer, J. M. Runk, of Chambersburg. Directors: J. H. Worden, Harrisburg; F. Kramlich, Allentown; Dr. Geo. Goebel, Philadelphia; J. F. O'Neil, Wilkesbarre; Geo. Crane, Mountville; R. R. Bennett, Pittsburg; Dr. Joseph Kalbfus earnestly addressed the meeting on the contemplated changes in the shooting laws of the State. Williamsport made an earnest bid for the next State shoot, but it went to the Herron Hill Gun Club, of Pittsburg, by a large majority.

Owing to a misunderstanding between officers of the York Gun Club and officers of the State Association, concerning the final winning of the State trophies at this shoot, the trophies were, in the programme, announced as being in open competition for the last time, and to become the property of the contestants who won them at this shoot. At the State meeting it was decided to continue them in competition.

#### First Day, May 16.

The programme had eight preliminary practice events for the afternoon. Each open sweep was at 15 targets, \$1.30 entrance, four moneys, class shooting, 40, 30, 20 and 10 per cent. To each of the two high guns, \$5. The totals were 140 targets, \$10.40 entrance. A strong wind made difficult shooting conditions. Jack Fanning was high for the day with 114; J. Mowell Hawkins and P. B. Pfeiffer, of Amber, tied for second on 113. Messrs. Elliott, Fulford and Hull were close up with 112. Of the York county shooters, Mr. N. McSherry was high with 106.

#### Second Day, May 17.

The real competition of the tournament commenced to-day, and there consequently was a large influx of shooters on Monday evening, and this morning. Of the eleven programme events, ten were at 15 targets, respectively \$1.40 entrance, \$8 added.

Event 11 was at 25 singles and 5 pairs, \$2 entrance; it was also the two-man team race for the Milt Lindsey trophy. Conditions: Entrance per team \$4, not included in the regular entrance. Divided 40, 30, 20 and 10 per cent.; teams composed of residents of the State only; no man to shoot on more than one team, and all must be members of the same club. Each member of the win-

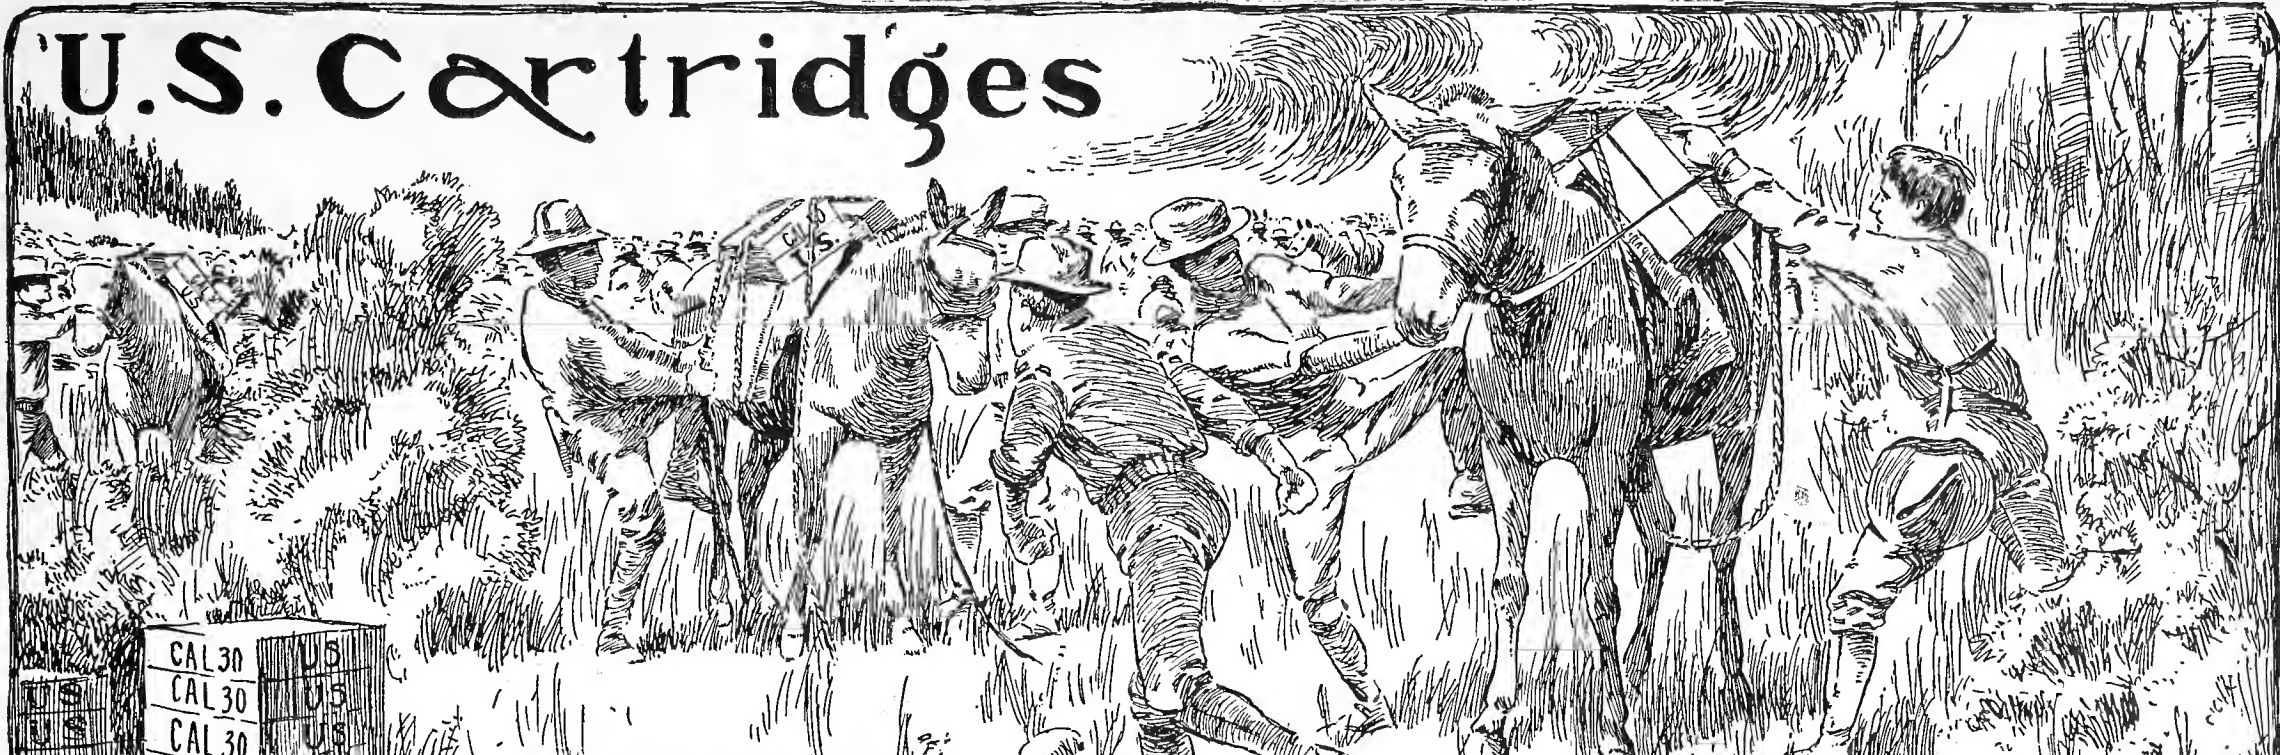

ning team to receive a trophy. Nine clubs contested for this famous trophy, and the struggle was close and prolonged for it. The Carlisle proved to be the victor with the admirable score of 63 out of a possible 70; the York team No. 1 pressing it closely with a score of 62, only one target less. Four clubs had more than one team, namely, York, Du Bois, North Side and Philadelphia.

The high averages of the day, total 185 targets, were as follows: First, J. S. Fanning, 178. He missed only four in the first ten events. Second, J. A. R. Elliott, 176. He made a run of 69. Fleming 175, Neaf Apgar 174, Ford 173, McSherry 171. Stroh and Trafford each scored 10 in the doubles, and Apgar, Squier, Fleming, Grove, Harris, Fanning, Watson, Smith and Glover each made four doubles.

The Reading trophy, four-man team contest, resulted as follows:

Reading—Harner 19, Weidner 23, G. K. Lutz 19, D. Lutz 20; total 81.

North Side No. 1—Denicker 21, Fleming 24, Watson 22, Atkinson 22; total 89.

Herron Hill, Pittsburg—Jessup 23, Heil 16, Rahm 19, Pontefract 22; total 80.

J. F. Weiler Gun Club—Kramlich 25, Schlicher 24, Bray 25, Straub 18; total 92.

Florists', of Philadelphia—Frank 22, Fox 24, Pfeiffer 24, Park 22; total 92.

York—McSherry 24, Grove 21, Miller 22, Somers 21; total 88.

Carlisle—Parker 21, Sprout 18, Porter 19, L. C. Smith 23; total 81.

Independence—Newcomb 24, Mrs. Park 18, G. O. Bell 19, Daudt 20; total 81.

The J. F. Weiler Gun Club and the Florists' Gun Club, of Philadelphia tied on 92, dividing the moneys thereby, and agreeing to shoot the tie off for the trophy at a later date.

#### Fifth Day, May 20.

The programme of Friday had four amateur events. No. 1 was the Wolstencroft trophy, emblematic of the target championship of Pennsylvania; 50 targets, entrance \$1, optional sweep, \$2; moneys divided 30, 25, 20, 15 and 10 per cent.; class shooting. Only residents of the State who are bona fide members of any club or association in the State are permitted to shoot for the trophy. All other amateurs may shoot for the purse.

No. 2 was a merchandise event, 25 targets, entrance \$2, optional sweep \$1; moneys divided 30, 25, 20, 15 and 10 per cent.; class shooting. High guns take the merchandise prizes.

No. 3 was the gold badge and silver cups event; 50 targets, entrance \$1; optional sweep \$2; moneys divided 25, 20, 18, 15, 12 and 10 per cent.; class shooting. The first high gun in this event received a gold badge. The second high gun a silver cup presented by the York City Gun Club. The third high gun a silver loving cup.

No. 4 was a merchandise event, 25 targets, entrance \$2; optional sweep \$1; moneys divided 30, 25, 20, 15 and 10 per cent.; class shooting. High guns take the merchandise prizes.

The total of the day was 150 targets. Mr. E. D. Fulford made the highest average for the day. He broke 145 out of 150.

The Wolstencroft trophy was won by Mr. Fenimore Cooper, of Mahanoy City, after a close contest with Capt. Elias Spangler, of the York City Gun Club. Each made the exceptionally good score of 49 out of 50. In the shoot-off at 25 targets they tied again. In the second shoot-off Mr. Cooper broke 24 to Mr. Spangler's 22 and won.

In event 3, there was a keen contest between Messrs. N. McSherry and James Atkinson for the gold badge. There were two shoot-offs for this badge. In the final, McSherry broke 25 straight to Atkinson's 23 and won. The silver cup presented by the York City Gun Club for this event, thus went to Atkinson.

The Parker gun was won by Mr. L. B. Fleming. The four events of the programme follow:

Events:	1	2	3	4	Events:	1	2	3	4

### Vicksburg, Miss., Tournament.

The thirteenth annual tournament given by the Vicksburg, Miss., Gun Club closed May 18 with another fine day's shooting, which brought to a close one of the best tournaments ever held in the South. The dates were May 17 and 18. Spencer and Money tied for high professional average, breaking 385 out of 400 targets. Brady, of Memphis, is high amateur, breaking 380 out of 400 targets.

Bradfield led our local team, breaking 364 out of 400 shot at, closely followed by Miller with 360; Hayes, third, with 352. As scores below will show, excellent shooting was done, as out of forty entries shooting at 400 targets per man, only three men shot less than 80 per cent. No. 1 squad of the Vicksburg Gun Club, composed of Miller, Bradfield, Fletcher, Hayes and Pinkston, broke in one race 96 targets out of 100 shot at.

The great event of the first day was the contest for the Postel elegant trophy, the massive silver loving cup donated by the Ph. H. Postel Milling Company, of Mascoutah, Ill., emblematic of the individual championship of Mississippi at inanimate targets, 60 targets to the man, open to any amateur in the State.

As good fortune and good luck would have it, while Bradfield, one of our locals fell down one bird, Fletcher, another Vicksburg local, won the cup. The following scores were made in the cup race: Fletcher 57, Wilson 57, North 57, Bradfield 56, Miller 54, McCutchen 54, Redhead 54, Catchings 54, Pinkston 53, Shanahan 53, Henshaw 52, Hayes 49, Dinkins 49, Collier 49, Hossley 48, Baggett 48, Porterfield 45, Birdsong 45, Wheelless 44, Wells 44, Mellon 42, Peebles 40, Williams 36.

Fletcher can well feel proud of his victory. It was well earned, as in the shoot-off of the ties between himself, Wilson and North, he had to break 49 out of the 50 shot at to land the trophy; but Fletcher was equal to the task, and the Postel elegant trophy remains in our Hill City, where it rightfully belongs, and we shall try and keep it here, as it is without doubt, and so acknowledged by all shots in attendance, the handsomest trophy ever contested for at any tournament in the South.

The next contest for this trophy will take place at Woodville, Miss., during their tournament, to be held at Woodville, June 15 and 16. Total scores on two days' shoot, May 17 and 18, follow:

Money	Shot at.	Broke.	Canale	Shot at.	Broke.

#### Notes Picked Up Here and There.

Harold Money's and Spencer's scores will show they are excellent running mates. T. A. Devine and G. H. Hillman were also on hand. Spencer, being a new shooter in our midst, made many friends, and we don't think Harold, George or Uncle Tommy lost any, and certainly they added friends to their already long list made in this section. Hubby and Anthony represented their company to suit the most exacting. Hubby also is a new comer among us, and judging from appearances he was well pleased with his first trip to the Hill City. Col. Anthony of course belongs to us, and he numbers many warm friends in our city.

Genial Maurice Kaufman is always welcome, and really a shoot without him could not be held.

Col. A. W. du Bray stayed right along with us, and when not at the traps was shaking the hands of his many friends.

On all sides could be heard compliments being handed to Hillman and Hornthal, who handled the cashier's desk. It was never done better or more quickly.

North, of East Mississippi, came near walking home from a couple of tournaments, and we believe that if he could have carried the elegant trophy home that he would have been willing to count ties from Vicksburg; and there are others.

Sorry, Livingston, that we could not secure that badger for you; but the supply ran out. We know you would have made an excellent referee. Next year we promise to have ample stock.

It was reported that Frank sprained his wrist in a friendly bout with Wilson on the preliminary day, which handicapped him in the target line.

Little Jack Elegant, the handsome son of Secretary Bradfield, proved a good mascot for the Vicksburg team.

Wilson, of Natchez, was heard to remark that he would beat Fletcher for the cup at Woodville. Don't be too sure. Ed. Fletcher is hard to down, and we will have Miller, Hayes, Bradfield, Dinkins and Pinkston at Woodville, and we think they have a look in, and don't you forget Dr. Catchings and the others.

The last seen of Uncle Tommy, he was wearing a golf cap three inches too small. It seems he wanted a sieve to sift out his gold dust, and some kind friend perforated his derby for him to use.

McCutchen traveled all the way from Greenville. He was heard to remark that if it was any other place but Vicksburg he would not have come. All right, Proc; sorry Mermod and Heard were not here.

Shanahan was with us and welcome always; but, Danny, you had better wake up in Greenville. We have a fairly good team here now, and can give you a race for trophies.

All in attendance seemed well pleased with their visit, and we hope to have them one and all again next season. SPECTATOR.

### Auburn Gun Club.

AUBURN, N. Y.—The two days' tournament of the Auburn Gun Club was a decided success, with forty shooters present from Rochester, Avon, Phelps, Cohocton, Lyons, Owego, Wolcott, Seneca Falls, Hannibal, Baldwinsville, Waterville, Utica, Fulton, Elbridge, Skaneateles Junction and Towanda, Pa.

C. J. Dalley, of Baldwinsville, won the Smith hammerless in event 6 the first day, with 20 straight. R. G. Wheeler, of Waterville, won the Ithaca gun on second day, same score. Henry Whitney, of Phelps, was high average for the two days.

The management are indebted to Geo. Ginn and J. G. Heath for their efficient aid. High winds prevented high scores the first day.

#### First Day, May 18.

KNOX & KNAPP, Mgrs.

### Brantford Gun Club.

ONTARIO, May 10.—The Brantford Gun Club have recently acquired new grounds, situated just outside the city limits, on the line of the Grand Valley Railroad. The grounds, comprising nine acres, have a clear sky background, are perfectly level and covered with sod.

The club and trap houses are being erected, and the members are getting ready to practice this week. The Dominion of Canada Trapshooting and Game Protective Association's annual tournament will be held on these grounds on Aug. 10 to 12. The programme for same is being prepared, and advance notices are now ready for mailing. The tournament this year will be larger and better than ever.

A. B. CUTCLIFFE.

### Springfield Shooting Club.

SPRINGFIELD, Mass.—Though the weather conditions for shooting were very unfavorable, eight club members on May 18, turned out to compete for the Hunter Arms Co. gold badge. Coats was the lucky one to win and may wear it until his score of 19 out of 25 is beaten or tied at some future shoot. Considering the strong east wind, his score was remarkably good.

Below are scores in badge contest, 25 targets, giving handicap of each shooter: Coats (16) 19, Chapin (16) 12, Parsons (16) 11, Hawes (17) 10, Janser (16) 8, Kites (16) 13, Lathrop (19) 12, Snow (19) 10.

Scores in regular events follow:

Events:	1	2	3	4	5	6	7	8	Shot	Broke.
Targets:	10	10	10	10	10	10	10	25	at.	
Lathrop	6	..	4	..	..	..	..	..	20	10

MISFIRE.

### SIDE LIGHTS OF TRADE.

Messrs. Von Lengerke & Detmold, 318 Broadway, New York, have issued a new fishing tackle catalogue, which they will be pleased to send gratis to applicants. It is illustrated, and shows in detail a full line of hexagonal split bamboo rods for fly, or bait, in size from trout to tarpon, and in price from \$1.50 up to \$40. Also lancewood rods, hand-made wood rods, steel rods, reels of all kinds, sizes, mechanism and price; lines, leaders, flies, fly-books, hooks, baits, spoons, baskets, tackle cases, minnow buckets, landing nets, gaffs, leather rod cases, rubber and waterproof goods, fish knives, compasses, and a multitude of other implements too numerous to mention. They also will send to applicants their catalogue of shotguns, rifles, pistols, hunting clothing, cameras and photographic supplies, etc.

### PUBLISHERS' DEPARTMENT.

#### Philadelphia Horse Show at Wissahickon Heights.

Special Excursion Tickets via Pennsylvania Railroad.

THE thirteenth annual open air exhibition of the Philadelphia Horse Show will be held on St. Martin's Green, Wissahickon Heights Station, Philadelphia, May 30 to June 4, inclusive.

The Pennsylvania Railroad Company will sell special excursion tickets, including coupon of admission, from New York, Philadelphia, Belvidere, Lancaster, Wilmington, West Chester, Phoenixville, and principal intermediate stations (as well as stations on the Chestnut Hill Branch) to Wissahickon Heights Station, May 30 to June 4, good to return until June 6, 1904, inclusive.

The grounds of the Philadelphia Horse Show Association are located immediately on the Germantown and Chestnut Hill Branch of the Pennsylvania Railroad, eleven miles from Broad Street Station.

#### New Advertisements.

In the country, where most of us camp, and where rain-storms and thunder showers are of frequent occurrence all through the camping season, nothing is more important than a good tent. The United States Standard Wall Tents offered for sale by Mr. Chas. J. Godfrey, of 4 Warren street, New York, are made from the best grade of duck, and are strong and durable. Of course the name Godfrey is well known to all sportsmen, who know that tents are not the only thing he sells. His catalogue tells the story.

Anglers in search of the indomitable black bass or that old water wolf, the pike, will welcome the appearance of a hook which does not foul with weeds. This appears to have been devised by the West Weedless Hook Co., of Council Bluffs, Ia. The hook is furnished with guards, which keep the weeds from catching in the bend, and so save the angler much vexation of spirit and a great deal of time. The company will send descriptive circulars on application.

The multitude of anglers now beginning to turn their faces northward for the trout, salmon and other fishing in Canada, will do well to communicate with or call on Messrs. T. Costen & Co., 1696 Notre Dame street, Montreal, Canada. This firm carries a large line of fishing tackle, including English and Scotch salmon and trout flies, casts, rods and reels, manufactured by some of the best British makers. Messrs. Costen & Co. will be glad to see all visitors from the United States.

The old camper will tell you that nothing is more important to a hunter than proper rest at night. To rest well you must be comfortable, and the best bed in the world is a sleeping bag. Mr. T. C. Phelps, of 11 Central street, Boston, Mass., declares that the extreme of comfort and convenience are found in his tents and sleeping bags, descriptions of which are furnished in his catalogue No. 1, which will be sent on receipt of stamp.

All anglers in and about New York will welcome the reappearance of "The Fisherman's Friend," the 1904 edition of which has just been issued. It is a most handy directory for fresh and salt water anglers alike, and gives a great deal of extremely useful information. Mr. W. I. Snyder, 130 Nassau street, New York, will send it, and the price is 10 cents.

## BAKER SPECIAL PARAGONS.

Strictly high grade. Built to order at regular prices. \$60, \$75, \$200 and up. Carefully fitted and highly finished. Baker guns have a long established record for hard shooting and great durability.

Send for FREE QUARTERLY and 1904 booklet fully describing all grades.

**BAKER GUN AND FORGING CO.,**

Cor. Liberty & School Sts., BATAVIA, N. Y.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1904, BY FOREST AND STREAM PUBLISHING CO.

TERMS, \$4 A YEAR. 10 CTS. A COPY. {  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JUNE 4, 1904.

{ VOL. LXII.—No. 28.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### PICTURE SERMONS.

THE pictures of the Supplement printed this week possess a special interest, as showing two widely different phases of American scenery.

On the one hand are the rough, bare mountains of New England, where the civilization is old, where towns and hamlets have flourished for hundreds of years, where the game has all been killed off, or in the few places where any is to be found, it comes from restocking or from rigid-protection extending over many years, and where, notwithstanding this old civilization, there are close to populous towns and cities, many wild spots to which the nature lover may retreat, feeling sure that he will not be disturbed.

On the other hand, we have the mountains west, which are new in the public estimation—though to the old-timer in the West they seem old enough—a country where thirty years ago railroads were unknown; a country where, owing to wise action by Congress, beginning in 1872, and continued later, and by the faithful and hearty co-operation of half a dozen army officers and a very few others, nature remains to-day somewhat as she used to be. Game has been protected, and is so tame that, as told by the President in his recently published article in "American Big Game in Its Haunts," the animals are no wilder than so many Alderney cows.

To readers all over the land these two series of mountain scenes will bring many memories, and will arouse many aspirations. Those of us who live in the East would all like to go to the West and see her mountains and her big game; while those who live in the West, but who originally came from the East, may well enough wish to revisit the scenes of their youth, or to show these scenes to those whom they love.

From the illustrations of The Mountains East may be seen how, by the expenditure of very little money and considerable energy, a mountain—or wilderness—home may be erected, full of comforts, amid that solitude which from time to time we all wish to enjoy, and possessing also—what is of better worth than any other of its qualities—a wealth of association that will endure through the builder's life, and will be a constant joy to him.

The lesson taught by the pictures entitled The Mountains West is not less impressive, though it has less of a practical bearing on the life of the individual man. In these pictures, and in others taken by Major John Pitcher, now the Superintendent of the Yellowstone Park, we are shown in singularly effective fashion what the results of his work have been.

It is no new thing to see near the Yellowstone Park deer and sheep that are very tame, but it is a new thing to have the Hot Spring and Fort Yellowstone and the Gardiner Cañon regarded by the game as a permanent abiding place and winter feeding ground, and it is a new thing to see big game come galloping down from the hills to eat its meals when a wagonload of hay starts out to be distributed at the customary feeding places.

Since the Park was placed in charge of a military officer as superintendent, there has been a very high standard of excellence among the men detailed to that command. Major Pitcher has well maintained that high standard, and has besides enlisted the sympathies and secured the support of practically the whole of the population of Montana and Wyoming, adjacent to the Park.

If Mr. Brown and his companion could build for themselves on a rocky ridge of the Vermont hills a camp as charming as the one here described and figured, why may

not almost any of us prepare for our own occupancy some similar retreat, which, while it may by no means equal that described here in situation, comfort and massiveness, may yet—because it is our own—be for our purposes just as good or even a little better than L'Habitat. The money cost will not be great. There are few of us who do not know of some place where permission, or a lease, or the fee of an acre of ground might be had at a cost absolutely nominal, on which one might spend his vacation days with a joy and an interest that would increase as each vacation came around. It matters little whether such a retreat be on the mountain, in the forest, by the stream-side or the seashore, if it is one's own—the work of one's own hands—it will have a value that can never be measured by dollars and cents.

And if Major Pitcher can teach the deer, the antelope, the elk, and the mountain sheep to live peaceful and undisturbed lives under his very hand, why may not those of us who live in the country—if we will but take the pains to do so—establish like friendly relations with the wild creatures that live about us? Almost by instinct these wild creatures know whether men are their friends or their enemies, and they early and easily learn to trust those whom they know to be their friends.

### PACKS AND PIECES.

THE letter on "Inland Packs," published elsewhere, comes to us like a breath of the old fur trading times, now gone forever. In these days of luxury and convenience—of steamboats and railways and telegraphs and telephones—we cannot realize what journeying into the wilderness meant when traders left the salt water in birch bark canoes and pushed their way further and further westward and northward through a thousand unknown ways, until they came again to the salt water—the waters of other seas. Then every day's journey was long, hard work with the paddle, interrupted only by arduous and back-breaking foot work when canoe and baggage were carried on men's backs over steep ascents, through difficult marshes or along sidehill trails, where a misstep might throw the bearer and his burden down into the torrent which rushed along far below.

In the adventures of the old fur traders and explorers, which, as the "Trails of the Pathfinders," are now being told of in FOREST AND STREAM, frequent mention is made of the "packs" and "pieces" which made up the lading of the canoes. In a general way we know what these packs and pieces were, but the details given by the veteran fur trader who tells of them this week are of very great interest in connection with the series of articles now being published.

The writings of the early fur traders—the Henrys, McKenzies, Ross, Franchere, Cox, and half a hundred others—all tell of this method of travel, and often with much detail; but these works are quite without the reach of the general reader, and it is good to have these things told of to-day by one who saw and was a part of them.

### A FAR REACHING DECISION.

THE more we study the recent decision in the Colorado deer hide case, the more important it appears. This importance rests not only on the fact that it settles a vital question of law for the State in which the opinion was rendered, but that it gives to all legislators a model on which may be drawn hereafter game laws which shall be effective.

For years Judge D. C. Beaman has been striving to impress on game protectors and game law makers a point, very clear to his own mind, but apparently not so clear to the minds of most lawyers. The highest court of the State has finally ruled on this precise point, and decided that the game law of Colorado stands on solid ground, and hence that a law drawn as this one is drawn will stand, and can be enforced.

This game law vests the ownership of the game in the State as "proprietor," and then declares that "no right, title, interest or property therein can be acquired or transferred, or possession thereof had or maintained except as herein expressly provided." The law then goes on to specify the time and manner in which game may be killed, held in possession, transferred, and so on.

A law such as this obliges the man in the possession

of the game to point out the precise provision in the law expressly permitting the possession contended for. If he cannot do this, his contention of legal possession or ownership fails.

Most game laws leave the interest of the State as at common law, which simply makes the game or fish public property, to be taken and held in possession, unless there is some statute forbidding it, and then proceed to make certain prohibitions. This throws the onus on the game protector, and obliges him to point out the precise words in the law which prohibit the act in question. This gives many opportunities for the violator of the law to escape. The difference is so obvious that it needs only to be pointed out to be clearly recognized.

A very few States have in part followed the suggestions originally made by Judge Beaman, but over by far the greater part of the country the game laws are still in many respects in a chaotic condition. In some respects the game laws of Colorado are not as they were originally drawn by Judge Beaman, but notwithstanding some interference with his draft by the Legislature, they still remain—in the opinion of many lawyers—by far the most perfect model of game laws in existence.

The decision of the Court of Appeals is final in this matter. The case cannot be carried higher, and the law will stand.

### A SNAKE STORY.

THE papers on the treatment of snakes at the New York Zoological Society Park in the Bronx, have interested many readers and have brought us many comments and inquiries. Right on the heels of those articles comes a happening in the New York Central Park Menagerie, in which one keeper was badly bitten by a python and another one badly squeezed.

It appears that a number of the pythons in the Central Park menagerie have recently died, and that it was thought necessary to administer to the survivors medicine by the mouth. Three keepers entered a cage to perform this operation. The duty of one man was to hold the snake's head and open its mouth, of another to administer the medicine, while the third was a guard for the snake's tail, to keep him from coiling about and squeezing either of the keepers. Matters went well enough until one of the snakes, becoming excited, grasped the keeper's hand as he tried to catch its head and tried to coil itself about the man. The struggle of the three keepers with this snake excited the other snakes in the cage, and one of them took a part in the fight. For a while it seemed as if the two snakes would get the better of the three men, and one of them—a 12-footer—did coil itself about the leg of the keeper, and gave him so severe a squeeze that his leg was badly bruised. After an active and more or less dangerous struggle, the two other men freed the one that was in the coils, and the 12-foot python was thrust into a sack, where he was powerless.

The moral of this is that in dealing with wild animals of any sort, eternal vigilance, together with extreme caution and deliberation of movements are most important. A ten or twelve-foot python is capable of inflicting severe injuries on a man—perhaps of even killing him—but it may be imagined that if these pythons had been as large as some of the great snakes in the Bronx, one of the three men would have been killed before the struggle was over.

THE time for shifting to summer homes has come, and many subscribers to FOREST AND STREAM naturally desire to have the addresses of the copy of the paper which goes to them changed from winter to summer residences. This is a matter that it is well to attend to in time, so that no issues of the paper may be lost to the reader.

Readers who are not subscribers, but purchase the paper from week to week at the news stands, or have it furnished them by their local dealer, may, by taking short time subscriptions, have the paper sent to them for any period from one to three months. The charge for sending the FOREST AND STREAM is 40 cents for one month, 75 cents for two months, or \$1 for three months' subscription. This may be convenient for those who are spending the summer within reach of a post-office, yet at a distance from news stands.

# THE SPORTSMAN TOURIST

## L'Habitat.

On the highest ridge of one of the rock-ribbed hills of old Vermont, against a dark background of thick green spruces, stands a small log cabin. Over the slab-covered door is nailed a piece of hemlock bark, on the inner surface of which, by means of a heated poker, has been rudely burned the one word "L'Habitat."

It is a delightful spot, commanding an extended view full of the quiet charm found only among the green hills of this old State. Beyond a rough foreground of glacier-marked ledges, with here and there a few old trees whose tordant branches bear mute witness to the years of wrestling with boisterous winds, lies mile upon mile of wooded hills and fertile valleys, covered with green meadows, ripening grain fields and straggling orchards. Far away to the westward the forest-clad peaks of the Green Mountains climb skyward till lost in the haze of the distant horizon.

Back from the cabin a forest of hardwood and spruces stretches away over the ridge, gray beeches and silvery birches stand out in sharp relief against the dark fir trees. From the depths of this wood, the branches of whose advance guard touch the cabin roof, comes the muffled roll of the drumming grouse by day and the sharp bark of the red fox by night.

The cabin itself is a gem worthy the setting. The walls are of spruce logs; its broad, gently sloping roof is covered with great slabs of hemlock bark held against the attacks of winter winds by rows of flat stones, like the roof of a Swiss chalet. A chimney of rough gray stone stands against the eastern end. Around its broad base and along the sides of the cabin hardy ferns and grasses crowd each other for a footing. The kindly hand of time has gracefully curled the rough bark of the roof over the projecting eaves and painted the whole in soft tints of gray and brown, making a picture which appeals alike to artist and sportsman.

Within, the walls are hung with trophies of the hunt—skins of the deer, wildcat, fox, raccoon, and smaller game. The comfortable bunks are covered with blankets in rich, warm colors. Beautiful and curious tree growths, collected in many woodland wanderings, have been worked into artistic and serviceable camp furniture. At one end a fire-place of generous proportions warms the cabin and serves as a shrine before which the disciples of Zoroaster may worship during the long winter evenings. And lastly, but by no means of less importance, there is a snug little kitchen, whose perfect equipment would make any thrifty housewife green with envy, and where things are made to satisfy the most ambitious camp appetites.

Of how it was built and furnished, and something of the many delightful days spent there, this is the simple story.

And if there be somewhere someone who shall read this little sketch to the very end and go away and on the slope of some grim old mountain, or by the shore of some quiet lake, or deep in the woods by the side of a murmuring brook, shall build for himself a house of logs, and there, heart to heart with nature, find rest and health and pleasure, then shall the writer be content.

In the single-barreled shotgun days of his youth, a wise man presented the boy with a copy of Don Gordon's "Shooting Box," a delightfully fresh, healthy boy's story of life in the woods.

It left the boy with a longing for a camp of his own; he carefully nurtured the idea in secret, and built many castles—or rather log cabins—in the air. Several years spent in pursuit of an education and a few more in pursuit of coin of the realm, prevented an early realization of his dream.

But the time came, as it has a way of doing; and being a gregarious animal, the boy—now a man—cast about for some one to share with him the joys and sorrows of camp life. Nothing in the world—with the possible exception of matrimony—so severely tests the qualities of a man as life in camp, and a partner in such an enterprise must be a man who will not shy at the wood-pile or exhibit signs of heart failure at the mere mention of washing dishes.

Being blessed with a friend of the right sort, who fell in with the scheme with an enthusiasm as great as the writer's, we two, on November 1, 1899, chose a location for our camp on the summit of a high, rocky ridge. The face of this ridge is bare, and commands one of the most beautiful views imaginable. Back of the cabin is an extended wood, a favorite retreat for small game.

For a small annual rental we leased a site for our cabin, "with all the rights necessary for a reasonable enjoyment of the same."

A few days later the axes began to ring among the spruces back in the woods. Straight trees ten inches at the butt were cut and hauled to the proposed site. Five of these, twenty-four feet long, were first laid five feet apart for sills. On these were raised the cabin walls. The end logs were cut fourteen feet long, and those for the sides twenty-four feet, and laid up in the regular cob-house fashion to a height of eight feet. The space thus inclosed measured ten feet by twenty feet. Openings for doors and windows were sawed out of the solid walls; pieces of two-inch by four-inch hemlock spiked to the sawed ends of the logs served as casings and prevented the solidity of the walls being impaired.

For rafters we cut ten small spruces five inches in diameter; they meet at the ridge-pole eighteen inches higher than the side walls, beyond which they extend seven feet on either side, their ends resting on a log running the length of the cabin, which is in turn supported by four upright piazza posts.

A roof of rough hemlock slopes gently from the ridge-pole to the outer edge. Over these boards was laid heavy builders' paper well lapped and fastened with wooden strips. Two coats of paint made our roof ready to receive its covering of hemlock bark. This was not put on until the following June, at which time the great trees peel readily. Nearly a cord of this bark, in the largest slabs we could get, was shingled on and flat stones as large as a man could handle were laid over the bark to keep it from huffing up or being carried away by the wind.

A double floor of hemlock boards with an interlining of heavy builders' paper was nailed to the five log sills. Low base-boards, tightly fitted around all sides, made a solid, warm floor. A trap-door at one end gives access to the hole we call a cellar. The windows are hinged at the sides, swing inward, and are fastened with oak buttons and equipped with natural curved wood handles.

The doors were hung with heavy, old-fashioned hand-wrought hinges, with "the loving marks of the hammer still upon them." The outside of these doors we covered with straight-edge hemlock slabs nailed on at an angle of forty-five degrees, and the cracks between them chinked with gray moss. Handles of natural curved wood were cut in the forest, and sliding bars of white oak fastened these doors securely.

The laying of the two piazza floors, and the making of heavy wooden shutters to protect the windows during our absence, completed the heavy woodwork.

The important work of chinking the cracks between the logs now occupied our attention. For inside we used a hundred pounds of coarse burlap cut into strips and tightly driven into the crevices. For the outside we used the long, damp swamp moss. When it was finished, the effect was beautiful. But alas! the following summer the logs dried and shrunk, the moss dried and fell out or blew away, and we saw, much to our chagrin, that we had all our work to do over again.

It had been a tremendous task, this chinking, and we determined to make it permanent this time. We made a mixture of mortar and cement, to which was added enough lamp-black to give it the color of blue clay, and tearing out the remaining moss and burlap, we re-chinked the whole, inside and out. The result was entirely satisfactory; it looked well and the cabin was warmer than ever before.

If one is in no hurry it would be a good plan to cut the logs during the winter, build the walls and put on the roof, and let the whole thing stand through the following summer. The sun and wind would pretty thoroughly dry the logs, and the chinking could be done in the late autumn with a fair chance of the work being permanent. Or the top and bottom of the logs could be hewn flat and laid in mortar.

In July of the first summer, on visiting the cabin after a ten days' absence, we found a species of small "borers" were working the logs. A hole the size of the lead of a pencil on the lower side of the logs would have below it a pile of fine "sawdust" from one to two inches high. Hundreds of these were all over the logs, inside and out, and the floor along the sides of the room was literally covered with the result of their borings.

They must have had day and night shifts, for they were never idle. Any loud noise would cause an immediate cessation of work, but at night, or during the day when all was quiet, the sound of these insect miners could be plainly heard. According to the log book, their operations extended over a period of four months.

We began to fear that the logs would be honeycombed, and that some day the whole thing would crumble to dust at our touch. Our fears were allayed by several old woodsmen, who informed us that during the first summer, when logs are drying, the sap turns sour, and it is then that these borers work the wood immediately beneath the bark.

Of the looks of our unwelcome guests we remain entirely ignorant, for although we searched all we could without disfiguring the logs, we never found one.

Peeling the logs would evade the attack of these borers, but the rustic beauty of the cabin would be lost.

To return to our building. On each side of the room at one end we built double bunks. An old coil spring bed cut in two in the middle and excelsior-stuffed mattresses made really comfortable beds. It would have been more in keeping with the spirit of the place to have stuffed these mattresses with the scorned but withal most excellent corn husk—the curled hair of our forefathers.

The two top bunks did not prove to be popular; it required all the agility of a Rocky Mountain bighorn to get into one of the things, so we removed them, much improving the appearance of the room. Cot beds which fold and slide under the lower bunks proved a most satisfactory substitute.

We bought a small kitchen range, a supply of tinware and cooking utensils, and moved in. The range was set up at the end of the room opposite the bunks, and the tinware was hung in solemn rows upon the wall.

Our entire attention was now devoted to the making of

camp furniture. Straight young birches were cut and hauled to camp and fashioned into a couch. It was a work of art when finished, and although it required several strong men to move it, has since dried out and is not so heavy. Provided with a mattress and covered with plenty of blankets, this couch serves as an extra bunk upon occasion.

A round table was our next essay. The top we made of oak burned black with a piece of round iron patiently heated and reheated in the fire. The base was found growing in the woods, after much search. It is a yellow birch whose gnarled and twisted roots spread out to form a firm support. When it was finished we sat down, filled our pipes, and admired our handiwork. It was very "Roycroftie." A hammock chair of deer skin with natural wood frame, a stool made from odd growths, and two ancient, curved-backed chairs bought at a country auction, completed the furniture.

Our energies were next bent toward the less important but still more interesting work of decoration. As in the building of the cabin, and the construction of the furniture, the materials at hand were made to serve as far as possible. A strangely twisted lever-wood root from the swamp made a suitable mount for the thermometer. A beautiful moss-covered pine knot with base flattened and rotted center removed made a gem of a match safe. Gun racks of deer's feet, pipe racks made with the talons of the red-tailed hawk—all kinds of useful and beautiful things appeared as the result of the long winter evenings.

The broad, shelf-like mushrooms collected from decaying stumps and logs began to form a frieze around the walls.

Skins and horns, fur and feathers, all told of luck or prowess with the rifle.

The inside of the two doors we covered with birch bark. The brush, the pen and the camera have contributed choice things for the adornment of the interior. The platinum point has also been brought into service, and the soft brown tones of the burnt wood are in perfect harmony with the place. The woodwork of the bunks offered an especially attractive field for the work, and are covered with bits of woodland scenes, and birds and beasts from field and wood.

The roof inside presented a painfully new appearance, and although we smoked enough to enable the Tobacco Trust to declare an extra dividend, it failed to have any appreciable effect on the rough boards. We determined to hasten the natural course of things, and put on a coat of lamp-black and turpentine, which gave a sufficiently smoky effect to suit our taste.

Spring saw us at work on an addition. On the back side of the cabin, as on the front, we had a wide piazza. A part of this twelve feet long was inclosed, and the outside covered with hemlock slabs, whose reddish-brown matches the rough bark of the logs. Here we set up our stove, built a sink, shelves, and a generous cupboard. The appointments of this little kitchen are complete, and it is with pardonable pride that we show it to occasional petticoated visitors. The remaining eight feet of the back piazza makes a dry shed for our season's supply of fire-wood.

We now turned with enthusiasm to the building of our chimney. It was easy to find the stones—this is a Vermont crop that never fails—and although her hardy sons have been digging them out of the soil for years, I could never see that the supply materially diminished.

For the fire-place we sawed an opening through the logs at the end of the room opposite our bunks, five feet wide and four feet high. The chimney is of native gray stone laid in cement, and stands wholly outside. The base, six feet wide and three feet thick, rises to a height of five feet, tapers to three feet, and ends in a low, round top above the ridge. The back and sides of the fire-place and the flue we lined with common brick. The hearth-stones are of flat slate rock laid in cement. On each side of the opening are columns of white quartz from a vein in the ledges. The broad mantel is of blackened oak, supported by rustic brackets. A pair of andirons, marvelously wrought—the gift of the maker—completed the work.

And of all things we love this fire-place best. The hunter, returning at the close of the long winter day, may be cold and hungry and empty-handed, but under the influence of the cheerful blaze his heart melts with the snow on his moccasins, fatigue and disappointment are forgotten, and an ineffable sense of bodily comfort steals over him.

There had been some doubt as to whether this fire-place would warm the cabin in the coldest weather, but it works like a charm. Indeed, by building a rousing fire and closing all tight, we can put a Turkish bath to shame.

We have tried a variety of coverings for the beds, including sleeping bags of different kinds, but find nothing so comfortable and hygienic as the best grade of heavy woolen blankets. We bought them in bright colors and spread over the bunks, and they give a warm and cheerful appearance to the room.

Each spring and fall we have devoted some time to the surroundings—filling, leveling, and sodding over hollows, planting fern roots along the sides of the cabin, and clearing away dead branches and decaying logs, but being careful not to mar the natural beauties of the place.

The elevated location of our camp made serious the

question of a water supply. The streams were all far below. Water in these hills we knew there was. Much we dug and much we pondered. In the village lived a man whose hair was white with many winters, and it was said that in his hands a hazel wand had magic power; if he but walked over a vein of living water the wand bent downward toward the earth. And many believed, but some there were who scoffed.

At our request the "Wizard of the Wand" came to the camp, and with him brought a freshly-cut forked hazel stick. As Cromwell told his soldiers to trust in God, but keep their powder dry, so the wizard, while trusting to the wand to show him where lay the hidden spring, searched always in the most likely places.

There were visitors at camp that day, and we all followed the old man with much the same curiosity and amusement as urchins follow an organ grinder.

About one hundred feet from the cabin a clump of spruces grew close to a shelf of rock. Toward this spot the searcher led, with arms extended straight in front holding the wand. As he passed close to one of the spruces, down went the hazel, drawn by some invisible force, until at a certain point in front of the rock ledge the crooked part that had pointed skyward pointed directly toward the earth; as he passed over the place, the wand resumed its upright position. Back came the wizard, and as he recrossed, that strange, unseen force again pulled down the wand, and when the old man tried to stay the downward pull the very bark was split and twisted in his hands.

"Dig there," said the wizard.

A doubting Thomas went up to the cabin and came back armed with the spade. We dug; one, two, three feet—nothing; four feet—a stream of clear, cold water leaped from a crevice in the rock. It was a very tiny stream, but in the driest month of a dry summer we knew it meant a never-failing spring. The doubting Thomas said nothing, neither did the wizard, but the faintest glimmer of a smile played around his thin lips; and those who came to scoff remained—not to pray—but to marvel. And thus was found the Wizard Spring. Later we walled up the sides, cemented the bottom, and put on a wooden cover, so that no disappointed woodchuck would drown himself there.

From the start we have faithfully kept what we call our "log book," in which are recorded the dates of our visits, with notes on the weather, temperature, names of visitors, records of successful hunts, and, in fact, anything of special interest. Our guests have herein paid their tribute to *The Habitat*; there is off-hand verse by the Professor, fables by the Reverend, sketches by the Artist, and one lover of these hills (one of the handful of brave men composing the Ziegler Polar expedition, and at this moment enduring the rigors of the long Arctic night), after a particularly good dinner, expressed his contentment in the following outburst:

"We came up to the Habitat,  
We had one meal and bitters;  
We all around the fire sat  
A-sitting on our sitters."

Reader, perhaps you cannot appreciate this; perhaps it is necessary to have been there; I don't know; but for us it needs only a retrospective glance through the pages of this old book to live over again in memory the many days so delightfully passed.

The cabin is now complete, yet there is always something to do to add to its beauty or utility.

And what do we do there? Ah, yes! In the spring we fish the streams below and eat many an appetizing supper of the small but succulent brook trout.

In the summer we tramp through the woods, and at evening we light our pipes and lounge on the front piazza, watching the changing glories of the sunset till the crimson change to purple, and the purple fades into darkness, and the stars come out and the twinkling lights appear in the valley far below.

It is at this season of the year that "The Habitat" is most visited, and many a jolly party climbs Mount Merritt to eat those picnic lunches which only New England housewives know how to prepare, and to feast their eyes on these glorious hills while "Old Sol" goes down in all his splendor. But the summer goes, and the leaves turn red and gold, and the air is like a tonic, and your cheeks are as red as the apples the farmers are gathering—the fall has come. Of this season of the year *FOREST AND STREAM* once published an old French-Canadian couplet which I have never forgotten, and which leaves nothing more to be said:

"I would not die in autumn,  
When the ma'sh es full of game,  
When poisson blanc and duck get fat,  
And mus-rat do de same.  
Den es de Frenchman's harves' time,  
When game he sell so high,  
'Tis den he makes de l'argent blanc;  
I would not wantier die."

"'Tis den" we follow the wily ruffed grouse through the young growth, or beat up the alder swamps for the twisting woodcock, or stand of a frosty morning on the top of the close-cropped pasture ridge while the mellow tenguing of the hounds come up from the valley below as they rouse Reynard from his morning nap on some sunny knoll.

And whether the gods of the hunter smile upon us or whether the grouse be wild and the woodcock few, and Reynard leads away for the next county, what matters it—"these are golden days, these are the best days of our lives."

But of all seasons it is the winter which sees us most at our snug little cabin. Snowshoeing is a pleasure known to too few. Suitably dressed, on good shoeing, there is no finer winter sport. And for the man who has no particular regard for his cuticle, tobogganing on the crust is both exciting and invigorating.

Few appreciate the beauty of nature in her winter dress—the dark spruces with snow-laden bows, the gnarled old hemlocks, the birches in their tattered dress of silver and gold, the soft gray beeches reaching out with many knotted limbs; and all so still, with not a sound save the occasional creaking of the rheumatic joint of some old grandsire of the forest. And then the snow—

the broad, white pages of nature's ledger, on which every guest tells how he came and why and where he went, and what his business was.

In summer one may make his camp where night finds him, but in winter such a camp as ours is appreciated at its full value, and inside these snug walls we laugh at old Boreas as he howls outside or hurls the drifting snow with seething hiss against the window pane.

Ah! and then the evenings in camp. Who can describe the contentment as, after the hearty supper, for which the mountain air gives such keen appetites, we sit gazing into the open fire, while from our pipes the smoke hourly rise and clasp the rough old rafters in their warm embrace. But such pleasures cannot last forever—bedtime comes like other evils; we crawl into our blankets, the fire and mercury both go down, and then—sleep.

W. W. BROWN.

SPRINGFIELD, VT.

## Trails of the Pathfinders.—IX.

Lewis and Clark (Continued).

As they proceeded they passed a number of ruined villages of the Mandans, the low mounds of earth showing where the sod houses had fallen in; but on Oct. 24 they came to a large Mandan village, where they were received with friendship, and where the chief of the Arikaras smoked with the grand chief of the Mandans.

On the 26th, at a large Mandan camp, they met a Mr. McCracken, a trader in the employ of the Northwest Fur Company, who was much on the Missouri River in those early days. The younger Henry frequently mentions him in his journal, but as a slightly later day. The Mandans were not only most friendly, but most interested in the strange people who had arrived in boats; and men, women and children crowded to the river bank to see them. "The object which seemed to surprise them most was a corn mill fixed to the boat, which we had occasion to use, and which delighted them by the ease with which it reduced grain to powder," for the Mandans, like other Indians, pulverized their corn by pounding it in a mortar.

On the following day their boat reached the principal Mandan village, and here was found a Frenchman named Jessaume, who was living among the Mandans with an Indian wife. Not far from the Mandan village was one of the Annahways, a tribe, according to Dr. Matthews, closely related to the Hidatsa, or Minnetari, a part of whose warriors were then absent on an expedition against the Shoshoni. In speeches of the usual form, Captains Lewis and Clark expressed the good will of the Great Father at Washington, and his desire that all the tribes should be at peace; and presents and medals were distributed among the chiefs. In the course of the next few days these presents were returned by gifts of corn and dried meat; and the Arikara chief set out for his home with one Mandan chief and several Minnetari and Mandan warriors. Captain Clark, after much investigation, found a good situation for a winter post, and the work of felling timber and erecting buildings began. Besides the Mandan interpreter, Jessaume, they met here a Canadian Frenchman, who had been with the Cheyenne Indians "on the Black Mountains," and the previous summer had come by way of the Little Missouri to the Great River. The Little Missouri was always a great range for the Cheyennes.

The weather, which for some time had been cold, now grew much colder, and ice formed on the edges of the rivers. Water fowl were passing south, and it was evident that soon the river would close up. A large camp of Assinaboines, with some Crees, had come to the Mandan village and encamped there. A couple of Frenchmen made their appearance from further down the river. It seems extraordinary how many Canadian Frenchmen there were at this time in this distant country.

Near Fort Mandan, just established, there were five Indian villages, the residence of three distinct nations, the Mandans, the Annahways, and the Minnetari. The journal gives the history of these nations as follows: "Within the recollection of living witnesses the Mandans were settled forty years ago in nine villages (the ruins of which we passed about eighty miles below), situated seven on the west and two on the east side of the Missouri. The two finding themselves wasting away before the smallpox and the Sioux, united into one village and moved up the river opposite to the Ricaras. The same causes reduced the remaining seven to five villages, till at length they emigrated in a body to the Ricara nation, where they formed themselves into two villages and joined those of their countrymen who had gone before them. In their new residence they were still insecure, and at length the three villages ascended the Missouri to their present position. The two who had emigrated together settled in the two villages on the northwest side of the Missouri, while the single village took a position on the southeast side. In this situation they were found by those who visited them in 1796, since which the two villages have united into one. They are now in two villages, one on the south-east of the Missouri, the other on the opposite side, and at the distance of three miles across. The first, in an open plain, contains about forty or fifty lodges, built in the same way as those of the Ricaras; the second, the same number, and both may raise about three hundred and fifty men.

"On the same side of the river, and at the distance of four miles from the lower Mandan village, is another, called Mahaha. It is situated on a high plain at the mouth of the Knife River, and is the residence of the Annahways. This nation, whose name indicates that they were 'people whose village is on a hill,' formerly resided on the Missouri, about thirty miles below where they now live. The Assinaboines and Sioux forced them to a spot five miles higher, where the greatest part of them were put to death, and the rest emigrated to their present situation, in order to obtain an asylum near the Minnetarees. They

are called by the French, Soulier Noir, or Black Shoe Indians; by the Mandans, Wattasoons; and their whole force is about fifty men."

Toward the end of November seven traders belonging to the Northwest Company reached the Mandans, coming from the Assinaboine River. Before long some of them began to circulate unfavorable reports among the Indians; and Captains Lewis and Clark found it necessary to take immediate steps to stop this. They told Mr. Laroche, the chief of the seven traders, that they should not permit him to give medals and flags to the Indians, who were under the protection of the American nation, and would receive consideration from them alone.

On the last day of November, word was brought that the Sioux had attacked the Mandans, and killed one and wounding two others; and that a number of Indians were missing. Captain Clark therefore, in order to fix the loyalty of the Indians, summoned his whole force, and arming them, set out for the Mandan village. He told the chiefs who came out to meet him that he had come to assist them in their war, and would lead them against the Sioux, their enemies, and avenge the blood of their countrymen. This action made a great impression on the Mandans, and a Cheyenne captive, who had been brought up in the tribe, and attained a position of considerable importance, made a speech thanking the white men for their assistance, and expressing the confidence of the Indians in them. There was a long talk, after which Captain Clark left the village. The next day six Sharha (Cheyenne) Indians came to the village, bringing the pipe of peace, and saying that their nation was three days' march behind them. With the Cheyennes were three Pawnees. The Cheyennes were at peace with the Sioux, and the Mandans feared them, and wished to put them to death, but knowing that this would be against the wishes of their white friends, they did nothing. Lewis and Clark note the common practice of calling the Arikaras, Pawnees, a practice which still exists.

A little later something is said about the chief of the Mandans, and following this comes the story of the tribe's origin, as given by the Mandans themselves: "Their belief in a future state is connected with this tradition of their origin: The whole nation resided in one large village under ground, near a subterranean lake. A grapevine extended its roots down to their habitation, and gave them a view of the light. Some of the most adventurous climbed up the vine, and were delighted with the sight of the earth, which they found covered with buffalo, and rich with every kind of fruits. Returning with the grapes they had gathered, their countrymen were so pleased with the taste of them that the whole nation resolved to leave their dull residence for the charms of the upper region. Men, women and children ascended by means of the vine; but when about half the nation had reached the surface of the earth a corpulent woman, who was clambering up the vine, broke it with her weight and closed upon herself and the rest of the nation the light of the sun. Those who were left on the earth made a village below, where we saw the nine villages; and when the Mandans die they expect to return to the original seats of their forefathers, the good reaching the ancient village by means of the lake, which the burden of the sins of the wicked will not enable them to cross."

Although the weather was cold, buffalo were near, and there was much hunting by means of the surround, and the bow and arrows. Captain Clark hunted with the Indians, and killed ten buffalo, of which five only were brought into the fort, the remainder being taken by the Indians; since, as buffalo were killed by guns, they bore no mark of identification, such as an arrow would have furnished. The next day Captain Lewis took fifteen men and went out to hunt buffalo. They killed eight and one deer; but, being obliged to travel on foot through deep snow, it took them a long time to approach the buffalo, and some of the men were frost-bitten.

It was now mid-December, and very cold; and the white men suffered a good deal and hunted but little. About this time a Mr. Haney arrived from the British post on the Assinaboine, bearing a letter from Mr. Chabouillez, a well known trader of the North, with offers of service. In the Mandan village the Indians were playing at sticks, apparently in the method practiced at the present day among the Blackfeet. Thin circular stones are rolled along the ground, and followed by running men, who slide their sticks along the ground, trying to have the disk fall on them. On Dec. 22 the explorers seem to have first seen the horns of the animal called by the French the Rocky Mountain sheep. It is described as "about the size of a small elk or large deer, the horns winding like those of a ram, which they resemble also in texture, though larger and thicker."

The year 1804 opened with a New Year's day festivities, and "in the morning we permitted sixteen men with their music, to go up to the first village, where they delighted the whole tribe with their dances, particularly with the movements of one of the Frenchmen, who danced on his head." Frequent mention is made of the pleasure with which the Indians witnessed the dancing of the Americans, and this amusement was much indulged in by the men, many of whom, as already said, were Frenchmen.

Although the cold was intense, and the white men suffered severely from it, the Indians seemed to regard it very little. They were coming and going constantly, very slightly clad, and sometimes were obliged to sleep out in the snow, with no protection save a buffalo robe; and yet they were seldom frozen.

During these months of inaction, Lewis and Clark were frequently occupied in settling individual quarrels among the various Indians near them, making peace between husbands and wives and persuading the Indians to abandon war journeys planned for the following spring.

Traders from the North were frequent visitors to these villages. All through the winter the blacksmith kept at work with his forge, manufacturing various

articles of iron, and the Indians seemed never to weary of watching him and admiring the magic by which he turned a straight piece of iron into a useful implement.

During all this time hunting was of course going on, for though the explorers had abundant provisions, yet they were supporting themselves as far as possible from the country. Besides the corn which they purchased from the Indians, in exchange for trade goods and bits of iron, they killed buffalo, deer and elk; and on one hunt, in February, Captain Clark and his party killed forty deer, three buffalo and sixteen elk. Most of the game was too lean for use, and was left for the wolves. A part, however, was brought to a point on the river, and there protected in pens built of logs, which should keep off the wolves, ravens and magpies. The next day four men were sent with sleds and three horses, to bring in the meat. They returned that night stating that a party of one hundred men had rushed upon them, cut the traces of the sleds and carried off two of the horses, the third being left them through the influence of one of the Indians. The Indians had also taken some of the men's arms. An effort was made to pursue these enemies, who were believed to be Sioux, and Captain Lewis, with a few Mandans, set out on their trail. This was followed for two or three days, until at last it turned off into the prairie. The supposition that these robbers were Sioux was confirmed by finding some moccasins that had been thrown away, though the Sioux had dropped some corn in one place, apparently with the hope of making it appear that they were Arikaras. Before returning, Captain Clark visited the place where the meat had been cached, and did some more hunting; and, having killed thirty-six deer, fourteen elk and one wolf, he returned to the fort with about three thousand pounds of meat.

The weather was now growing milder, and preparations began to be made for continuing the journey. Men were sent out to look for trees suitable for canoes. White men began to arrive from the Northwest Company's post, and also Mr. Gravelines, with Frenchmen from the Arikara village down the river. These brought word that the Rees were willing to make peace with the Mandans and Minnetari, and asked the Mandans whether they would be willing to have them settle near them, and form with them a league against the Sioux. Word was also brought that the Sioux who had stolen the explorers' horses had afterward gone to the Arikara village and told what they had done, and that the Rees were so angry at this that they had declined to give them anything to eat; in other words, had treated them as enemies.

Shortly after this, they were visited by the head chief of the Minnetari, known as Le Borgne, whom they had not seen before. He was greatly astonished at the appearance of the negro servant, whom he believed to be a painted white man; but when he could not rub off the paint, and when the negro showed his curly hair, the Indian acknowledged that he had seen a new sort of man. This is the Le Borgne mentioned by Henry, during his visit to the Mandans, and concerning whose violent adoption of the son of a Cheyenne chief he tells so amusing a story.

The method employed by the Mandans and Arikaras in making their own glass beads is described in much detail. These beads of course have long passed out of use, but at rare intervals some of them are still unearthed from the remains of the old Mandan or Arikara villages.

The river broke up late in March, and, as happened every spring, many buffalo were brought down on the floating ice. An interesting description is given of how the Indians killed the buffalo floating down on the cakes of ice, which they dared not leave. The men ran lightly over the loose ice in the river until they had reached the large cake on which the buffalo stood, and, killing it there, then paddled the cake of ice to the shore.

A thunder storm, accompanied by hail, came on April 1—the breaking up of the winter. And now for several days the explorers were engaged in packing specimens to be sent back to Washington; skins and skeletons of some of the animals of the country, together with a number of articles of Indian dress, arms, implements, tobacco, seed, and corn, with specimens of some plants. Arrangements were made also for some of the chiefs of the Rees to visit the President; and a delegation from the Rees made a peace with the Mandans.

They were now ready to continue their westward journey, and left the fort the afternoon of April 7. The party consisted of thirty-two persons, including the interpreters, one of whom was accompanied by his wife. At the same time their large boat, manned by seven soldiers and two Frenchmen, set out down the river for the distant United States.

The journey up the river was slow, and it would be too long to tell of all they saw—things then new to all, but many of them now common enough. The prairie and the river bottom swarmed with game; herds of buffalo, elk, antelope, with some deer and wolves. As they went along they saw a nest of geese built "in the tops of lofty cottonwood trees," an interesting fact in natural history, rediscovered more than fifty years later by an enterprising ornithologist. From time to time, as they passed up the river, they passed small abandoned encampments of Indians, at one of which, "from the hoops of small kegs found in them, we judged could belong to Assinaboines only, as they are the only Missouri Indians who use spirituous liquors. Of these they are so passionately fond that it forms their chief inducement to visit the British on the Assinaboine, to whom they barter for kegs of rum their dried and pounded meat, their grease, and the skins of large and small wolves, and small foxes; the dangerous exchange is transported to their camps, with their friends and relations, and soon exhausted in brutal intoxication. So far from considering drunkenness as disgraceful, the women and children are permitted and invited to share in these excesses with their husbands and fathers, who boast how often their skill and industry as hunters have supplied them with

the means of intoxication; in this, as in other habits and customs, they resemble the Sioux, from whom they are descended."

The recent presence of the Assinaboines on the river had made the game scarce and shy, and it was so early in the season that the animals killed were very thin in flesh, and almost useless for food. Beaver, however, were numerous, and seemed larger and fatter, and with darker and better fur, than any seen hitherto. They were now in the country of abundant buffalo, and the calves had already begun to make their appearance. On April 26 they reached the mouth of the Yellowstone River, "known to the French as La Roche Jaune." Game was so plenty that it was scarcely necessary to hunt, and they killed only what was needed for food. The river banks were lined with dead buffalo; some partly devoured by wolves. The buffalo had evidently been drowned in crossing, either by breaking through the ice or being unable to clamber from the water when landing under some high bluff.

On April 29 Captain Lewis met his first grizzly bear, which the explorers call white bears. "Of the strength and ferocity of this animal the Indians had given us dreadful accounts; they never attack him but in parties of six or eight persons, and even then are often defeated, with the loss of one or more of the party. Having no weapons but bows and arrows, and the bad guns with which the traders supply them, they are obliged to approach very near to the bear; and as no wound except through the head or heart is mortal, they frequently fall a sacrifice if they miss their aim. He rather attacks than avoids man; and such is the terror he has inspired that the Indians who go in quest of him paint themselves, and perform all the superstitious rites customary when they make war on a neighboring nation. Hitherto those we had seen did not appear desirous of encountering us, but, although to a skillful rifleman the danger is very much diminished, the white bear is still a terrible animal. On approaching these two, both Captain Lewis and the hunter fired, and each wounded a bear. One of them made his escape; the other turned upon Captain Lewis and pursued him for seventy or eighty yards; but, being badly wounded, he could not run so fast as to prevent him from reloading his piece, which he again aimed at him, and a third shot from the hunter brought him to the ground."

The curiosity of the antelope is spoken of as being often the occasion of its easy destruction. "When they first see the hunters they run with great velocity; if he lies down on the ground and lifts up his arm, his hat or his foot they return with a light trot to look at the object, and sometimes go and return two or three times, till they approach within reach of the rifle. So, too, they sometimes leave their flock to go and look at the wolves, which crouch down, and, if the antelope is frightened at first, repeat the same maneuver, and sometimes relieve each other till they decoy it from the party, when they seize it. But generally the wolves take them as they are crossing the rivers; for, although swift on foot, they are not good swimmers."

As the party struggled on up the Missouri they passed the mouth of the Porcupine River, so-called from the unusual number of porcupines seen near it. They continued to see vast quantities of buffalo, elk and deer—principally of the long-tailed kind, with antelope, beaver, geese, ducks and swans. As they went on, the game became much tamer. The male buffalo would scarcely give way to them, and as the white men drew near, looked at them for a moment and then quietly began to graze again.

On May 4 they passed some old Indian hunting camps, "one of which consisted of two large lodges fortified with a circular fence twenty or thirty feet in diameter, and made of timber laid horizontally, the beams overlaying each other to the height of five feet, and covered with the trunks and limbs of trees that have drifted down the river. The lodges themselves are formed by three or more strong sticks, about the size of a man's leg or arm, and twelve feet long, which are attached at the top by a withe of small willows, and spread out so as to form at the base a circle of from ten to fourteen feet in diameter; against these are placed pieces of driftwood and fallen timber, usually in three ranges, one on the other, and the interstices are covered with leaves, bark, and straw, so as to form a conical figure about ten feet high, with a small aperture in one side for the door." These lodges, of course, were war lodges of the Assinaboines, Gros Ventres, or Blackfeet, though the travelers evidently took them for ordinary habitations.

The explorers were greatly interested in the animals they saw—especially the bears—and gave good descriptions of those seen, and of their habits.

The tenacity of life in the bears made them especially interesting, and their encounters with them were often marked by danger. However, the people usually hunted in couples or in small parties, and as yet no one had been hurt.

GEORGE BIRD GRINNELL.

### New Rabbits from Mexico.

IN a recent issue of the "Proceedings of the Biological Society of Washington," Mr. E. W. Nelson, of the Biological Survey, describes seven new rabbits from Mexico. The discoveries were made on examination of the material, consisting of several hundred specimens of rabbits, in the collection of the Biological Survey. This material was turned over to Mr. Nelson for study by Dr. C. Hart Merriam, the Chief of the Survey. Of the seven rabbits, five belong to the cottontail and two to the jack rabbit type.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Natural History.

### Short Talks on Taxidermy.

#### V.—Mounting a Bird.

IT WILL be well for the beginner to learn how to make bird skins before he attempts to mount a bird. In other words, let him master one branch of the art before he attempts the second. The mounting a bird is not difficult, but it requires more skill, and so, much more practice than to make a skin.

To the simple equipment required for skin making, he who wishes to mount his specimens must add a few other tools. These are, a pair of sharp wire cutters—shown in the cut of tools, printed with the first of these talks—a number of lengths of annealed wire of different thickness, a file, some spools of thread, and plenty of pins. He will also need glass eyes, which are to give the bird its lifelike appearance. The wire must be annealed, so that it will bend readily, and if mounting is to be done on any considerable scale, this wire should be of different sizes and cut to different lengths, suited to birds of various sizes, running from very fine, for a warbler, up to that much stouter, large enough for a duck or a red-tailed hawk. For eagles and great blue herons, still heavier wires will be required. Fine wire is readily straightened by attaching one end of a coil to some firm object, as a nail in a wall, and pulling on the other end, so as to stretch it. After it is straight it can be cut into needed lengths, say, six inches for a robin, eight inches for a quail or woodcock, and so on, up to the larger birds. In each case the wire must be small enough to pass, without breaking it, through the bird's tarsus—which is the sheath of scales inclosing the bone of the foot just above the toes and up to the leg feathers—and yet thick enough to support the bird's weight, and to hold it firmly in position. Taxidermists commonly have at the back of the work table, and so within easy reach of the hand, half a dozen little deep and narrow cups to hold the various lengths of wire that they most commonly use. Pasteboard cylinders an inch and a half in diameter, and the end of each fastened to the table, make good cups for this purpose.

After the skin has been turned, cleaned and poisoned, take a wire of the proper length—for a robin, say, two inches longer than the distance from the point of the bird's bill to the root of the tail—and file each end to a sharp point. Wind about this wire enough cotton, or tow, to make a neck for the bird, beginning about one inch from the end. Introduce the point of the wire, near which the artificial neck begins, into the skull cavity, thrust it through the top of the skull, and then, with forceps or pliers, turn it over, introduce it into the skull, just back of the eyes, and clinch it there, so that the wire is even with the top of the skull.

Now, holding the skull by the wire, turn your skin right side out. Place a little filling in the throat, as you did in making the skin. Take some tow, or excelsior—cotton will not do for this, because you cannot thrust the wire through cotton—and make it up into a solid oval body, just about the size and shape of the bird's body. Closely wind this body with thread all around, so as to hold the material firmly in shape, and thrust the sharpened end of the wire lengthwise through the mass, pushing the body up close to the end of the false neck. The false body should be shaped as nearly as possible like the natural body it is to replace. The artificial neck and body should be no longer, and very little, if at all, larger than the natural neck and body. Turn the sharpened end of the wire which is passed through the body up and over and clinch it into the body. You now have for your bird a firm body and neck, which will hold it properly in position.

Take two straight wires, sharpen each at one end, and holding the middle toes of the bird's foot in your left hand, pierce the sole with the point of a wire, and work the wire up back of the tarsal bone, to the tibio-tarsal joint, which is really the bird's heel. Hold the tibia straight, allowing no bend at the bird's heel, and push the wire up until it is within the bird's skin, and then on until it projects an inch or more beyond the end of the tibia. Wrap a little cotton or tow about the tibia and the wire, binding the two together, and to some extent replacing the muscles of the leg which have been removed. Having done the same thing on the other side, thrust these wires through the artificial body, at right angles to it, about one-third the way from its tail to its front, and turn the end of each wire over, and clinch it firmly in the body. When this has been done on both sides, the legs will be sticking out pretty nearly at right angles with the body, and must then be bent back so that they are parallel with the axis of the body. Now, sew up your bird and lift it from the table, give it a shake, pull the skin of the head and neck well forward, pull the wings forward, and generally see that all the feathers are in place. Loosen and pull out a little the cotton within the orbits, and see that the sides of the head look right. Then place your bird on the table on its back, raise the right leg up, so that it points straight up in the air; place your fore finger behind the leg wire, close to the bird's body, and holding the wire there, bend the leg backward again to its former position. The result of this will be that you have made a right angled bend in the wire, which now represents the actual knee of the bird, or the place where the femur and the tibia met. Do the same on the other side; and pull up the skin around on each side, so that each artificial knee will be within the skin, as the living bird's knee is within the skin. Now take your partly stuffed bird in the right hand, holding it under the wings, take the head in your left hand, bend the head and neck down, and placing your right forefinger on what would be the back of the bird's neck, just where it joins the body, raise the head up again above the level of the back, thus bending down the neck wire where it joins the body. You have thus made a natural crook in the bird's neck, which will add much to the naturalness of

its appearance when it is mounted. Now bend the neck and head to the position you desire it to assume, and pull up and loosen all the feathers around the neck. Be especially careful not to have the neck too long or too stiff. The position of head, neck and legs is something that you will have to decide on for yourself, and your success in giving your bird a lifelike attitude will tell something of how much attention you have paid to birds in nature.

Your small birds you will probably mount on what is called a T stand; that is to say, an upright piece of wood fastened to a base, and with a cross-bar of wood at the top. This cross-bar should be pierced by a bradawl with two holes, the wires from the feet passed through them, and wound around the cross-bar. See that these holes are placed at proper distance apart. Your bird must not straddle; nor must his feet be too close together.

For a bird that is to appear standing on the ground, as a sandpiper, quail or duck, the stand is a flat board, either with cleats nailed across either end, or a circular disc, more or less hollowed out beneath. The holes for the wires are pierced in this board. The purpose of the cleats or the hollowing of the circular disc is to lift the stand above the surface on which it rests, and to give the bottom an even bearing on the supporting surface. If the wires touched the table or surface on which the stand rested, they would tip the board and the bird out of true. After the bird has been placed on its stand, although the feet, head and neck, and body of the bird may be well arranged, it still looks more or less dilapidated; all the feathers are rough, and the wings and tail hang down limp. You must go over the specimen with your forceps, your fingers, and perhaps a pin, moving the skin about until the feathers lie smoothly. You must remember that it is the skin beneath that makes the feathers look smooth or rough, as the case may be; that if you get the skin to lie properly, the feathers will be quite sure to lie smoothly; but that if you have got the skin twisted or stretched, or bunched up in any way, the feathers cannot appear well.

THREAD-WOUND BIRD.

After you have done the best you can, get ready to wire the tail. This usually seems very difficult to the beginner, and it is not always easy, but it is much the best means of holding the tail in place. Some people, without the requisite skill or knowledge, put a piece of pasteboard over, and one under the tail, and pinning these together, support them by a wire thrust beneath the tail into the body; but it is better to wire the tail. To do this a sharpened slender wire must be passed from side to side, through each one of the quills of the tail feathers—close to the body and so under the tail coverts, where it will not show—and the feathers must be evenly arranged on the wire. If for any reason they do not lie just as they should, the wire can be bent. After the quills of the tail feathers have been wired, to support the wire and hold it in the proper place, another, somewhat stouter sharpened wire should be passed under it and thrust forward into the body.

Only the wings now remain to be arranged. These must be lifted up and laid in position, pulled backward and forward until they lie smoothly and are properly covered by the feathers of the hind-neck, of the shoulders, and of the breast. The tendency is to set the wings too low; see that they lie well up on the body and well forward. When the position is right, thrust either a pin or a sharpened wire through the bend of the wing, and into the artificial body; and down just back of the leg, and under the wing, thrust another pin or sharpened wire into the body. Do this on both sides. These pins will support the wings and hold them in position. The pins must be in the right place, which you must discover for yourself. wound with thread. Make a loop in the end of the thread, and pass it over one of the wing wires, and then lightly over the back to another, and, with the stand on which the bird rests in your right hand, and your left hand holding the thread, so that it shall not press on the feathers, pass the thread backward and

forward, over and under and around the specimen, catching on the different wing wires, until you have the whole body and lower neck of the bird enmeshed in thread. These threads must nowhere press heavily on the feathers, must yet everywhere lie close to them and hold them in place and prevent any standing up or roughness which might follow on the drying and, perhaps, uneven shrinking of the skin. The purpose of the threads is to keep the feathers as they are, not to change their position.

Now, when you have tied your label—which should never be omitted from any bird—to the stand, you may put the specimen up somewhere on a high shelf, where no one is likely to knock against it. It is customary to postpone putting the eyes in a mounted bird until it has dried. After it is dry it can be taken down, a little wad of moist cotton placed within each eye, and, when the eyelids have become damp and flexible, as they will in a very short time, they can be stretched a little, the eyes inserted, and the eyelids delicately pulled over them with a pin. Some taxidermists put a drop of glue or mucilage on the cotton where the eye is to rest, and there is certainly no harm in doing this. After the eyes are in place, and the eyelids have dried about them, see that there is no dust or tarnish on the glass of the eye, lightly rubbing it off, if necessary, with a cloth.

If you wish to have your bird in more natural surroundings than when he is on the T stand, you can easily secure a twig with a little fork, and when you have made a base for that, transfer the bird to it. There are books which tell of different methods for making rock work, and grass, and bushes, and snow work, and if you desire stands of this kind, such books should be purchased and studied. Hornaday's "Taxidermy and Zoological Collecting" is one of these, and Batty's "Taxidermy and Home Decoration" is another, less expensive, but by no means so thorough.

The instructions already given are those for mounting a small bird, but the principal is the same whether the bird be large or small, and it is really only a difference in the size of the wires, and of the stand. To mount an eagle, or great blue heron, is hard work, and the bending of the large wires require some strength. But the mounting of a smaller bird, such as a quail or partridge, or a wild duck, is little more difficult than the mounting of a robin, though the greater size of the bird makes it slightly more laborious.

TAXIDERMIST.

[TO BE CONTINUED.]

## Spook or Rats—Which?

THE Blackthorn, when I knew it, was a farmhouse. Formerly it had been a roadside tavern. It stood on what had once been an important thoroughfare across the Alleghenies; but the construction of a railroad running parallel with it but a few miles distant had superseded the old highway, and it was now but a common country road, and little traveled. The Blackthorn stood well up on the side of the range, in a very lonely, and especially in winter, a very dreary spot. No other house was in sight. There the winds seemed to moan across the waste fields and through the leafless trees all night, with a weird, mysterious, suggestive sound. What added to the general sombreness of the place, the house was said to be haunted. A peddler had been murdered there one night, and the tree was pointed out to me under which he was said to be buried. A census of the different peddlers that tradition reports to have been murdered in lonely houses in our back country in early times would be an interesting, if not a cheerful, compilation.

My friend, John Cryder, lived in the old Blackthorn at the time I write of. He was a stalwart, middle-aged man, a German, or of German descent. I had sometimes occasion to go into that neighborhood, and Cryder often pressed me to stop at his house. The family consisted of only himself, his wife and a half-grown adopted boy. I knew of the unsavory reputation of the house, and never having any hankering for ghostly acquaintances, I had so far always managed to give the house a wide berth. But one winter afternoon found me in the neighborhood. Cryder knew I was there. I could not get down to the railroad station, two or three miles away, without passing his door. To go by, after all his kind invitations, without stopping, would have been an unpardonable offense. I thought I would stop and get my supper, and then go on down to the railroad. But supper was a little late, and the darkness had set in early. The ground was covered with snow, it was cold and dark, there seemed no pressing need to go, and so it was plain that I was elected to stay all night.

After supper, we sat and talked of various things. I had very skillfully, as I thought, succeeded in steering the conversation clear of the dreaded subject; no reference to it had been made; and so, along about 9 o'clock or so, an early hour anywhere else, but late enough in a lonely country house in midwinter, Cryder remarked, "Well, I guess it's about bed time."

"All right, John," said I, though I would much rather have sat up an hour longer, "any time will suit me."

Thereupon he got a candle. As he was lighting it, he said, in a careless way enough, "Some people say the house is haunted, but I have lived here eleven years, and I have never seen anything worse than myself in it yet."

This, I suppose, was meant to be reassuring; but it was far from reassuring me. I can argue very logically against the physical possibility of ghostly manifestations; but the earlier teachings of my mother's hired woman in my childhood, were stronger just then than all my later philosophy, and I felt nervous and demoralized. I wished Cryder hadn't mentioned the miserable thing. To his remark I made no reply, for I didn't wish to pursue the subject. So we went upstairs.

Now, that upstairs was itself not a cheerful or inviting place. It consisted of only two rooms. There

was no carpet on the floor. There were no blinds to the windows. No pictures hung against the wall. There was almost no furniture except beds. A board partition separated the two rooms; in it was a doorway, but no door. The stairs were boxed in below, but led directly up into the outer room, as through a trap door. At the head of this open stairway was a large heap of corn in the ear lying on the floor. In this room was a bed. In the inner room, where I was to sleep, were two beds, in corners diagonally across from each other. If there is anything in the world that will make a bedroom seem more utterly lonesome than everything else it is to have an unoccupied bed in it. It was in this room that the murder was said to have been committed. The blood stain, not to be obliterated by soap and water, was said to be on the floor. I did not look for it.

John Cryder set the candle on the table, said good-night, and went away. I resorted to every expedient I had ever heard of to get to sleep—counting the sheep in a flock as they jumped over a wall, separating the black ones from the white and carrying the two totals together in my mind—this and other devices I tried—but it was long before I fell asleep. Some time during the night I was awakened by a slight noise, a series of low, dull knocks on the stairs in the adjoining room; but it ceased shortly, when it seemed to have reached the bottom of the stairs; and after a little I fell asleep again. I wondered what had made the noise; but when I went down in the morning I found an ear of corn against the door at the foot of the stairs, and I supposed I had discovered the mystery. Rats had evidently rolled it there, and thus caused the noise.

Down in the railroad village that forenoon I called at the house of a friend of mine. His wife was a bright young woman who had been brought up in the neighborhood. When I mentioned where I had stayed over night, she became interested. Had I heard or seen anything unusual there? The house was said to be haunted!

"No," I replied. "People who had stayed there over night," she said, "reported that they had heard a mysterious noise on the stairs, as of something dropping from one step to the next."

I was interested now. "Why," said I, "I did hear such a noise, but I found an ear of corn at the foot of the stairs, and I concluded that rats had rolled it there."

"It may have been," she replied, "but people say that it is the head of the murdered man striking on the steps as they dragged him down stairs."

I had been quite satisfied with my solution of the mystery; but this gave me food for thought. "People" had heard this same noise! Was there always a pile of unshelled corn on the floor? Did the rats roll an ear down the stairs every night in the year, or did they give this performance only when strangers were staying in the house? In short, was it a Spook or was it Rats?

T. J. CHAPMAN.

## The Resourceful Skunk.

It used to be said by the old farmers of New England, men who had, presumably, cultivated well their powers of observation, that a healthy young pig would drink double its own bulk of milk at one "sitting." I have never proved the truth, or otherwise, of this statement, which, on its face, seems irreconcilable with mathematical verities; but I have demonstrated—to my own satisfaction, at least—that nature has made a certain other animal that can divest itself of more fluid than could be contained in a cubical space equal to that of the animal itself.

When a youngster in my "teens," I set a trap one day on an Ohio hillside, near a trickling stream, at the mouth of what I believed to be a mink tunnel. My theory was dispelled on the following morning when I found a bushy-tailed animal with a calico coat tugging vainly at the trap chain.

The appearance of the snow round about the trap indicated that the animal had been indulging quite extensively in both offensive and defensive tactics prior to my arrival. In fact, it was this discovery that suggested my course of action. No sooner was my presence known to the prisoner, than he unlimbered for immediate operations. Stiffening his brush into vertical rigidity, he trained his batteries full upon me, followed by a "swish" not unlike that of a rocket at the outset of its heavenward flight. His actual missile range did not exceed twelve or thirteen feet, but the odoriferous range seemed restricted only to atmospheric limits. The animal's battery was on the rapid-fire principle, the volleys reiterating in such close succession as to suggest a continuous performance.

After a campaign of several minutes, the animal seemed to realize the futility of its onslaught, and gave the order to cease firing. By this time I had gotten interested, and determined to probe the capacity of the enemy's magazine. Hence I procured a slender white ash sprout, some twenty feet in length, acquired a position well to windward, and gave the animal a poke. The response was instantaneous and oft repeated. As I continued poking the pied shooter in limbo waxed mad and madder. With his anger increased the vigor of his broadsides, until the air between the opposing forces was constantly saturated with a greenish vapor, which discolored the snow for a radius of fifteen feet from the spouting nucleus. I would poke until my arms ached, and it was only when I desisted for a momentary rest that the fragrant fountain ceased to play. It was always ready to resume when I did; in fact, it would anticipate me, and the slightest movement on my part would be greeted by a pungent volley.

I did not time the duration of our skirmish, but it must have approximated an hour. I became fully convinced of the wholly inexhaustible nature of the animal's resources. I was well assured in my own mind that the bulk of ammunition squirted in my direction must have exceeded that of its projector by some milliliters long ere we quit; and the brute responded to my final poke quite as vigorously and copiously as to the initial jab. Is it a fact that this species of animal possesses powers of recuperation adequate to enable it to fully recoup simultaneously with an outlay?

SAMUEL MANSFIELD STONE.

## Inland Packs.

PRIOR to 1865, furs at inland posts were made up in packs of ninety pounds for transport to the frontier, but some of the young canoe men were not sufficiently strong to handle such a weight in debarking or loading them into the canoes, and a pack slipping from their grasp into the water and becoming wet inside caused delay to the whole brigade. A stop had to be made and the damaged pack unlaced, dried and repaired, before the journey could be resumed.

About the year mentioned, a top pack slipped off a man's back while being carried over a side portage, and before the man could save it had bounded down the hill-side into the rapid, and was lost.

This happened to be a very valuable package, and its loss being reported called forth the next year, from headquarters, a general order to reduce the weight from ninety to eighty pounds per pack, and to make each package of pure skins—i. e., skins of only one kind.

This order to discontinue the mixing of skins was not pleasing to post managers, inasmuch as a smaller and better pack can be constructed of mixed skins than of only one kind.

For the information of trappers of to-day, I will give a summary of how many of each kind of skins made up, as nearly as possible, the prescribed weight of eighty pounds, thus:

40 large beavers and 20 small beavers made 80 pounds.  
8 large bears and 4 small bears made 80 pounds.  
500 spring rats, 80 pounds.  
720 large and small rats, fall, 80 pounds.  
2 beavers, large, for top and bottom covers, and 60 lynx skins made 80 pounds.

2 beavers for covers and 30 otters made 80 pounds.

2 beavers for covers and 50 fox skins made 80 pounds.

We had orders to gather such furs as fisher, ermine, wolf, wolverines, skunk, and any broken or damaged skins, and make up into a separate pack.

The fine and delicate skins, as marten, mink, silver and cross foxes, were to be packed in boxes thirty inches long by twenty inches square, and into this small compass the martens and mink, after being tied in bundles of ten skins each, were packed to the number of four hundred skins.

This made a very valuable package, and the greatest care was taken of it the whole journey. Valuing them at only \$5 each, one of these boxes represented the sum of \$2,000.

We all saw that this mode of packing would not last; as, taking the best of care, accidents will happen, and they began the very year after the order came in force. Leaving a disagreeable job to the last, the men at each carrying place avoided these boxes, and there was a struggle to see who would not carry them. The sharp corners abraded the men's backs, and when carried on top of a pack they hurt the back of the head; so, as a rule, they were generally left till the last load, and then taken with bitter comments, and a fervent wish that the promulgator of the order for such packages were himself present to portage them over the carry.

Two of these marten boxes were left by one of our crews in the middle of a brûlé. In making the former trip some careless fellow must have thrown down a half-burnt match; in a few moments dense clouds of smoke arose in their rear. The country was as dry as tinder, and in the space of a very few minutes the flames swept to the other end of the portage, licking up in passing those valuable boxes and contents.

We, figuratively, locked the door for the balance of that trip after the horse had been stolen, for the remaining boxes were stored each night in the officers' tent, and during the day a responsible person was on guard over them.

It was a severe loss out of the returns of one post. No one, perhaps, could be blamed for it, but it had the desired effect of repealing the order, and we were told to pack as in the good "old corn-meal days," and mix our furs.

To arrive at an average of each kind of skins through each and every pack, we counted the whole returns and estimated the gross weight, and then divided so many of each kind of furs through the several packs, something like this: 10 beavers, 2 bears, 40 marten, 10 mink, 100 rats, 4 foxes, 4 otters, 4 lynx—80 pounds, or as the average might count out.

Previous to packing, the skins were neatly folded, placed in a pile and weighted down for a week. They were then built in the desired pack shape and underwent a severe wedge press hammering to reduce the bulk, then tied with three strong cross lashings, either of raw cowhide or twenty-four-thread cod line, and when all was secure, the wedges being released, the pack tumbled out complete, less the lateral tyings, which were two in number, of eighteen-thread cod line.

The size of one of these packs, ready for transportation, was 24 inches long, 17 inches broad, and 10 inches thick. The expansion of the compressed skins would, after a few days, give it a rounded shape in the middle, but when first out of the press it was almost perfectly

square, and it was the pride of each post manager to outdo the others in the beauty and solidity of his packs.

A well made pack would withstand the ill usage and the hundreds of handlings in making a journey of four or five hundred miles from an interior post, and would reach the first steamer or train of cars without a tying giving way. In my young days I have seen a pile of 296 of these packs on the beach at one portage.

An anecdote relating to the care of such a valuable cargo may be here appended. An old factor who had not left the interior for twenty-seven years, applied for and received leave to visit civilization with the understanding that he would take care of the furs in transit. This he did during a journey of days and weeks coming down the great river, standing at each portage till every pack was over, and checking them off by numbers and the aggregate.

At last he reached steamboat navigation, shipped his packs, and had the bill of lading in his pocket. Having shipped the furs he took passage on the same boat. During the midnight hours the captain, in making his rounds, was surprised to find a man sitting among the cargo. Who was this but Mr. S., still keeping his faithful watch. The captain asked why he was not abed in his stateroom. "Well," he replied, "I saw rough deck hands going about the packs, and thought it better to keep an eye on them."

The captain laughed. "Why, man," he said, "we have signed bills of lading for those goods, and we are responsible for their safe delivery. Go to bed, Mr. S.," he continued, "and rest in peace, for even you have no right to touch one of those packs, now they are aboard this vessel."

That was in 1873, and I believe that old gentleman is alive yet. He retired many years ago and settled in Ontario.

MARTIN HUNTER.

## A Michigan Quail Hunt.

NOVEMBER 27, 1903, was the day selected for the start of what was to be my last quail hunt of the season.

I drove from Vermontville six miles south to a small village. It was about noon when we arrived, and after donning my shooting togs I started out. Crossing a field I entered some woods, where birds are usually seen, and soon the dog found some. On the rise I managed to hit one, but as they flushed at long range, he was not hit hard enough to bring him down. One of the quail separated from the rest and pitched down alongside a rail fence. The remainder I could not mark down on account of the brush. I went after the one that pitched along the fence, and in a few minutes saw the dog stop and make a beautiful point. What a picture he made! Rigid, fore foot uplifted, eyes bulging—in fact, the very picture of excitement. Looking about, something caught my eye which made my heart beat faster. It was the tell-tale tracks. Following them up with my eye, I saw where they ended, under a little bunch of grass covered with snow. Upon approaching, out went a fine quail. In the fraction of a second it was over the fence, speeding for the woods from whence it came, but the shot overtook him, and he wilted. At the word, the dog leaped the fence and brought me a full grown cock. I admired him for a minute, and then, smoothing his feathers, placed him in my pocket and turned my attention to the remainder of the flock, and had not gone far when Bob became a statue beside a log. Approaching carefully, my eye caught sight of a quail under the end of the log, and as I saw it, it ran out and took wing. It did not go very far. I then turned around and started back to where I had just come from. Two quail flew out of a fallen treetop, but they were too far off. Near a small brush pile the dog pointed, and while I was getting ready, a quail rose behind me, but swinging round I was in time to give him one barrel. Enough feathers fell out to make a feather bed, but the bird kept on. Just as he was almost out of sight, I saw him sail off to one side into a cornfield. When I fired, the bird in the brush pile went out and I never saw him.

The next thing to do was to find the wounded bird in the field. When the dog had gone about twenty-five yards out into the field, he stopped, and on mounting the fence the bird was seen lying in the snow right under the dog's nose. Pushing the safety forward I approached and picked up the quail, too weak to fly. It must have flown at least three hundred yards after being shot. Soon two more birds joined their companions in my pocket, and as it was nearly sundown, I went home with five quail to show for my afternoon's hunt.

### The Second Day.

The next morning in half an hour I got five birds without missing a shot. The rest of the bevy could not be found.

Leaving these woods and traveling quite a distance, I saw as I came to the top of a small hill a single quail track made the day before. I followed it. The trail led me over the hill, down the side into some low land between two hills. Here the track ended. I knew he

had flown to join the bevy. Looking about I discovered a small field of corn that had not been cut, and said to myself, "They are there."

Sure enough, when Bob came to this field he pointed, and up went a small bevy of five birds. Bang! bang! Two birds fell, and the dog brought me one. The next bird was not so easy to find. He had fallen right where the bevy had been feeding, and the scent was scattered all around. The dog was down flat on his belly, exploring through some bunches of grass (he knew the bird was near-by), when he found him. Bob stiffened out just as he was, flat on his belly, his tail as straight as an arrow. I touched him, but not a muscle would he move. The quail I caught in my hand under a small bunch of grass. The remaining three had flown on, and pitched in a deep washout on the side hill. Down into the dug out went the dog, and up flew the birds. One fell to the first barrel, but the second didn't. My gun went off prematurely, so he kept on going. Then we started home.

When we reached the town, I met my host's brother-in-law, who told me he had just seen a covey in the corn field adjoining the school yard. Just then Doctor Jones came along and drove me up there. When we reached there, he pulled up his horse, after looking a moment, and said: "There they are, right there," pointing along a furrow in the field. I jumped out, and as the rose shot twice, getting two nice quail. Entering a thick swamp, one arose, and when I shot his feet hung down. An old bird hunter once told me that this is a sure sign the bird is mortally wounded. A man out in the wood was watching me, and the bird flew toward him and pitched not fifteen yards from him. He marked him down as nearly as he could, and the dog found him stone dead. Another rose, and as the bird reached the top of the trees he swung around and came right toward me. I shot him, and he fell at my feet. Bob could not find another bird. This made a total of seventeen quail. This—the last shoot I enjoyed—was the best of the season.

ESPY HANSON.

## Our Camping Trip.

WE had decided, George and I, to take a canoe trip of three weeks, if time, weather and good health permitted. We purchased our supplies at Sanico, a small lumbering town thirty-five miles distant from the first sheet of water. Our grub we intended to "tote" on our backs, together with rifles, blankets, ax and camera.

On the morning of the 15th we started. The "train" was very bad owing to heavy rains, and all the morning we "sloshed" along as best we could. At noon we stopped for a bite, and then tramped steadily till dark, stopping long enough to catch a mess of trout for supper. We camped that night in a tent and slept as only two men can who have tramped and carried a 65-pound load all day over rotten corduroy roads, blow-downs and swamp trails.

Morning found us up and ready for an early start after a hot breakfast. Game we saw in plenty in the form of partridges, rabbits and two deer which we jumped, a buck and a doe. The pleasure which we enjoyed from walking through a country which has never been logged and rarely frequented can only be realized by those who have enjoyed the same privilege. Great masses of green mold and gray lichen hung from old, massive trees, and the trail was carpeted with green moss and gold and brown leaves. A little after noon we reached Little Rock Pond, where our canoe was hidden, and where we intended to make our permanent camp.

The afternoon was spent in getting out the canoe, white-leading and soaking it. After a hot supper and a pipe we turned in.

At sunrise we were up, and found the day raw and cold, with a high wind and heavy sea. In a couple of hours the wind went down and we started. I sat in the bow, our knapsacks, rifles and grub were amidships, and George held down the stern. It was glorious! The sun rose and burned off the fog, which had chilled us through and through, and as it mounted steadily higher, the day came out as fine and clear as a bell. Two fish-hawks flew over us in wide circles, and on the further shore a heron walked with stately tread—like a Boston Alderman. The bow cut through the little waves like a knife, and we hurried along at a good pace.

After a few hours' work with the paddle, during which we drank in the crisp air and beautiful scenery, we saw ahead what I took to be a small stick of wood floating on the water. On coming up with it, however, we discovered that the stick was a red squirrel, vainly attempting to swim the lake and still a quarter of a mile from shore. I pushed my paddle slowly toward him, and he came quickly up into the canoe and shook himself. We paddled along, and he sat on my rod and watched us, without apparent fear. After staying with us about five minutes, he jumped into the water with a little splash, and struck

ut bravely for the shore, and as long as we could see him he kept the right direction.

About an hour before sunset we reached the head of the lake, and struck into the headwaters of the Tashnukée. We landed, "shingled down" a bed, got upper and "left this weary world." The next day was as fine as the preceding one, and we glided down stream with no more work than to keep the bow headed into the strong current.

So a week and a half passed as in a dream; trout were had in plenty, together with a stray pickerel or bass. Partridges in abundance fell to George's rifle, our larder was well filled. Ducks we had not seen until one evening, as we were quietly drifting down stream, under the lengthening shadows, we came upon a flock of about fifteen mallards. For some time we watched them gamboling, playing and splashing along the shore without being discovered; and before they could get away, we had three.

On the last day of the second week out we heard the sound of chopping one morning, and upon investigation discovered a crew of about forty men. They were getting out birch and "popple," and had been at work about two weeks. After taking dinner with them, we struck a bargain with the cook for flour and baccho and started on again. In the afternoon we struck a long series of "rips" and landed to begin preparations for a mile carry. Two trips were necessary to get all our stuff over, and while on my second trip I discovered the tracks of "fresh venison" leading down the carry in the same direction in which we were going. Hastily filling the magazine of my .30, I stole quickly forward, hoping against hope at something would keep George from returning on his second load. Suddenly I heard his lusty voice singing his favorite song,

"His father was chasing his boy round the room,"

and to my surprise, a buck and two does came up the carry directly toward me. When within a short distance, I drew a bead and fired at the buck. I fired a second time. He stumbled a few feet toward me and fell with a crash. One bullet had passed through his neck and out the shoulder; the other had broken his fore-

The sound of the shots brought George "on the hot spot," and together we dressed the deer and took the head off. Although the head itself was not a pretty one, still it had eleven points. We cut up the deer as quickly as possible, made our last trip across the carry, and pushed on. All that day we traveled through rough rips and rapids, where the water rushed down rough gorges, with perpendicular walls of smooth rocks. Great masses of boulders lay in the stream, around which the water boiled and roared. Whenever it was possible we avoided the roughest water by cutting the rocks, though at times the waves broke over the canoe both in the bow and stern at once, while we swayed and tipped from side to side. We went along at a frightful pace, and finally neared a point where the river narrowed till one could almost throw a stone from bank to bank. The trees were uprooted and scraped where ice and logs had rushed down in the spring, and some marks were twelve or fifteen feet high on the trees. It now began to grow dark, and we had hoped to be well out of the rapid before night settled down. On we went, faster and faster, until we suddenly shot out into clear, still water.

We landed, two thankful, tired men. Now, we were resting toward civilization again. We came upon the remains of a camp-fire and "lean-to" which were hardly a week old, and the next day we met a couple of Canucks, who informed us that our destination was not ten miles distant. That was our last night in the woods.

How I disliked to go back to a spring bed, plates and a table, to meet the razor, boot brush and city clothes. Why is it that a man cannot live as nature intended that he should, without formalities and conventionalities? No matter, our trip was over. Next day we arrived at our final point, and after shipping the canoe and deer head, George and I had a "bang-up" and shook hands long and hard to keep us over the following year.

CHARLES B. FLOYD.

## Foreign Game Birds and Eggs.

VERY important Bulletin, soon to be issued by the United States Department of Agriculture, treats of the importation of game birds and eggs for propagation, by T. S. Palmer and Henry Oldys. The object of this bulletin is to furnish information respecting the game birds brought into the United States since the passage of the Lacey act of 1900, and the eggs of game birds imported and of the egg act of 1902.

It will be recalled that following the exploitation of the great American duck egg fake, exposed in FOREST AND STREAM nearly ten years ago, Congress passed a law prohibiting the importation to the United States of wild birds' eggs. The intentions of Congress were of course excellent, but its knowledge of the subject was extremely limited.

Instead of protecting the wildfowl of Alaska and fish America, the act of 1894 merely made it impossible for anyone wishing to bring in the eggs of game birds from European countries for the purpose of propagating pheasants, partridges, or what not, lawfully to get the eggs to hatch. This law was modified in 1902, and eggs are now being imported for propagation under regulations prescribed by the Secretary of Agriculture. The Lacey act has been in effect for nearly four years, and as the Secretary of Agriculture has charge of importations, and under that act, as well as under the egg act, the data that has accumulated are considerable.

The older generation of sportsmen will remember the rest felt in the importation of the migratory quail of Japan during the late seventies, and the utter failure of attempts, then made. Not very long after that, Asiatic pheasants were imported into Oregon, and did so well that importers of birds were much encouraged.

Until the passage of the act of 1900, there were no means of ascertaining the number or kinds of birds brought to the United States, but under present conditions a reasonably close knowledge is had of the birds that come in, the officials of the customs service checking the importations, and giving figures which enable the Agricultural Department to approximate to the numbers of the birds.

Within the last four years more than 23,000 game birds have been brought into the United States, divided as follows: In the fiscal year 1901, 6,584; in 1902, 5,281; in 1903, 9,126, and in the first six months of the fiscal year 1904, 2,187. Of these, 3,866 were pheasants, 16,609 quail, 753 partridges, 1,473 ducks and geese, and 477 miscellaneous.

It must be remembered that this includes all the birds imported, and not merely those brought in for purposes of sport. Ornamental pheasants for the lawns of country places, like ornamental foreign wildfowl, or birds intended for menageries or zoological parks, are all included. Pheasants constitute about 17 per cent. of the total import, but these are in addition to those now bred in considerable numbers in the United States. The total number brought to this country during the last four years is very small, when compared with the numbers raised each year in some places in Europe; for Newton states in his "Dictionary of Birds" that in 1893 there were sold from one estate in Suffolk, England, 101,000 pheasants' eggs, while 9,700 pheasants were killed there.

Most of the imported birds come from Canada, Belgium, England, Germany, China and Japan. Canada and Belgium each send in from 300 to 600 birds a year, almost all pheasants, the two countries furnishing about three-fourths of the pheasants imported. Most of the partridges come from Germany, and are the common gray partridge of Europe. China sends practically all the quail and about 500 pheasants. The quail are mostly eaten in San Francisco, and there is no way of determining whether the pheasants come from China or Japan. Japan furnishes mandarin ducks, and has sent a number of pheasants to Honolulu from Yokohama. The other birds come from many countries, and are of many kinds. One of the most important importations was that of capercaillie from Sweden.

Of the 3,000 pheasants imported, more than 2,000 went to the six States, Massachusetts, Michigan, New Jersey, New York, Pennsylvania and Ohio, while about 500 were consigned to points west of the Mississippi or in the South.

Pheasants intended for liberation are of two sorts, the English pheasant of Europe (*Phasianus colchicus*), and (*P. torquatus*), the so-called Mongolian pheasant, more properly termed the ringnecked pheasant. About twenty ornamental species have been imported for aviary or exhibition purposes.

The importation of partridges has been undertaken only on a very small scale, and the bird has not as yet established itself at all. Of 300 imported for Oregon, only 97 lived to be liberated, most of the others having died in transit. When turned out they seem to do well, but not having been protected, they are reported to have been nearly exterminated by gunners. A lot turned out in March, 1901, near Corinth, Miss., have suffered the usual fate of exotic birds without protection.

The ducks and geese imported are chiefly ornamental, though a few wild birds have been brought in; and it is curious that of these wild birds a number are our own wood duck, which apparently have been bred in domestication in Europe.

An especially interesting importation is that of ten black game and 65 capercaillie. Of these capercaillie, 57 were imported by the Ontario Game Commission, and 8 for a private club. Most of the 57 were liberated in November, 1903, in the Algonquin National Park in southern Canada, and since then have occasionally been seen. Just how well they are doing appears not to be known.

Nothing of any moment has been done as yet in regard to the importation of eggs. The total consignment amounts to only about 2,000 eggs of pheasants and 100 eggs of partridges. It is true that the act permitting the importation of eggs has been in force for two years only, but we should have supposed that more eggs would have been imported. There can be little doubt that after a time eggs will be brought over in large quantities and many birds hatched here, and that this will be a successful means of introducing exotic birds.

It will be recalled that the so-called English pheasant and various other pheasants, the jungle fowl and the guinea hen, have done well in many places to which they were not native. The red grouse was introduced into the Shetland Islands and into southern Sweden, and the capercaillie has been re-established in Scotland. Instances of this sort are many, and there is no reason why foreign birds should not be successfully introduced here, so soon as we are disposed to take sufficient care of the birds and give them protection at the proper time.

On the other hand, certain States which to some extent have been engaged in the work of raising and distributing pheasants, have given up this work. Such States are New Jersey, Ohio, New York, and Massachusetts, the last named being the only one that continues it. New York gave up the work only a short time ago.

Pheasants are protected in most States, and this is essential if they are to become established there. The difficulty with almost all the States is that they protect for a few years and then remove the protection until the birds have almost been killed off. On the other hand, California, Colorado, Indiana, Minnesota, Montana, and Nebraska and Utah protect the birds permanently, as they should. The law in most of the Canadian Provinces is much better than in most of the States, giving also permanent protection.

The Bulletin in question is full of interesting information, and its authors have performed a good service to sportsmen.

## Rocky Glen Park.

The Rocky Glen Park Company, of Scranton, Pa., are constructing near that city an extensive park in which is a large and beautiful lake. When completed the park will be a great addition to the beauties of Scranton.

## In Central American Mountains.

PERHAPS in no other part of America is hunting attended with more excitement or exhilaration than in the picturesque Cordilleras of Central America. In these high tropical plateaus two conditions are found highly favorable to the enjoyment of the Nimrodian sport: abundance of game and an agreeable climate. The first is due to the naturally wild state of the country, not yet invaded by the pioneers of the ax or seekers of the yellow gold; the second to the high altitude and resulting low temperature.

There, in the glory of undisturbed nature, among the giant oaks and crystal streams of virgin forests, can be found the fleet deer and the tapir, the wild boar and the agouti, the iron-clad armadillo and white-fleshed pac. The abundance of wild turkeys, golden-plumed pheasants, partridges, grouse and other innumerable specimens of the gallinaceous tribes known only to these mountains, may well delight the heart of the most exacting sportsman. If he has a liking for a touch of danger mixed with the sport he need not go further, for felines of every kind and description, from the small wildcat to the treacherous jaguar, lurk on every side, and at any time are ready to drop on the shoulders of the unwary hunter. Or, if he is a lover of beautiful scenery, an admirer of artistic nature, the volcanoes of Guatemala, the lakes and islands of Nicaragua, and the mountains of Costa Rica, will afford him spectacles well worthy of description, and once seen are not forgotten.

It has been the privilege of the writer to witness the rising of the sun from the summit of the highest volcano in Costa Rica, 12,000 feet above sea level, and incidentally to behold that rare and remarkable spectacle, the sight of both oceans, Atlantic and Pacific, from the same spot and at the same time. To the north and to the south, as far as the eye could reach, the evergreen forests extended over hills and valleys like an enormous velvet mantle, broken here and there by glistening, snake-like water streams.

In these thick, wild forests, where the traveler may wander for days without ever seeing the sky above him, thousands of animals, small and large, pretty and hideous, inoffensive and destructive, fly, jump, climb, and dig, enjoying the liberty that was given to them ever since the beginning of things. Early in the morning and at the approach of night the woods seem fairly alive with their noisy occupants. From 5 to 6 o'clock in the morning an incessant racket is kept up. Small birds, with large yellow beaks, emit guttural and grotesque sounds, which, to the inexperienced woodsman, may seem to proceed from some huge carnivorous monster. Redheaded parrots, clad in bright green and gold, screech and screech from among the treetops. Monkeys of every kind, description and size call to each other from hill to hill in discordant tones, while grouse and partridge sing happily to the beginning of a new day. At night the noises are of a different nature, and not so pleasant; it is then that wildcats, pumas and jaguars proclaim their presence by an infernal roaring far into the night.

Countless species of frutal plants for the wild boars; high liana-entangled treetops for the monkeys, sloths, parrots and pheasants; soft, damp soil and roots for the cavies and other rodents to burrow; cavies and other rodents for the jaguars to devour; and broad tracks of thickly wooded, well watered land for all, contribute to make the Central American forests a paradise for its animated inhabitants, and an Eldorado for the hunter.—G. L. Michaud, Jr., in Springfield Republican.

## Experiments with Wild Birds.

PROF. W. E. D. SCOTT, of Princeton College, who has devoted much time to experimenting with the domestication of wild birds, and has raised large numbers of young ones, has within the last two or three years induced canary birds to incubate the eggs and rear the young of wild birds of the finch family. The eggs put under these canaries—which in all cases appear to have been excellent foster parents—were those of the song sparrow, field sparrow, cow bunting, chipping sparrow, savannah sparrow, and bobolink. In all he placed 41 different eggs of wild birds under the canaries, all of which were hatched; but of these 41 young, all except one died within a very short time, although at the time of hatching the young seemed strong and vigorous. Usually the bird died in from three days to a week. One or two which lived long enough to leave the nest seemed feeble, and unable to use their legs. The parent birds were devoted to the young, but all their attention was in vain. Mr. Scott calls attention to the remarkable fertility of the eggs with which he experimented, all of them hatching, something that does not happen with eggs laid by ordinary cage birds, or wild birds semi-domesticated. It seems altogether probable that the food given the young by these canaries was not suited to their well being, and Mr. Scott believes also that the character of the nest lining had something to do with the early death of the young.

## Nebraska Chicken Season.

OMAHA, Neb., May 23.—*Editor Forest and Stream:* It is to be regretted that the next Legislature will surely advance the open prairie chicken season from October 1 to September. There has been a loud call for the change from the residents of the chicken country, and yet no change should be made. October 1 is plenty early enough to begin the killing of this royal bird. But the faction that wants September chicken shooting have the votes, and that settles it. The change will be made. Game legislation, like tariff legislation, is too often based on the selfish ends of the party in power. Sportsmen should have as little to do with it as possible. If they all thought alike, it would be different. What A. considers needful for his section, B. declares would not do at all for his. The growing scarcity of game and improvement in sportsmen's weapons have developed an alarming state of selfishness in lovers of field sports that is rapidly eliminating all semblance of the old-time camaraderie that existed in those good old days before a network of grotesque laws made shooting possible only to the few, and made poachers out of honest men.

SANDY GRISWOLD.

## The Pollution of the Potomac.

REPORT OF SECRETARY OREGON MILTON DENNIS.

THE dumping into the Potomac River of refuse from two pulp mills at Harper's Ferry, as told of in Mr. Henry Talbott's letter on this subject, published in *FOREST AND STREAM* May 14, appears to have ruined the bass fishing in that river. The matter is one of keen interest to all anglers, and especially to those in the States touching on the Potomac. We print below the report of Mr. Oregon Milton Dennis, secretary of the Maryland State Game and Fish Protective Association, made to the executive committee of that association at the Eutaw House, Baltimore, May 20, 1904:

I beg to report that by reason of the pollution of the Potomac River, which has entirely driven out the bass in that river, a conference was held at Harper's Ferry, at which Major R. Sylvester, game warden of the District of Columbia; Mr. Frank Lively, game warden of West Virginia; Dr. Walter A. Harban, and Dr. William P. Young, president and secretary of the District of Columbia Association; Dr. T. S. Palmer, Chief of the Biological Survey at Washington; Mr. John A. Avirett, game warden of the State of Maryland; Mr. Henry Talbott, and Oregon Milton Dennis, were present.

We found the condition of the Potomac River appalling, in that the shavings from two pulp mills at Harper's Ferry had been so long in the Potomac River that the places where the fish used to be found are now filled up with these shavings, and rocks in the river almost entirely covered.

As a result of this meeting, some decided action will now be taken.

At the conference, it developed that the Potomac was polluted from Harper's Ferry to the Great Falls; that part being entirely in Maryland, and consequently within the province of State Game Warden Avirett to take such steps as may be necessary to prevent its further pollution.

So far as West Virginia is concerned, Game Warden Lively, of that State, will have the entire backing of Maryland and the District of Columbia.

Half-hearted measures have been attempted during the past years to stop this pollution, and I now want this association to ratify the following resolution, which was passed at the conference at Harper's Ferry, to wit:

"At a meeting held at Harper's Ferry between the representatives of West Virginia, District of Columbia and Maryland, for the purpose of bringing about united action to prevent the further pollution of the Potomac River, which has resulted in the entire destruction of fish life therein, and the final driving out of said river of fish, it was

"Resolved by the representatives of the District of Columbia and Maryland, in the presence of the game wardens and officers of the District of Columbia and Maryland State Fish and Game Protective Associations, that we view with concern the interest displayed by the game warden of West Virginia in the protection of the fish life in the Potomac River, and to the end that we may be of material assistance to him in the prevention of the further pollution of the Potomac River by mills, etc., we hereby tender him our earnest support, both moral and legal, in the enforcement of the laws passed for the protection of the fish life in the said Potomac River and its tributaries."

I am informed by Warden Avirett that he will take immediate steps to stop the throwing of shavings by these pulp mills into the Potomac River.

So far as Maryland is concerned, we have ample laws to prevent this sort of thing, and I ask that this association will immediately inaugurate such steps to assist the game warden as will be necessary to effectually prevent these pulp mills from further damaging fish life in the Potomac.

This being the first meeting since the Legislature, I also want to say that a large number of bills were passed at that session, which will greatly aid us in the protection of fish and birds. Taking it altogether, a great stride was made toward the end we all so earnestly desire—the unification of the laws for the protection of fish and birds, and I think the time is not far distant when Maryland will not only have a uniform game law, but one of the best laws of all the States.

I also suggest that the association take immediate steps to inaugurate, through the public school system throughout the State, the education of the young for the protection of song birds, as suggested by Governor Warfield in his Arbor Day Proclamation, thus instilling in them that love for bird life which, as they grow older, will produce a class of men and women who will become natural protectors of the song birds, without the aid of laws and legislative enactment.

BRUNSWICK, Md., May 20.—*Editor Forest and Stream:* A friend has just handed me a copy of *FOREST AND STREAM* of May 14, and requested that I read the article entitled, "Fishing Up and Down the Potomac," by Henry Talbott.

Living, as I do, seven miles below the mills referred

to, and spending more or less time on the river, I have an opportunity to know something of its condition.

Mr. Talbott is right. The river is filled with shavings, especially on the Virginia side, and no bass would deposit eggs in such places.

I wonder how many people ever had the opportunity or took time to note how bass build their nests?

They form the nest of a quantity of small, clean gravel, and placed in a pile. Then they deposit their eggs and stay near-by to protect them, and will strike at anything that happens to fall near.

Now, what I want to protest against is people who know this and make a practice of catching bass at this time with spoon. Once the nest is located, the rest is easy. They simply cast around it until they worry the bass into striking.

Report comes from Winerton that certain parties there have been catching bass for some time. The same thing goes on here, and there are dozens of outlines and set nets along the river. Yet no one says a word.

I don't care to defend the mill people, but if private citizens take no steps to protect the fish, I do not see that the mill people should be put to extra expense and inconvenience to do so.

J. A. VAN PELT.

## Nebraska Fish Notes.

OMAHA, Neb., May 23.—*Editor Forest and Stream:* Large numbers of handsome rainbow trout were taken last season from the waters of the White River out in Sioux county, and the prospects for grand sport there the coming month are abundant and flattering. The cold depths of the White River are said to be swarming with trout, the outgrowth of the State Fish Commission's work in 1892, when the first batch of rainbow trout were planted in a small tributary of this stream on Russell's ranch near a small station called Glen. The deposit has thriven, the stream being well adapted for their growth and improvement. It is bountifully supplied with water-cress, fresh water shrimp, and the aquatic insects on which the trout feed. That this particular stream teems with these matchless fish this year is a big feather in the hat of the ex-State Fish Commission. It reflects credit on their wisdom and judgment in selecting this isolated section for the propagation of these game fishes. Both this and last year the Commission planted a carload of yearling rainbow along the Elkhorn from Long Pine Creek to the headwaters of the White River. These 20,000 fish were donated to Nebraska by the National Fish Commission. Ex-Chairman Lew May is much elated over the success of the industry in northwestern Nebraska, and predicts the best results in the near future.

In these days of going fishing and planning for summer campaigns with the rod, substantial assistance may be found in the weekly fund of information given in the columns of the *FOREST AND STREAM*. Not a week goes by in the season that there are not accounts of successful excursions to waters abounding in bass or trout or other fish, until the grand old journal has become a sort of anglers' directory. To make this feature more valuable is certainly its editor's constant aim, and the accomplishment rests largely with its angling readers. While no one is called upon to abandon to the public his jealously guarded secret of good fishing in waters likely to suffer from publicity, every member of the fraternity owes it to his brethren to tell of lake and streams and bays where the fishing may be of scope and quality so generous as not to suffer even if others do know it. Send in your contribution to the common fund. No one has a right to keep a good thing to himself when it may be unharmedly shared with others. If this is not true doctrine for a true fisherman, where is the fallacy?

L. H. Woods and John J. Hardin returned home Monday, after spending two days pulling the untutored members of the finny tribe from the waters of Big Lake at Bigelow, Mo. They report the lake as an ideal fishing resort this season, filled to the brim with bass, croppies, perch and catfish, all ready to bite with the proper encouragement. The bass season opened there about two weeks ago, and several fine catches, ranging up to 12 pounds in weight, had already been recorded this season. The lake is ninety miles down from Council Bluffs on the Burlington's St. Joe line, and is four miles out from the station of Bigelow, from which a 50-cent bus line is run. The lake itself is a deep, clean body of water, crescent-shaped, about a half-mile wide, and five miles long, and has not suffered from the depredations of seiners since the last crop of fish came in from the last overflow of the Missouri and Tarkio rivers. Two fishermen's hotels, each with a farmhouse bill of fare, are situated on the banks, and each is plentifully supplied with boats and common fishing tackle, while one has a small steamer that is often used to tow the small boats against the breeze on windy days. This place possesses the advantage over Phelps and Langdon that turtles and gars are not

present to provoke profanity. So far, the resort has been mostly patronized by Kansas City and St. Joseph lovers of the sport, though the finest catch of the season was made Sunday by Mr. Hardin, a 6¾-pound big-mouth.

Peter Matza, of this city, has invented and patented a fishing and hunting bonnet, as well as for general practical usage, for protection against flies, gnats, mosquitoes and bugs, that is certain to bring him fame among the ramblers of the woods and waters. The bonnet, Shaker-shaped, is constructed of fine wire, which in no way interferes with the vision or respiration, with the base or back of the hood of silk, and with a silk collaret dropping over the shoulders. It is a good thing without a doubt, and will become popular when once known.

While fishing for ring perch Sunday with W. A. Pixley up in Big Blue Lake, many unusual little bits presented themselves for the camera. Pixley is one of the best amateur photographers in the country, but on this occasion, much to his regret, he had left his instrument in Omaha. Pixley says that after a man once begins to make nature pictures that he becomes more a lover of the camera than he does of the rod and gun. He avers that the game he secures with his camera is far more satisfactory than the game secured with the hammerless and the hook, and he is a crack shot, and an ardent angler at that. He advises all young hunters to include a camera in their outing outfit—that it cannot be complete without it.

SANDY GRISWOLD.

## Fish and Fishing.

### The Value of the Sturgeon.

CANADIANS are at last waking up to the value of the sturgeon fisheries, which they have for so long permitted to be ruthlessly despoiled. For many years any implement of capture could be employed. The result has been that, while a few years ago the fish were so plentiful as to be practically of no market value, they have now decreased so rapidly that they have become the highest priced of our commercial fishes. The average wholesale price obtained for the flesh of the sturgeon shipped to New York is now about 15 cents, while the roe of the fish brings, in the same market, from 80 cents to \$1 per pound. The finest caviar in Canada comes from the Lake of the Woods, in Ontario, the roe of the sturgeon in those waters being, as a rule, larger than that of the sturgeon of the Great Lakes.

The largest specimen reported to have been caught in Canada during the last year was that taken by a Lake Erie fisherman, which turned the scale at 190 pounds. It yielded 40 pounds of roe, and for the meat and roe, the fisherman received the sum of \$50, which, as he said, was the price of a good cow. But the value of the sturgeon does not end with the meat and the roe, for there is another and a very valuable product manufactured from the bladder, namely, isinglass, used by brewers for clarifying purposes. In Canada, it is simply the custom to save and dry the bladders, for which 40 cents per pound are realized. They are then exported to the United States, manufactured and resold in this country at from \$1 to \$1.25 per pound.

### The Destructiveness of Carp.

Evidence of the destruction wrought by carp is rapidly accumulating. Apparently, too, it is badly needed, for the fish has its advocates, because of the profit made out of it by some of the commercial fishermen, who have recently disposed of large quantities of it at 6 cents per pound, which is said to leave a handsome profit. Its friends now claim that its edible qualities have been very much underrated, and say that, if salted for a few hours before being made ready for eating, it will lose much of its muddy flavor, and be found to be a palatable fish. As Mr. S. T. Bastedo, Deputy Commissioner of Fisheries for Ontario, declares, it would be nothing short of a calamity if these fish should be introduced into our beautiful inland lakes. Some time ago reference was made in this column to the fact that carp are supposed to destroy the plantations of wild rice which are so essential to the maintenance of good feeding grounds for wild ducks, by disturbing the roots of the plant. It has now been ascertained, however, by the Ontario fishery authorities that the damage to the wild rice fields is not only due to this cause, but that these fish, being granivorous as well as herbivorous in their habits, pick up and eat the ripened grain in the water, thus causing the loss of the seed. When the stomach of one caught upon the St. Clair Flats was opened last autumn, it was found to contain at least a double handful of rice, while as an illustration of their destructiveness upon the spawn of other fish it may be mentioned that a gallon of spawn which had been devoured was taken from an 18-pounder—a weight which the carp frequently attains.

### Distribution of Salmon and Grayling.

A number of reports have been current within the last year or two, to the effect that salmon have been taken in the nets of commercial fishermen in the waters of the Upper St. Lawrence. There is, of course, no reason why this should not be so, seeing that in former years this fish ascended in large numbers as far as Lake Ontario, to spawn in some of its tributary waters; but unfortunately none of the supposed specimens of salmon so caught were seen by or forwarded to people familiar with *Salmo salar*. Blunders may have been made by those responsible for the reports, in consequence of the great confusion arising from the local misapplication of the vernacular names of fishes. To this cause may perhaps be attributed the stories of the recent discovery of the grayling in certain waters in northern Ontario. At all events, they have not yet been verified, and Sir John Richardson, in "Fauna Boreali Americana," states that it abounds in the rocky streams that flow through the primitive country lying north of the 62d parallel of latitude, and does not record that he found it further south. Further west, however, it certainly is found very much further south.

### Returning Fish to the Water.

It is often urged by fishermen who insist upon keeping all the fish they catch, that many varieties, and particularly the black bass, will not survive being caught by hook and line and returned to water. This contention is satisfactorily disposed of by Mr. Bastedo, Deputy Fish Commissioner of Ontario, who shows that the bass is a very hardy fish, and that in 99 cases out of 100 will live, if returned to the water immediately after having been taken on a fly. In proof of this, he recalls the fact that the first bass deposited by the Province some years ago, were caught by hook and line, and with but little mortality as a result. Last year, too, one of the State Commissions purchased 500 bass, all caught by angling, and not a single fish, it is said, died. The danger is in the handling of the fish when it is taken from the hook, or when severely wounded in the throat or gills. The Ontario authorities are face to face with the necessity of taking some action to preserve many of their fishing waters from depletion. The increase of visiting anglers has been so great during the last few years that a marked decrease in the fish supply is noticeable, and though the planting of bass is being carried on upon a limited scale, it is feared that, unless anglers agree to return to the water such fish as are undersized or unrequired for consumption, it may be deemed necessary to close certain waters to the public for a time.

### Change in the Salmon Law.

While no change is to be made this year by the Legislature of Quebec in the fishery laws, the Federal Government has just made a new regulation concerning salmon fishing, which affects the rivers of the Province. By the new provision it is lawful to fish with rod and line for salmon until Aug. 31, in the rivers of the north shore east of the Natashquan. In all the other salmon waters of the Province the fly-fishing closes, as before, on Aug. 15. The change has been made in the case of the far eastern rivers of the north shore because of the general lateness of the season there. It is gratifying to note that no netting of salmon is to be allowed after Aug. 1.

E. T. D. CHAMBERS.

### About the Carp.

COSPERVILLE, Ind.—*Editor Forest and Stream*: What can we do immediately to stop the rapidly approaching total destruction of our small and game fish of the lakes in Indiana caused by the greatly increasing number of carp and dogfish?

About twelve or fifteen years ago the private fish-pond idea swept over us, and unfortunately the Government advised the stocking of these ponds with German carp, and even furnished the fish to do it. At first the people were pleased with the fish, and a large carp was considered a prize. As time rolled on, the people seemed to lose their great appetite for carp, until at present they rank but little, if any, above the dogfish. When the truth was learned, people opened the floodgates of their ponds and drained them either into the main waters or into tributaries leading thereto. The result of these careless, unthoughtful acts was to completely stock our lakes with carp. I personally know of seven such cases in my own vicinity.

I venture to declare that at present there are more pounds of carp in our lakes than all other fish combined. I have grown up by the side of our lakes, and have observed with regret the change that is surely and rapidly being wrought by this worthless destroyer. In some of our lakes carp beds exist which are many square rods in extent, and poor luck, indeed, awaits the fisherman who drops anchor here. All the people are talking about the matter, and all foresee the end, but none are active.

Our waters furnish fair bass fishing in sections, but bass absolutely will not stay where carp have taken possession, therefore they have naturally crowded together in these sections and furnish fair fishing; but on the whole the bass are certainly decreasing in number.

As carp will seldom take a bait, all fish that are caught are small and game fish, thus leaving the carp to increase indefinitely. They are even protected by law, as they cannot be successfully taken except by spear or net, and the use of these is strictly forbidden. In the last season less than one dozen carp were taken from our waters by bait and hook.

I understood a year ago that the authorities were considering seining our lakes, but nothing was done. I learn through *FOREST AND STREAM* that considerable seining was done in Illinois last year, to good advantage. Of course honest men, who have the true interest at heart, should do the work, else fine specimens of game fish which are caught in the seines may never find their way back to the water. I am not posted on our laws as to seining in such cases, but where there is a will there is

a way. I see an account where in one of our Western States the fish commissioner simply took the matter into his own hands and licensed individuals to use the spear, and also hired men to use the seine, and by so doing it was said of him that "the right man had been found for fish commissioner."

Turn the spear loose on the carp and dogfish, and, for that matter, on the sucker also, as the almost total extermination of the noble pike is laid at the door of the bony sucker. Of course, occasionally a game fish may suffer by being mistaken for a carp, but this should not occur often, and in case it does occur, they should be thrown back, even though they are sure to die. This will take away all incentive toward making such mistakes "accidentally-a-purpose." But we had better sacrifice a few mature fish to get rid of the spawn destroyer. Further, employ men to seine the lakes and allow them to market the carp, if they can find a market for them. If there is no fund to carry on the work, a small appropriation should be made, but at least do not protect the carp by law. An overseer should be appointed to look after the spearing.

I should like to engage in correspondence with you regarding this matter, as I am aware of the great necessity of taking active steps in this matter, and I sincerely hope that some arrangements will be made soon to do something about it. I am willing and anxious to assist in any way possible, and would even be willing to go out and help with the work myself.

JOHN W. ZIMMERMAN.

### Erie Fish Hatchery.

THE largest fish hatchery in the State, and, to gauge by results, one of the best in any State, is the one located here in Erie. Its total output for this year will be at least one hundred millions, a good part of which goes into Lake Erie. They are needed there, as the spring fishing by seiners is the worst for a number of years; in fact, most of the commercial fishermen have pulled up their nets and quit for a month or two.

The superintendent of this hatchery of ours, Mr. A. G. Buller, has been kept very busy all spring, but is nearly through now. It must be said to his credit, though, that he is never too busy to answer all the questions he is asked. In that respect, he differs from some of our officials. He is winding up the season now with yellow pike, "wall-eye," we call them, about half a million of them will go into the Allegheny River, where they will find themselves at home. Lake Erie will get the most of them, though, and Conneaut Lake gets some. Yellow perch is another fish he is hatching out in large numbers, several millions. He has hatched out a lot of blue pike, but hopes to get more of them yet.

A smaller hatchery down at Corry, Erie county, takes care of the trout fry. Buller has none of these. Superintendent Buller advances the idea that the cisco of the lake here is a cross between the herring and whitefish. There may be something in that; the cisco looks as if it was. How is it?

In addition to all the fish that he has hatched out, he has ten millions of frogs in process of hatching. Frogs are protected in this State now. It is time that they were. They are getting to be very scarce here.

CABIA BLANCO.

[There are a variety of ciscos (*Coregonus*), but the true whitefish occurs with you.]

## The Kennel.

### Rabies.

From Hill's "The Dog, Its Management and Diseases."

(Continued from page 442.)

The voice at this time becomes strangely altered. It is hardly possible to describe it, though when once heard it can never be forgotten. It is a kind of blending between a bark and a howl, having a croupy sound, and most frequently is heard at night.

A thoroughly savage and morose disposition becomes at this period firmly established. Any article presented will be seized and ferociously mangled. The poor creature, in its paroxysms, is regardless of pain; the lips are wounded, and even the teeth broken, in its frantic efforts to avenge some imagined injury or offense.

During and immediately after the paroxysm, the breathing is short and painful, and the animal looks an exhausted object, as if suffering from the effects of a hard-fought sanguinary battle.

As the malady proceeds toward its last stage, the head frequently becomes swollen, particularly about the eyes, which assume a brilliant lustrous appearance, and the conjunctival membrane is deeply injected. An anxious, haggard countenance is present throughout.

The animal may gradually sink into a state of stupor, or die in a paroxysm of rage. Paralysis is sometimes associated with the disease from its commencement, and is rarely absent toward its termination. Emaciation is rapid under all circumstances.

One marked symptom in rabies, as opposed to all other nervous affections, is the magical influence of voices the animal is accustomed to. Even in moments of frenzy the call of one the poor sufferer knows is instantly recognized, and for a brief period produces an appearance of sanity.

It has been stated by a professed authority—Grantley F. Berkeley—that "Dogs become utterly insane through distemper, and are for a time mad to all intents and purposes." "If you prevent distemper in dogs 'by vaccination' (?) well performed, you decrease the madness in dogs, which in numberless cases arises from the effects of the 'common distemper,' but which is often vulgarly termed 'hydrophobia.'" (I presume *rabies canina* is meant.)

<sup>5</sup> These fits of fury are not always attendant on rabies, if the animal be left to itself; but nervous excitability appears to be predominant more or less throughout the disease.

<sup>6</sup> From letter in the *Morning Post*, dated Sept. 11, 1887.

Any such marked insanity in distemper it has never yet been the lot of the author to observe, nor, as far as he can gather, has it been noted by any other veterinarian. Rabies and distemper are, in fact, as widely different in character and pathology as it is possible for two canine maladies to be. Those nervous symptoms which are frequently present in the subacute stages of distemper do not bear the slightest analogy to "rabid insanity," and only those inexperienced in the latter disease could mistake them.

An unusual affection has been described as another symptom, and whether the unfortunate creature being aware of its hopeless condition accounts for it, is only surmise. Certain it is such a manifestation is—especially in the earlier stages—very frequent.

Another symptom worthy of note and exceedingly characteristic, is the appetite. This invariably assumes a morbid character. Portions of wood, stones, earth, hair, excrement, and other filth are devoured, while the ordinary meal remains untouched.

The vomiting of blood in the early stage of the malady, described by some authors, is not by any means an invariable symptom of rabies. The sanguinary tinge of the vomit more frequently proceeds from wounds of the tongue or mouth than from any morbid condition of the stomach.

Lastly, when a dog unconfined becomes rabid, there is much that is characteristic in his mode of traveling. His gait may be termed as rambling, or jog-trot. The head is carried low, the tongue protrudes from the side of the mouth, or hangs pendent in front, swollen and covered with dirt. It is rare he turns from his path to attack anything (unless it be an animal of the same species, to which they invariably show the greatest animosity), but woe betide anyone who attempts to stay his onward course. This pace is continued with little intermission until exhaustion overtakes him, or it may be a fit, when he creeps into an obscure place, and lies in a fatigued or comatose state for hours.

Such, then, as I have endeavored clearly to describe them, are the leading symptoms of this horrible malady.

*Tranquil or Dumb Madness.*—The general symptoms in this form of rabies are much the same as in the preceding, with the exception of absence of voice, modification of nervous excitability, and paralysis of the muscles of the lower jaw. The latter is a curious and characteristic feature in this type of the malady. As I observed in Land and Water with regard to the Albrighton hounds, "No particular period can be given at which this symptom is observed. One at feeding time had refused its food, and in three hours after its jaw had dropped; another apparently well at night was found similarly affected the following morning, and, in fact, in many of them this paralysis was noticed before any other symptom."

Frequently in packs of hounds the two forms of rabies exhibit themselves simultaneously, and as inoculation from glands produces farcy, and vice versa, so ferocious madness may give rise to the dumb or furious form.

Maternal affection is not interfered with.<sup>8</sup>

*Post-mortem Appearances.*—These differ considerably: two in all particulars scarcely ever being alike. Indeed, the pathological anatomy of rabies appears to be as varied as it is obscure. The following may be taken as some of the chief conditions usually seen, but rarely combined:

Congestion of the brain, occasionally extending to the spinal cord.

Serous effusion within the membranes of both.

Hæmorrhage into the substance of the brain.

Inflammation of the fauces, glottis, upper portion of the trachea and glands of the throat, with enlargement of the latter. These structures are more particularly implicated in dumb madness.

Lungs frequently gorged with blood, especially if the animal has died from asphyxia.

Foreign matters in the posterior part of the mouth, in the stomach and intestines, as hair, straw, wood, earth, etc.

Or the absence of either, and the presence of blood, mucus or brown, coffee-colored fluid in the stomach.

Patches of inflammation in the lining membrane of the stomach and bowels.

Enlargement and inflammation of the mesenteric glands.

Enlargement and engorgement of the spleen and liver. The appearances in the brain, throat, and digestive organs form the most confirmatory evidence of rabies.

From the excellent and valuable annual report of the cases brought for observation on treatment to the Vienna Imperial Veterinary Institute, and published in the *Esterreichische Vierteljahresschrift für Wissenschaftliche Veterinarkunde*, for 1875,<sup>9</sup> we observe that in the session of 1873-4 there were no fewer than 125 dogs admitted as rabid, or suspected of being affected with rabies. Though some of the pathological alterations were so frequent that they could be accurately grouped, yet others were so inconstant that there could not be said to be any certain indication of the presence of the disease. In some were found alterations in the brain; in others, changes in the blood, lymphatic glands, and kid-

<sup>7</sup> Devouring the excrement has wrongly been described as an infallible sign of rabies. I say wrongly, because dogs in robust health will occasionally contract this disgusting habit, puppies in particular. Therefore, it is only to be taken cognizance of in connection with the other symptoms. Again, morbid appetites are often associated with some peculiar condition of the sympathetic nervous system, independent of rabies. This is especially to be observed in pregnancy. Strange and impossible gratification of fancies and desires fill the human mind, and the same idiosyncrasy exists in the lower animals. In-calf cows often devour leather, linen and other strange substances. Looking at it from another point of view, rabies coming under the class of nervous diseases, we should not be surprised at similar morbid appetites being present.

<sup>8</sup> The maternal affection for its young remains as strong in the rabid as it is in the healthy dog. M. Defays, a professor at the Brussels Veterinary School, gives an instance of a bitch that had three puppies, and two days afterward suddenly exhibited all the symptoms of rabies. Notwithstanding the severe attacks of the malady, the poor creature continued to suckle its young, and ran anxiously to them when they emitted the slightest cry; not being able to swallow any fluid, however, the secretion of milk was suspended, and the puppies died.

"But this event did not alter its desire to be near, and to fondle them, and to cover them over with straw, as if to hide them; it was only when complete paralysis had supervened that the unfortunate animal ceased to occupy itself with its dead offspring."

—*Annales de Méd. Vétérinaire*, Brussels, October, 1871. (Fleming.)

<sup>9</sup> From the *Veterinary Journal*, October, 1876.

neys; and in others, morbid manifestations in the digestive organs were met with. The malady prevailed as an epizooty, and animals of both sexes, various ages and breeds, when or whether bitten often unknown, were at different times brought to the Institute. Frequently little could be learned with regard to the animals which were brought dead, and even their condition previous to death could rarely be ascertained. With regard to the value of some pathological alterations in forming a judgment as to the presence of the disease, the following epitome is given of the result of the necroscopical examinations made of these animals:

a. Alterations in the brain. 1. Hæmorrhage into the subcutaneous tissue of the cranium of a suspected dog. 2. Hæmorrhage into the *dura mater* of two rabid and one suspected animals. 3. Injection of the *pia mater* and *plexus choroides* in 28 rabid and 2 suspected. 4. Hyperæmia of the brain in 2 rabid. 5. Softening of the brain in various degrees—from mere shining softness (*glazend und weicher sein*) to complete pulpy liquefaction—in 35 rabid and 2 suspected animals. Of these the whole brain was generally involved in 3 rabid cases; the cerebellum in 3 rabid, and 2 suspected; the upper surface and base of the brain in 1 rabid animal. 6. Distension of the lateral ventricles, through a collection of serum therein, in 10 rabid animals, 1 of which had the right ventricle unusually dilated, while the left was normal.

b. Alterations in the circulatory apparatus and the blood. 1. Pericarditis in 1 suspected dog. 2. Capillary hæmorrhage into the pericardium in 2 rabid cases. 3. Hæmorrhage beneath the endocardium in 1 rabid case. 4. Alterations in the blood alone in 83 rabid, and 28 suspected animals. The blood was of a light-red color in 13 rabid and 1 suspected; fluid in the heart in 2 rabid, slightly coagulated in 5 rabid, and with a dense whitish fibrinous clot in 6 rabid and 1 suspected dogs. The blood was dark red to black red (*schwarzroth*) in 70 rabid and 27 suspected. (a) In the heart it was quite fluid in 11 rabid and 4 suspected. (b) Slightly coagulated in 21 rabid and 11 suspected. (c) With a soft fibrinous clot in 9 rabid; and (d) it had a dense gray clot in 29 rabid and 7 suspected animals. Bacteria (*Stäbchen*) in the blood were in some cases numerous, in others few; in none were they very abundant. Anæmia was present in 4 rabid animals.

c. Alterations in the spleen and mesenteric glands were noted in 68 rabid and 11 suspected animals. 1. Lymphatic nodules in the spleen alone in 1 rabid creature. 2. Enlargement of the spleen alone in 25 rabid and 3 suspected. 3. Tumefaction of the mesenteric glands alone in 21 rabid and 6 suspected. 4. Enlargement of the spleen and mesenteric glands in 21 rabid and 2 suspected dogs.

d. Alterations in the respiratory apparatus in 86 rabid and 16 suspected animals. 1. Marked pallor of the mucous membrane of the larynx and trachea in 2 rabid and 1 suspected animals. 2. Intense injection of the same in 51 rabid and 8 suspected creatures. 3. General dark discoloration of the pharyngeal, laryngeal, and partially of the respiratory mucous membrane in 2 rabid and 1 suspected animals. 4. Capillary hæmorrhage at the entrance to the larynx in 1 rabid. 5. Capillary hæmorrhage in the laryngeal mucous membrane in 1 rabid. 6. Capillary hæmorrhage in the *pleura pulmonalis* in 1 suspected. 7. Bronchial catarrh in 3 rabid. 8. Pulmonary oedema in 11 rabid and 4 suspected. 9. Pneumonia at the border of some lobules—seldom involving entire lobes; and 10. Hæmorrhage into the thoracic cavity from gunshot wounds in 2 suspected cases.

e. Alterations in the digestive organs. 1. Injuries to the tongue in 1 rabid dog. 2. Foreign bodies in the mouth and throat of 1 rabid and one suspected. 3. Stomach empty in 19 rabid and 1 suspected. 4. Foreign matter in the stomach—hair, wood, straw, grass, leaves, soil, cherry-stones (and in one case a living horse-fly attached to the mucous membrane)—in 56 rabid and 21 suspected. 5. Foreign matter besides hair in intestines in 6 rabid and 3 suspected. 6. Blood in the stomach in 2 rabid. 7. Injection of the serous membrane of the stomach only in 43 rabid and 2 suspected. 8. Injection of serous membrane of the stomach and intestines in 3 rabid and 3 suspected. 9. Pallor of the gastric mucous membrane in 1 rabid. 10. General redness of the same in 6 rabid. 11. Patchy redness of the same in 2 rabid. 12. Hæmorrhagic erosions and ulcers in the same in 40 rabid. 13. Marked yellowness of the intestinal mucous membrane and contents of same in 4 rabid. 14. General redness, with tumefaction of the intestinal mucous membrane and tape-worm, in 58 rabid and 17 suspected. 15. Patchy redness of the mucous membrane of the small intestines, particularly involving Peyer's patches, in 27 rabid and 9 suspected. 16. Diverticular formations in 1 rabid animal.

f. Alterations in the urinary and generative organs. 1. Nephritis in one rabid and 1 suspected; 2. Cystitis and nephritis in 1 rabid; 3. Pregnancy, about three weeks, in a rabid bitch.

g. Alterations in the locomotory apparatus probably due to injury to the head, were discovered in 3 rabid and 13 suspected dogs.

In the Bericht über das Veterinärwesen in Sachsen, for 1874, Professor Siedamgrotzky has a paper on the pathological anatomy of rabies.<sup>10</sup> He remarks that the peculiar expression of the rabid dog's physiognomy has long been recognized as an essential part of the diagnosis, and that this characteristic indication is largely due to the dull, heavy eyes, which are so commonly partially covered by the membrana nictitans in rabies. Besides, the malady has a tendency to be accompanied by catarrh of the conjunctivæ, indicated by a collection of mucus in the inner canthus of the eye. Beyond this, there sometimes suddenly appear circumscribed opacities of the cornea, with breaking up of the texture in the center of these, and so leading to the formation of ulcers. This ulceration progresses so rapidly that in some cases the substance of the cornea is perforated within two days. These corneal ulcerations are not, however, very common; Siedamgrotzky had only observed them in six cases, in which two or three ulcers appeared in both eyes. They are not an accompaniment of only one form of rabies, but appear in both—dumb as well as furious. On a post-mortem examination, it is found that the ulcer has pene-

trated the cornea, in a conical manner, and that nothing but a thin layer of fibrin, or a blood coagulum in the anterior chamber, has prevented the escape of the entire contents of the organ. Examined microscopically, the corneal ulcer offers no essential difference from that witnessed in distemper: moderate cell-heaping in the vicinity of the ulcer, fatty degeneration of the corneal elements, and opening out of the interstitial substance; but nothing otherwise characteristic.

Siedamgrotzky at first believed that the alteration was produced by mechanical causes, but from close observation he is satisfied that it may appear in the quietest animals whose eyes have not been exposed to external injury. It is therefore not unlikely that an interruption in the nutrition is the cause; though not a general alteration in the nutritive function, but perhaps rather due originally to an alteration in the trophic nerves of the eye.

This explanation, of course, cannot be experimentally proved; but that it has some foundation in fact may be deduced by reference to the extensive derangement in the other nerve regions, particularly in the branch of the fifth pair supplying the lower jaw.

Alterations in the ophthalmic branch are likewise few when those of the maxillary are so—proving, apparently, that the lesion is central.

According to Professor Benedikt (Wiener Med. Presse, No. 74),<sup>11</sup> the disease is a special acute exudative inflammation of the brain, resulting in various forms of hyaloid degeneration, which is particularly observed in the neighborhood of the lenticular nucleus of the anterior lobe—often in this alone. Siedamgrotzky states that he has, in his examinations, been particularly careful to inquire into the correctness of this; and in some cases of "dumb madness" there was certainly a marked inflammatory condition of a portion of the brain about the fissure of Sylvius.

In the "Giornale di Anatomia," etc., edited by the veterinary professors at the University of Pisa, Rivolta gives the description of a careful examination he made of the brains of seven dogs which had perished from furious rabies transmitted to them by inoculation. The result goes to show that the pathological alterations in that organ consist mainly in more or less marked hyperæmia of the pia mater in the cerebral fissures, but especially at the base of the brain, and this hyperæmia is never absent from the cerebral plexus choroides; that softening of the cerebral substance is not frequent, though, on the contrary, the gray substance is constantly higher colored; and that perivascular infiltration of a fatty nature cannot be recognized as characteristic of this disease, as Rivolta has noticed it in other maladies.

In the "Centralblatt für die Medicin-Wissenschaften," Kolesemkoff reports the results of the examination of ten mad dogs made in Rudneff's pathological laboratory at St. Petersburg. The parts examined were the cerebral hemispheres, the corpora striata, thalami optici, cornua ammonis, cerebellum, medulla oblongata, medulla spinalis, and the sympathetic and spinal ganglia. The changes were always most marked in the ganglia, and were as follows: 1. The vessels were much distended and filled with red corpuscles. Here and there along their course were seen groups of red corpuscles, and round indifferent elements (probably emigrated white corpuscles) scattered in the perivascular spaces. The walls of the vessels were spotted with hyaloid masses of various forms, sometimes extending and obstructing the lumen of the vessel-like thrombi. Not far from these were collections of white and red corpuscles. 2. There was found to be a collection of round, indifferent elements in general around the nerve cells, sometimes penetrating into the protoplasm of the cells to the number of five or eight; sometimes in such number as quite to displace the cell protoplasm. The number of migrated cells produced various changes in the form of the nerve elements. The nuclei of the cells were sometimes pushed forward towards the periphery by the intrusive elements. In other cases the nerve cells seemed entirely replaced by masses of round, indifferent corpuscles. These changes were seen even in isolated nerve cells. The author points out the analogy of these changes to those described by Popoff in enteric fever and injuries.

With regard to the innocuousness of the milk derived from rabid animals, there is a conflict of opinion. Cases, however, are on record both of human beings and the offspring of animals becoming affected through partaking of milk secreted by hydrophobic and rabid subjects; but many of these cases, it must be confessed, are involved in doubt.

Mr. Fleming, in his work on "Rabies and Hydrophobia," observes: "The influence of the milk obtained from animals supposed to be infected with rabies has received much attention, and, as in the case of the flesh, the facts relating to its virulence are negative and positive. Among the negative facts, however, those must be distinguished which have reference to the milk derived from animals only bitten by mad dogs, and those really affected with the disease.

"Andray reports that peasants affected have used, for more than a month, the milk of a cow which was wounded by a mad dog, without experiencing any inconvenience."

"An infant fed on the milk of a goat until the day the animal became mad, remained in perfect health. And, what is more striking, another child drank the warm milk drawn from a rabid cow, and no ill effects followed. The veterinarian, Gellé, has stated that he was commissioned by the Préfet of the Haute-Garonne to inquire into an occurrence reported from the commune of Gagnac, near Toulouse, in which several persons had drunk the milk of a rabid cow every day from the commencement until the fatal termination of the disease. Though some of them were plunged into the greatest terror, none were affected with the disease.

"The experiments made by Baumgarten and Valentin concord with the observations made by Gellé; they are also confirmed by the researches instituted by Baudot, who, a great number of times, noted that neither the milk nor butter obtained from rabid cows produced unpleasant effects on whole families who had consumed these articles of food."

<sup>10</sup> From the Veterinary Journal, October, 1876.

<sup>11</sup> Recherches sur la Rage, Paris, 1781.

<sup>12</sup> Mémoires de la Soc. Royale de Médecine, Vol. II., p. 211.

"At the Alfort Veterinary School, a ewe which had been wounded by a rabid dog was soon after delivered of twin lambs, which of course it suckled. Twenty-one days after the infliction of the bite the ewe became rabid, and died, but the lambs did not manifest any signs of the disease.

"The only positive statement I can meet with as to the milk of a mad dog producing rabies, are the following: Scranus of Ephesus, the most distinguished disciple of the Methodic School of Medicine, averred that infants at the breast are sometimes attacked with hydrophobia." Balthazar Timæus speaks of a peasant, with his wife and children, as well as several other persons, becoming rabid through drinking the milk of an affected cow. Eleven of these died; but the peasant and his eldest child were restored by medical treatment—a circumstance which might tend to throw some doubt on the occurrence. Faber mentions instances in which the milk has proved injurious. An observation made by M. Dussort, and quoted by Roucher, offers a very probable instance of transmission by the milk of a hydrophobic patient. This was the case of a negress in Algeria, whose child died presenting symptoms similar to those of the mother before she perished. In the same country, however, M. Hugo relates the case of a rabid bitch, whose puppies were suckled by her and remained in good health. But, again, an instance is given in Cassell's Magazine for July, 1871, in which the puppies suckled by a mad bitch also became rabid."

Treatment.—After what I have already said, it is almost needless to add that I believe treatment, according to past and so far as present experiments have gone, to be of no earthly use; and no man having any regard for his life, however valuable that of his dogs may be, would, I imagine, risk it in administering all the talked-of remedies that have from time to time cropped up.

Prevention is at all times better than cure, and when rabies makes its appearance in a kennel, isolation of the apparently healthy or unbitten ones I strongly recommend, until a sufficient period has elapsed to prove they have escaped inoculation. With regard to ourselves, all dog bites, as a precautionary measure, should be treated as if they were inflicted by a rabid animal—i. e., by immediate suction, followed by the application of the actual caustic nitric acid, or pure carbolic acid. When rabies is suspected, the suction should be directly followed by complete excision of the wound, performed as quickly as possible; after which, without loss of time, the caustic or acid should be freely used. Compression above the wound, especially in the first instance, is also valuable.

Failing the adoption of these measures or even accompanying them, the Russian or Turkish bath should, if possible, be immediately had recourse to, and in the absence of such measure, free and intense perspiration should be promoted by other means, such being the most efficacious treatment at present known. Whatever contrary opinions may be expressed, the remedy, if considered useless, is harmless, i. e., the bath cannot produce hydrophobia or rabbit paralysis; whereas Pasteur's system of inoculation can, and, unfortunately, has done.

I also advise a powerful stimulant before taking the bath, and subsequently full doses of chlorate of potash and iron.

The same measures, excepting the baths and the suction, which might be done with a cupping glass, will apply to a dog bitten under suspicious circumstances.

An antiquated idea, which, unfortunately, still prevails, is that the danger arising from the bite of a dog supposed to be mad can only be averted by the death of the animal. This is an egregious mistake. A dog must be infected with rabies before it can produce "hydrophobia." Again, if a dog, after biting a person, is at once destroyed before being examined by a qualified canine veterinary surgeon, the mind of the wounded individual may be in a state of continual disquietude, from the oft-recurring thought that the dog may have been mad, and this painful and haunting uncertainty acting upon a highly nervous temperament is not unfrequently productive of a fatal issue from hysteria and nervous exhaustion, so often wrongly reported as "hydrophobia." My advice has always been to let a dog which has been guilty of biting be fully secured until the maximum period of incubation has passed; then, if he is in perfect health, or free from rabid symptoms, the mind of the injured person will be relieved, and the animal, if still desired, can then be destroyed—not with the policeman's truncheon, but with chloroform. In a few instances when I have appeared in court to plead this arrangement, and even volunteered to take personal charge of the dog, I have met with opposition, and unnecessary terror and anxiety to the bitten individual has been the consequence, but a sensible magistrate will always see the wisdom and humanity of granting such an application, and even advocating it to the injured person.

There is no such disorder as "epileptic rabies," which was alleged, during the recent London scare, to exist. Such an allegation is not only misleading, but purely imaginary on the part of the originator. Canine rabies is a specific disease and has no concomitant malady.

<sup>13</sup> Cæc. Aurelianus, Op. cit., lib. iii., cap. 2.

<sup>14</sup> "A friend of mine once owned a favorite terrier, which had recently littered five puppies, and as she was kept constantly in his garden, she could not possibly have been bitten for some considerable time. But she suddenly displayed unmistakable symptoms of madness, and ran up and down the garden, with the saliva flying from her jaws, and her head twitching from side to side, as the heads of all mad dogs do. \* \* \* But, even in her frenzy, her maternal instinct was too strong, and she ran back to her kennel, and began suckling her puppies. \* \* \* Here is the strangest part of the story, and to me it seems very pathetic; all her little puppies were raving mad, too, and the foam hung in flakes about their mouths, and their poor little heads twitched, just as the mother's had done. They had sucked in madness with the milk, for she had not bitten any of them. This was, in my experience at least, a new feature in the history of hydrophobia."

### Points and Flushes.

Entries to the Manitoba Field Trials Club Derby are announced to close on July 1. This stake is for setters and pointers whelped on or after January 1, 1903. Forfeit, \$5; \$10 to start. Purse, \$400; 1st, \$175; 2d, \$100; 3d, \$75; 4th, \$50. Entries of the All-Age Stake close August 1. Forfeit, \$5; \$1,000 for starters. Nominations for the Champion Stake must be on or before August 1. The Honorable Secretary is Mr. Eric Hamber, Winnipeg, Manitoba.

# YACHTING

## Yachting Fixtures for 1904.

Members of race committees, and secretaries, will confer a favor by sending notice of errors or omissions in the following list, and of changes which may be made in the future.

### JUNE.

Boston, Mass. Y. R. A., City Point, Boston.  
Knickerbocker, L. I. Sound Y. R. A., annual, College Point.  
Corinthian, club race, Marblehead.  
Manhasset Bay, L. I. Sound Y. R. A., annual, Sand's Point.  
Columbia, power boats, Hudson River.  
New York, annual regatta, Lower Bay, N. Y.  
Boston, Mass. Y. R. A., Hull.  
Larchmont, spring regatta, Larchmont.  
New York, Lysistrata cup, Sandy Hook Lightship.  
New Rochelle, power boats, New Rochelle.  
Squantum, Mass. Y. R. A., open, Squantum.  
New York, special races, Glen Cove.  
New York, power boats, Glen Cove.  
New York, Glen Cove cups, Glen Cove.  
American Power Boat Ass'n, challenge cup, Hudson River.  
American Power Boat Ass'n, challenge cup, Hudson River.  
Corinthian, club race, Marblehead.  
Seawanhaka, L. I. Sound Y. R. A., annual, Oyster Bay.  
New York Athletic Club, ocean race, Long Island Sound.  
American Power Boat Ass'n, challenge cup, Hudson River.  
Manhasset Bay, challenge cup series, L. I. Sound.  
Manhasset Bay, challenge cup series, L. I. Sound.  
Manhasset Bay, challenge cup series, L. I. Sound.

### JULY.

American, L. I. Sound Y. R. A., annual, Milton Point.  
Corinthian, club race, Marblehead.  
Brooklyn, ocean race, New York to Marblehead.  
New Rochelle, L. I. Sound Y. R. A., annual, New Rochelle.  
American, power boats, Milton Point.  
Eastern, open race, Marblehead.  
Eastern, squadron run to Gloucester.  
Corinthian, invitation race, Marblehead.  
Eastern, special open, Marblehead.  
Larchmont, annual Larchmont.  
Hartford, L. I. Sound Y. R. A., annual, Fenwick.  
Indian Harbor, power boats, Greenwich.  
Eastern, power boats, Marblehead.  
Eastern, start of ocean race, New York to Marblehead.  
New York, Glen Cove series, Glen Cove.  
New York, Glen Cove series, Glen Cove.  
Boston, club race, Marblehead.  
Riverside, L. I. Sound Y. R. A., annual, Riverside.  
New York, Glen Cove series, Glen Cove.  
Manhasset Bay, special club, Manhasset Bay.  
Eastern, power boats, Marblehead.  
Bay State, Mass. Dory Association, Revere.  
Manhasset Bay, challenge cup series, Sand's Point.  
Manhasset Bay, challenge cup series, Sand's Point.  
Manhasset Bay, challenge cup series, Sand's Point.  
Eastern, annual regatta, Marblehead.  
Eastern, rendezvous for cruise.  
Larchmont, race week, opening, Larchmont.  
Atlantic, power boats, Sea Gate.  
Eastern, cruise to Gloucester.  
Winthrop, Mass. Y. R. A., Winthrop.  
Swampscott, Mass. Dory Ass'n, Swampscott.  
Eastern, cruise to Isles of Shoals.  
Larchmont, race week, Larchmont.  
Eastern, cruise to Peak's Island.  
Larchmont, race week, Larchmont.  
Eastern, cruise to Booth Bay.  
Larchmont, race week, Larchmont.  
Eastern, cruise to Islesboro.  
Larchmont, race week, Larchmont.  
Eastern, cruise to Bass Harbor.  
Larchmont, race week, Larchmont.  
Eastern, cruise to Bar Harbor.  
Corinthian, club race, Marblehead.  
Larchmont, race week ends, Larchmont.  
Hartford, L. I. Sound Y. R. A., special, Fenwick.  
Manhasset Bay, power boats, Manhasset Bay.  
Eastern, regatta at Bar Harbor.  
Boston, Mass. Y. R. A., Hull.  
Boston, midsummer series, M. Y. R. A., Hull.  
Quincy, Mass. Y. R. A., Hull.  
Boston, midsummer series, M. Y. R. A., Hull.  
Indian Harbor, L. I. Sound Y. R. A., annual, Greenwich.  
Atlantic, power boats, Sea Gate.  
Eastern, power boats, Marblehead.

### AUGUST.

Eastern, special open, Marblehead.  
Boston, Mass. Y. R. A., Marblehead.  
Corinthian, midsummer series, Marblehead.  
Corinthian, midsummer series, Marblehead.  
Loyal St. Lawrence, Seawanhaka cup match, Lake St. Louis, Canada.  
Lass. Racing Dory Association, Marblehead.  
Corinthian, midsummer series, Marblehead.  
Loyal St. Lawrence, Seawanhaka cup match, Lake St. Louis, Canada.  
Lass. Dory Racing Association, Marblehead.  
Corinthian, invitation race, Marblehead.  
Loyal St. Lawrence, Seawanhaka cup match, Lake St. Louis, Canada.  
Hempstead Harbor, L. I. Sound Y. R. A., annual Hempstead Harbor.  
Shelter Island, L. I. Sound Y. R. A., annual, Shelter Island.  
Larchmont, power boats, Larchmont.  
Lass. Dory Racing Association, Marblehead.  
Manchester, Mass. Y. R. A., West Manchester.  
Manchester, Crowhurst cup, West Manchester.  
Boston, club race, Marblehead.  
East Gloucester, Mass. Y. R. A., Gloucester.  
New York, special races, Glen Cove.  
New York, rendezvous for annual cruise, Glen Cove.  
Annisquam, Mass. Y. R. A., Annisquam.  
New York, annual cruise to Morris Cove.  
Annisquam, Mass. Y. R. A., Annisquam.  
Orseshoe Harbor, L. I. Sound Y. R. A., annual, Larchmont.  
Bridgeport, L. I. Sound Y. R. A., annual, Black Rock.  
New York, annual cruise to New London.  
Annisquam, dory races, Annisquam.  
New York, annual cruise at New London.  
New York, annual cruise to Block Island.  
New York, annual cruise to Vineyard Haven.  
Corinthian, club race, Marblehead.  
New York, annual cruise to Newport.  
Eastern, special open, Marblehead.  
New York, special races, Newport.  
Eastern, special open, Marblehead.  
New York, Astor cups, Newport.  
Boston, club race, Hull.  
Uguenot, L. I. Sound Y. R. A., annual, New Rochelle.  
Northport, L. I. Sound Y. R. A., annual, Northport.  
Hartford, L. I. Sound Y. R. A., special, Fenwick.

20. New York, start of ocean race, Newport.  
20. New York, steam yacht races, Brenton's Reef.  
20. Brooklyn, power boats, Gravesend Bay.  
22. New York, Newport series, Newport.  
23. New York, Newport series, Newport.  
24. New York, Newport series, Newport.  
25. Plymouth, Mass. Y. R. A., Plymouth.  
26. Duxbury, Mass. Y. R. A., Duxbury.  
27. Duxbury, Mass. Y. R. A., Duxbury.  
27. Corinthian Stamford, L. I. Sound Y. R. A., annual, Stamford.  
27. Larchmont, power boats, Larchmont.  
27. Wellfleet, Mass. Y. R. A., Wellfleet.  
30. Wellfleet, Mass. Y. R. A., Wellfleet.

### SEPTEMBER.

1. Cape Cod, Mass. Y. R. A., Provincetown.  
2. Cape Cod, Mass. Y. R. A., Provincetown.  
3. Indian Harbor, L. I. Sound Y. R. A., fall, Greenwich.  
3. Hartford, L. I. Sound Y. R. A., special, Fenwick.  
3. Manhasset Bay, special club, Manhasset Bay.  
3. Larchmont, club race, Larchmont.  
3. Cape Cod, Mass. Y. R. A., Provincetown.  
5. Lynn, Mass. Y. R. A., Nahant.  
5. Larchmont, fall regatta, Larchmont.  
5. Norwalk, L. I. Sound Y. R. A., annual, Norwalk.  
5. Sachem's Head, L. I. Sound Y. R. A., annual, Sachem's Head.  
5. Indian Harbor, club races, Greenwich.  
8. New York, autumn cup, Glen Cove.  
10. Seawanhaka, L. I. Sound Y. R. A., fall, Oyster Bay.  
10. Larchmont, club race, Larchmont.  
11. Mass. Y. R. A., rendezvous at Hull.  
17. Manhasset Bay, L. I. Sound Y. R. A., fall, Sand's Point.  
24. Riverside, L. I. Sound Y. R. A., fall, Riverside.

## Gloriana and her Rivals.

Editor Forest and Stream:

When gross exaggerations, calculated to greatly injure the reputation of famous boats and their designers and skippers, happen to get into print and receive a wide circulation, unless contradicted and corrected in time by some one well acquainted with the facts, they are pretty apt to be accepted everywhere eventually as true and reliable.

A couple of years since, in a lecture before the "Yachtsman's Club" of New York, a well-known yachtsman made the claim for Gloriana that in her very first race she beat her rivals by the immense margin of thirty minutes! To make matters still worse, he told his hearers that no less than eight of her new rivals had been designed by that great designer.

The hearers of this speaker were allowed to infer that in the first race Gloriana met all of these eight Burgess rivals and all of her other rivals and beat every one of them by at least thirty minutes, and of course, that this wonderful victory, at the very beginning of her career was but as nothing compared with some of her later achievements.

But what are the facts?

1. Burgess designed but five, not eight, boats to meet the Gloriana. One of these—the Ilderim—did not meet the Gloriana at all in 1891. The two fastest met her but once or twice, at the close of the season, and only one of the least successful of them met her in the earliest races.

2. But if Gloriana did not meet eight Burgess boats in her first race, neither did she meet eight new boats all told in that race, nor the half of eight, but only one or two of what proved to be her least successful rivals.

3. But these one or two slow rivals—such as they were—did Gloriana in her first race beat either or both of them by thirty minutes? By no means. She did not beat both of them, and she did not beat either of them by thirty minutes. Nor did she in any race that season—her first and most successful season—beat a single one of even her most unlucky or most unsuccessful competitors by thirty minutes.

4. And, if she was not thirty minutes faster than her slowest rivals, neither was she twenty, nor, as a rule, fifteen minutes faster. Nor was she anything like even ten minutes faster than boats built on either side of the water the same year or earlier.

Fife's Jessica was a year older than Gloriana—had about 1,300 feet less sail—was built strongly, for crossing the ocean on her own bottom—probably was handled a little less superbly than Gloriana—and yet, in four races out of seven in 1891, Gloriana's corrected margins only ranged from five to nine minutes, and only averaged about seven minutes and a half.

Fife's Uvira was a year older than Gloriana; of much heavier construction, much smaller in racing measurement, and had about 1,400 feet less sail. But neither in 1891 nor in their only subsequent race did Gloriana succeed in beating Uvira by a corrected margin of even five minutes.

When Uvira met Gloriana in 1891, the little Fife wonder had as yet done no serious racing, was almost wholly unknown to her owner, had been in the water all summer, without being hauled out for cleaning, and was probably ten minutes slower than when at her best in 1895. Nevertheless, had the time allowance then been as large as the present allowance of the N. Y. Y. C., then, without any change in the measurements, Uvira would have beaten Gloriana in their very first race.

Had Gloriana met Uvira in 1895 it is almost certain that she would have been beaten by the older Fife boat in every race, for Gloriana never began to make so good a showing against Wasp, over regular courses, as Uvira did in 1895.

In Uvira's first race in 1895 (June 11) FOREST AND STREAM credits her with having beaten Wasp and the whole fleet on actual time.

But it was not till June 24 that Uvira for the first time, and only time when owned by Mr. F. P. Sands, was actually pitted against Wasp for a race over a regular course. Wasp covered the thirty-mile course inside the limit for an American cup race, but Uvira won by a margin of nearly five minutes, and that, too, by the regular sixty per cent. time allowance.

Compare this with Wasp's beating Gloriana fourteen minutes in a short race of twenty miles in 1894, twenty-four minutes in a twenty-five mile race the same year, and thirteen minutes in a good twenty-five mile race in 1892.

In no year has Wasp failed to beat Gloriana over regular courses twice as badly as ever she beat Uvira when owned by Mr. Sands, and racing over the same regular course in the same or a different class!

As for Fife's Barbara, built the same year as Gloriana, but with considerably less sail, she was not at her best in 1891, but in 1892 broke down when far ahead of Gloriana in their first race, and allowing for a handicap at the start in their second race, Barbara beat Gloriana on corrected time by ten seconds. It was a good, fair race.

In 1897 Gloriana and Barbara met for the last time. The race was over a thirty-two-mile course—sixteen miles of windward work, in a strong wind. Barbara beat Gloriana about twenty-one minutes! Of course, Gloriana was not at her best, but had she been she would have found Barbara a hard boat to beat.

Wasp has repeatedly beaten Gloriana, much worse than ever she beat Barbara. On the other hand, Barbara has beaten larger boats of her own class, much worse than Gloriana has beaten such boats.

Quite recently the statement was published in a New York paper that Gloriana was a fast as English sixty-footers built seven years later. How absurd! Fife's Kestrel is only six years newer than Gloriana—is much smaller than Gloriana—and is only a racing cruiser, with too little draft for an out and out racer. But in her last three races over the same course as Gloriana the little Fire cruiser beat the big Herreshoff racer on actual time! Both over a regular course and in squadron runs Kestrel beat Gloriana on actual time.

Queen Mab is an English sixty-footer, not seven, but only one year newer than Gloriana.

In June, 1894, they raced over a twenty-mile course. Queen Mab beat Gloriana about fourteen minutes actual time and seven minutes corrected time!

In the Golet cup race the same year Queen Mab beat Wasp fifteen and Gloriana twenty minutes actual time.

In the fastest thirty-seven mile squadron run in which both Queen Mab and Gloriana figured, the famous Watson sixty-footer beat the famous Herreshoff forty-six footer by a margin of thirty-three minutes actual time, and of about eighteen minutes corrected time—or in distance about five miles!

Gloriana was "a wonder," but there have been others!

JOSEPH J. PARKER.

BOSTON, Mass.

JAMAICA BAY Y. C. SCHEDULE.—The regatta committee of the Jamaica Bay Y. C. has arranged for the following races:

June 12—Race for power boats.  
June 26—Race for all classes.  
July 10—Race for all classes.  
July 24—Special race for power boats.  
July 31—Race for cabin and open catboats.  
August 14—Race for cabin cats and launches.  
August 21—Race for all classes.

\*\*\*

ENGRAVING OF RELIANCE.—Messrs. John A. Lowell & Co., the well-known engravers of Boston, have recently produced a very fine engraving of the Cup defender Reliance. The plate was made from a picture painted by Mr. Marshall Johnson, of Boston. It represents Reliance close-hauled on the port tack. The artist's painting has been followed closely, and the result in black and white is most satisfactory.

\*\*\*

LAUNCH COMMODORE NEARLY COMPLETED.—Commodore is the name chosen for a new power boat building at the works of the New York Kerosene Oil Engine Company for A. A. Low, of Brooklyn. The craft is 50ft. over all, 7ft. beam, with a draft of 3ft.

\*\*\*

ST. CLAIRE LAUNCHED.—The 21-footer that was built at Wood's yard, City Island, for Mr. C. H. Walker, of Chicago, has been launched. The boat was designed by Mr. Clinton H. Crane, of Messrs. Tams, Lemoine & Crane. She was named St. Claire, and will be a competitor in the races for the Lipton cup. St. Claire is a very likely looking boat, and we expect her to do well in the races for the Lipton cup. She has been shipped to Chicago by rail.

## Detroit Boat Club Yachtsmen.

ABOUT three miles above Detroit, on the banks of the river of that name, is situated the home of the Detroit Boat Club Yachtsmen. No better site could have been selected for the home of a yacht club. The conditions for all branches of aquatic sports are almost perfect, and the natural scenery is very beautiful. The river at this point is more than a mile wide, with a depth sufficient to float yachts of large size. The river has great possibilities for the power boat man, especially those inclined toward speed.

The Detroit Boat Club Yachtsmen were organized June 28, 1899. The object was to bring together those members of the Detroit Boat Club who were interested in yachting in such a way as to promote the welfare of the sport and increase its popularity in and about Detroit. Shortly after the club's organization, application was made for membership in the Interlake Yachting Association, and after a reasonable time it was admitted.

The first commodore was Mr. John C. Shaw, one of the most prominent fresh-water yachtsmen; and under his able guidance, the organization began to flourish. Commodore Shaw served the club for two years and part of a third. He was untiring in his efforts to push the club to the front and make it a factor among yachting organizations. In this, he was successful, and much of the credit for the strong financial foundation upon which it was constructed belongs to him. Commodore Shaw was succeeded by Mr. John H. Smedley, who served the club for two years. Commodore Smedley, like Commodore Shaw, was a hard and persistent worker, and during his regime the club continued to grow.

At the annual meeting of the Interlake Yachting Association this year Commodore Smedley was elected to the high office of that Association, and he therefore resigned from the office he held in the club. When the club held its annual election, Mr. John L. Dexter was unanimously chosen to succeed Commodore Smedley. Commodore Dexter is popular not only with the members of his own club, but with the other clubs as well, and has done much to bring the four Detroit organizations in closer and more friendly relationship. During the first year of its career the club had two catboats built for the use of its members. These little boats were thoroughly enjoyed, until they were burned in a conflagration which completely destroyed the beautiful home of the club. This fire occurred in the fall of 1901.

Although the assets of the Detroit Boat Club Yachtsmen were entirely wiped out by this disaster, the members set to work with a will, and by the ensuing spring had their magnificent home ready for occupancy, and three new catboats constructed. These catboats were built from a design furnished by Mr. Wm. E. Dyer, a club member, and were much of an improvement over their predecessors. In 1903 three more boats were constructed, but two, however, had to be rejected on account of inferior workmanship and material. The contract was recently let for two more of these boats, so that by the opening of the season there will be a fleet of six one-design boats. Regular club races for these little fellows are scheduled during the season. The course laid out is a small one, and is only sailed around once. This constitutes a heat, and a certain number of percentage points, according to the position in which the boat finished is credited, not to the boat, but to the man who sailed her. Instead of entering the boats in a race, those desiring to enter the contests, have to enter their own names. The courses being short, as many as six heats have been sailed in a day, and in each event a new skipper officiates. At the end of the season prizes are awarded the best sailors, according to their rating or percentage. The prizes

given the successful competitors are rather unique, but useful, and consist of oilskins, sweaters, sou'westers, boots, etc., for the individual races, and for the season's honors, silver cups and other trophies of value.

One of the achievements of the club was the formation of the syndicate of fifteen in the spring of 1900 to build a yacht to contest for the Canada's cup. The boat was built by the Hanley Construction Co., of Quincy, Mass., and delivered to the Yachtsmen early the following summer. She was named *Cadillac*, and as she is so well known, little need be said of her career as a racing craft.

In order to encourage the building of a seaworthy class of boats, adapted for afternoon sailing on the Detroit River, and at the same time useful for short cruises, the Yachtsmen have just adopted restrictions for a 16ft. knockabout. These restrictions are practically the same as those in use by the Lake Skiff Sailing Association of Lake Ontario. The Yachtsmen are now making an effort to induce as many as possible of the other clubs in their vicinity to adopt the same rules, so as to secure some amount of uniformity in the classes below 21ft., and their efforts promise to be successful.

The present membership of the Yachtsmen numbers more than one hundred and is increasing rapidly from year to year. All members of the Detroit Boat Club are eligible to membership. While a great many of the trophies, along with the boat club proper, were destroyed in the fire of 1901, a number of handsome cups and flags have been acquired since that time. The Yachtsmen are now getting out a very handsome souvenir booklet, containing a short history of the club, its constitution and by-laws, a list of the members, the restrictions governing the new 16ft. cabin class, a description of the catboats, and rules governing catboat racing, and an announcement of the principal regattas for the season of 1904.

The home of the Detroit Boat Club was designed by Mr. Alpheus Williams Chittenden, a well-known architect of Detroit. The club house is a most practical and handsome structure and compares most favorably with any of the large yacht or country clubs in the East.

## British Letter.

THE news that the Watson yawl *Sybarita* has been sold to an American owner, Mr. W. Gould Brokaw, brings up the much debated question as to her powers of speed, which have been variously described by different writers. Perhaps no large racing yacht of recent years has been so little tried under favorable conditions as *Sybarita*, and her career as a first-class racer has been so patchy and meteoric that it is very difficult to get a true idea as to how she would rank in all weathers with the German Emperor's famous old yawl, *Meteor*, or Mr. Kenneth Clark's cutter *Kariad*.

*Sybarita*, it may be remembered, was built in 1900 for the late Mr. Whittaker Wright, and she first hoisted fighting colors in Kiel Harbor in June of that year, when she sailed a series of six or seven races, in which her chief opponent was *Meteor*. As the writer was present at the Kiel regattas of that year, and as he sailed on board *Sybarita* on more than one occasion, perhaps his opinion of the relative merits of the two vessels may be considered interesting. *Sybarita* carried away her topmast at the commencement of the first race, and of course gave up; in the remainder of the matches she led *Meteor* home every time, but in the last one, off Travemünde, she was only about half a minute ahead at the finish. The weather was for the most part light, and in very soft airs *Sybarita* showed a distinct superiority. In moderate breezes there was little difference between the two, but at times *Meteor* appeared decidedly faster, especially to windward. The two boats never met in a blow, and the only time *Sybarita*

was highly tried by wind and sea was in a private race round Ailsa Craig against *Kariad*. Both vessels started with two reefs down and *Kariad*, in spite of her inferiority in size (and rig for such hard weather), hung on to *Sybarita* in a wonderful way over two-thirds of the course. The yawl, however, shook out a reef in the free reach home, and just managed to beat her gallant little rival by a narrow margin. *Sybarita* won, but by so little that it may be considered a moral defeat, in view of the disparity in size of the boats and the conditions of weather, and there can be little question that had *Meteor* been there she would have been many minutes ahead of both. *Sybarita* subsequently became the property of Mr. Myles B. Kennedy, and sailed a score or more of races against *Kariad* in the Mediterranean in the spring of 1901. However, the vessel was badly sailed, and lost nearly every race. She had not the advantage of a first-class skipper or crew, and cut a very different figure at the Riviera regattas, and subsequently in a few home races, to what she did in her first season in the able hands of Charles Bevis and a strong crew, and Mr. Kennedy threw up racing with her long before the season was out. The probability is that *Sybarita* is the fastest light weather vessel Watson ever turned out, *Kariad* perhaps excepted, but we think that the stronger the wind the less marked will be her superiority among vessels of her own class. However, if the news is true that her new owner intends to race her at all the principal British handicap races during the season, and that Robert Gomer is to have charge of her, we shall be able to get a very good line as to her qualities before the season is out. It may be said that *Sybarita* is a handsome vessel, and is very comfortably fitted below.

In giving a list of noteworthy new vessels in our last letter, omission was made of an important addition to the handicap fleet in the shape of the new Nicholson cutter, *Merrymaid*. This vessel was launched at the end of April, and should be an acquisition to the fleet. She is 98ft. over all, 68ft. 10in. on the waterline, breadth 18ft., and draft of water just over 12ft. She is very strongly built, with wooden frames, strengthened where necessary with steel, planked with teak, and has been built with a view to comfort as well as speed, for she is very well fitted up below. Her tonnage is 106 tons. *Merrymaid* will probably make her debut in the London River matches.

It seems practically certain that the German and Ostend regattas will cut pretty badly into the Clyde fortnightly again this season. Of course, it cannot be denied that the foreign regattas offer different attractions than the home races, and make a very pleasant form of holiday for the busy man if he is able to spare the time to attend them, but it does seem a thousand pities that the ancient glory of the Scotch races should be dimmed by the defection of British owners, for the absence of a good fleet from the Clyde means a good deal more than a mere reduction in spectacular effect; it means loss of prestige to the fine old sporting clubs of the North, and a great loss of trade to the shopkeepers of the vicinity, which is in itself a serious thing. It seems probable that neither *Borea* nor *Oaldora* will this year be present on the Clyde, and as they made the backbone of the racing in the big class last season, it is difficult to see how a collapse of the class can be averted. Perhaps something may yet be done to avert such a disaster, but so far it does not look likely.

E. H. KELLY.

SECRETARY ATLANTIC Y. C. RESIGNS.—Owing to ill health, Mr. T. Alfred Vernon, secretary of the Atlantic Y. C., has resigned from office.

\*\*\*

DEATH OF WILLIAM A. HAMILTON.—Vice-Commodore William A. Hamilton, of the Riverside Y. C., died at his residence in New York city on Tuesday, May 24.

DETROIT BOAT CLUB—EXTERIOR VIEWS.

DETROIT BOAT CLUB—INTERIOR VIEWS.

## Gas Engines and Launches.

BY F. K. GRAIN.

(Continued from page 408.)

### Four-Cycle Engines.

Four-cycle engines, as we explained before, have an impulse of the piston at every other complete revolution of the crank. In order to accomplish this the sparking and valve movements are actuated by what is termed the time shaft, which, by the simple system of gearing, is actuated once for every second turn of the engine, producing these results. The engine being on the upper center, the charge is ignited and the piston descends. Before reaching its lower center, the inlet valve is opened from a movement of the time shaft, allowing the burnt gases to escape. It is then held opened while the piston is making the entire up stroke, expelling all the burnt gases and thoroughly scavenging the cylinder. It then admits the new charge of gas on the down stroke. When the piston returns, this charge is compressed and ignited. This operation, where the engine is working full load, gives an impulse of the piston at every other revolution. Where a governor is employed, if the full power of the engine is not consumed, the governing is accomplished by the governing device holding the exhaust valve open, when no charge is required, and of course under these conditions, the cylinder will form no vacuum, and consequently take no charge.

### Valves—Proportions.

In the four-cycle engine it is necessary to have valves which are under control, and the Poppet valve is now universally used. In all cases the exhaust valve is mechanically operated, but in the majority of marine engines the inlet valve is operated entirely by the suction of the piston, and while this method is very simple and dispenses with the necessary device to operate it mechanically, from an economical standpoint it is bad practice, as of course the spring which seats the valve will govern to a great extent the quantity of mixture admitted, whereas with a positive opening valve, the exact amount is taken in every time. The four-cycle engine, taking an impulse at every other revolution, requires, in order to develop the same power as the two-cycle engine, an increase about one-third in the area of the cylinder, and also necessitates a heavier fly wheel in order to maintain its efficiency while passing the idle stroke and to overcome the compression of the larger area of the cylinder.

### Reversing Mechanisms.

Unlike the two-cycle engine, the four-cycle, on account of its valve mechanism, cannot successfully be designed to operate in either direction; therefore, we have to depend entirely on a mechanical reverse gear, and as it is also more difficult to bring it to its full power in starting, the method usually employed is a combination clutch and reversing mechanism, allowing the engine to be started independent of the propeller shaft. These mechanisms are generally built on to and as a part of the after end of the engine frame. Of course, this mechanism being not only heavy but bulky, makes the engine unsuitable for installation in the extreme stern of the boat. All the leading reversing gears contain a number of gears, and are therefore not only noisy, but liable to wear rapidly and require careful handling. Very few of these devices can be reversed at full speed, it being necessary to slow down the engine preparatory to reversing.

### Compression.

It is usual, in order to add to the power, to operate the four-cycle engine from 10 to 20 pounds higher compression than the two-cycle. Of course, in the four-cycle engine, there being no necessity for an air-tight base, it allows of the crank shaft being more accessible; and as this is one of the vital parts on any engine, it gives this type a decided advantage.

### Comparative Efficiency.

The advantages and disadvantages and efficiency of these two types of engines have almost been argued threadbare, both having their staunch supporters. Modern practice, however, has shown us that there is practically no difference between the two engines, either in economy of fuel or in the quality of the product of combustion upon which they operate. It has universally been conceded until quite recently that on the high powers the four-cycle gave the best efficiency. This, however, has not been found to be the case, as we find that, particularly in Europe, the builders are adapting the two-cycle principle almost entirely for units of 100 horse-power and over. At the present time, in marine practice, we are inclined to lean to the four-cycle engine for all powers over 15 horse-power, until such time as a two-cycle engine is produced which will dispense with the airtight base, which will of course necessitate an auxiliary compress, or which is employed in large engines mentioned.

For engines under 15 horse-power there is no question but what the two-cycle is the most popular engine. It being much lighter, much more simple, and sold at about one-half the price of the four-cycle, it necessarily is bound to win out on the work for which it is adapted. The principal argument of the advocates of the four-cycle engine is that they know of so many two-cycle engines that have given trouble and disappointment. We will grant that there are a number of this type of engine on the market that are not what they ought to be, but the principal reason is that, particularly in small marine engines, we find in use about ten two-cycle engines to one of the four-cycle; it is therefore fair to assume that we would hear of ten times as much trouble from the former. On account of the idle or scavenging stroke, the four-cycle engine is supposed to thoroughly expel all the burnt gases, therefore allowing the new charge only to be contaminated. Whereas in the two-cycle engine the new gas is entering as the old gas is escaping, and it is claimed that the two-cycle not only loses the entering charge by its following the burnt

gases, but also mixes with the burnt gases, and therefore produces a mixture of poor quality.

While this may to a certain extent be true, it is more than offset by the rapidity of the explosion so obtained in the two-cycle, and also that the cylinder of the two-cycle, being of less area, requires less gas, and the fly wheel and moving parts, being lighter, the power necessary to maintain a momentum is not as great.

In the four-cycle engine there is much more vibration than in the two-cycle, and part of the additional weight in the fly wheels of this type is necessary to obviate this difficulty. In the four-cycle engine the mufflers are of the same construction as the two-cycle engine; but they do not have to be as large, as of course they have only half the work to perform. Not only this, but they are not subject to the excessive heating of exhaust gases, as in the other type, where of course we have an almost continuous flow of hot gas.

### Editor Forest and Stream:

I have read with great interest the articles on gas engines and launches on pages 195 and 403 in your paper, especially the latter, on igniters, by Mr. Grain.

I have made something of a study of these devices, scores of which have been manufactured and "found wanting" in actual practice (however attractive theoretically), to the disappointment of both the inventor and the investor. I have been an investigator "on my own hook," and for personal reasons, I want an igniter for a gasoline engine, and I want one that will ignite and not do any monkeying with my honest purpose.

I suppose there are others like-minded, and this subject cannot be talked over any too often to secure some good results to the interested.

The last igniter that has been investigated seems to me, both in theory and practice, to pretty nearly fill the bill, and is certainly freer from objections than any that I have previously seen.

For the general weal, I will tell you my impressions, not technically, because I am a little shy on technical terms, but just from the point of view of a common, every-day power boat chap, who also uses some stationary engines in his business.

In the first place, it does away entirely with the necessity for using any kind of a battery or hot tube for starting the engine, which are abominations. In this igniter that I am writing about, the starting is done by the impelling device, in the following manner: The armature of the generator revolves once for each spark required; the first half of the revolution is effected by the driving sprocket, and on the latter half of the rotation a compressed spring impelling device kicks the armature ahead of this first-mentioned driving arrangement, and causes the second half of the rotation to be made at a very high speed. No matter how slow the speed of the engine, the same speed is imparted to the second half of the revolution of the armature; thus, you will see, the spark is generated at a very slow motion, and consequently no battery is required on the start, as in other methods, where the magneto is used.

Another thing is, that the trouble usually arising from carbon collecting on points of sparker is eliminated, since the current produced from this generator is of such a high tension that the carbon usually gathering on the points is, in this case, more beneficial than objectionable. Again, no spark coil or switch is required, the current generated being of a voltage high enough to make the spark.

No renewals are ever necessary at this place or in any other part of the system, because ordinary steel points are used in the sparker. When this system is used, all the mechanical parts usually required for getting a spark in engine are removed.

A mighty convenient feature is this: Any position of spark can be secured without even stopping the engine, by simply tilting the field of the generator forward or back to get an early or late spark, thus making the device safe in starting any engine.

I have found that this igniter can be applied to any gas or gasoline engine, vertical, or horizontal, single or multiplied cylinders, marine, automobile or stationary, 2 or 4 cycle.

A friend of mine had occasion to use one of these igniters on a Fairbanks Company's gas engine. He simply gave the number of engine and had supplied to him the spark plug, driving chain and sprocket, to fit the side shaft of the engine on which it is used, as well as a bracket for fastening the generator to cylinder head of engine.

In case of any kind of electric system, now being used, it is necessary to remove all the igniter arrangements, as at present supplied by the old electric systems.

I cannot go into any more detailed description of this igniter, but I suggest that any one interested could probably get a lot of information if he should call on my friend Harvey E. Miller, at the corner of Broome and Elm streets, New York (the northeast corner), Fairbanks Company's office, or write him, only if you go to see him he can doubtless show you the device in use somewhere near. All I can say is that it is far the simplest and best one I know of.

J. M. BULKLEY.

DETROIT, May 18

HAMPTON ROADS Y. C. PROPOSED INTERNATIONAL RACE.—The Hampton Roads Y. C., of Old Point, Va., is taking steps towards having a series of international yacht races at Hampton Roads in 1907. Each club of this and other nations will be invited to send the best boat to a national regatta of its own country. The races at each national regatta will determine what boat shall represent that country at Hampton Roads. Coming in conjunction with the review of the marine power of the world, which will be one of the principal features of the Jamestown Exposition, the international regatta, it is believed, will be largely attended. The racing grounds are said to be as good as any in the country.

## Rhode Island Letter.

PROVIDENCE, R. I., May 28.—The schedule of the club's fixtures for the season has been issued by the directors of the Edgewood Y. C. The club house will be formally opened with a dance May 30, and, following the plan of last year, socials will be held every Wednesday evening thereafter until the end of September, regular hops and whist parties alternating. A large addition, with a handsome arched portico entrance, has just been built on the street side of the building, and the club now has one of the most attractive club houses to be found in this section. The Edgewood racing events have been definitely scheduled as follows:

Saturday, June 11—Club regatta.

July 2, 4 and 9—Special for the Possner cup for 30-footers.

Saturday, August 6—Club regatta.

Monday, August 15—Opening race of N. B. Y. R. A. and beginning of annual cruise.

September 3, 5 and 17—Fall races.

Although the Washington Park Boating Association was organized more than a year ago, this is really its first active season, as the large new club house erected by the members was not completed until near the close of last summer. With its first regatta on Memorial Day the association begins a season that is expected to prove of great interest, both in social and racing events. As with its neighbor, the Edgewood Y. C., weekly entertainments will be held on Friday evenings throughout the summer, dances and whist parties alternating. The club fleet has about 100 boats enrolled, including several handsome new power craft and all the 30ft. racing cats of the upper bay. For the latter there will be a special series of three races in July for the Commodore's cup. The Edgewood Y. C. started only a few years ago as a "boat club," and is now a highly prosperous organization. With its auspicious beginning, and the enthusiastic interest taken by its members, it is likely that the W. P. B. A. will follow the same course within a year or two, dropping the modest title of "boating association," and becoming a full-fledged yacht club. The present officers are: President, Robert L. Ward; Secretary, W. K. Potter, Jr.; Treasurer, Arthur D. Bliss; Commodore, William C. Peirce; Vice-Commodore, D. M. Pott; Rear Commodore, W. B. Bliss.

The dates of the club days at Potter's Cove, which mean Rhode Island clam-bakes and a general good time, have been fixed by the Rhode Island Y. C. for the Sundays of July 3, 17 and 31, and August 21.

Both the Rhode Island and Edgewood fleets have been augmented by two large cruising launches which arrived this week. The first, a torpedo stern, full cabin launch called Nautilus, was purchased by A. J. Scattergood, of Providence, from C. H. Cutter, of Boston. She is a Murray & Tregurtha boat, with a 16 horse-power four-cycle engine, 47ft. over all, 9ft. 6in. beam, and about 3ft. draft, finished in mahogany throughout. The other is also a Murray & Tregurtha boat, the Gypsy, 37ft. over all, 32ft. waterline, 8ft. 9in. beam, and 3ft. draft, and was bought by George R. Babbitt, of this city. She has just been rebuilt by E. H. Brown, of Taunton, Mass., a large cabin house of mahogany having been put on, fitted with extension berths and all cruising equipment. Gypsy has a 10 horse-power engine, located in the cockpit and leaving the cabin clear.

The 30ft. hunting cabin launch Zeta, recently built by Mr. F. S. Nock at East Greenwich, for Mr. W. P. Otis, of Providence, was launched this week, and on her trial trip developed a speed of a little better than 10 miles an hour.

Several of the smaller cruising and racing craft at Herreshoff's Walker's Cove yard at Bristol, are not to be placed in commission this season, their owners having taken to automobiling, and lost their interest in yachting for the time being. Several steam yachts are also to remain laid up there during the summer. The yawl Fanchon, owned by Judge Bliss, of East Providence, has been fitted with auxiliary power. The 45ft. sloop, Lady Mary, owned by Senator Nelson W. Aldrich, was put in commission this week.

The construction of another 35ft. sloop, on much the same lines as Cock Robin, has been begun by the Herreshoffs. Like Cock Robin and Chewink IV., the new boat is destined for the racing at Marblehead, Mass. The new steam yacht for Mr. M. C. D. Borden, of New York, is to be launched in about ten days. She is to be named Little Sovereign, and is expected to show a speed of 24 miles an hour. Mr. Borden was the owner of the Sovereign, a large steam yacht which he sold to the Government at the beginning of the Spanish-American war, when her name was changed to Scorpion. The steam yacht Mirage, owned by Mr. Cornelius Vanderbilt, has left the Herreshoff yard for Rye, N. Y. She has been chartered for the season by Mr. A. E. Whitney, of New York, who has a summer residence at Rye, and will use her in his trips to and from the city. The yawl Spalpeen is soon to be fitted out for the season for her owner, Mr. Robert M. Riddell, of Philadelphia.

Brownell Brothers, of Bristol, have a new 30ft. launch, with large trunk cabin forward and cockpit aft. The steering wheel is at the forward end of the cabin, a large deadlight in the trunk giving the helmsman protection and a clear view ahead.

Designer N. G. Herreshoff has been confined to his home in Bristol with rheumatism for the past week, but is now improving.

F. H. YOUNG.

MANHASSET BAY Y. C. EXTENDS PRIVILEGES.—The Manhasset Bay Y. C. have extended the privileges of their place at Port Washington, L. I., to the members of the Automobile Club of America.

\*\*\*

PENATAQUIT-CORINTHIAN Y. C. FIXTURES.—The following fixtures have been arranged for by the regatta committee of the Penataquit-Corinthian Y. C.:

July 9—Spring open regatta.

July 26-27—Annual cruise.

July 30—Summer open regatta.

Sept. 3—Fall open regatta.

The lighthouse cup, sailed for by sloops of class N, and the Queen of the Bay cup will be included in the prizes on the above dates.

## New Rochelle Y. C.

NEW ROCHELLE, LONG ISLAND SOUND,  
Saturday, May 28.

The New Rochelle Y. C. opened the racing on Long Island Sound by holding a regatta on Saturday, May 28. There were eighteen starters, and in some of the classes the racing was very close.

A fresh westerly breeze gave life to the contests. The boats sailed over a 4½-mile triangular course, the start being made off Echo Bay. The first mark was the black spot buoy off Execution, the second the red spar on Hen and Chickens, and back to the starting line.

Chewink II. had no competitor in the 30ft. class, but she took a walk over and covered the course three times.

In the 25ft. class the racing was not interesting, for although there were three starters, Kenosha had matters all her own way, and beat her two competitors easily.

Grasshopper, the Huntington-designed raceabout that did not show up very well last year, came to the line in improved form, and beat Rogue, the second boat, by the close margin of three seconds.

Four of the new Indian Harbor Y. C. one-design boats started. These boats were built last winter from designs by Mr. Morgan Barney. This is the first time these boats have met, and Wa Wa finished a winner by one second. Owatanna was second.

There were four starters in the Larchmont Y. C. one-design class. Dorothy lost her bowsprit at the end of the first round and retired to the harbor, where repairs were made.

In the Manhasset Bay one-design class there were only two starters. Arizona beat Wister with ease. Mr. Dunstan Farnum is a newcomer in this class, and he will show up better when he gets more accustomed to his boat.

Ace beat Agawam II. by over six minutes in the New Rochelle one-design class. Agawam II. broke the jaws of her gaff, which accounts for her indifferent showing.

The regatta committee was made up of Messrs. G. P. Granberry, R. N. Bavier, D. W. Thomas, M. S. Katerborn, and E. B. Wright.

The summary follows:

Class N—30ft. Sloops—Start, 2:05—Course, 13½ Miles.			
	Finish.	Elapsed.	
Chewink II., Evans R. Dick.....	4 17 40	2 12 40	
Class P—25ft. Sloops—Start, 2:10—Course, 9 Miles.			
Kenosha, C. W. Voltz.....	3 49 16	1 39 10	
Skip, C. M. Pinckney.....	3 58 00	1 48 00	
Shella, J. C. Connolly.....	3 58 30	1 48 30	
Raceabouts—Start, 2:15—Course, 9 Miles.			
Grasshopper, H. C. Pryer.....	3 40 20	1 25 20	
Rogue, A. B. Alley.....	3 40 23	1 25 23	
Tartan, A. H. Pirie.....	3 42 14	1 27 14	
Indian Harbor Knockabouts—Start, 2:20—Course, 9 Miles.			
Wa Wa, J. E. Martells.....	4 02 35	1 42 35	
Owatanna, George Lauder, Jr.....	4 02 36	1 42 36	
Kenoshi, C. B. Mallory.....	4 03 00	1 43 00	
Anawanda, E. C. Ray.....	4 05 23	1 45 23	
Larchmont 21ft. Class—Start, 2:20—Course, 9 Miles.			
Adelaide, J. J. Dwyer.....	3 49 00	1 29 00	
Vaquero, J. M. Marble.....	3 49 11	1 29 11	
Houri, J. H. Esser.....	3 51 03	1 31 03	
Dorothy, L. G. Spence.....	Disabled		
Manhasset Bay—One-Design Class—Start, 2:25—Course, 9 Miles.			
Arizona, G. A. Corry.....	4 17 45	1 52 45	
Wister, Dustan Farnum.....	4 23 20	1 58 20	
New Rochelle One Design Class—Start, 2:25—Course, 9 Miles.			
Ace, R. N. Bavier.....	4 07 04	1 42 04	
Agawam II., W. L. Diaz.....	4 14 00	1 49 00	

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

ALMANAC OF SOLENT CLASSES FOR 1904.—We are indebted to Thalassa for a copy of his useful and interesting little pamphlet, "Almanac of the Yacht Racing in the Solent Classes for 1904."

\*\*\*

RECENT CHARTERS.—Messrs. Gardner & Cox have made the following charters: Steam yacht Calypso, by Mr. R. C. Veit to Mr. Roswell Eldredge; steam yacht Scud, by Mr. Samuel Untermyer to Mr. W. C. Allison, of Philadelphia, and the schooner yacht Vesta, by Col. J. Fred Ackerman to Mr. Stewart Shillito.

\*\*\*

ALBERT PHELPS THAYER DIES.—On Monday, May 25, Albert Phelps Thayer, a well-known Corinthian yachtsman, died at his country place at Port Washington, L. I. He was forty-nine years of age. Mr. Thayer had been seriously ill for some years past, and while his death was not unexpected by his many friends, they will feel the loss none the less keenly. Mr. Thayer was at one time Commodore of the Huguenot Y. C., and was serving on the house committee of the Manhasset Bay Y. C. at the time of his death.

\*\*\*

MOHICAN AND THETIS CHARTERED.—Messrs. Tams, Le-moine & Crane have made the following charters: Steam yacht Mohican, Mr. Tracy Dows to Mr. Charles T. Barney, and the steam house-boat Thetis, Mr. Hiram Sibley to a member of the New York Y. C.

\*\*\*

YVETTE SOLD.—The cutter Yvette has been sold by Mr. T. Langdon Erving to Mr. E. S. Pendleton.

\*\*\*

NEW ROCHELLE Y. C. CRUISING RACE.—Mr. Lawrence Dunham, a member of the New Rochelle Y. C., has offered a cup for a cruising race from New Rochelle to Stratford Shoal and return, the start to be made on July 30, at 5 P. M.

\*\*\*

ENTRIES FOR BROOKLYN Y. C. OCEAN RACE.—The following entries for the Brooklyn Y. C.'s ocean race have been received by Secretary Charles A. Kelly:

Sea Bird, yawl, 25ft. 6in., Springfield Y. C.; T. F. Day, New York, owner.

Holy Smoke, raceabout, 40ft.; R. M. Lewis, Philadelphia, owner.

Ray II., sloop, 37ft. Brooklyn and Columbia Y. C.; G. R. Hawes, New York, owner.

Little Rhody, sloop, 34ft. 6in., Bristol and Rhode Island Y. C.; C. F. Tillinghast, Providence, owner.

ASPIRANT.

Designed by Gardner & Cox. Owned by Addison G. and Wilmer H. Hanan. Photo by James Burton.

Ulula, sloop, 37ft. 8in., Beverly Y. C.; W. H. Winship, Boston, owner.

Fanshawe, yawl, 35ft. 6in., New Rochelle Y. C.; Frank Maier, New York, owner.

Rough Rider, sloop, Brooklyn Y. C.; W. A. Maxwell, New York, owner.

Bonita, sloop, Brooklyn Y. C.; Haviland Bros., Brooklyn, owners.

Squaw, sloop, Brooklyn Y. C.; H. J. Heath, Brooklyn, owner.

The Brooklyn Y. C. will also hold an ocean race for auxiliaries of 45ft. and under over all measurement. Handsome prizes will be given to the winners of this race, which will start on the same day as the Lipton cup race.

\*\*\*

MACHIGONNE LAUNCHED.—There was launched at Morris Heights on Saturday, May 28, the steel steam yacht Machigonne. She was built for Mr. Cyrus Curtis. She is a flush deck, schooner rigged vessel, 115ft. over all, 95ft. on the waterline, 16ft. 6in. beam, and 7ft. 6in. draft. Her deck house, companion ways and deck fittings are of mahogany. The engines are of the triple expansion type, with cylinders 8½in., 14in., and 23in. in diameter by 12in. stroke, and the water tube boiler is of the latest type. A speed of 16 miles is guaranteed.

\*\*\*

BLOSSOM SOLD.—The 18ft. cabin knockabout, Blossom, has been sold by Mr. J. A. Goldsborough, of Washington, D. C., through the agency of Messrs. B. B. Crowninshield and L. D. Sampson, to Mr. J. R. Norman, of New Orleans, La. Blossom was designed by Mr. Wm. H. Hand, and she has a fine reputation as a fast and able little vessel on Chesapeake Bay, where she has raced and cruised extensively. She is now on her way to her new home by railroad. This type of boat is just being introduced on the Gulf Coast.

The Boston 25-footer, Chewink III., will not be taken to New Orleans by rail, as before reported, but arrangements have been perfected whereby the Morgan Steamship Company, of New York, will take her south by water, the date of departure probably being June 3. This boat is undergoing considerable alteration at Boston, so that she can measure in under the bow and cabin rule of the Southern Y. C.

## Regatta Committee for A. C. A. Camp.

RECORD RACES AS PRESCRIBED BY RACING REGULATIONS.

Event No. 1—Combined paddling and record sailing race, 3 miles, limit 1½ hours, start to be made under paddle, ½ mile alternately paddling and sailing.

Event No. 2—Paddling record race, ½ mile straightaway.

Event No. 3—Sailing record race, 4½ miles, limit 2½ hours.

Note—The record races are governed by Rule VI. of the racing regulations.

SAILING RACES AS PRESCRIBED BY RACING REGULATIONS.

Event No. 4—Trophy sailing race, 9 miles, limit 3½ hours.

Event No. 5—Dolphin trophy sailing race, 7½ miles, limit 3 hours.

Note—By deed-of-gift the winner of the sailing trophy race is debarred from entry in the Dolphin trophy race.

Event No. 6—Sailing race, 6 miles, limit 2½ hours.

PADDLING RACES AS PRESCRIBED BY RACING REGULATIONS.

Event No. 7—Trophy paddling race, 1 mile straightaway.

Event No. 8—One-man paddling race, single-blade, ½ mile.

Event No. 9—One-man paddling race, double-blade, ½ mile.

Event No. 10—Tandem paddling race, single-blade, ½ mile.

Event No. 11—Tandem paddling race, double-blade, ½ mile.

Event No. 12—Fours paddling race, single-blade, ½ mile.

Event No. 13—Fours paddling race, double-blade, ½ mile.

SAILING RACES NOT PRESCRIBED BY RACING REGULATIONS.

Event No. 14—Novice sailing race, 3 miles, limit 1½ hours, open to men who have not sailed canoes prior to September 1, 1903.

Event No. 15—Club sailing race around Sugar Island; this race shall be won by club that shall have first three canoes finish.

Event No. 16—Open canoe sailing race, 1½ miles.

PADDLING RACES NOT PRESCRIBED BY RACING REGULATIONS.

Event No. 17—Special class sailing race.

Event No. 18—Novice paddling race, single-blade, ½ mile, open to men who have never raced at any division or general camp of the A. C. A.

Event No. 19—War canoe paddling race, 1 mile straightaway.

Event No. 20—War canoe paddling race, ½ mile straightaway.

SUNDRY RACES NOT PRESCRIBED BY RACING REGULATIONS.

Event No. 21—Mixed tandem, single-blade, ¼ mile.

Event No. 22—Tilting tournament.

Note—All paddling races straightaway.

The committee reserve the right to change this programme at the camp by duly posted notices.

## A Canoe Cruise.

BY WM. H. L'ESTRANGE, DULUTH, MINN.  
(Concluded from page 426)

SATURDAY, October 10.—This morning we made a short portage down stream and then put the canoe in and ran down about half a mile. Here we came to some rapids, which we ran a short distance. Then we came to a ravine, where we had to land and portage. The ravine is about fifty feet deep and the portage climbs one bank. Here, in a little open spot, we found where some party had camped during the summer. It was a beautiful place to camp, as it overlooked the water, and gave a charming little vista up the gorge. We ate lunch before starting for Iron Mountain Lake, which was about three-quarters of a mile further down stream. The river winds around prettily and the mouth opens gradually. This was the most easterly point of our trip, and we turned and paddled west to the outlet of the lake. There used to be a natural dam at the mouth of this lake, formed by drift-wood, with live trees growing over it. The lumbermen, however, had cut away the dam, and by a dam at the outlet of the small lake below had raised its level so as to form a wide channel. As we paddled through here, we passed a scow loaded with hay, propelled by long sweeps, going to some camp up the lake. We found loggers at work all around the small lake felling trees and skidding them down into the water. There was a strong southerly wind blowing, and the floating logs had gathered in the north corner of the lake, obstructing the portage, and forming a (very much "right-angled") jam, through which we were unable to force the canoe. The shores here are precipitous, so we abandoned the portage and paddled around into Newfound Lake as the easiest way through. The north portage is short, but runs over a steep ridge, and is not easy. At the mouth of this little lake we came to the dam, and found a lumber camp just below. We had about four hundred yards to carry, and just as we took the canoe out of the water a teamster with a dray (what, in England, they would call a "sledge") came along and offered to haul our stuff over. We gladly accepted his kindness, and tried to repay him with tobacco, but—*Mirabile dictu!*—here was a lumberjack that did not use tobacco. Leaving the dam, we looked for the outlet of Newfound Lake, but missed it, and camped on the shore on the other side of the mouth. The shores here were so steep that we had some trouble to find a place level enough to set up the tent. The timber had all been logged recently, and we camped in the open of a skidway. An incident of the evening was caused by setting our birch bark candle-stick too close to the side of the tent, and the wind belling the tent, it caught fire, but as we noticed it at once, only a very small hole was burned.

Sunday, October 11.—The task after getting under way this morning was to find the outlet, but this took very little time; indeed, it was hard to see how we came to miss it in the first place. We paddled around the narrows into Birch Lake, and caught a pickerel while going through. Going across the lake we met a small steam launch towing a scow load of hay and other supplies for our friends, the loggers. We reached the dam at the mouth of the lake a little before noon. There is a large dam here, and a comfortable fall below. We found the road that had been cut around the rapids to bring the steam launch over, and a kind of cradle on runners, by which, evidently, the feat had been accomplished. We also found the old portage trail, and it proved to be the shortest and best route for our purpose. Here we ate lunch within sight of a large lumber camp. We were now in Basswood Lake once more, and had a long paddle ahead of us. However, after we got around the point and headed westerly, we met enough of a head wind to make our progress rather slow. We hugged the south shore for shelter, and got as far as Canadian Point before stopping for the night. We camped on the extremity of the point, in a beautiful little place under the cedars, and prepared an excellent supper of fried fish and hot biscuit. This was put away where it would do the most good, although from the amount consumed, one might have expected dire results. We went to bed, however, and slept the sleep of the just man who has traveled rather more than a Sabbath day's journey. This was our only camp on Canadian soil. The shore on this side is easily distinguishable from the American side, as it has not been logged, whereas the American shore has been stripped bare.

Monday, October 12.—We got under way about 9:30, and paddled for the portage into the westerly arm of Basswood. The portage was just where our map showed it, but we had some trouble reaching it, as the end of the arm was filled with a cranberry swamp through which we had much ado to haul the canoe. It is hard to locate the portage trails from a distance in the country that has been recently logged, for the shore is lined with skidways and dray roads, where the logs have been snaked down to the water. After the trail is once picked up there is no trouble in following it, but there are so many paths that look alike until followed up a little way. As soon

as we got ashore, we found a logging road ran back over the old portage, and the carry was but a short one. We ate lunch here, and found the black flies out in sufficient numbers to be uncomfortable. The weather was unusually warm for the time of year, and the hot sun brought the flies out in quantities. A short paddle took us across the arm, and we picked up the portage without much delay, though there were several little bays here that all looked alike to us. There was a logging road over this trail also, and as we went over with the canoe, we scared up a number of partridges. We found an abandoned logging camp at the other end of the portage. These camps are not made of logs nowadays, as lumber is cheaper and easier to run up. They do not make nearly as warm a camp, but the trouble in a camp is more to keep cool than to keep warm. We paddled across the lake and picked out a camping place on a high ledge of rock covered with a thick carpet of moss, with a few big scattering pines above. This made a splendid camping ground. The evening was still, and we sat late around the camp-fire. The sunset was greasy and yellow, and we looked for rain the next day. We intended to camp out the next night, but, as it turned out, this was our last night under canvas. We rolled in for the night on a bed that kings might have envied.

Tuesday, October 13.—This morning was overcast and threatening, but the weather held, to our delight. There was no wind whatever, and we secured several good reflection pictures. About three hours brought us to the foot of Pipestone Falls, where we caught a couple of pickerel in the broken water below the falls. The fall is only about four feet, but about forty yards wide. The portage is very short, only a lift around the falls. The river is about four hundred yards wide, and has no appreciable current, even quite close to the falls. We were now going up stream for the first time. We reached the portage into Fall Lake by noon, and ate our lunch beside the rapids. The rapids are wide and picturesque—a miniature of the Sault Ste. Marie. The portage runs out of a little bay on the right hand side of the rapids, going down stream. It is about a quarter of a mile long and a good, wide, well-traveled trail. When we launched out into Fall Lake we could see where we had poked around looking for the portage on our first day out. We paddled out into the open lake, and, by good luck, just struck the tug returning to Winton. The captain slowed up on our hail and took us on board and landed us in Winton about three o'clock. We were glad to be saved the long paddle up the lake, as the wind was dead ahead, and paddling against a head wind, even when slight, is tedious work. The tug crew told us we would find the river up to Ely navigable, with, perhaps, a few short carries; so we decided to spend the rest of the afternoon in traveling by that route, instead of hiring a team. We thought that if we got to Ely in good season we would camp on the lake shore instead of going to the hotel for the night. However, we found our information regarding the river to be sadly at fault. After the first mile we struck a succession of rapids and shallows that kept us busy portaging, and as the river is never traveled now, there were no trails around the bad places. The further we went the worse it became, till finally we were reduced to wading the stream, waist-deep, or worse, dragging the canoe. We reached Long Lake at 5:30 and had still two or three miles to paddle. We were pretty wet, and by this time the sun was well down and it was getting cold. The beauty of the sunset into which we paddled almost repaid us for the toils of the river. The lake is open to the westward and studded with islands, and paddling into the sunset we could imagine ourselves Hiawatha seeking for the Pearl Feather. The town lay to our left, and draped with smoke from the mine shafts, it presented a study in gray, as a contrast to the blazing crimson in front. It was six when we reached the dock at Ely, and the sun had set, and we remembered that it was the middle of October. By that time we were glad enough to go to the hotel. After supper the town band came out in front of the hotel, perhaps only for practice, but it seemed to us they were parading in honor of our return. We did not find a good bed any too comfortably comfortable, even after the delightful couches we had enjoyed in the woods.

Wednesday, October 15.—We boarded the train at 7:20 this morning for Duluth, homeward bound, regretting that our trip was so soon ended, but rich in the recollection of a glorious holiday. Of course, we had traveled neither as far or as fast as we could have done; still, as we were far from being experts at the art of camping out, we were well satisfied with the results. We had covered most of the ground mapped out, and returned safe and sound on the day appointed, and had enjoyed every moment of the time, even when it rained. I do not know where one could find a more desirable country in which to cruise. It is true, we saw little game, but that was just our luck, for the game is certainly there.

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## The Canoe a Life Saver.

Editor Forest and Stream:

At this season of the year, when the weather becomes warm and many, both young and old, go out on the water in small boats, and especially in canoes, the reports of accidents from drowning will probably begin; in fact, they have already begun, two cases having been cited recently. In one of them a young man and a young woman were out paddling in a canoe, which was capsized, and after the young man had held the young woman until he was exhausted, he had to let go of her, and she was drowned; and in the other, two young men were in a boat which capsized, and one of them, believing he could swim to the shore, left the boat, which had been supporting him, and tried to swim ashore, but on the way became exhausted and sank.

The cause of most accidents is ignorance and carelessness. If a person is acquainted with the tools he uses, or the conditions surrounding him, in many cases no serious result would come from a temporary disarrangement of the plans. For instance, persons go out in small boats and canoes without knowing the stability, or perhaps the lack of stability, of the boat, and sitting too high, or standing up or jumping about quickly, causes the boat to capsize, and then the more serious accident is apt to happen.

It is unpleasant and quite serious to be capsized from a small boat, but under ordinary conditions and circumstances there is no reason why a fatal result should follow. From an experience of over twenty years with canoes, I can say, without any fear of contradiction, because it is frequently proven at our club house, that one of the lightest canoes that can be built is amply able—even when filled with water—to support a large sized, heavy man. Nay, more than this, I have seen one of the very lightest canoes, when filled with water, support three adults, and at the Brooklyn Canoe Club, on Gravesend Bay, it is one of the usual exercises to capsize a canoe, and then have as many as possible get inside of it and see how many it will float before sinking, and the remarkable thing is that the space in the boat is the only thing that prevents its supporting more than three persons.

It must be distinctly understood, however, that to gain this result, one must have sufficient knowledge of how to make the boat support you before attempting to put it to the test; but it is really a simple matter, like many other wonderful things, and after all, not so wonderful.

Large vessels, heavily loaded, start out upon journeys across the ocean; during their voyage they become leaky and waterlogged and sink to the water's edge. The crew leaves the vessel, and then the old hulk floats about the seas, standing all the storms that come to it, drifting many hundreds and thousands of miles over the ocean, and for several years, before the vessel sinks. The vessel is not seaworthy, nor is a canoe filled with water seaworthy; but when did you see a rowboat that is filled with water, or a canoe in the same condition, sink to the bottom? The secret of it is that the wood has flotation in it to support itself and more, too, and if a human being will place himself in a boat, reducing as far as possible the weight of his person by submerging his body, he will find that the canoe will support him for an almost unlimited time.

The way to do this is, as soon as the canoe capsizes, and without getting excited, to right her. Of course she will be full of water. Do not attempt to get any of the water out of her, because this is generally impossible, but climb over either the side or the end, and when you do this, the chances are that she will sink under the water, but as she feels the weight of your body lightening she will rise to the surface, and it is then for you to lie down in the boat, resting your head on the thwart or the cross-piece toward the end, where you can remain until picked up. The fact that your arm or arms may be out of the water, so that you can wave to persons on the shore or in passing boats, will not materially affect the flotation of your boat.

Not only one person can do this, but two. Two years ago, when I was on the St. Lawrence River, I proved to an old canoe friend of mine and his wife what I had seen so many, many times shown before. This gentleman and his wife and myself were bathing, and his canoe lay up on the shore, and I pulled it into the water. I suggested that he permit me to show his wife and himself how good a life-preserver a canoe filled with water was. The lady and myself got into the canoe and paddled to where the water was about to her waist, or perhaps a trifle deeper. I said to her, "Now, we will capsize the canoe, and when we do I want you, without touching your feet to the bottom (because she was a good swimmer) to hold on to the boat till I turn it over in the right position again." This we did, and I said to her: "Get into the boat," I assisting her by pulling the bow down completely under water. When she did, the boat began to rise at once, and then I, in the same way, got into the boat. The boat then supported both of us. They thought it was wonderful, and, as a further test, I suggested to the gentleman to come out to us and also get into the boat in the

same manner. He did so, and the boat then again rose to the surface, supporting the three of us.

If anyone has a canoe, and doubts this statement, let him try it the next time he goes in bathing, because I have never yet seen a boat, not even a canvas-covered oldtown canoe, which are so very lightly built, that would not do this. If our canoe friends and others who use canoes would only try this experiment, and when it was proven to them, explain it to their friends; and also if those people who rent small boats would explain it to those who hire boats from them, I think a few lives might be saved. Never have I heard of a person being drowned from a canoe where they have attempted to follow any such suggestion as the above, and on many occasions a fatal result has come from attempting to reach the shore by leaving the boat and swimming.

ROBERT J. WILKIN,  
President Board of Governors A. C. A.

## CANOEING NEWS NOTES.

**CANOE CLUB OF PARIS.**—The Canoe Club of Paris is organizing an original competition to last from June 15 to September 15, for canoes holding two persons. They must make a month's cruise in any part of the world. A prize is given for the most interesting cruise, the record of which is to be kept in a log-book.—New York Herald.

## Rifle Range and Gallery.

### Fixtures.

June 12-20.—Union Hill Schuetzen Park, N. J.—National Schuetzenbund Festival.  
June 26.—Zeltner's Morrisania Park.—German-American Shooting Society's shoot.

### Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association at Four-Mile House, Reading Road, May 22. Conditions: 200yds., offhand, at the 25-ring target.

Roberts was declared champion for the day with the good record of 224. He also received his record to-day, his former being 223.

A gusty 3 to 6 o'clock wind prevailed throughout the day. Nestler was high on the honor target, with 69 points.

Roberts	224	208	205	200	196	Freitag	211	208	207	195	192
Hasenzahl	223	222	217	213	212	Hoffman	213	205	200	197	193
Payne	222	221	219	216	215	Odell	206	200	199	182	...
Bruns	222	203	195	194	193	Trounstein	205	195	192	183	183
Gindele	219	218	211	208	206	Lux	200	193	193	180	170
Nestler	219	215	209	207	205	Drube	199	174	...	...	...
Hofer	219	204	203	188	188						

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

June 1-3.—Watertown, S. D.—South Dakota State Sportsmen's Association tournament. F. J. Cory, Sec'y.  
\*June 7-8.—Ligonier, Pa., Rod and Gun Club.  
June 7-9.—Sioux City, Ia.—Soo Gun Club's tenth annual amateur tournament; added money. W. F. Duncan, Sec'y.  
June 8-10.—Huntington, W. Va.—West Virginia State Shoot. F. H. Merrick, Sec'y.  
June 9.—Westchester, Pa., Gun Club target shoot. F. H. Eachus, Sec'y.  
June 9-10.—Peru, Ind., Gun Club eighth annual tournament. Wm. Daniels, Sec'y.  
June 11.—Norwich, Conn., Shooting Club target tournament. I. P. Taft, Sec'y.  
June 13.—Middleton, Wis., Gun Club tournament. Frank L. Pierstorff, Mgr.  
June 14-15.—Wilkes Barre, Pa.—Hanover Park Shooting Association target tournament. E. L. Kipple, Sec'y.  
June 14-16.—Akron, O.—Ohio Trapshooters' League target tournament. G. E. Wagoner, Sec'y.  
June 14-16.—New London, Ia., Gun Club midsummer tournament. Dr. C. E. Cook, Sec'y.  
June 14-17.—Warm Springs, Ga.—Target and live-bird tournament. Chas. L. Davis, Mgr.  
June 15-16.—Battle Creek, Mich.—Tournament of the Michigan State Trapshooters' League. L. K. Forsythe, Sec'y.  
\*June 15-16.—Millvale, Pa., Rod and Gun Club.  
June 15-17.—Lincoln, Ill.—Illinois State Sportsmen's Association tournament. James Davis, Sec'y.  
June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Coltart Square, Pittsburg, Pa.  
June 25.—East Walpole, Mass.—Second annual tournament of the Neponset Gun Club; \$60 in prizes. M. H. Grant, Sec'y.  
June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club; strictly amateur; \$500 added money. John M. Lilly, Pres., Indianapolis.  
July 4.—Brunswick, Me., Gun Club all-day target tournament. G. M. Wheeler, Sec'y.  
July 4.—Richmond, Va.—East End Gun Club annual merchandise shoot. J. A. Anderson, Sec'y.  
July 4-6.—Winona, Minn.—The Interstate Association's tournament, under the auspices of the Winona Sportsmen's Club. Oswald Leicht, Sec'y.  
July 6-7.—Homer, Ill.—Homer and Ogden Gun Clubs' tournament.  
\*July 6-7.—Kane, Pa., Rod and Gun Club.  
July 8-9.—Wausau, Wis.—Wisconsin League of Gun Clubs' State tournament. H. G. McCrossen, Sec'y.  
July 12-14.—St. Paul, Minn., Rod and Gun Club amateur handicap tournament. J. L. D. Morrison, Sec'y-Mgr.  
\*July 13-14.—Scottsdale, Pa., Rod and Gun Club.  
July 19-20.—Shamokin, Pa., Gun Club midsummer shoot. S. C. Yocum, Sec'y.  
July 19-22.—Cincinnati, O., Gun Club annual handicap.  
July 20-21.—Armada, Mich.—Tournament of the Eastern Michigan Gun Club; \$100 added. E. W. Sutton, Sec'y.  
July 27-28.—Grand Forks, N. D.—The Interstate Association's tournament, under the auspices of the Grand Forks Gun Club. W. M. Ferguson, Sec'y.  
Aug. 9-12.—West Baden, Ind.—Indian tournament; \$1,000 added money.  
\*Aug. 10-11.—Bradenville, Pa., Rod and Gun Club.  
Aug. 10-12.—Brantford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.  
Aug. 15-20.—Buffalo, N. Y.—New York State shoot.  
Aug. 24-25.—Hot Springs, S. D.—The Interstate Association's tournament, under the auspices of the Hot Springs Gun Club. H. A. Gayhart, Sec'y.  
\*Aug. 25-26.—Tarentum, Pa., Rod and Gun Club.  
Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.  
\*Sept. 6-7.—Irwin, Pa., Rod and Gun Club tournament.  
\*Sept. 14-15.—Ruffsdales, Pa., Rod and Gun Club.  
\*Sept. 27-28.—Monessen, Pa., Gun Club.  
\*Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.  
\*Western Pennsylvania Trapshooters' League tournaments, C. G. Grubb, Sec'y, Pittsburg.

## DRIVERS AND TWISTERS.

Col. James T. Anthony and Mr. Frank C. Riehl are ill. The former in Memphis, Tenn., the latter at his home in Alton, Ill. We sincerely hope that good health has returned to them.

For the two days of the W. P. T. S., at Brownsville, Pa., May 25 and 26, Mr. Ed Painter was first with 327 out of 350. Messrs. Tryon, Fleming and West were 325, 322 and 316, second, third and fourth respectively.

The Westchester Gun Club defeated the Meadow Springs Gun Club, on the grounds of the latter, at Philadelphia, last Saturday, in a twelve-man team race. Each man shot at 25 targets. The scores were 194 and 184.

Mr. W. H. Heer, of Concordia, Kan., has sufficiently recovered from his severe illness to again resume his position as a shooter. He participated in the competition of the Missouri Trap Shooters' League, at St. Louis, last week.

Mr. J. A. R. Elliott was high on both days of the Shamokin, Pa., Gun Club shoot, on May 25 and 26, with 172 each day out of a possible 175, a total of 344 out of 350. Mr. L. J. Squier was second, with 339. Mr. Ed Rike was third, with 331.

Mr. Frank Muldoon, of Freehold, N. J., has challenged Mr. T. W. Morley, of Dover, N. J., to contest for the New Jersey State championship, and the challenge has been accepted. The contest is fixed to take place at Lake Denmark, N. J., on Thursday, June 9. Each contestant will shoot at 25 live birds.

Mr. Arthur Chamberlain, of Kynoch Limited, Birmingham, England, departed from New York for his home on Saturday of last week. Mr. Chamberlain is a nephew of Sir Joseph Chamberlain. He had been in the United States about a month when he departed. His visit in the United States combined both business and pleasure.

The programme of the Consolidated Gun Club, of Connecticut, first tournament, to be held at New Haven, June 9, provides fifteen events at 10, 15 and 20 targets, entrance 65 cents, \$1.22 and \$2.30. Total, 190 targets, \$15.33 entrance. Rose system, 5, 3, 2, 1, will govern. Targets 1½ cent. All shooters are invited. Mr. D. C. Y. Moore, South Manchester, Conn., is secretary. Shooting commences at 9 o'clock.

The Soo Gun Club has issued the programme of their tenth annual tournament, to be held at Sioux City, Iowa, June 7-9. Merchandise and \$400 cash are added. Handicaps 16 to 22yds. There are twelve events each day, eight at 15, and four at 20 targets, entrance \$1.50 and \$2, \$10 added to each. On the second day, the interstate championship contest, prize, a silver cup, will be shot. There are five prizes for the five high and five low guns. The secretary is Mr. W. F. Duncan.

The Norwich, Conn., Shooting Club has issued the programme of its target tournament to be held on June 11. The programme presents fourteen events, at 10, 15 and 20 targets, entrance 65 cents, 90 cents and \$1.10. Totals, 180 targets, \$10.80 entrance. Event 9 is a four-man team shoot, 20 targets per man, \$3.20 per team. In event 13, the entire purse goes to high man. Rose system, 4, 3, 2, 1, will govern the division of moneys. Lunch free. Targets 1½ cent. For further information apply to the secretary, Mr. I. P. Taft, 10 West Main street, to whom guns and shells may be sent.

The Fitchburg, Mass., Rifle and Gun Club have issued the programme of their shoot, to be held on June 17. Eleven events are provided, at 10, 15, 20 and 25 targets. Shooting begins at 9:45. All shooters are invited. No sweepstakes. Five events are distance handicaps. Events 9 and 10 are the annual five-man team match. Targets 1½ cent. Special prizes, a leather dress suit case and a leather gun case, to the amateurs making respectively first and second averages. Guns and cartridges forwarded to Mr. I. O. Converse, care of Fitchburg Hardware Co., will be delivered on grounds free.

BERNARD WATERS.

## W. P. T. S. L. at Brownsville.

BROWNSVILLE, Pa., May 27.—The third shoot of the Western Pennsylvania Trapshooters' League took place on the ground of the Brownsville Gun Club at Brownsville, Pa., May 25 and 26.

The shooters were favored with very fine weather; still the first day was quite warm, but it did not interfere in any way with the boys enjoying themselves.

The Pittsburg party was in great luck, being invited by Mr. Painter to make the trip in his fast steam yacht, Wauneta. It is needless to say that they enjoyed themselves.

On Wednesday, the first day, forty shooters faced the traps, most of them shooting through the programme of 175 targets. Shooters were present from Pittsburg, Irwin, McKeesport, Monessen, Greensburg, Charleroi, Masontown, Belle Vernon, Pa., also Cleveland, O.

The trade was represented by Chas. G. Grubb and H. P. Fesenden.

High guns, first day: Mr. Painter, of Pittsburg, Pa., first, breaking 165 out of 175; second, Mr. Tryon, with 162 out of 175; third, Mr. Fleming, 161 out of 175, and fourth, Mr. E. J. West, 160 out of 175.

High guns second day: Mr. Tryon, first, 163 out of 175; second Mr. Painter, with 162 out of 175; third, Mr. L. B. Fleming, 161 out of 175; fourth, Mr. R. J. West, 156 out of 175.

High average for two days went to Mr. Painter, with 327 out of 350; second, Mr. Tryon, with 325 out of 350; third, Mr. Fleming, with 322 out of 350, and fourth, Mr. R. J. West, with 316 out of 350.

On the second day the regular team race took place, and resulted as follows: Herron Hill Gun Club, first, with 142 out of 150; North Side Gun Club, second, with 130 out of 150; Brownsville Gun Club, third, with 129 out of 150; Irwin Gun Club, fourth, with 111 out of 150.

Team race, Thursday, May 26, events 5,

## Pennsylvania State Tournament.

(Continued from page 450.)

THE fifth day, May 21, was devoted to live-bird competition. There were two events on the programme. Both were amateur events.

No. 1 was at 15 birds, entrance \$10, birds extra; divided 40, 30, 20 and 10 per cent., class shooting. This event was also the three-man team race for the L. C. Smith trophy. Entrance per team \$25, not included in the regular entrance. Divided 50, 30 and 20 per cent. Class shooting. Teams to be composed of bona fide members of any club or association in the State, and residents of the county in which the club is located. No man to shoot on more than one team. Each member of the winning team will be presented with a valuable individual trophy, donated by the State Association and the York City Gun Club.

No. 2 was at 15 birds, entrance \$10, birds extra; divided 40, 30, 20 and 10 per cent.; class shooting. This event was also for the Williamsport diamond badge trophy, emblematic of the live-bird championship of Pennsylvania. Only residents of the State and members of the State Association competed for the trophy, but all amateurs could shoot for the purse.

Mr. John Morris, of Philadelphia, won first in No. 1 event, with 15, the only full score made in that event, and his good work brought in return a win of \$150.

The scores in their individual and team significance in No. 1 event, follow:

Morris	222222122212222-15	Woods	222222122222020-13
Williams	2222222222222-14	Seitz	22222211100011-12

## Ohio Trap.

### Cincinnati Gun Club.

CINCINNATI, O.—The weather on May 28 was all that could be desired, and the attendance was almost a record one. Sixteen shooters made straight scores in the Parker prize gun contest, including their handicaps. Harig and Ahlers tied for high gun in actual breaks with 89 each. Then came Randall and Farn with 84 each.

Not quite as much practice shooting was done to-day as usual. Several matches were shot, in which good scores were made. During the afternoon 3,500 targets were trapped, which speaks well for the way in which Supt. Gambell keeps things running. The club has lost F. Waddell, of the DuPont Powder Co., as he has removed to Wilmington, Del.

The following additional scores were made in the cash prize contest of May 21, handicaps of yards in parentheses: Bleh (18) 41, Deck (20) 40, H. Sunderbruch (16) 37, Sampson (16) 36, Rybolt (17) 32.

A 100-target race was shot on May 22, C. O. Le Compte winning with 91. Gambell and Williams tied for second on 89, the former making a run of 51. The scores: Le Compte 91, Gambell 89, Williams 89, Ahlers 87, A. Sunderbruch 81.

Parker prize gun shoot, 100 targets, handicap of added targets:

Kirby 21, Farn 21; total 42.

### Rohrer's Island Gun Club.

Dayton, O.—Seventeen shooters took part in the club's handicap medal event on May 25. P. Hanauer, Miller and Lockwood tied on scores of 25 or better, and after two shoot-offs the former won. The club has had its grounds put in first-class order. The scores:

Club shoot, 25 targets, handicap extra targets to shoot at: P. Hanauer shot at 28, broke 27; C. Miller 29, 26; Lockwood 35, 25;

Morris, 35, 24; J. Donohue 34, 23; J. Schaerf 30, 22; Brake 29, 22; C. Ballman 35, 22; G. Rohrer 30, 22; J. Hohm 30, 21; W. McCullough 35, 19; C. Smyth 29, 19; D. Rogge 35, 19; A. Mohr 29, 17; W. Kette 29, 12; Saints 35, 6; J. Ballman 35, 16.

Shoot-off of tie: P. Hanauer shot at 10, broke 10; Lockwood 14, 10; Miller 10, 9.

Shoot-off No. 2: Hanauer shot at 5, broke 5; Lockwood 7, 4.

BONASA.

## Missouri League of Traphooters.

ST. LOUIS, Mo., May 23.—Early in the week, it being Monday, there was a gathering of traphooters from Missouri and the west at Dupont Park, which is situated where the towers of the World's Fair buildings can be plainly seen, the occasion being that of the second tournament of the Missouri League of Traphooters.

The weather was good and the attendance fair, though not so large as it would have been, providing there had been more time for advertising the shoot, as a change had been made from Butler to this place. In all there were 33 participants.

The trade was represented by Harold Money, W. H. Heer, H. W. Vietmeyer, Chas. Spencer, Tom Norton, Mr. Thoms, Hart Bronaugh, Leslie Standish, Mr. Sharp and Mr. Williams, and they were a busy lot of gentlemen.

The best score of the day was made by Harold Money, his run of 99 out of 100 was extra, considering the conditions, which were of a very trying order as the scores will show.

The background at this park is bad and the traps face the sun. A Leggett trap and a magatrap were used and both were throwing the targets good and plenty. The high amateur score was made by Harlow Spencer, of St. Louis, and in doing so he missed 30. Mermod was next with 22.

The individual championship was won by young Guy Ward, of Walnut Log, Tenn. Both he and his father did not shoot the load that they were used to, and fell as many others did below their usual average.

The Canvasback Camp donations for high averages was won by the home boys, Spencer and Mermod. The secretary, Dr. Clapp, of Moberly, left his pill bag behind and shot the programme through and came off winner of third prize.

It was decided that the next meeting of this league should be held at Butler on June 14 and 15. As this town is situated in the southwest part of the State where the shooters are plentiful, there should be a good turnout.

During the afternoon Wm. Clayton, of Kansas City, won the Elliott target trophy from O. N. Ford, of Central City, Iowa; scores, 81 to 80. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot
Targets:	15	15	20	15	15	20	15	20	15	25	25	25	at

The last event was a two-man team championship, and was won by Ford and Brookman, of Iowa, on the shoot off.

### St. Paul Rod and Gun Club.

ST. PAUL, Minn., May 24.—Inclosed find scores made at our regular club shoots, Saturday afternoon and Sunday morning.

Despite the fact that most of the best shots were at the Minneapolis Gun Club tournament, held at Inter-City Park, we had a fair attendance. Messrs. Figge and Bazille each made 15 straight. We have taken in forty new members, and our score sheets do not look as well now as they will later, after more experience.

Our new park is now completed, and we have no hesitancy in saying it is the best in the Northwest.

Scores of May 21:

Targets:	Shot at.	Broke.	Targets:	Shot at.	Broke.
Dave	100	34	Mike	75	18
Bokeman	90	62	Frankel	75	35

## Grand American Handicap Target Tournament.

THE manner of shooting all events scheduled for the Grand American Handicap target tournament is as follows:

# A Ready Repast for Sportsmen

PREPARED DELICACIES,  
WHOLE SOME FOOD

The Best Procurable  
The Best Money Can Buy

## And Always Ready.

A first-class Hot Dinner  
under all and  
every condition.

Prepared Soups, Meats, Vegetables, Puddings. A stove including fuel, attached to each can, without increasing bulk or weight.

ALL YOU NEED  
IS A  
MATCH.

Compact, Portable, Delicious, and with the aid of a match ready for use anywhere at a minute's notice.

**W**HILE the business in conserved foods of all descriptions has grown to enormous proportions in America as well as Europe, and millions of people are more or less dependent upon them, it has been necessary heretofore to either use a kitchen outfit for heating or cooking canned foods, or confine oneself to such as can be eaten cold.

We now offer an entirely new and full line of the very choicest and very best quality of preserved foods, such as soups, joints, vegetables and prepared mixed dishes in a patented form, which provides the necessary fuel and cooking arrangements without appreciably adding to the bulk and weight of the can containing the food. This arrangement will especially appeal to Sportsmen, Campers, Prospectors, Yachtsmen, Canoeists, Military, Tourists and all who have occasion to be away from home, or outside of reach of a well supplied table. Most shooters when starting out for a days tramp after big game or birds provide themselves with a bite of some kind. Luncheon carried in the pocket or otherwise is generally bulky and of a kind which cannot be compared with a well prepared, square hot meal. Our foods furnish the latter in most compact form.

## All You Need is a Match

to serve a hot meal of Delmonico quality in a few minutes, no matter where you are.

We draw especial attention to the high quality of our foods, which should not be confounded with the many preserved canned goods, excellent in their way, which are on the market. Our foods are prepared by some of the greatest culinary artists of the old world, and the following testimonial from the chief Larderer of His Imperial Highness Emperor William, of Germany, speaks for itself:

**Testimonial.** *"The canned foods with cooking apparatus attached have been used yesterday by Emperor William and gentlemen from the surrounding country during their trip to the mountains, and all goods have proved most excellent in every respect. Although the wind was blowing very strongly on the snow covered mountains, the cooking apparatus worked so well that the meals could be eaten within a few minutes time."*

### PRICE LIST.

We offer the following:

1/4 can a portion for 1 person  
1/2 " " " 2 persons  
1 " " " 4 persons

#### SOUPS.

Pea Soup, with salt beef.....	1/4 can	\$0.40

**G. T. BELL,** General Passenger and Ticket Agent, Montreal, Canada.  
Grand Trunk Railway System,

This day was on the dark, windy day order, and brought out that Billy Heer and Harold money are hard shooters under hard conditions, as they made 129 and 128. Cummings, the Bunker

Hill man, furnished a little spice of life for his first and only day by getting 126, Spencer and Powers each having 124. The World's Fair weather did not fully agree with most of the others. It is to be noted how poorly some of the members of local clubs shoot who invariably shoot well when on their own ground. It is a fact that all the other grounds about the city have better background than that used by this shooting association. The scores:

Events:	1	2	3	4	5	6	7	8	Broke.

The Mermod-Jaccard cup, representing the amateur championship at live birds, was a handicap event from 26 to 31 yds., at 25 live birds. Entrance \$15, including birds. Division of money, high guns; Interstate Association rules to govern contest. Any amateur in good standing is eligible to compete. The holder shall be subject to challenge, issued through the FOREST AND STREAM, the Sportsman, American Field, or the Sportsmen's Review, who will immediately notify the holder. The holder to name the place and date of the shoot, the date to be within thirty days of the publication of challenge, the holder to give the challenger not less than ten days' notice and deliver the trophy in good condition at such place of contest. The holder to name the number of birds, which shall not be less than 25 nor more than 50 birds. Loser to pay for birds. The cup will be open to challenge contests till the next State shoot, then all who have won it, either in open or challenge contest, including 1905 State shoot, will compete for absolute possession.

This was won by Tom Hall, the good shooter from Springfield, Ill. The handicaps were not well placed, as with the 31 limit many of the others should have been at the 28 instead of 30. scores:

#### Fifth Day.

This wound up the State programme, as there were only nineteen men shooting targets. Powers and Chas. Spencer were at their best. Heer had the hard-luck story, as running short of target loads, he shot regular 3 1/2 dr. pigeon loads, and in the first event after the change made four misses, which, with a loss of eight for the day, made him a tie with Spencer for the four days, as Spencer gained during the day five targets, just the number that Heer was ahead when the day's shoot was started.

In the merchandise and target events, Powers came near to the firsts, as he either won or divided all the firsts. The stein set, which Powers captured, was handsome. The Winchester shot-gun went to him and he was tied for the tent. Zahn won the

hunting boots. H. B. Spencer, the disinfectant; Kauffman, the beaded vest; Hall, the suit case; H. B. Spencer, the rocking chair; Hall, the disinfectant. Scores:

#### Aquidneck Gun Club.

NEWPORT, R. I.—The third race for the Powel cup was pulled off on Wednesday, with a good attendance and with splendid weather favoring the shooters. Herman, the wizard of last week, was again high, not very high, but far enough up to win with 44. Bowler, the last winner performed from 17 yds., scoring 39.

The traps worked finely, and a bunch of extras were shot, the boys being anxious for all the practice possible for the third annual on Monday next, when with good weather, a large entry is hoped and looked for. The scores:

Targets:	10	15	10	15	Total.
Manchester	9	12	10	13	44
Powel	7	12	8	13	40
Mason	9	10	8	13	40
Bowler, 17	7	10	9	13	39
Dring	7	10	10	9	36

Father (to boy): "Nice dog that you've just brought home. I'll pay half the license if you give me half the dog." Boy: "Thanks, dad. My word, you are a brick." Father (a week later): "Say, my son, I don't know what you are going to do with your half of that dog; but I'm going to poison mine."—Shooting Times.

#### Nebraska S. S. A.

OMAHA, Neb., May 23.—The Nebraska State Sportsman's Association closed its twenty-eighth annual target tournament at Columbus yesterday. It was one of the most successful meets ever held by this grand old body, which is saying much to the credit of G. A. Schroeder, Dan Bray and Gus Sievers, of the Columbus Gun Club, the trio who so ably conducted the affair. Seiverson made the highest score, with Blivins a close second, while Sack took the high average. The total figures of those who shot the full card out show the following results: Seiverson 579 out of 620; Blivins 577, Sievers 560, Ilian 541, Bernhardt 493, Campell 567, Terryberry 493, Sach 576, Roberts 519, Schroeder 439, Linderman 565, Dworak 465, Anderson 485, Reed 659, Allen 474, Goodrich 491, McDonald 516, Townsend 573, Thorpe 455, Miller 565, Williams 523, H. Dixon 544, C. Dixon 543, Bray 533. There were ninety-eight shooters participated, and they were unanimous that the tournament was one of the best ever held under the auspices of this time-honored Association.

SANDY GRISWOLD.

#### SIDE LIGHTS OF TRADE.

Parker gun wins: At Vicksburg Gun Club shoot, concluded on May 18, Mr. Ed. Brady, of Memphis, won highest amateur average for the entire shoot, and Mr. Paul Chaudet, of New Orleans was third. For amateurs, we think this a remarkable showing. On May 17, Mr. Fletcher, of Vicksburg, won the championship cup with a score of 49 out of 50. Frank J. Morse, of Boston, Mass., an amateur shooter, at the Watertown Gun Club grounds on May 14, made a score of 50 straight. John A. Flick, of Ravine, O., a one-armed shooter, on May 19 broke 23 out of 25 in a gale of wind. No other score was over 18. This was really a wonderful performance for Mr. Flick. At the Columbus, Neb., shoot, W. D. Townsend scored 96 out of 100, tying for second place in competition for the \$100 hammerless gun. W. D. Townsend won the gold medal event with a score

SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JUNE 11, 1904.

VOL. LXII.—No. 24.  
No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, \$4 per year, \$2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

### PURIFYING WATER SUPPLIES.

Nothing is more important than the purity of the water which we drink, yet it is within the experience of most men to have drunk bad water. In fact, it is not unusual, in large towns, for the water at certain seasons of the year to have a bad taste and perhaps a bad odor, and so to be very disagreeable to use. Possibly the unusual taste, smell and color may not be unhealthy, but being disagreeable they are supposed to be so, and a remedy for these conditions is constantly sought. This often takes the form of cleaning out the reservoirs, under the impression that the bad odor and taste come from dead fish in the water. Sometimes the water becomes so bad that it is refused not only by men but by domestic animals as well. In very many—if not in all—cases this trouble is caused by the presence of low forms of vegetation, as algæ, in the water.

A bulletin recently issued by the Department of Agriculture offers a method of destroying or preventing the growth of algæ and certain pathogenic bacteria in water supplies. The bulletin gives the results of extended investigation and experiment by Dr. Geo. T. Moore and Karl F. Kellerman. Dr. Moore is the physiologist in charge of the laboratory of plant physiology, and Mr. Kellerman is his assistant.

These investigators have shown that it is practicable cheaply and quickly to destroy objectionable algæ in small lakes and ponds and storage reservoirs by the use of extremely dilute solutions of sulphate of copper, or of metallic copper. They have shown also that an extremely dilute solution will destroy typhoid and cholera bacteria at ordinary temperatures in three hours, a fact of possibly enormous importance.

It is shown that—contrary to the general belief—copper in small quantities is not injurious to man or to mammals. Metallic copper and its oxides have been eaten by dogs with no noticeable effect, even though the quantities were considerable, and a sheep to which copper was daily administered lived for 128 days. On the other hand, plant life is very susceptible to copper. An enormously dilute solution will affect the growth of seedlings when applied to their roots, and will destroy and prevent the growth of algæ.

It thus appears that animal life is less susceptible to injury by copper than is plant life, and that among animals the higher the life the more resistant it is to the copper. The critical concentration for game fish is higher than for others. Black bass in good condition have endured concentrations of 1 to 50,000 for many weeks without apparent discomfort, while 1 to 100,000 was sufficient to kill German and mirror carp in a few hours, and 1 to 500,000 killed the most susceptible in a few days.

In the case of algæ, a dilution of 1 to 1,000,000 would be sufficient to prevent the growth of any algæ which would tend to pollute the water. Such a dilution is absolutely harmless to man or to mammals. In order to absorb an amount of the copper sulphate sufficiently great to be possibly unpleasant or dangerous, it would be necessary to drink 50 quarts of this water in a day. Moreover, as the copper in the solution speedily combines with the algæ, and is precipitated in other ways, the amount remaining in solution after the first few hours would be practically nothing.

The method of treating water is a very simple one. The required number of pounds of copper sulphate should be placed in a coarse bag—as, for example, a gunny-sack—attached to the stern of a rowboat near the surface of the water, and rowed slowly back and forth over the reservoir, making each path of the boat about 15 or 20 feet from the last one. This has always proved effective. Against the lower forms of plant life it is a certain remedy, and it seems quite possible that it may be destructive also of certain insect larvæ, like the mosquito,

Experiments with the typhoid, cholera, and some other baccilli, have already been alluded to. The great value of this copper disinfectant is its efficiency, its harmlessness to man, its cheapness, and the ease with which it can be applied.

On the other hand the investigators warn the public against a general and wholesale use of this remedy. They declare that the microscopic investigation of waters is necessary before it can be known how to treat them, and that each body of water must be considered as a special case requiring a particular prescription.

The matter is one of such universal interest that we may imagine that a vast number of experiments will be made on the subject, to the very great benefit of the public.

### NEW JERSEY AND PIGEON SHOOTING.

THE status of trapshooting in New Jersey, as it concerns pigeon shooting, is not approved by the shooters at large. Several times since the New Jersey Legislature at its recent extra session passed a comprehensive law prohibiting the shooting of any kind of bird from the traps, the daily papers of Philadelphia have recounted that the Riverton Gun Club, through one or more of its members, purposed to test the constitutionality of that law.

The club's plan of procedure, according to rumor, is simple and direct. After the law goes into effect on July 4 next, a club member or members will publicly shoot a pigeon or pigeons at the traps on the club grounds at Riverton, N. J., thereby inviting prosecution, and instituting the test case.

The case, in the event of adverse decisions, will be carried up from court to court till the highest court of the State makes final adjudication on the constitutionality of the law.

Whether these rumors truly present the position and purposes of the Riverton Gun Club in respect to this matter, we do not know; but we do know that there is a broad undercurrent of opinion among New Jersey trapshooters favoring the institution of such test case.

This law, hostile to live bird shooting at the traps, imposes special loss and hardship on the Riverton, Cartaret and Westminster clubs; for, apart from the personal deprivation concerning pigeon shooting as a sport, the new law renders useless an elaborate and costly trapshooting equipment, which, after July 4, will be of little, if any, more value than old junk.

The Riverton Gun Club's grounds, club house, stables, traps, etc., are said to represent a cash outlay of \$75,000. It is quite to be expected that this club would object to a law which so radically affects all its interests.

However, from the viewpoint of trapshooting sentiment or investments, or both, a test case, if it ever should reach the judicial stage, affords no ground for a reasonable hope that any judicial decision would be rendered favorable to the contentions of the trapshooters.

Opposed to pigeon shooting are too much adverse precedent, too much contemporaneous law in other States which effectively prohibits pigeon shooting, and too much watchful, forceful public opinion everywhere which views the practice with uncompromising hostility. Other States than New Jersey this year entirely prohibited it within their borders.

If we examine briefly the law of the State of New York, which is considered sufficient law to suppress pigeon shooting, we find that it is a general law prohibiting cruelty to animals. It, nevertheless, is considered as being quite sufficient to suppress pigeon shooting, on the ground of cruelty alone. In 1874 Mr. Henry Bergh officially interfered with the shoot of the New York State Association, held at Coney Island. As a consequence, he was sued for damages in the city court. Judge MacAdam, before whom the case was tried, dismissed it on the ground that the general statute prohibitive of cruelty to animals applied to pigeon shooting.

As a result of the earnest efforts of New York trapshooters, pigeon shooting by members of sportsmen's clubs or incorporated societies, was legalized by statute, as per Section 1, Chapter 107, New York Laws of 1875. The repeal of this statute by the New York Legislature not long since, left in force the general law as to cruelty to animals, which, under Judge MacAdam's ruling, prohibits pigeon shooting. No one has judicially questioned the efficiency or constitutionality of this law. It has

entirely suppressed all overt pigeon shooting in the State of New York.

The general law concerning cruelty to animals is also invoked against pigeon shooting elsewhere. Under it, in Chicago, on May 13, 1902, in a pigeon shooting case prosecuted by the Humane Society of the State of Illinois, the defendants were convicted, and the appeal, at first contemplated, was abandoned. That decision has since been accepted as good law in Chicago.

On the other hand, there are precedents under similar general laws quite opposed to the foregoing. In the case of the Commonwealth of Pennsylvania vs. Denny, et al., in 1892, the judge decided that the defendants had not been guilty of any cruelty in shooting pigeons at the traps.

Again, in an appealed case of a Pennsylvania court in 1887, in which Mr. A. Nelson Lewis was tried for pigeon shooting on the ground of cruelty, Judge Paxton, as Chief Justice, reversed the decision of the lower court. He held that the facts, as presented to the jury, did not bring the case within the general law on cruelty to animals. These cases, as precedents in later years, seem to be ignored. They have a restricted significance since they, in the main, represent an issue between the Humane Society and the trapshooters. The public at that time was passive, and manifested no particular interest in the matter. Pigeon shooting then was practiced by only a few, and had not attained the importance of a national sport.

Since then, a general public opinion has been aroused in relation to this subject. Under the general laws concerning cruelty to animals, the humane societies seem to be fully equipped with all needed legal support to prosecute successfully any overt act of pigeon shooting at the traps.

The general laws in a number of States having many times proved to be amply sufficient to suppress pigeon shooting, how much more forceful, then, is the specific statute of the State of New Jersey, which sharply and unqualifiedly prohibits every kind of live bird shooting at the traps? The mere assertion that it is unconstitutional, in social discussion, conveys a certain sentimental feeling of gratification to a majority of trapshooters, but the setting forth of the specifications of the pigeon law unconstitutional before a New Jersey court is quite another matter. The rights of the people in the abstract, and the statute law in the concrete, do not always concur.

Weighing the matter on its merits, without prejudice, we cannot perceive that there is even a remote chance for a test case to result in favor of pigeon shooting. And if a test case should result in favor of the shooters, what then? With the generally hostile public opinion against pigeon shooting in New Jersey, the next Legislature of that State to a certainty would amend any defects in the pigeon shooting law, and the test case would be in that large realm known as labor in vain.

MR. JOHN W. TITCOMB, Chief of the Bureau of Fish-culture of the National Fisheries Bureau, has returned from Argentina, in which country he has spent nine months in the investigation of the waters and the introduction of food fish there from the United States. The enterprise has been successful in a most gratifying degree. A hatchery was established at Lake Nehnel Huapi, the headwaters of the rivers Limay and Rio Nigro, a point 325 miles from the last station on the Southern Railroad, whither the eggs shipped by the United States Government were conveyed. These comprised 1,000,000 whitefish eggs, 1,000,000 lake trout, 50,000 brook trout and land-locked salmon. In addition to these, there have just been shipped 1,000,000 rainbow trout eggs and 50,000 steelhead eggs from California and Washington.

THAT story of Wymore's park system, as projected by a reader of FOREST AND STREAM, and achieved by a growing public sentiment, might well be used as a tract for distribution over the broad land to every village and city which is now without a pleasure spot the citizens may call their own. What Wymore has done, New York and other great cities are doing. Congested tenement districts have been converted into breathing places with shade trees and greensward and music, and the beneficial results are told in the decreased criminal calendar and the lessened death rate.

# THE SPORTSMAN TOURIST

## The Labrador Expedition.

Editor *Forest and Stream*:

In describing the case of the Hubbard party as that of children in a woodlot, I cannot think that you have duly considered the actual history of the expedition, or have been well informed as to the resources of the region concerned. As a friend of Mr. Hubbard, I may perhaps be pardoned for feeling that the criticism which has thus far appeared in your paper is unnecessarily disparaging. To condemn the party outright for not taking large supplies and almost at the same time to support the theory that the country could be traveled safely without provisions, is confusing, and the explanation that the party was totally ignorant of the woodsman's craft is not warranted by what we know of its doings.

It may be premised, as regards the party's knowledge of woodcraft, that George Elson, the Indian, while not especially experienced as his people go, came to Mr. Hubbard as a native of the Labrador, and withal extremely well recommended for the trip by officers of the Hudson's Bay Company. His life had been spent in the very atmosphere of northern life and travel, and there is, I believe, no obvious reason for regarding him as deficient in the ordinary technique of wilderness life.

Be this as it may, once cold weather has set in, there is not enough woodcraft in all North America to insure one's subsistence throughout a long cross-country trip in the northeastern inland. Native Indians, settled in well known and chosen spots in advance of cold weather, have an excellent chance of getting along; yet even with them, in the very country where Hubbard and Wallace turned back, a starving time occurs every few years, and perhaps half the people are dead in their lodges by spring. On George River this seems in no way due to unusual destruction of the game, but is an old condition which appears to have been not substantially different generations ago.

Accordingly John McLean's account of his journeys between Ungava and Hamilton Inlet, sixty years ago, is largely a succession of references to narrow escapes and death from starvation. The circumstances of his return to Chimo are singularly like those of Mr. Hubbard. He would surely have died but for an Indian who left him fifty miles out and fortunately had strength to reach the post and send back relief. Yet McLean had followed this life as a profession for many years, had local guides, and due equipment. A storm comparing with the one which windbound the Hubbard party would have sealed his fate also, as well as that of all his party, and his "Twenty-five Years' Service in the Hudson's Bay Company's Territory" would never have been written. It may be added that if he had perished his name as a traveler would by no means have suffered the disparagement brought down in the present instance.

Still further back, Samuel Hearne writes feelingly of the hazard and mortality from want attending the longer journeys of the inland Indians to Fort Churchill (then Fort Prince of Wales) with their furs, and during the hundred and thirty years since Hearne's time the risks of such trips have been always recognized by those familiar with northern life.

To the southwestward of the region we are concerned with, lies the basin of the great East Main River, many hundred miles long, which discharges into Hudson's Bay. On this river, for a long term of years, the deaths from starvation were more than from all other causes combined. The whole region was finally abandoned by the survivors, and was uninhabited for years, if it is not at the present time. The caribou had diminished to near extinction, and in the end the people came to save every scrap of refuse and offal, every bone, tag of skin and entrail, whether of bird, beast or fish, drying and storing all in time of sufficiency to save life in expected straits. At Mistassini Post, although thirty-five thousand pounds of freight were brought up each year from the Bay, Mr. Miller took evident pride in telling us that the post had never had a starving time since he had been in charge, though often before; and A. P. Low states in his formal report to the Geological Survey that the Indians about Mistassini could not subsist without help from the Hudson's Bay Company. Now, are the doings of a party who have subsisted themselves almost three months in such a country to be regarded with contempt? Let him of us who has done anything like it cast the first stone.

Unquestionably the party's initial equipment was deficient. They should have had a larger canoe—or better, a second canoe—more provisions, a shotgun, and, above all, a net. With the latter requisite there should have been practically no risk of starvation. But be it observed, even after freezing weather set in and they were unable to get fish with the hook, they still supported themselves on the country as long as John McLean did in going from Northwest River to Ungava over the same route. McLean traveled further, but had important advantages, one being that he had traveled the same route a few weeks before. Moreover, he started strong and well, while the later party were already weak and thin when they began their last month of travel. The exact parallelism of the final exhaustion of the two leaders, the forced march for life of an Indian in each case, and the return of a rescue party—too late, alas! for one brave

soul—may serve to emphasize the vicissitudes of north-eastern inland travel. As a matter of fact, for such a party as the present one to subsist themselves so long on that particular piece of country with only rod and rifle, is an incredible feat of woodcraft, such as the hardiest natives would shrink from. Noting what Mr. Hallock says about the Hudson's Bay Company's putting the party right as to outfit, the supposition is quite natural; yet, very curiously, it happened that the one fatal deficiency in outfit, and which almost surely cost Mr. Hubbard his life, was occasioned by his relying on getting a suitable net from one of the posts. There was none to be had at Rigolette, and it seems clear that the party traveled without one. And as to October not being a month to starve in on the plateau of the northern interior, the very contrary may well prove true. October there means early winter, and often zero weather.

Concerning local guides, it is safe to say that for the more remote regions north and east they are hardly to be had. So far are the inland Indians from being disposed to assist one, that in a recent instance a Hudson's Bay Company's officer was turned upon with threats, and found it expedient to get back to the shore forthwith. Moreover, their ways are not always those of the ideal guide, as may be inferred from the attempt of a party of them not long since to rush an H. B. C. post in the face of active resistance. Very sensibly, they prefer not to have outsiders on their hunting grounds, and do not often care to serve as guides. As to Hamilton Inlet, no Indians are regularly tributary there of late years. The shore people hunt far up the Grand River, traveling in skiffs, and might do well as guides for parts of that large basin. From Rigolette Mr. Hubbard wrote me in July that he could find no one there who had knowledge of the N. W. river route.

As to maps, if the average visitor tries to travel the further country by any other maps than Low's, he is not likely to get far enough to be in any personal danger whatever; and Low's routes really cover but little of the country. Even Low himself, with all assistance from the Hudson's Bay Company, was unable to get effective help at Hamilton Inlet, and did his important Grand River work with his Lake St. John men. Among the Labrador natives I have some friends, and in the course of something over two thousand miles of interior travel have had the fortune to potluck, winter or summer, with Indians from George River, Northwest River, Seven Islands, Bersimis, Mistassini and Pte. Bleue. These Indian hunters (and no one else) are really "absolutely acquainted" with the country. Yet I have to regret that to me the matter of getting any of these men for work in the north and east is not simple, if possible.

So far as white men are concerned, the peninsula, while truly "not unexplored," as your editorial has it, has large areas on which no eye is known to have rested, and some of its greater rivers and lakes have been mapped only by hearsay from Indians, or mere conjecture. From its barrenness the country is likely to remain longer unknown in detail than any other large area on the continent.

To return to subsistence and the starvation question. The eating of moss, barks, buds and the like is practiced under stress by the human race generally, and doubtless occurred to Elson. This browse-food does good service, but even when one is inactive will not maintain life long under north Labrador conditions, else the long list of cannibalistic horrors of the fur countries need never have been told. How far a man already weak could travel under the onset of winter upon such food may be readily surmised. Even the ruminants get weak and thin upon a course of winter browse. The rodents do better, and chemistry may yet enable us to do as well; but although these things are not wanting in nutriment, and a porcupine can do well on a barky tree, the time has not yet come when one can send home a load of hay for family provision with satisfactory results. Finally, the intimation that berries might have saved the party if they had been intelligent enough to pick them, is hard to take seriously.

The best resource in the barrens is probably the rock-tripe (wakwanapsk), which became important in Franklin's land expedition. Of this, on observing some, a Cree remarked to me with appreciation: "It has saved many an Indian family." It grows only on certain kinds of rocks, and may not be found on Northwest River.

Broadly speaking, when it comes to the question of doing serious traveling in the peninsula without provisions to start with, it is safe to say that those best qualified to do so would be the least willing to undertake it, and the firmest in their demand for a sightly pile of pork and flour before starting. The Nascaupsee I have seen, when journeying to the coast, carried supplies—men dressed in skins, living in skin tents, subsisting as wholly by the chase as their remotest ancestors, and growing sometimes to manhood without having seen a white face.

It is not to be denied that Mr. Hubbard was willing to take chances which most persons would not care to accept. Rash he was, and with more experience would doubtless have estimated the undertaking more correctly. Yet the getting windbound at a critical time might well have happened to an older voyager than he, with as sad a result. The rivers more or less fail of fish in cold

weather, and at times the Indians themselves perish even at their lakes, in spite of net and tackle.

Mr. Hallock's citation of the disaster to Nordenskiöld's party in the Lena Delta doubtless refers instead to De-Long's party. They surely should have tried fishing, but it is by no means certain from the printed accounts that the result would have been different. The fact that the natives were able to catch fish with nets a long way up stream from the party by no means proves that their own efforts in another place with hook and line would have been successful.

Without knowing the source of Mr. Hallock's account of Factor McLean's great journey, I am inclined to think that it is based merely upon John McLean's trips already alluded to between Hamilton Inlet and Ungava. No such event as the former is found in A. P. Low's long list of Labrador travels, nor is any tradition of the journey known to Mr. Peter McKenzie, the present manager of the Hudson's Bay Company, notwithstanding his long service in the peninsula.

It is not too much to say, finally, that if as unfriendly criticism were applied to other northern expeditions as has been bestowed upon the present one, not many would escape a bad showing. Not a few of the expeditions in such countries as northern Labrador have lost men or escaped by a mere chance. The region where Franklin and his hundred and five men left their bones had more game resources than did the country Hubbard traversed, for Schwatka subsisted a large party there during something like a year's time. Consider the ships and parties that passed up the Baffin's Bay route, yet none until Peary who ever thought to look over into the inland valleys and find the muskox feeding. Consider the precautions that Warburton Pike, with all his experience, neglected on his Peace River failure. And what one of us who have traveled in wild countries at all has not chanced upon the day when a turn of fortune less decided than that which bore against Hubbard when he turned back, would have cost a life or lives?

BOSTON, MASS.

W. B. CABOT.

## Wymore's Park System.

WYMORE, Nebraska.—*Editor Forest and Stream*: I have been a reader of *FOREST AND STREAM* for many years, and I feel to-night like testifying to the good influence the paper has exerted over me, and to point out, in my feeble way, how good results have been attained by reason of that good influence.

This little city was laid out twenty-three years ago by a land company connected with the Burlington Railway Company. Six hundred and forty acres were platted into lots, and placed upon the market. The eastern boundary of the city was the Big Blue River; the southern boundary is the beautiful Indian Creek; the northern boundary is Bill's Creek, and the western boundary is the Rocky Mountains. No prettier location for a city can be found anywhere. But the company which laid out the town neglected one very important thing, and that was parks. Not a lot, not a foot of ground, was left unplatted to be dedicated for city parks. It is true that we have some pretty drives along the river and the creeks, and some nice picnic grounds in the woods along these streams, but they are liable to overflow and do not belong to the city, and but few of these nice places can be utilized for the pleasure and comfort of our citizens, and do not in any sense take the place of nor obviate the necessity of having some nice parks in the city.

Two years ago the City Council called upon me for an opinion as to the best way to collect delinquent taxes upon certain pieces of real estate in the city, and after due investigation and consideration, I recommended that the property be condemned for city parks, and accompanied my report with the proper ordinances to carry it into effect. The Mayor and Council seemed to enjoy the joke, and adopted my report, and passed the ordinances without a dissenting vote. Appraisers were appointed and the lands appraised.

One of the pieces of land was a twenty-six acre tract on the north side of town, lying very high and sightly, overlooking Bill's Creek, and one corner of it taking in the creek, with about two acres of fine timber and shade trees. It had been a fair ground many years before, but the society had failed, and the title to the land had passed into the hands of a non-resident, who owed the city \$600 sidewalk taxes. The land was appraised at \$50 an acre, or a total of \$1,300, from which the appraisers deducted the taxes. There was an appeal from this appraisal to the District Court, and an injunction suit was commenced against the city in the same court. The city was successful in both suits. It was no longer a joke. The Mayor and Council and most of the people had become interested in the fight, and a settlement was effected under which we paid the owner \$1,000, and the land was deeded to the city for park purposes forever. The city then fenced the land at an expense of over \$900, and otherwise improved it, and named it "City Park." A driving association has been formed, which now has a fine regulation half-mile track in this park. The Wymore Gun Club has a nice building there, and the finest shooting grounds in the State.

The second piece of ground was a single block, three

hundred feet square, situated in the west part of town, which the city acquired at an expense of \$100 and the loss of \$392 taxes. The only objection that was made to the taking of this block was that it would increase the value of my property, as it was just across the street in front of my residence, but I waived this objection, and the Mayor and Council appointed me Park Commissioner. A year ago I planted nearly three hundred trees and some evergreens in this park, seeded it down in grass, and already it is a beautiful little park.

The third tract was two half blocks in the east part of town, which was deeded to the city free from taxes for \$250. The street between the two half blocks has been vacated, and added to the park, which has been well set in trees and fenced. The city water has been put into each of the three parks. I had almost forgotten to mention that the "City Park" (the twenty-six acre tract) has two nice little lakes upon it, which are being improved, and will be stocked with fish. Each little lake will have fresh water running into it from the city's pipes, and overflow pipes will allow the water to escape, thus keeping the water in the lakes always fresh.

The present City Council, not to be outdone by their predecessors, are negotiating for another park, and no doubt will get it during the summer at a cost of about \$500, part of which will be donated.

The city's total outlay for the three parks is less than \$2,500, including fencing, which is less than half of the actual market value of the properties at the time they were taken; and the best part of it is that a splendid and enthusiastic public sentiment in support of these expenditures has sprung up in our little city, and a man who would oppose the expenditure of money for the care and improvement of these parks could not get himself elected Dog Pelter in Wymore. And I may truthfully add that property owners are paying up their delinquent taxes and getting in out of the wet.

A. D. McCANDLESS.

## With the Shoal-Water Ships.

THE fog which had shrouded the harbor had lightened and the rain had ceased. The surface of the water was glassy. The wind, which had hung in the east for a couple of days, had died away, and the damp, cool air was motionless.

We climbed down the ladder aboard the tug, passed down grip and camera and numerous bundles, and went into the pilot house with the mate. The little tug started down the harbor, and we looked ahead to where the Kaplan ought to be. The Stella B. Kaplan, an old friend of mine, and as seaworthy and comfortable a craft as there was on the coast, had cleared for Savannah, Ga., under Capt. Merritt, who had sailed her as mate or master for six or seven years, and it was my good fortune to be numbered among the after guard.

The prospect of a cruise is always exhilarating, and I was not sorry to think that I could shake free from the land and city with its humdrum and enter the world of sea and sky, with its rough, rude life and its ever-changing scenes.

"What sort of a gang have they got off there for me?" Capt. Merritt asked of the mate of the tug. "Were they very drunk?" That they were "drunk" was an accepted fact; the degree of intoxication only seemed in doubt.

"Well, they h'isted 'em over the side in a bowline," replied the mate, with a judiciously aimed discharge of chocolate colored fluid through the open window of the pilot house; "they may not have been 'drunk,' but somehow they couldn't seem to stand alone very well."

"And the mate—how was he?"

"I guess he had a little down, but he seemed to know what he was about."

The captain said nothing, but probably his thoughts ran to the life he led, with its toils and dangers, long nights of watchfulness in winter's cold and summer's heat, and to gales and wrecks and collisions and lee-shores and fogs and snow; and its petty trials, its drunk and mutinous crews, long delays in port without demurrage, and the lonely, homeless life the sailor enjoys.

But we were soon alongside, and, climbing over the rail, took a look at our home for the next few days.

The Stella B. Kaplan is a stout four-masted schooner of 1,024 tons, and was a big schooner in her day. But twelve years have wrought such changes in the size of our coasting vessels, that she would look small alongside the recent products of the Maine yards.

The decks were dripping from the efforts of the mate to remove some of the coal dust which had covered everything; a new mainsail lay on the main deck, rolled up as it came from the sailmakers; fenders still hung over the side, and the decks had that appearance of general confusion which exists where things are not coiled up. The sailors stood around half dazed, and tried to interpret the orders of the mate with but little success; their haggard faces, shuffling gait, and generally dragged-out appearance confirmed the statements of the mate of the tug.

We went below, and the mate soon came down. "They won't work no more, Captain," said he. "They said they had done enough, and have gone into the fore-castle. I wanted 'em to wash her down and haul in the fenders, but they said they were tired and wan't going to do no more."

The Captain rose from his chair. "— 'em. I wish things were the way they were twenty years ago, when I first went to sea. You could go down into the fore-castle then if a man didn't obey orders and kick his head off: but now you can't lay a finger on one of 'em without making a lot of trouble for yourself. I wish some of those — fools that make these foolish laws could have charge of a vessel one trip and have to handle a lot of sailors; they wouldn't be so free with their laws to protect the poor sailor. What do they know about it, anyway?"

The Captain went forward and looked into the fore-castle door. I could not hear what was said, but he soon returned, and the sailors stayed in their hole.

"I'll dock 'em three days' pay for this. They think they can do as they like. It don't make no difference whether they refuse duty for five minutes or a whole day; you can dock 'em just the same. They will find that out when we get back to New York. Now I am going below to write some letters for the tug to take in the morning. He said he would be alongside at six

o'clock," and the Captain disappeared below and left me on deck.

Darkness had come on, and the city lights glistened in the distance. The long row of electric lights which marked the South Boston pier was reflected in the still water; two or three vessels at anchor near us lent companionship by the gleam of their riding-lights. The decks of our craft were deserted. In the forward deck-house the cook was busy in his galley on the port side; on the star-board the open door of the fore-castle showed the dim forms of the men moving in the uncertain light. Their words could not be distinguished, but one or two generally had the floor and emphasized each word by violent gestures. It seemed more like a page from Clark Russell's endless descriptions than a night in the month of September in a coal schooner at anchor on the South Boston flats.

About six o'clock a smart squall of wind and rain came out of the west, shifted to north and blew all night, and the morning was glorious. At daybreak all hands were turned out and we got under way. Sail covers came off, were folded up and piled on the hatches; stops taken off the sails, sheets rove fore and aft, fenders hauled in and stowed away, and steam having been made by this time, the spanker halliards were taken to the winch and the heavy sail rose slowly in the air. All signs of sulkingness had disappeared, and the men jumped around like lambs. The Captain was watching for the boat which was to be alongside at six sharp and tow us out if need be; but six and seven came and no boat. He glanced at the pier, up town, and at the weather. "Suppose you and the mate take the boat and pull ashore at the point and mail these letters. I would send one of the men, only I am afraid he would never come back."

I jumped at the chance, and we lowered the little boat and pulled the mile and a half in quick time. Just to breathe such air is sufficient reward for the three-mile pull. We were half way back when the "old man" started up the foresail and jibs, and as we pulled under the stern and hooked on again the cable was up and down, and in a moment she was away. I went to the wheel, hove it over, and she began to travel. The sharp hiss of foam came up from the wake under the boat on the davits; the glistening white froth raced along to leeward, and we had begun our little voyage. Out of Broad Sound with the fresh northerly wind we made quick time, and squaring away off the Graves laid the course for Cape Cod, and one of the men coming aft to the wheel, we went below for breakfast.

The wind held about N.E., and fresh, and with topsails set to the usual chorus of "O ho" and "Now down," we ran down to Highland Light. The crew had differentiated from the drunken conglomerate of the night before into Bill and Harry and Tom and Pete. Harry was a dark, rather slender, soft-spoken fellow, with a remarkably musical voice of a warm southern vibratory quality, had been second mate, and seemed a little above the level of the average schooner sailor. Bill was a stout, handsome Irish lad of twenty-five, with powerful arms and neck, white where unexposed to wind and sun, which bespoke a strength of body not yet broken by overwork and lack of sleep. Tom was a little fair-haired Dutchman of solid build and expressionless face, whose wide blue eyes seemed innocent as a boy's. He had been the most persistent in his demands the night before to be put ashore: twenty years ago he would have had his "head kicked off." Pete was the oldest of the lot, and a poor specimen; whiskey and dissipation had done its work and left its mark in the weak face and undersized frame. The engineer looked his part, and was not much on deck. The steward and cook was a colored man who had been on deep water all his life, and had so firmly acquired the habit of making a little go a long way that we nearly starved. His leisurely journey aft from the galley with his basket about seven bells was a signal for a subdued groan from the old man, who would recall numerous predecessors of the innocent offender with a gusto that was ludicrous. The mate was a vagabond who had been all over the world afloat and ashore, and who delighted in narrating his experiences in a broken lingo that required the closest attention to interpret. Their names may or may not have been their own; one name is enough for a sailor; "Here, you" is enough for the Captain.

Capt. Merritt did not love sailors. I never saw a captain who did. "If they would only build a vessel you could handle without sailors," he used to say, "wouldn't it be great? I don't know as I would mind going to sea if it wasn't for sailors, or if I could get home a few days every month and not have to look at a sailor."

At first thought, coasting trips would hardly seem to require prolonged absence from home, but on one occasion it was two years before the Captain saw the home he had left for a short trip.

"It's a lonely life," he said, with a down East drawl. "In port I have the agents and what captains may be in, but that isn't very gay; I generally stop aboard the vessel most of the time, and it gets to be terrible lonesome." The mate soon gets talked out, and the captain would as soon jump overboard as speak to a sailor outside of the ordinary routine. And with so few to handle so large a vessel, watch and watch is observed at sea, and thus the mates are below when the captain is on deck, except during the short dog watch. The old customs of the sea die hard; they are still in force to a great extent. Discipline is just as necessary in a coasting schooner to-day as it was in one of the famous liners of the '50s, and the "sir" at the end of an answer to mate or captain, the lee side for a man coming aft to the wheel, the hurried shift into fairly presentable garments for his trick, and many more of the details of marine etiquette are followed about as closely as ever. To be sure, the man at the wheel doesn't get a clip under the ear that lands him in the scuppers for letting the ship fall off of her course a point, but he would get a word in the ear if he didn't attend to his steering; and the same rule, "obey orders," holds good in a coal schooner to-day as in the famous clippers.

No man can follow the sea for a score of years and attain the command of a vessel unless gifted with physical powers and grit of a high order; and the story of any of the masters of the coasting fleet would be good reading. Capt. Merritt had been to sea all his life, and was a shrewd, hard-headed business man, with a mind of his own and the ability to express it, and was afraid of

nothing. Naturally his thoughts ran to the opposite extreme of the life he followed; and many a time when we were rolling along under a blue, cloudless sky, and I would say, "What do you want better than this?" the answer would come in slow, drawling tones: "You give me my gun and a few days in the woods," with emphasis on the woods, "and I wouldn't think of this old hooker for a while now, I tell you. I stayed ashore one fall for a couple of months while Captain M. had this vessel, and every morning I would take my gun and would go into the woods," and then would follow an enthusiastic hunting story. I wish I could transcribe tone and accent.

"What do the people do down your way—fish?"

"Wall, yes. Those along shore fish a little when they think they can make a little out of it. They are all poor, just make a bare living; never see no money. Down Addison way they are all poor except those back in the woods and they are poorer yet. You can live cheap down there; you have a cow, and there's your milk and butter; and a pig, and there's your pork; and a garden, and there's your vegetables; and you can raise your corn and stuff; but they don't see no money. They have to go to sea to make any money. Most every one down there has lost some one at sea."

He gave a look around—we were off Hatteras. "I spent five days on a wreck off here when I was a boy; but it was summer, so we didn't mind. She was a bark loaded with lumber. We were bound to the West Indies. The thirst was the worst; the last two days my tongue was swollen so that I couldn't speak." This was in answer to my question as to whether he had ever been wrecked; I had known him ten years or more, and he had never mentioned it before.

On deck things had assumed a normal aspect; gear had been coiled up, fenders stowed away, coal dust washed off, the regular watches set, and the usual life of the coaster at sea had begun. One of the crew—the whiskey-soaked one—when the mate was not looking, asked me whether we were going out of the South Channel or over the shoals. "South Channel," I said, and a momentary gleam of satisfaction lighted up his face. To be clear of handling chains and anchors and canvas in a passage over the shoals was a point of considerable importance to them.

Night came on, and about nine o'clock the lightship hove in sight on the starboard bow. The wind was steady, and the moon, nearly full, spread her pathway on the sea, and the schooner, rolling gently in the regular swell, swept along in the moonlight, transformed from the disorderly, untrim hulk of the coal dock into a sentient, living thing, mindful of a turn of a spoke of the wheel, and reaching, reaching under the swelling sails as though eager to cover the course ahead in the shortest time.

The hardships of a sailor's life were not in evidence on this trip. Surely no more ideal conditions could be desired; fair winds, a cloudless sky by day, a bright moon by night, a temperature constantly rising, changing the brisk, bracing air of Massachusetts Bay for the softer, warmer breath of the Gulf Stream, all combined to banish thought of danger and exposure.

On the third morning, off Hatteras, the change in temperature was sudden and agreeable; the dew-covered deck glistened with the rays of the morning sun; the wind had dropped to a light air which barely gave us steerageway; the damp, moist air, saturated with the salt of the sea, fanned out of the sails. The joy of living came with increased power. To be, to breathe, to drink the tonic of the ocean, to feel that soft wind on face and arms, to tread the cool, wet deck in bare feet, to lay aloft and from the cross-trees look on an ocean just awakening from a night's rest is a privilege which few can appreciate. The old shellbacks don't care for that sort of thing; they are washing the dew from off the decks and cursing the luck that they are there at all. It is \$30 a month to them. The look of amusement which came over the face of the man at the wheel when of an evening I took my little journey into the lazarette by way of the after hatch, loaded with camera and red lantern and boxes of plates, seemed to shout aloud, "What is a big feller like you fooling with them things for? What do you want to take pictures of an old coal schooner for, anyway?"

I could reply in kind: "My friend, put in fifty weeks a year housed up in town and you will prize the two or three weeks of ocean breeze and tarry hands and the glorious pull and haul as the best part of your life; and you will look back on it a hundred times as distance softens the view with ever-increasing love; and the snap shot of you at the wheel that I took to-day will have to last me many months when I feel the itching for a good, hearty drag on something heavy which no gymnasium can fully satisfy. You to-night are dreaming of some bum show and of the glorious booze you could have were you ashore. Look around on that ocean of molten fire, that sky of deepest blue, and brilliant stars, feel that life-giving wind, and thank fortune you are a deck-hand."

To one right from the city it is refreshing to cast the eyes around and see nothing but ocean; to have the broad decks and towering masts to one's self. There is freedom and unconventionality to the limit. The passenger by steam is bound by rules and regulations and social restrictions; he must dress for dinner and for walking the deck and for evening. Here the sleeveless jersey is worn the day through in the summer sun, and the whole ship is mine.

The wide, sloping canvas cover of the boat at the davits is a favorite lounging place. With the sun in one's face, to lie back there at a supremely comfortable angle under the strongback and take in the whole sweep of decks, gently heaving in the following sea; to listen to the soft hiss of foam twenty feet below; to feel the powerful upward lift, intensified by the extended position aft, as the vessel's stern rises to a sea, and to watch the regular swing of the topmasts as she rolls along in the afternoon sunshine, is to enjoy a side of sea life which might not appeal to the busy hustler; but a busy, disagreeable, modern hustler has no place here. *Dolce far niente* is the rule under sail, at least for the vacation end of the outfit, and a delightfully lazy drift in a summer sun is more to me than any record breaking passage under steam with poor devils below in a temperature of 120. Here all is above board; good, honest canvas and manila, and air

for everybody; the everlasting winds are the stokers and firemen, and they work without sweating, and never strike—but they strike hard.

One day in particular I remember with a thrill of something that cannot be put into words. The wind was quartering and moderate; the hot sun from a blue sky shot down his burning rays, bathing the schooner in a flood of light; the decks were deserted, save the man at the wheel, who silently steered his course; the old man was below making up lost sleep; the mate had all hands in the hold all day washing her out, and all that long afternoon we sailed on with no sail in sight. Porpoises leaped in schools around the bows; flying fish rose in flocks from out of the sea, winged their rapid flight of a hundred yards, and dove with a splash into the foam; bunches of dark weed, which the sailors say comes from the bottom of the Gulf Stream, floated by in procession, and all the charm of the tropic seas was ours. The warm wind blew through the rigging, the deep blue of the water (we were off soundings) contrasted with the foam that broke under the bows; the regular roll of the vessel added her rhythmic enchantment to the onward sweep; and from my perch in the fore crosstrees I seemed to be alone and in absolute control of the fabric under me, as though it were a bicycle instead of a thousand-ton schooner. No dirty engines gave that ship life; the smoke, oil, heat and toil that they entail had no place there; but the sweet blowing wind, free and clear, did for us all we could ask, and at what speed was shown the next day when we held one of the southern coasting steamers, a twelve-knot boat, as the mate said, who had worked on her engines, from dawn till dark, when the wind lightened and she slowly drew ahead.

This is the charm of seagoing—to cut loose conventional lines and rove at the will of the winds.

One day at breakfast the mate said: "Mister, can I ask a favor of you? I want to get the hold finished up to-day, and if you will steer and let me have all hands down below I can do it all and have it over with."

I was glad to assent, and that day, which was like all the others as to weather, I steered the schooner over the summer sea. S.W. by W. was the course, and I guess I made it good; nobody knew whether I did or not; one spoke either way would keep her straight and the sense of absolute control was fascinating.

But night, made brilliant by the full moon, was bewitching; deck and spars, softened by the mild light, seemed almost unreal; the shadows lay deep where the light failed to strike, and over the whole there was an air of romance which transformed that coal schooner into a stately galleon with a deckload of silver and gold sweeping on to the Fortunate Isles. The silent man at the wheel, the seething foam under the big spanker boom wide off over the quarter, the horizon, limited, save where the sparkling wake of the moon turned the water into molten silver ahead; the warm air without a chill blowing damp and heavy from the Gulf, all conspired to arouse whatever of vagabond spirit one possessed. Such nights tempt one to roam the world around.

Six days of this glorious weather sufficed for our passage. At noon on the last day we got a little change in the programme in the shape of a squall of wind and rain from the N.W., and clewed up topsails and staysails in a brisk shower and put two reefs in the spanker.

"On this coast," said Capt. Merritt, "you never can tell what's coming at this time of year. This is the hurricane season, and if we got ketched out in this light vessel on a lee shore, the only thing to do would be to wait for high water, pick out a good soft spot on the beach, and run her up there."

But all signs failed; the wind canted back to N.E., where it had held all the week, and we passed Martin's Industry at dark, picked up a pilot off the river, and with the moon lighting up the shores as bright as day, sailed up the blood red stream, and shortly after midnight anchored off the Savannah wharves, five and one-half days from Boston.

F. L. ENO.

## A Craftsman's Lakeside Cottage.

From *The Artisan*.

If anyone can point to a rarer sport than building one's own house in the heart of an evergreen mountain region, and out of material hewed by ax or sawed by water-power at one's very door, I should like to know of it. How invigorating the tussle with fate (unforeseen circumstance) and human inertia—the learning how few things are needed, ingenuity in devising substitutes, learning self-reliance, how many things can be made by yourself, stripping the burdened nature of the superfluities of city life, coming down in hot solitary chopping days in the woods to four articles of clothing (hat, shirt, trousers and shoes) and the like! In the dry, bracing, resinous air how sharp the appetite; coarse food relished and city sops and slops and sweets unwished for and even scorned!

If you are only built so you can coolly and cautiously restrain yourself at first, well for you. I can't. I lose my head. I go to work with such unreasonable fury that I invariably overdo. It seems so contemptible and puny not to do as much as those big natives with corded muscle on their arms. Yet your cit, try as he may to play the man in muscular work, at his best can do no more than a boy. In building my cottage (with its ice-house and shop and verandas) I had to boat or raft every pound of material and furniture, from framework to teapot, for a distance of half a mile; for six weeks I chopped and hammered and sawed, rafted and rowed and waded; feet never dry once in all that time, except at night; hands stiff and calloused and hot; face begrimed and black as an Indian's; clothes ragged; hair long; back aching; muscles overstrained. Yet, withal, I never was happier in my life, bating inability to sleep well. The fun and fascination of shingling, making doors and doorsteps, washstands, rustic trelliswork, dining table for porch, rustic stairway, kitchen table, spruce bark divan, and bed-lounge of spruce and rock maple sawed to order at the water-power mill; and picking up driftwood flotsam and jetsam; bass, salmon and trout fishing—oh, there's nothing like it! Then the difficulties of getting seasoned lumber; the long twenty-mile useless drive for a chimney builder; laying the chimney's foundation yourself; liberating your strangled pines; your mountain knapsack trips; the wild sweet bugles of the loons off on the lake;

the plunge of the osprey for the fish; the uncanny laugh of the two bald eagles passing up and down every day; the deer in your very dooryard; the red fox you meet in the woods; the night hawks pulling their guitar strings in the gloaming (at the upturn of their headlong plunge through the air); the divine chanting of the hermit-thrushes; the clear flutings of the white-throated sparrows in the bosky pastures; and the unrivaled trill of the winter wren in latter June on the mountain sides; the very roadsides sweet with endless trailing arbutus, and the quiet woodland roads filled suddenly in the spring, as if by magic, with the red moccasin flower—all this set in a framework of color such as alone the mountain atmosphere can show; the whole thirty-mile sweep of the distant violet range now drifted over by veils of white mist, and now (if in April or May) showing the long stripes of its snow gullies, and now stereoscopically near and distinct. There is something in this exhilarating piny mountain air that makes a man sing or whistle when in the open. But he and the birds make all the noise there is. The nearest steam whistle to my cottage is sixteen miles, though electric launches and noisy new cottages are getting too frequent and already profane the profound and restful silence of my peninsula. (Yet one can outwit the vacationists by going out of season.)

I have spoken of the winter wren. It's of little avail to describe a bird's song by words; but if I can convince any who read this that it is sinning their mercies, as the Scots say, not to try to hear the song of this matchless little peri of the mountain sides, that will be something. This is not a bird for Mr. Whackbair and his tail of pupil-imps. It would disappoint them. It is a bird for the devout lover of the primeval wildwood. Only the soul of the pious pagan, the lone mountain camper, will thrill to the high, plaintive-sweet, rapturous trill that closes the brief and simple warble of this bird—a creature rarely seen and difficult to see, a bodiless Ariel voice (apparently), filling the mountain silences with pure aspiration, with a song like a prayer and that induces the religious feeling—haunts one for days. In the technical execution it is the ecstatic upward-spiraling canary-trill at the close of the carol that so takes the hearer with awe and wonder. I thought of the highest notes, the climax, of some fairy prima donna, and of the feeling I had as I listened to the passionate trill of the nightingales amid the splashing antique fountains, the roses, and the cypresses of the unique old mouldering Villa d'Este in Tivoli.

Anyone can build a house in the woods. I know (by experience of prices) that I could put up with my own hands a ten by eight cabin, shingled on sides and roof, for twenty dollars. Portable houses can be bought at camping outfit shops in New York for eighty-two dollars, and corrugated iron somewhere in Connecticut for much less. Desirable land about me can be bought for two dollars to three hundred dollars an acre. Carpenter's labor here is one dollar and fifty cents a day; good spruce lumber ten dollars a thousand; fir and hemlock cheaper; spruce shingles two dollars a thousand; eggs twelve to fifteen cents, butter eighteen cents; table-board, with room, three dollars, four dollars, and five dollars, etc. Building material is of course very high now, and cottages that cost one thousand dollars six years ago would now cost fifteen hundred dollars. But the point for an artisan or craftsman is to save money by doing his own work and simplifying in everything. If you choose you can live in a tent till you get part of your house done—say what will be a detached kitchen or woodshed eventually—and then live in that until you finish the rest. Brick are high priced. A good brick fire-place and chimney running up through a story and a half house will cost you about thirty or thirty-five dollars. A native boat can be made to order for less than ten dollars in my neighborhood, which is in Maine, twenty-five miles east of Mount Washington. I merely mention these prices as samples of prices everywhere in northern New England, away from fashionable resorts. I must not forget to add that on the shores of this "most beautiful lake in Maine" a local Arts and Crafts Society has for some years been established by a New York artist. Its chief work is the weaving of art rugs on the big native looms of the farm-houses. This neighborhood guild holds annual exhibitions.

WILLIAM SLOANE KENNEDY.

## Natural History.

### Short Talks on Taxidermy.

#### VI.—Mammal Skins.

THE man who travels in lands that are new to him is certain to see in nature a vast number of beautiful objects of which he knows neither the names, the habits, nor the uses. The mammals, the birds and the plants will, many of them, be strange to him, and about many of them he is filled with more or less wonder, and, if he has a companion who was familiar with them, asks many questions about them. There is no inquiry more often put by him who is going through a new land than the query, "What is that?" "Where does it live?" "What is it good for?" and this is likely to be followed by a comparison with some other natural objects that the speaker is more or less familiar with.

Birds and flowers are much more obvious to the traveler than are the mammals. Many of these are nocturnal in habit, and though he may see their holes and their runways, and may sometimes have a glimpse of the creatures themselves, he does not often have the opportunity to view them deliberately, as he may the birds often and the flowers always. It is within a few years only that American naturalists have given close attention to any except the larger and more striking forms of mammalian life. The buffalo, and many of the various deers and bears and other large animals, were long ago described, but until within twenty-five or thirty years ago there were a vast number of species of smaller mammals, especially those belonging to the great order *Rodentia*, that were quite unknown. Of recent years, however, a number of men have taken up the study of mammals, and great numbers of new species have been described, so that our mammalian fauna is now very well known.

Not only is this true of the mammals of the United States, but hardy explorers have penetrated into the far south, and overrun Mexico, and others have gone to the extreme north, and have studied, and are studying, the mammals, great and small, of the Arctic region.

Big game is almost always shot with rifle, and most of the different forms are now well known, but the smaller mammals cannot be shot with a rifle, and the shotgun so mutilates their small bodies, and cuts up their delicate fur, that this weapon can hardly be used against them. Collectors of small mammals, therefore, commonly use traps. For creatures the size of the marten and the mink, the familiar deadfall, or the steel trap, may be used, but for the smaller ones, as rats, mice, voles, moles and shrews, traps such as are commonly used for domestic rats and mice are employed. These are sometimes baited with vegetable substances, such as meal ground from corn and oats, but they are likely to be quite as efficient when set in the animals' runways, or near the mouths of their burrows.

These traps take up but little room, and are easily transported, and a dozen of them carried by anyone interested in the study of mammals will give him much pleasure, and may be of very great use to science in the capture of some species of mammal which has hitherto been unknown or rare.

The implements used in collecting small mammals are precisely those required in making bird skins, except that wires are needed, and of course wire cutters and a file. If you are traveling in the field these things can be carried in a box similar to that already described for carrying your bird skins, but it must be remembered that as such a box is traveling on the railway or jouncing about in a wagon, or being carried on the back of a pack animal, it will be necessary for you to pack the tray in which your skinning tools, poison, etc., are to be carried, so full that the different articles cannot move. Your paper and your cotton or tow will serve for this packing material.

Unless you are really interested in this matter it is hardly worth while for you to carry with you on your journey this box and your skinning tools. Often you will get in at night, feeling too tired to make up your specimens, and yet, since you intend to start off early in the morning, the specimens must be made up or be thrown away. You should make up your mind that this work is worth doing, and worth doing well, and that it shall not be neglected. Better cut off an hour or two each day from your hunting than allow your specimens to go to waste.

Even if you do not travel to out-of-the-way parts of the world, where strange and new forms of life are to be seen, you will find much of interest immediately about your home. Even the woods and swamps close to you contain a number of creatures which you have never seen, and which you never will see unless you make an effort to do so, and to capture and preserve them. They are all worth becoming acquainted with.

Many collectors advise as a poison for small mammals a mixture of arsenic and alum, two parts of arsenic and one of alum. The arsenic poisons the skin, and keeps the insects from it, the alum shrinks it and makes the epidermis grasp each hair so firmly that it cannot escape.

Two things are always to be remembered in collecting small mammals: one is to take the measurements in the flesh, the other is to invariably preserve unbroken the skull of each specimen, and so to label it that it can always be known as belonging to the skin from which it came. Some collectors even place the partly cleaned skull within the skin, surrounded by the stuffing, so that it cannot possibly get away. The measurements that you should take are few; these are the length from nose to root of tail; the specimen should be stretched out and pulled perfectly straight on a flat surface—a board, table, or the cover of your skin box—then insert a pin in the board at its nose, and another at the root of the tail under the tail, and close to the body; another pin should be stuck in the board at the point where the vertebra of the tail ends. These three pins give you the two most important measurements—the length of body and length of tail. Another is the length of the hind foot from the end of the longest toe on the foot to the heel. The color of the eyes and of the nose and of the feet, if naked, should be noted, or any other parts of the body naked or likely to change in drying.

In opening the skin of a small mammal, the cut should be made from the lower breast or upper part of the belly down to the vent. The skin is taken off in the usual manner, the hind legs unjointed at the pelvis, and the fore-legs at the shoulder blade. The skin of the tail is stripped off by closing the finger nails of thumb and forefinger close around the bone of the tail and pulling backward. After the skin is removed from the body it is pulled forward, the neck skinned, the ears cut off close to the skull, the eyes carefully cut around so that the eyelids shall not be injured, and finally the lips are cut away close to the teeth, and the skin cut off at the nose. The feet must be skinned down well to the toe, and quite below any flesh, and if the animal is as large as a gray rat or a squirrel, it is well to make an incision in the soles of the feet, and to rub a little poison in them. All the flesh on the skin must be removed, the lips split, and after all this is done the skin must be thoroughly poisoned. Now, from the skull remove all the flesh that is possible, taking care, however, not to break or cut any of the bones. Having thoroughly cleansed the skull and removed the brain, which must be done with water and a stick, put it to one side to dry. The skin should be now turned back, the bones of the legs lightly wrapped in cotton or tow, the lips sewed up. Now take a fine wire, put about it a very little cotton, rub the cotton in the poison, and introduce this into the cavity from which the tail bone was removed. It should be pushed down slowly and carefully until it reaches the end of the tail, and there will be no trouble about doing this if you have wrapped the wire as it should have been wrapped. Do not stretch the tail.

Be as careful as you were in the case of the bird about not stretching the skin of the mammal. Under the most favorable circumstances you will be pretty sure to stretch it somewhat, and so you must be careful not to fill it too full, and to give it an opportunity in the drying to shrink down to its natural size. The made-up skin should be wrapped in cotton, the tail—unless it is a very long one—stretching out straight behind, and the front paws stretching forward on either side of the head, while the hind

paws stretch out behind, the skin lying on its belly. Try so to make your skin that when it has dried it will resemble the dead animal.

Just as you labeled your birds, with locality, date, sex, and name of collector, so you must label your mammals. A specimen without a label is absolutely valueless, and no man, under such circumstances, can afford to trust anything to his memory. In the case of both birds and mammals, you will do well to carry a note-book, and to take as full field memoranda as possible of the observations which you have made with regard to a particular specimen when it comes into your hands. You will wish to say whether a certain mammal was secured on a mountain top or in a damp valley; where its burrow was, if you know, and generally to give all the information connected with its life history and habits that you can possibly acquire. At the same time you must not make any guesses about these matters, and if you are only drawing conclusions you must say so.

The best paper ever prepared on the preparation of skins of small mammals for use in study, was written by Dr. C. Hart Merriam, Chief of the Biological Survey, and published some years ago by the Government at Washington. It is as follows:

#### Directions for Measurement.

The tools necessary for measuring mammals are a pair of compasses or dividers, a steel rule graduated in millimeters, and two large pins. Dividers with round points are better than those with triangular points.

All measurements should give the distance in a straight line between the points indicated. They should be taken by means of dividers, or by driving pins into a board to mark the points between which the measurement is desired. They should never be made with a tape-line over the convexities or inequalities of the surface.

The three most important measurements, and those which should always be taken in the flesh, are: (1) total length; (2) length of tail; (3) length of hind foot.

(1) The total length is the distance between the tip of the nose and the end of the tail vertebrae. It is taken by laying the animal on a board, with its nose against a pin or upright post, and by straightening the back and tail by extending the hind legs with one hand while holding the head with the other; a pin is then driven into the board at the end of the vertebrae. (See Fig. 2.)

(2) The length of tail is the length of the caudal vertebrae. It is taken by erecting the tail at right angle to

still, with a mixture of powdered arsenic and alum in the proportion of four parts arsenic to one part alum, being particular to put an extra supply in the feet and tail. Put a wire in the body, letting it extend to the extreme tip of the tail, but be careful not to stretch the tail. Use annealed iron wire of as large size as will fit easily into the tip end of the tail. In rabbits, foxes, and wildcats put wires in the legs also.

Stuff the skin to nearly its natural size with cotton or tow (never use wool, feathers, or other animal substances); sew it up along the belly, and place it flat on a board to dry (belly down), with the fore legs extended in front and parallel to the body (i. e., not projecting out sideways), and the hind legs and tail directed backward. The accompanying cut (Fig. 1) shows the appearance of a well made skin.

Attach to each skin a label bearing the same number that is given the skull. On this label should be stated the sex, locality, date of capture (name of month should always be written in full), and name of collector.

All skins should be thoroughly dry before they are packed for shipment. They should be carefully wrapped in cotton and packed in small wooden boxes. Cigar boxes do very well for the smaller species.

TAXIDERMIST.

#### A Forest Tragedy.

ON Friday two lads who live near Cornwall saw two fine deer in the woods, and while they watched the animals with no little interest they saw the life of one end in a tragedy. The animals were does, and one was much larger than the other. It was the larger one which came to an untimely end by accident. Years ago some wealthy people inclosed a section of mountain land with an iron fence. This fence is about seven feet high, and is surmounted with spikes. The presence of deer is not common in Orange county, and the two lads watched them eagerly. Finally the pair started off and when they came to the high iron fence both attempted to jump it. The smaller deer was successful, and cleared the obstruction like a bird. The heavier deer failed. The unfortunate animal's hind legs caught on the spikes. She struggled hard and cried out in her agony as she hung on the fence. The lads who had been a witness of this unexpected mishap in the forest ran and told some men about it. Thomas and Elmer Kent, who live on the mountain road near the landing, hurried to the scene. They found the

FIG. 1.

FIG. 2.

FIG. 3.

the back, and placing one point of the dividers on the backbone at the very root of the tail, the other at the tip end of the vertebrae. (See Fig. 3.)

(3) The hind foot is measured by placing one point of the dividers against the end of the heel (*calcaneum*), the other at the tip of the longest claw, the foot being flattened for this purpose. (See Fig. 4.)

#### Directions for the Preparation of Skins.

Skin all mammals as soon as possible after death.

Lay the animal on its back and make an incision along the middle of the belly from just behind the fore legs nearly to the vent. Be careful not to stretch the skin while removing it, and exercise great caution in skinning around the eyes and lips, which parts are easily cut. Skin as far down on the feet as possible, but leave in the bones of the legs. Remove the bone from the tail by pulling it between the fingers (in the larger species a split stick answers well). Take out the skull, being careful not to cut or injure it in any way, and wash out the brains by means of a syringe or jet of water. Remove the tongue, and cut off the thick flesh from the sides and base of the skull. Tie a tag to the skull bearing the same number that is attached to the skin, and dry in the shade. In damp weather it is sometimes necessary to use powdered borax to prevent the remaining flesh from decomposing. Never put arsenic or salt on a skull.

Remove all fat and tags of flesh that adhere to the skin. In cleaning off blood or dirt that may have soiled the hair, an old tooth-brush and a liberal supply of corn-meal will be found serviceable.

Poison all parts of the skin with dry arsenic (or, better

FIG. 4.

deer had been cruelly torn by the spikes and could not live. To end the animal's suffering, Elmer Kent killed it. The carcass was taken to the home of one of the men on a sleigh. Mr. Kent then notified Game Protector Kidd, who went to Cornwall and investigated the matter. Dr. Kidd said the doe was one of the finest and largest he had ever seen. Few people around Newburgh are aware, perhaps, that wild deer roam the woods so near-by. They are occasionally seen, however, in the mountains around Cornwall, and a small doe was seen several times last summer near Roseton.—Newburgh (N. Y.) Journal.

#### New York Zoological Park.

IN the Zoological Society's Park, in the Borough of the Bronx, New York already has the largest zoological park in the world, and it is believed that a year or two hence it may justly be fairly called the finest and most completely equipped. During this season and the coming one more than half a million of dollars will be spent for improvements on the park, and the Board of Aldermen has recently appropriated \$270,000 for immediate use. Before very long the city's rapid transit system will be completed to the southern boundaries of the park, and this will give the public direct access for a single fare of five cents. This convenience of approach is certain to increase very greatly the attendance which has grown during the last year in an astonishing degree. Within a comparatively short time the Lion house and the Antelope house have been completed, and the Bird house is fairly under way. It now becomes necessary to improve Baird Court, on which the Lion, Primate and Bird houses stand,

and when this work has been completed, Baird Court will be the practical center of the park.

Other improvements now in contemplation are a building for large African quadrupeds, to cost \$200,000; another restaurant to cost more than \$50,000; aviaries costing \$25,000; the completion of Baird Court with its approaches, \$120,000; a Deer house, \$25,000, and other improvements perhaps \$100,000. The completion of all these buildings is a year or two distant, but we have seen how energetically the management of the park moves, and we may feel sure that if the money is available there will be no delay.

But while the city authorities are altogether disposed to provide the funds for the necessary improvement of the park, it is the society itself which must furnish the collections which make the park attractive. This it has done, and is doing, yet often opportunities occur to secure rare animals which must be foregone for lack of money. The society has a goodly membership, but it ought to have twice as many members, since in this city and its neighborhood there are a great multitude of people interested in the subjects to which the society is devoted, and perfectly well able to pay the annual membership fee of \$10. The privileges of members in the way of free admissions, certain comforts within the park, the receipt of the publications of the society, and in other ways, are considerable. We shall be very glad to put any of our readers in the way of securing membership in this society.

#### Oysters which "Bite" at Knife Blades.

CHATHAM, Miramichi, N. B., Canada, May 20.—*Editor Forest and Stream*: I have nothing to say in opposition to Dr. Morris' objection to the oyster which is "stall-fed" in fresh and brackish waters, which, he truly says, are "pretty but no good" as to flavor. But there are other white-meated, plumped and delicious oysters of full, natural, and even improved flavor, which are taken on the Miramichi by fishing for them with a jackknife blade, although those who know how and where to get them to the best advantage go among them armed with a regular oyster-knife.

When we tell visitors to the Miramichi that our oysters in a certain locality bite at the knife blade, are taken upon it by the basket full, and that they are the most plump, white-fleshed and best flavored in this Province, they are at least skeptical, until they are induced to join an oyster party on one of our steam or other yachts on a trip to the lower bay of this beautiful river.

Landing say at the southwest end of Bay du Vin (Baie des Vents) Island, where there is a Sandy Hook on a small scale, the visitor finds hundreds of barrels of large oysters which have been spread out in the shallow water inside of the "Hook," where they are dry for a few minutes at low tide, but water-covered at other times. In this pure salt water they lie with open shells as soon as the tide covers them, and the seeker after the fattest, best flavored, and most shapely oyster obtainable in New Brunswick may walk out among them with a pair of rubber boots on to keep his feet dry, and placing his knife-blade on the inside of one shell find the other closed quickly and tightly upon it, enabling him to lift the bivalve from its artificial bed. He has his choice of eating it raw on the spot, or collecting as many as he may desire for more leisurely consumption. There is no danger of bacteria of any harmful kind, the fat which the oysters take on is genuine, natural, and flavor-improving.

If Dr. Morris would come to Miramichi and "fish" for oysters with a knife-blade at Bay du Vin, he would, probably, be as enthusiastic as we are over the artificially fattened oyster of the Miramichi, and know that the New York and other fresh-water processes were suggested by the conditions and practice at the Hook of Bay du Vin Island, with the substitution of fresh for salt water.

D. G. SMITH,

Fishery Commissioner of New Brunswick.

#### Variation in Habits of the English Sparrow.

NOT only has the English sparrow changed his plumage here, as noted by Mr. Charles Hallock in a recent number of *FOREST AND STREAM*, but he has changed his character to a certain extent. He hops quicker, chirps oftener, and flies faster. And he is vastly more aggressive. All the result of climatic influence, of course. Another thing to be noted about the pervasive importation is this: He has taken to building in trees. This is easily explained. Since the metamorphosis of New York began, there have been practically no places left for nests, the architects being wise in their generation. But if they thought to interrupt the propagation of *P. domesticus*, they reckoned without their host. It will be a cold day when that astute bird cannot adapt himself to circumstances. And as it has been in regard to nest building, so it will be in regard to food. The inevitable disappearance of the horse from our streets will not mean starvation for our feathered English friend. Food he will get somewhere, depend upon it. Lately I happened to be at a remote seaside resort, and saw him flying about. What does he live upon here? I asked myself a little wonderingly. Presently the question was answered when I saw him eating fish on the shore.

F. M.

NEW YORK, June 4.

#### Relics of the Seneca Indians.

A FARMER's plow recently uncovered in Mt. Morris, Livingston county, N. Y., the grave of a Seneca Indian. It consisted of a stone box, the sides of which were flat slabs set on end, and was covered with another large flagstone. Human bones in a very much decayed condition were found in the kist, and one of the most perfect implements was a highly polished white ivory-like tusk of unknown use.

Near Squawkie Hill, where these relics were found, was the place where the Senecas used to hold their annual festivals and religious ceremonies, of which the green corn dance and the offering of the white dog were important. It is said to be about 100 years since the last of these celebrations was held.

All communications for *FOREST AND STREAM* must be directed to Forest and Stream Pub. Co., New York, and receive attention. We have no other office.

## A Woman's First Moose Hunt.

WHEN cruising in the Temagami Lake region in the summer of 1902, we were chased by a bull moose, and signs of moose were so abundant, we began to discuss a moose hunt. When our guides said they could take us to a region where moose were quite numerous and easy to get, we engaged them then and there to take us on a moose hunt the next fall. I was determined to kill my own moose, and not have the guide kill it for me, and on our return home began to practice diligently. A 15-yard range was made in the cellar, and there, with a Winchester .22 short, model 1890, I took my first lessons in target practice. I knew absolutely nothing about a gun, and after a few lessons decided to do my shooting when alone. I took the gun and cartridges, and in fear and trembling started to the cellar. On several occasions the gun surprised me, but fortunately with no more serious result than to shoot a hole in the jacket of my china kiln. After many trials and more vexation of spirit, I could hit the bullseye occasionally, and feel reasonably sure the other bullets had hit the stone wall. But, best of all, I had learned the mechanism of the gun, could load and clean it, and was not being surprised any more. My greatest difficulty now was in sighting. I could sight with both eyes open, but my left eye was the range finder, and shooting right-handed was awkward; still, I was afraid to try to shoot left-handed for fear I would never learn, as I could do so little with my left hand. About this time it was considered advisable to buy a target rifle nearer the weight of the one I would use when hunting, and a Stevens single shot, weighing  $7\frac{1}{2}$  pounds, was purchased from Mr. Webber, of the Great Western Gun Works. When we were making a selection, Mr. Webber noticed the trouble I had in sighting, and insisted on me shooting left-handed. I went home determined to learn it all over again, if necessary, but learning to shoot left-handed was not difficult, and I could do much more accurate work.

We felt the need of a longer range, and when the weather got warm, found one we could reach by driving several miles into the country. There was a 100-yard range in a pasture field where cattle were grazing. When taking up the rifle to shoot I felt a good deal of curiosity as to what would get hit, for the cows and horses scattered over the hillside made our target at the foot of the hill look Oh, so small! Fortunately the cattle did not suffer, and the targets were almost as good as new. My enthusiasm was somewhat checked one day when a young man who was plowing corn in a field just over the brow of the hill, came down to inquire what we were shooting at. He said that two bullets had whizzed by so close to the horses that they jumped to one side. I thought I had aimed for the foot of the hill and not the top, and could not account for the vagaries of the bullet. After a great deal of heart-ache and wounded vanity, I could occasionally hit the bullseye at 100 yards.

As it was now time for me to learn to handle the new hunting rifles, they were taken along to the range. They were the .35 Winchester, model 95, weighing  $8\frac{1}{2}$  pounds. When I heard the report and saw the recoil, I was afraid of them, and it was some time before I had the courage to fire one. With the recoil pad the gun did not hurt me, but I knew that when I pulled the trigger I would get a bump on the shoulder, and my attention was divided between the target and the bump; and, as might have been expected, I almost always flinched. The disgrace (?) of not hitting the bullseye and the fear of the recoil grew to be a kind of nightmare, which seemed to increase with each day's practice. When reading Dr. Hudson's work on "Modern Rifle Practice," I had been profoundly impressed by this advice: "Keep everlastingly at it." I therefore kept on, using up more than my share of the cartridges, and felt that I had entered the ranks of those who led "The Strenuous Life." But I would be rewarded for all this when I looked at my moose head hanging on the wall. I had no doubt about getting the moose, and had decided to shoot the first bull moose I saw, without regard to the size of the horns. Then I could spend the remainder of my vacation in a more leisurely way.

I was able, eventually, to do fair shooting, but I believe the gun is too heavy for me, for I never became accustomed to the recoil, and on my next moose hunt I shall carry a lighter gun.

The target practice was over at last, and we were on our way to the North Woods.

The forests between North Bay and Temiscaming were a splendid blaze of color. The red of the maples and the yellows of the birch and poplar, mingling with the dark green spires of the tall pine trees, covered all the hills, between which could occasionally be seen the blue water of some lake or river. The forests had donned their gay robes for the last fete before the white mantle covered them.

At Temiscaming we went to the Bellevue Hotel for dinner. The tables were decorated with autumn leaves, and the effect was so striking we unconsciously paused a moment in admiration on the threshold of the dining-room. The walls of the room were white, the woodwork a dull yellow, and the floor a walnut brown. The three long tables were laid with linen fresh from the laundry, and in the center of each were branches of the most

beautiful autumn leaves. The leaves on one table were yellow, on another red, and on the other one red and green, while on the sideboard were branches combining all the colors. From the three windows on the side could be seen a grove of maple trees in their gorgeous colors, bathed in sunlight and filling the room with a soft glow.

It was raining when we reached Haileybury Sunday morning, and was cold and disagreeable all day. We went to the hotel and were shown to a cold, cheerless room. Haileybury was changed. Its beauty and charm were gone. A railroad was being built from North Bay through the Temagami region north through Haileybury, and the streets were full of Italian and French laborers. This road will be completed as far as Haileybury by next fall. The afternoon and evening would have been exceedingly dull and cheerless but for the kind thoughtfulness of a lady in the town, who invited us to her home for tea. We had sent our provision list to Mr. Cobbold, that he might have them packed with a complete camp outfit. He had everything in readiness, and we afterwards found them very satisfactory.

Monday morning, September 28, found us, with two guides and provisions to last three weeks, on the dock at Haileybury waiting for the Geisha, a little steamer that runs to Tom's Town, a new town located about thirty-five miles up the White River. It was a miserable morning. A cold wind was blowing, with an occasional shower of rain, followed by a snowstorm. The little steamer was full of passengers, principally settlers in the new farming district.

The trip up the White River was full of interest. The country is level and wonderfully fertile. Along the river, where the clearing had been done several years ago, were beautiful fields of clover, and the more hardy vegetables were growing luxuriantly, while the oats were just being harvested. Some timothy pulled up by the roots measured over six feet in height. There are miles and miles of this level country with its wonderful soil, but it is covered with a dense growth of small pine, birch and poplar that must be cleared off. To start in to clear 160 acres, or a lot, as it is called, seems an endless task; but to me the utter hopelessness was appalling, when the trees had been felled in windrows and burned, and I looked on those acres and acres of stumps. Nothing can be done until these innumerable little stumps have one by one been taken out.

The pioneers who go into this country—or any other, for that matter—must be men and women of grit and courage, as we found the majority of these to be. Their lives are a continual round of hardship, privation, and often of danger. We saw many of their houses, and were in a few of them. Their little log homes were neat and clean, but they contained few of the comforts and none of the luxuries of life. The settlers were of all ages, from old men and women, whose hair was already turning white, to the boy of seventeen. They had come from the towns and the cities; from the rented farm, the work shop, the mill and the desk; to hew out a home in this new country. They were intelligent, and many of them well educated, and on the steamer were discussing some of the latest books and magazines. We almost invariably found them the kind of men and women who make good citizens, as indeed a man almost always does who owns his own home—or at least a piece of the face of the earth.

To take up and clear a lot is a tremendous undertaking; many of the settlers start out with little idea of what it means, and finding the hardship too great, are compelled to give up. This is especially true of the man who takes his family in before he has done any clearing, and has little or no money to see him through. There is but little opportunity here to earn money, and provisions are very expensive. Cows, horses, pigs, and even chickens cannot be taken in until some land has been cleared and broken, as there is not even a blade of grass for them to live on. If cutting down the timber does away with the summer frosts this will be a wheat country rivaling that of the Northwest, and the pioneer or his descendants will reap the reward.

A good, well cooked dinner was served on the boat, and we reached Tom's Town, which is the head of navigation, about two o'clock.

A number of years ago a man past middle life came up the White River in his canoe, and landing here built himself a log cabin, where he lived alone, hunting and trapping in the winters, little dreaming that in a few short years steamers would be coming up the river to stop at his dock, from which a Government road would extend for miles back into the country, and his little clearing be turned into a town site, with talk of a railroad in the near future. "Uncle Tom," as everyone calls him, still lives alone by the river bank in his two-roomed log cabin, and a board over the door bears this inscription, "Uncle Tom's Cabin." He is an old man now, with a soft, quiet voice and courteous manner, who does not want to live in town, but is too old to move on. A beautiful bed of pansies grew at his door, and when I admired them, he gathered a bunch for me. Besides "Uncle Tom's Cabin," the town consists of a boarding-house or hotel, a store and post-office combined, a blacksmith shop, and three or four houses.

As it was late in the afternoon, besides being cold and

wet, we made arrangements to spend the night at the hotel. There was fire in but one of the sitting rooms, and it being full of men, I was taken to the kitchen to get warm. While sitting there I was struck with the beauty of some rugs on the floor. They had been made from scraps of cloth and pieces of worn-out garments, but with what infinite pains these pieces had been selected, cut, and worked into rugs. The color schemes were quite artistic, and the simple geometric designs were very accurate. There was one rug, not quite finished, which was really beautiful. It was a bunch of red roses with their green leaves worked on a white ground with a scroll border. I could but wonder at the tireless energy of the woman, when I learned that the day before, with what little assistance her husband, who kept the store, could render, she had cooked and served dinner for forty-three men.

Three boys, the youngest about seventeen, whom we had noticed on the Geisha, stopped at the hotel for the night. They had each taken up a lot and were going in to do some clearing before cold weather. We had quite a talk with the boys, and found them very gentlemanly.

The next morning we crossed the river, took the shotgun and started over the eight-mile portage, leaving the guides to load the duffle in the wagon. We could have gone up the river in the canoes, but by taking this route we not only avoided a long, hard pull in heavily-loaded canoes against a swift current, with one three-mile and several shorter portages, but saved almost a day.

It was a beautiful morning, and we had not gone more than half the distance when the wagon overtook us. We were getting warm and tired, but threw our coats on the wagon, gave Sam the guns, and tried to keep up. We soon found that impossible, and Bob fell back with us while Sam kept on. I kept pace with Bob and the Doctor for a mile or two, but was compelled to fall behind, and would find them sitting on a log where the trail was obscure. At the end of the portage we found the canoes in the water, and Sam had his loaded ready to push off. Before dinner we had tried our new shotgun on a duck at about forty yards, and were much pleased with the result. From that time until we came out of the bush we were not a day without either birds or fish.

Near the head of the narrows in Wendigo, or Ghost Lake, the shores are very rugged, the bluffs rising in many places 100 feet or more above the surface of the water. At the head of Wendigo we crossed a portage to another lake, and reached the guides' hunting camp late in the afternoon, where we found a kitchen table and a raised platform for provisions near the fire-place, and a dining table with seats, over which we stretched a tarpaulin. Our camp was made in a grove of birch and poplars, averaging from thirty to fifty feet in height, growing straight and tall, with no branches except at the top. The trees grew close together, and their tops were covered with bright yellow autumn leaves, which formed an almost unbroken canopy of sunlight over our heads, for the branches met and interlaced so closely that only in places could we see the sky. The yellow leaves threw a warm glow as of sunshine over us, that, even on cloudy days, had the effect of sunlight. The water in the lake in front of our camp was clear and sparkling, while that in the lake across the portage to the east was muddy. Standing on the shore and looking out over this lake, a line of blue hills could be seen along the horizon, and we knew if we crossed those hills we would stand where the water flows north. This lake lay on the border of the "Enchanted Land," and I loved to cross the portage to its shore, where I could sit and look out over its waters to that line of blue hills and dream of the time when I should cross them and see some of the wonderful things that lay beyond the Height of Land. I was building air castles in dreamland.

When our tent was up, two sticks from four to five inches in diameter were cut the width of the bed; then small saplings were cut and laid on these, making a platform on which the pine boughs were laid, and raising our bed off the ground. That evening our larder contained three grouse and a duck. The next morning was spent getting camp in good shape, cutting wood and hunting birds.

Taking our rifles and a lantern we went on our first moose hunt in the afternoon. Sam took one canoe and started ahead, while Bob, Doctor and I followed in the other. We paddled across the lake, drew the canoe up on the rocks, and I was told that this was a portage. There was no sign of a path; indeed, I did not see how one could be made, for the hill appeared to rise straight up, and its surface was covered with broken rocks that twisted and turned and slid when we stepped on them, making the climb anything but pleasant. Bob took my rifle and the lantern and started up the hill, and we followed as best we could. I expected to sit down and rest when we reached the top, for I was about out of breath, but there was Bob just going out of sight, so we hurried on as fast as we could. I wish I could describe that portage. It was a revelation to me. I knew when I left camp that we were going to hunt moose, and that was about all I did know; but as we proceeded on our way, I got Bob to say this was a portage to another lake where we were going to hunt. On that mile-portage—the guides said it was a mile, but it might have been twenty; I was

## Life in the Woods.—IX.

## Back-Breaking Business.

(Continued from page 482.)

too busy trying to get over it to know—I found more different kinds of walking to the inch than I ever before knew existed, and I had been quite proud of not being a tenderfoot. It seems to me I have read that "Pride goeth before a fall," but no matter.

We climbed over loose rocks and boulders—I mean I climbed over, the others walked—and came to jumping off places; when I could not jump off I slid, and when I could not slide I crept around. We crossed high ridges of rock that were perfectly bare; went through the bush where the trees grew so close together we had to pick our way through; crossed marshes where I hopped from one hump to another, and when I missed a hump and came down in the water I was thankful that, like the Irishman, I was "foremost in the rear," and there was no audience.

Before we had gone far, coats, sweaters, and all extras were discarded, and I believe if anyone had worn a necktie he would have shed that, too. On a portage like this all extra clothing might be called the "white man's burden," for no Indian would start with them on. To break up a chill or cure cold hands and feet—unless permanently cold—I would certainly recommend this portage, for after one or two applications of the remedy the patient would either be cured or quit complaining.

When we reached the lake, there sat Sam beside the canoe, serenely smoking. He had carried the canoe over that portage, while I had felt glad to escape with my life and carry nothing. Verily that portage was capable of great possibilities.

After one look at the lake we put on our coats and sweaters and forgot we had ever seen a portage. It was a beautiful lake, lying up among the hill tops, a turquoise in a setting of green and gold. We crossed to a point near the upper end of the lake which commanded a view of almost the entire shore, and sat down in the bushes to watch for moose. There were signs of moose everywhere. The marshes were cut with trails, the beds of lilies were torn up, and broken pieces of roots were lying all along the shore. Just back of the bushes where we sat was a moose trail as wide as a wagon road. My confidence in being able to take home a moose head had received something of a shock at Haileybury; but when I saw the evidence of moose on this lake it fully recovered.

We sat on the shore watching and hoping. I almost held my breath. The ducks came in flocks and settled in the marshes. The air grew cold; the sun sank low in the west, and still we watched. The air grew colder and so did we. The ducks were coming now in numbers, but we dared not shoot. We could not even talk—rather hard on a woman—and we hardly dared to move. We were growing very cold; the sun had gone behind the hills, and we had neither heard nor seen a moose. There was nothing to lean against; I was tired and stiff, the ground woefully damp, and Oh, the ducks! While we watched,

"Day had put on his jacket, and around  
His burning bosom buttoned it with stars."

"The moon, in her chariot of silver,  
Was climbing the eastern hill."

The sky was perfectly clear, thickly dotted with stars, while the west was a glow of warm, rich color that lasted long after we had left the lake. The paddles made no sound, the surface of the lake was unbroken, and, with its setting of hill tops, seemed suspended in air, and we were floating in space, with one sky above and another cre below us. So real was this impression, I would grow dizzy, as though looking down from some great height. The light in the western sky, toward which we were drifting, and the moon following in our wake made the vastness of space appalling.

From a hunter's point of view, the evening had not been a success, but it is not all of hunting to kill a moose.

Reaching the end of the lake, the canoe was carried back from the shore, the lantern lit, and we started over the trail. I cannot do justice to that trail by daylight, and will only say it is more than weird by lantern light. The blazes on the trees indicated the direction of the trail, but on the ridges of rock we would often have to retrace our steps before we could make connections on the other side.

We were wearing two pairs of ordinary woolen stockings, one pair of heavy lumberman's stockings and shoe packs of oil-tanned leather. The Doctor's shoe packs had a low heel and thin sole, but mine were orthodox shoe packs, and I never had anything on my feet before that was quite so comfortable. Around the camp-fire they are a kind of nightmare. You are standing or sitting by the fire, close enough to feel its genial warmth, and someone says, "You're burning your shoe packs." You change your position, and are beginning to feel comfortable again, when you are startled by, "Look at your shoe packs." Again you move, only to hear, "Mind your shoe packs." Thus they become a peace disturber, until, as you throw them aside, when you snuggle in among the blankets, you wish something would steal them before morning. In the morning you are glad to find them, for you realize that in civilized shoes you would be in danger of breaking your neck before night.

A. W. C.

[TO BE CONCLUDED.]

*The time for shifting to summer homes has come, and many subscribers to FOREST AND STREAM naturally desire to have the addresses of the copy of the paper which goes to them changed from winter to summer residences. This is a matter that it is well to attend to in time, so that no issues of the paper may be lost to the reader.*

*Readers who are not subscribers, but purchase the paper from week to week at the news stands, or have it furnished them by their local dealer, may, by taking short time subscriptions, have the paper sent to them for any period from one to three months. The charge for sending the FOREST AND STREAM is 40 cents for one month, 75 cents for two months, or \$1 for three months' subscription. This may be convenient for those who are spending the summer within reach of a post-office, yet at a distance from news stands.*

AFTER we had been hunting with varying success, as the time of our sojourn was drawing to a close, we decided to begin carrying in the heavy deer we had hanging around the woods, most of which still hung near where they were shot, and so we made our preparations accordingly. Those that were hanging near a road, easily accessible by team and not too far for a trip in the morning before camp truck was loaded on the wagon, were of course left where they were, or were dragged to some favorable spot adjacent to the roads, and there carefully concealed from the keen eyes of dishonest teamsters, who sometimes figure that they cannot make money any easier than by stealing a deer from hunters and selling it on their trip to the station.

Oftentimes shooting a deer is the easiest and quickest part of a hunt, as well as at all times the most pleasurable. But more often the most vexatious question is what to do with it after you have got one. Alone, and three or four miles from camp in a hilly country densely timbered, and where there are no roads or trails, a man feels as if he had taken a pretty big job on his hands when he stands over a 200-pound buck and begins to figure how he will get him out without cutting him up. This reflection, though, of course never comes until after the first heat of exultation has passed away. We have had a variety of methods of getting out our deer, depending on the size and weight of the game and the locality in which it fell. One common method where there is not too much weight to handle, is to slit each of the four legs just above the hoof and between the tendons, and then tie all four firmly to the lower jaw by means of a withe or small leather thong passed through the jaw and up through the mouth. This brings the deer together in a compact mass, and, if not too heavy, it can be carried quite easily, swung over one shoulder or both. If the latter plan, however, is followed, the feet and head must not be too closely tied, otherwise on first starting off with your burden you will either have to stop very shortly, or run the risk of being badly choked. A deer tied in this way can be swung on a pole and carried by two, but not very comfortably, for any distance or over rough ground, for the reason that it will always swing too much. A man single-handed, if he hasn't too many hills to climb, can handle a medium sized deer pretty well by tying the front legs to the lower jaw and dragging it over the ground. The one objection to this is that constant rubbing over logs, sticks, and the ground, wears the hair off and makes the game look bad. In the case of a very heavy deer or a buck with large horns, this way will be found to be quite trying. However, if there is a light fall of snow or a frozen stream or lake to traverse for any distance, this plan will be found to work tolerably well. A good powerful man, hardened to the work, will oftentimes despise such "monkey work," as he may term it, and will walk off with a deer on his back alone and unaided, as if it were a pastime. When this is done, a heavy deer, if frozen, or if it has been allowed to hang long enough to stiffen pretty well, will handle much easier than when taken soft, for then it will not slip and slide so much, nor will the weight seem to settle so much in one spot. With a light deer this objection does not hold good, for if soft it will fit itself to the back, and can be carried across both shoulders quite comfortably. An aid to dragging a deer, and oftentimes quite an aid, especially if there be a little snow, is to make a small travoy of brush; if nothing more, an old alder with a crooked root turned up in front and the branches left on for the deer to rest on, will often make it slide along a good deal easier, and it will also protect the skin from injury. If a very long distance is to be covered, and help is scarce, old hunters oftentimes cut off the head, neck and legs, and such other parts of the deer as they do not want, and tie the remainder of it up in the hide and carry it into camp by making a pack of it which can be carried on the back. Such experience as I have had has taught me that the easiest way is to pack out with a pony, but where you have none, the next easiest way is none too easy, and the more help there is on hand the better. If the deer be of moderate size, our favorite plan is to cut a large dry stick, one strong enough to bear from 100 to 150 pounds of weight, and so large that it will not spring or bend easily, and dry enough so that it will be as light as possible. With such a pole, smoothed off at the ends, a deer can be stretched out on the ground and lashed so securely to the stick that it cannot slip or sag much, nor swing but little either way. Such a burden will, of course, cut the shoulders some, and for the first time or two make them very sore; but by taking frequent rests, and changing from one shoulder to the other quite often, about as good headway can be made by this method as by any other where man-power exclusively is used. If a very heavy deer is to be handled, our way is to make a sort of stretcher by taking two poles and nailing them just far enough apart so that a man can walk between the ends. Then rough pieces are nailed on at intervals, so that the deer cannot fall through, and the additional precaution is taken to lash it securely to the sides, so that it cannot slip or slide in any direction or fall off. The ends of the poles are hewed and whittled round and smooth so as to fit the hands, and to them are fastened broad straps, which are arranged to pass up over the shoulders, and which assist greatly in distributing the weight. With this kind of a rig, two moderately strong men, who have a little sand and who will take it cool and not try and overdo, can carry a heavy deer a distance that is surprising. Of course, in a brushy country, they will be bothered, but in such places "go slow" is the word, and a little patience in going around bad spots and frequent rests will result in more progress than any attempt to hurry or to force a way through by main strength.

When hunting near waters that can be navigated, a boat or a raft is a back-saving institution, and still better a horse that is used to the woods and will allow a dead deer on his back, beats them all. But the genuine hunter likes to be independent. He likes to be able to do most of his work for himself, for that is one of the charms of his hunt, and after it is all over, though his back may

ache, and every motion cause a sore muscle to respond with a twinge of pain, yet if he has been careful, he is better for it physically and mentally. He will glory in it and in the freedom of the hunters' circle he will delight in exploiting his efforts. He does not want to hunt if someone has to do about everything for him but shoot the game, and he is right about it, too.

On the morning in question we got our ropes, straps, hatchets and nails ready and prepared for a hard day's work. It made me think of the first big deer I ever helped to carry out, and it happened on my nineteenth birthday. I had been hunting all day with little or no luck, and with a companion was on the way back to camp. At about a quarter of a mile out we came within speaking distance, and as I stood on a log, out jumped a big rabbit and sat looking at me. "Shall I shoot him?" says I. "Might as well," was the answer. "We haven't much meat in camp and they are pretty fair eating now." "All right," I responded, and slipping out a buckshot cartridge I substituted some small shot and took aim. I don't know what influenced me, but something seemed to be urging me not to shoot, and after hesitating a few seconds I said, "I guess I won't," and dropping the gun took out the fine shot and put the buckshot back. I hadn't gone fifteen rods from there when up jumped a monster of a deer, not over eight rods away. He ran in front of me, and as I caught a good sight on the shoulder, I let go with the rifle barrel. The old fellow ran right up a very steep hillside, and getting up a little way stopped and looked back. Then I gave him the buckshot, and down he came, rolling over and over. My companion coming over, we secured the assistance of some men, who were on the hill top prospecting for iron ore, and we hung him up. In a few days we started to carry him out, and built a stretcher for the purpose, but he came awfully hard. It was our first lug, and we had a hard time of it. Finally, when we were near the road, Henry, who was ahead, stepped upon a log. The top was rather rotten, but the sides were still sound, and he broke through; I stumbled at the same time, and pitching forward came so near to breaking both of his legs that it made me feel faint all over. That taught us a lesson, and forever after we were more careful.

After getting our traps together we started after the buck which the Colonel shot, and for which we had such a chase. The Pembine was then frozen over, and we thought we could slide him down the creek quite easily. We found him hanging undisturbed and frozen solid as a rock, so we fixed up a little travoy and hauled him down to the creek and on the ice, starting at once toward camp. All went not swimmingly but slippery, so that we made good progress at first, with one ahead pulling and one behind pushing with a long pole. Now and then a little anchor ice would bother us, and in a few places where the current was swift and the water not very deep, the ice was thin, but we managed to get around all such places in safety. At about a mile or a mile and a half from where we started, the creek took a wide bend and went off at almost right angles to the course we ought to pursue, turning again and gradually bearing straight toward camp. On reaching this point we debated some as to whether to carry the buck across land to the other end of the big bend or to follow along the ice. It was a long way across and still longer around, but the deer slid much easier than he carried, so we decided to stick to the ice. All went well until we reached the middle of the big bend, when suddenly, without any warning, as he stood resting, the Old Trapper went through the ice, and stood up to his waist in the cold water. The Colonel laughed, but the echo had hardly died away before he went through, first with one leg and then with the other, and in hustling to get out of danger, I suffered the same fate. There we were up to our waists, the thermometer way below freezing, the ice impassable ahead, and nearly two miles from camp. It will not do to tell what we said. What we did was to rig up a stretcher and carry Mr. Buck the rest of the way. We were worse off than if we had not tried the ice, for getting wet was the least of our troubles. The land inside this big bend was all swampy, and the banks of the opposite side of the creek were high, rocky and inaccessible. The ice was weakening, and we could not go back, so that nothing was left but to carry that buck about half a mile through alder brush and swamp to hard land. I won't say how many times we fell down, or how many times we went into the mud and water over our knees. I won't say how many times our faces and hands were scratched by the brush and our arms and legs bruised. I won't say how long it took us to get through, and least of all will I ever reveal the language that was used, for fear the reputation of the party might be destroyed forever and forever. I will say, however, that late in the afternoon four weary, sore, cold, bedraggled men reached camp with one fine dead buck, and as each one of those men stepped into camp, if he didn't say whiskey, he thought it, and got it, too. Once, and once only, have we had as hard a pull, and that was on a previous hunt, when by chance we caught and shot an old doe as she was swimming across the pond above an old logging dam. This was four miles from camp, and after wading around in the mud and water to get her out, two of us carried her into camp so as to have some venison the next day. It was a back-breaking job, for I can remember the last time we rested we had about all we wanted to do to get upon our feet, and once up, our legs were none too steady. We call it hard work, but after all, who is the worse for it after the job is done? No one. On the contrary, every one is better for it. Sore muscles, aching joints and back, and bruised shins give way soon to a healthful feeling. The muscles become hard and strong, the eye clear, the complexion good, and the appetite after such a trip—well, the appetite becomes a devouring monster almost insatiable in its demands. Sweet, dreamless, refreshing sleep waits on such trips, and after they are all over a man feels that they have done him good and fitted him for some of the hard work and knocks of every day life. The Old Trapper says it makes his back squeak and his joints complain every time he sees a big buck now. But the Old Trapper at sixty is like a war-horse—the sound of the gun puts new life in him, and he becomes only twenty once more.

We didn't attempt to carry in any more deer that day.

CAROLUS.

## Salmon Culture in America.

Editor Forest and Stream:

Since my good friends, Livingston Stone, of New York; Commissioner Babcock, of British Columbia, and C. H. Barkdull, of Seattle, Washington, assured the editor of the London Fishing Gazette that salmon culture on the Pacific Coast of America had, so far, been a great success, and would, in the near future, without any further protection than the laws now give, enable the canners and fishermen and local consumers to "eat their cake and have it, too," the writer has been collecting reliable information on the whole question as it now exists in the United States and Canada. This he intended placing in your hands at an early day; but as the official report for 1903 of Mr. Babcock, Fisheries Commissioner for British Columbia, has been sent him by an obliging friend in Victoria, he has concluded to make some extracts and offer some remarks on the subject now, in order to show from Mr. B. himself, the results of the wasteful and destructive fishing that has hitherto been pursued in two salmon rivers on the Pacific Coast—the Columbia and the Fraser.

The second paragraph of the report says: "It is well known that the run of salmon in the Fraser River during the past year was the poorest that was ever known. The scarcity was largely confined to the sockeye variety, though all varieties showed a marked decline. As the sockeye is the great commercial salmon of the Fraser, its failure to run as abundantly as usual entailed great loss upon both the fishermen and canners. But what is of far greater importance to the Government, the fishers, and the canners, than the remarkable decrease in the catch, is the fact that the number of the sockeye which reached the spawning grounds of the Fraser this year was so small as to severely threaten the destruction of this great industry. \* \* \* This statement, which may reasonably alarm those interested, is made after a most careful inspection of the spawning grounds during the past summer. I believe that the decrease in the run and the absence of fish upon the spawning grounds this year is attributable to excessive fishing. An investigation of the conditions existing on the fishing grounds for the past five years amply demonstrates that to be the case."

Mr. B. goes on to state that in his report of the previous year he had pointed out "that there was urgent need of giving greater protection to the fish." In that report he had stated "that the greatest movement of the sockeye seeking entrance to the Fraser passed through the American channels of Puget Sound, and called attention to the fact that there were no limitations, either of time or method, placed upon the capture of sockeyes in these waters, and that in consequence all, or mostly all, the fish which attempted to pass through these channels were captured by trap, purse or drag nets." The same report also showed that, in Canadian waters, though the fishing was confined to the use of gill nets, there was an excessive number of these in use.

In addition to this wholesale destruction of the parent fish at the approaches and mouths of the rivers which the fish enter only for the purpose of procreation, Commissioner Babcock tells us, at page 9, that on the upper waters the young salmon are destroyed in the same ruthless manner. After describing the destruction of fry and yearling by loons, ospreys, and other water birds; by trout, char, and burbot, which cannot be prevented, he writes: "Another source of destruction, more pernicious in its effects on the young fish, was found to exist which can, and should, be prevented. On the 2d of May last, at the head of Portage Creek, I found a brush and rock dam which prevented the passage of the young salmon from the lake, which was constructed and used by Indians for the purpose of enabling them to take immature fish for food. It was an ingenious and most destructive contrivance, built in the form of a great funnel; its wings were made of logs, green boughs, willow brush and rocks. At its lower end was a basket-trap, into which the fish were swept by the swift waters, and removed by the Indians. At every Indian house on Portage Creek were found young salmon taken from these traps. The Indians eat the yearlings in a fresh state, and smoke and dry many more. \* \* \* As there is an abundance of game in all these sections, and the Indians have no trouble in getting all the food they need, no possible excuse can be made for destroying these young salmon, and I strongly urge that steps be taken to prevent their doing so." It seems not to have occurred to Commissioner B. that there is far more excuse for these ignorant Indians than there is for presumably intelligent fishermen and canners at the mouths of the rivers.

In the report before me, Commissioner Babcock says: "We are told by some Washington officials that this decrease in the run of salmon is occasioned by the failure to provide adequate hatcheries; that only by their establishment can the run be maintained." The innocence or naïveté of these officials is refreshing! In former letters to FOREST AND STREAM, the writer showed by copious extracts from the writings of Sir George Simpson, Capt. Butler, Lieut. Swatka, Matthew Macfie, Charles Hallock, Livingston Stone, A. C. Anderson, Samuel Wilmot, and Thomas Mowat, that before this excessive fishing was carried on, salmon in the Sacramento, the Columbia, the

Fraser and the Skeena rivers were so overcrowded that they were killed in vast numbers in their ascent to their spawning grounds. Is it not plain to any man not blinded by cupidity and self-interest, that as natural propagation produced these overwhelming numbers before greed and selfishness led to the excessive fishing Commissioner B. describes, protective legislation and curtailed destruction, not hatching houses, are the readiest and cheapest means of restoring the rivers to their former productiveness?

In former issues of FOREST AND STREAM we were told much about the obtuseness of English and Canadian pisciculturists, and of the greater shrewdness and business ability of the canners of the Pacific Coast. In quite a gushing paragraph, Mr. C. H. Barkdull, of Seattle, wrote: "Out here we have the prettiest girls, the richest gold mines, the best battleships, the biggest trees, and the most salmon of any country in the world; and, with the assistance of Uncle Sam, we intend to show England and the world that we can keep up the supply of our increasing (?) products if we have to do it artificially." If, in the face of Commissioner Babcock's reports and the teachings of thirty years' fish hatching in Great Britain, the United States and Canada, these sharp business men of the West expect, by any number of hatching houses, to keep up the excessive fishing described by Commissioner B., the writer must entertain grave doubts, not only of their unusual "shrewdness," but of their business capacity.

In your issue of May 2, 1903, Commissioner Babcock told us that the combined Fraser River and Puget Sound pack in 1901 was 2,400,606 cases of 48 pounds each, making 115,229,088 pounds, which, he said, is nearly half the annual pack of the world. The consequence of this excessive fishing is shown in his report before me, from which I have given the foregoing extracts. That he and Mr. Barkdull (who both seem to be ignorant of the history of salmon culture in Europe, the United States and Eastern Canada), should hope to keep up this supply by hatching houses is not surprising. But that Prof. Prince, the Dominion Superintendent of Fishculture, should encourage this hope, is, to the writer, wholly inexplicable. He must, or at least he ought to, be familiar with the results of salmon culture in his native country, if not on the Continent, and he must surely know what is recorded in the blue books of his department. These show that fishculture has been a Government work for thirty-one years, and that there are now in active operation 20 hatcheries, which have planted the "grand total" of 3,705,616,700 young fish, and that the last year's catch of every species manipulated is less than the catch of the year in which the hatching houses were started. Where we naturally look for some visible and tangible returns for the large sums spent in building, managing and maintaining the hatcheries and in procuring the parent fish from which the ova were obtained, we find a steady annual decrease in the catch. The fisheries reports, carefully compiled from the annual returns of fishing overseers in the several Provinces, give us a means of comparison. Commissioner Babcock has told us the result on the Pacific Coast in the extracts above given, and he urges the building of many more hatching houses and managers' cottages.

Prof. Prince's report for 1903 gives us the catch of salmon in Quebec, Nova Scotia, and New Brunswick, where the bulk of the young salmon have been planted. The report for 1874, the year the hatching houses were started, gives the catch of salmon in New Brunswick as 3,214,182 pounds. The catch in 1902, with the help of three hatcheries for twenty-eight years, was about half, amounting to only 1,658,007 pounds. In 1874 the Nova Scotia catch was 1,758,818 pounds; in 1902, with the help of three hatcheries ever since 1874, the catch was 556,386 pounds, a decrease of more than 75 per cent. In Quebec the returns for 1874 were incomplete; but the salmon catch was carefully estimated at 1,500,000 pounds; in 1902, with the help of three hatching houses, the catch was 935,883 pounds. In Ontario, salmon culture has long been abandoned as a useless expenditure of money. In P. E. Island, after running the hatchery for eight years, and planting 6,185,000 fry in a single river without any visible result, except the loss of all the money expended, the house has been abandoned to decay.

As it was the lack of proper protection and the destructive effects of over-fishing in Europe and America that led to artificial hatching in the hope that it would restore the loss and keep up the supply, and as thirty years' experience everywhere has shown the futility of that hope, does it not behoove governments, officials, fishermen and canners to give up the vain dream of eating their cake and still having it, and do what has been too long neglected—restrict fishing within reasonable bounds, and give the fish a chance to reproduce in the way that was sufficient to overcrowd all their haunts before man's greed and stupidity led to such destruction as the reports of Commissioners Prince and Babcock disclose?

So far as the writer has been able to learn from the best available sources in England, Scotland, and Ireland, not a single river in which salmon or trout were not indigenous has been stocked with either salmon or trout. In the Atlantic States, taking the reports of their com-

missioners as evidence, the same story is told. Not a single river or stream has, by artificial culture alone, been stocked with either salmon or trout; not a single adult Pacific salmon of any variety has been taken from the waters in which were planted all the fry hatched out by Livingston Stone, one of the oldest and most experienced pisciculturists in the United States. An American gentleman who for many years has taken a great interest in fishculture, informs me that he estimates the cost of every pound of salmon or trout caught by anglers in "stocked waters" at not less than five dollars.

Some of us are old enough to remember when buffalo darkened the prairies of the West; when wild pigeons in enormous flocks darkened the sun; when pinnated grouse were as plentiful on the prairies as fowls in a henner; when wild geese and ducks were found on every river, lake and stream; when quail and partridges were found in every field and copse that yielded them food and shelter; when our rivers were alive with salmon, and our lakes and streams with trout. In a single lifetime the buffalo has all but disappeared; the wild pigeon is now a curiosity in all the Northern States and Eastern Canada; prairie chickens are now found in but a few favored localities in the Western States; wild geese and ducks are annually becoming scarcer, while some varieties, like the canvasback and redhead, are luxuries for millionaires; quail and ruffed grouse are almost unknown in localities where they were once plentiful; angling for salmon and trout can now be indulged in only by those with means enough to own or lease the waters in which they are found.

So far as the salmon fisheries of North America are concerned, their existence as a profitable industry now depends on a greatly reduced open season, and strict protection on their spawning grounds during the close season. One-half the money now spent on useless hatching houses, if spent in protecting the fish from senseless destruction, will produce better results. One plain deduction from the facts stated in Commissioner Babcock's report for 1903, is this: If the state of things therein described is allowed to continue ten years longer, enough ova to stock the hatcheries he recommends to be built could not be obtained in any of the rivers his report deals with.

When the writer has completed his inquiries, he will place the results in your hands for the benefit of those who are now chasing rainbows.

THE OLD ANGLER.

SUSSEX, N. B.

## Yellowtail a Dollar a Pound.

My boy Harold, aged thirteen, and his mother are in California. They took a run over to Catalina Island, and the boy had not stepped upon the wharf before he became filled with yellowtail microbes. In fact, the skipper of the boat filled him full of them on the way over from Pasadena. So everything in the way of engagement of rooms at the hotel, etc., would have been secondary and inconsequential matters had the boy had his way. But in due course a launch was chartered at \$5 per half day, and off they went after yellowtails.

The boy got a strike. The fish took out the reel like mad; in fact, the boy's mother was not so much alarmed for the fish as she was for the boy. The flexure of the rod and the struggles of the little fellow to brace his feet against the gunwale of the boat were realistic in the extreme, and it seemed to his mother that it was a fight for supremacy as to whether the yellowtail would force the boy to swim the pathless sea with him or the boy would bring him to gaff. It was a great fight, the boy in his excitement endeavoring to follow the boatman's instructions as to giving him the reel, taking in slack, etc. It was a 25-pound fish, so the boatman said, and would no doubt have weighed that had the boy landed him, but the fish wrapped his tail around the leader, bit it off—not his tail, but the leader—and the fight was over. It was once more the case of the biggest fish getting away. The boy was disconsolate as the time came to point the nose of the launch toward shore. He fought the battle all over again in his dreams that night, and no doubt this time caught his fish.

His mother thought the yellowtail microbe had been exterminated, and—but mothers are sometimes mistaken. The microbes instead of being exterminated were multiplying at the rate of many thousands per minute, and another trip was arranged for, and off they went. Everything turned out wrong, it appears; tide, wind and weather were unpropitious, and again did the party return empty-handed. Instead of the yellowtail fever now subsiding in the boy, it took an acute turn, and he vowed he would not leave the island if he had to stay there a month until he had caught a yellowtail.

His mother began to do some figuring. Ten dollars expended and nothing to show for it, and the boy more dissatisfied than ever. So there was nothing to do but again arrange with the launchman and go out once more. And this time the boy got a strike. The boatman coached him, and he implicitly followed instructions, making no mistakes, and giving Mr. Yellowtail no opportunity to wrap his caudal extremity around the leader and then bite himself loose.

It was a glorious victory, made sure by the gaff of the boatman, and when it was all over the boy all but collapsed. The nervous and physical strain as well as great, but victory perched upon his banner.

The fish was weighed and pulled the indicator down to the 15-pound notch. The boy was happy now. The microbes had done their worst and the fever had subsided. He was prepared now to return to Pasadena any time. He had won his spurs. And his mother, asking the weight of the fish, was told that it weighed 15 pounds. It took but little mental arithmetic to ascertain that the cost was just \$1 per pound. And instead of scolding the boy for his extravagance she quietly remarked that she had known of fishing trips taken by a certain life partner of hers where trout had cost \$5 per pound, and there were not many pounds in evidence even at that price, so she could not have the heart to criticize the son of the father for investing in yellowtail at \$1 per pound.

Now when that boy comes home and I take him on a trout stream and he strikes a pound trout, everything will be compared with that yellowtail, to the disadvantage of the trout. And in self-defense I must arrange for a trip to the maskinongé lakes and pit him against a 35-pound fresh-water wolf, and then, and only till then, will I cease to hear about that 15-pound yellowtail. It may cost me more than \$15 to kill the yellowtail microbe, but other microbes will take its place, and as long as they are the kind that you pick up in rippling lakes along moss-grown brooks, and amid the woods and swales and stubble, we'll have to diagnose the disease as one that must run its course, and not at all dangerous; in fact, highly beneficial in the long run for the boy, and let it go at that.

CHARLES CRISTADORO.

## Fish and Fishing.

### American Anglers in Canada.

THE annual invasion of Canada by American anglers is now on. The first fishermen of the season from the United States were parties of New Englanders, chiefly from Bridgeport, Conn.; Springfield, Mass., and surrounding points, on their way to the Metabetchouan and other fish and game clubs alongside the line of the Quebec and Lake St. John Railway, which on Saturday last had to put extra sleeping cars on the trains for the accommodation of the visiting anglers. From the St. Maurice district of Canada I hear that several members of the Laurentian Fish and Game Club are now on their limits. The Triton Club management expects several of its members this week to go into camp at various points along the line of the Batiscan and connecting lakes, and a number of the members of the Nonantum Fish and Game Club have made arrangements to visit their club headquarters at Commissioners' Lake next week. I am under the impression that these late spring arrivals will enjoy their outing better than those now in the woods at present writing, for constant cold rains have made it rather disagreeable both for camping and fishing for the last week or ten days. This weather is in striking contrast with that of the same season last year, when, for want of spring rains, everything was parched, and disastrous bush fires were the order of the day.

Up to the last few days the trout fishing in the northern lakes has been exceptionally good. Several large catches were made in Lake Edward on the 23d and 24th of May, and Lake St. Joseph is also yielding good results to the fishermen. The fly-fishing season is still, however, undoubtedly backward, and it will take a few days' subsidence of the present high water due to the prevailing rains to make it good. From the 20th to the 25th of May it was excellent.

North of the Laurentians there has been less rain, and as a consequence the water in Lake St. John is rapidly getting down to its normal early summer level. That means to say that the fly-fishing for ouananiche in the Grande Discharge ought to be good from about the 15th of June as usual, and I am just in receipt of a message, in answer to my inquiries on the subject, saying that the steamer from Roberval will commence her regular trips to the Discharge for the accommodation of fishermen on or about the 12th of the month.

### Salmon Fishermen in Canada.

DR. JOHNSON, of New York, has reached Quebec, and is on his way to his salmon river on the distant north shore of the Gulf of St. Lawrence. He leaves by the present trip of the steamship King Edward, expecting to have some days on the river before the first run of salmon is well in. The first of the fish have already, however, reached the estuaries of the north shore streams, for the King Edward brought up to Quebec several boxes of fresh salmon on the second of the month, which had been taken in the fishermen's nets, and the fish were retailed the next day at thirty cents per pound. Most of the American anglers who fish in Canada for salmon will only leave on the next trip of the steamer for the north shore, and some of them will go a fortnight later, though those who fish south shore rivers, including the members of the Restigouche Club, will find it necessary to be in camp by the 12th, or at least by the 20th, in order to get the best of the sport with the first run of fish of the season.

I hear that many salmon fishermen who have been coming here for the last few years have sent word that they will not be able to spare the time for the sport this year. This very often proves to be the case in Presidential year, and it is supposed in Canada that the condition of Wall street may have something to do with keeping many men chained to business who would much prefer a vacation in the woods.

In the Lake St. John district, however, there are evidences of considerable activity. Many private camps are being placed in readiness for summer occupation, and many of the club houses expect at least as many fishermen this year as usual. Mr. Dodd and other members of the Metabetchouan Club have just returned from their club house at Kiskisink, where, although they found the weather extremely cold and the water high, the fishing was excellent. By this time, with the lowering of the water, the sport ought to be still better. Many Quebecers have returned from fishing excursions in the Stadacona and Laurentides districts, and bring glowing reports of

the fly-fishing, and some pretty heavy trout in support of their statements. Very large takes of smaller fish are reported from various points along the Batiscan River, where larger fish may be had as soon as the water lowers a little more.

Lake Edward is more than sustaining its enviable record for big fish, Mr. H. B. Jackson having killed one fish of 5¾ pounds on his first cast of the season a few days ago, immediately in front of his summer camp on this lake. He was using very light tackle, and was over twenty minutes in killing the fish.

There are many applications for accommodation at the Grand Discharge, most of the intended visitors proposing to come later in the season than usual, however. This is doubtless due to the late opening of the spring all over the country. As a matter of fact, nevertheless, the waters on the north of the Laurentian divide have run down so much faster than those further south that Lake St. John is now very near to its summer level, and ouananiche fishing ought to be good in the Grand Discharge by the time that these lines appear in print, or at all events in the course of the following week.

Because, too, of this rapid subsidence of northern waters, I would warn those who fish the salmon rivers of the north shore of the Gulf that their season is likely to be a short one this year, unless there should be a fair amount of summer rain in the interior of the Labrador Peninsula to maintain the water supply. Hence the desirability of getting to the rivers in time to enjoy the early fishing.

### Night Fishing by Artificial Light

The North American aborigines well and early understood and artfully applied the knowledge that light attracts fish as well as insects. Hence their "burning of the waters" and spearing of salmon and other fish by torchlight. A French entomologist has taken advantage of the same knowledge in fishing for specimens in a pond. With a portable battery and a small incandescent electric lamp attached to a net, he was able to secure a large number of fish, larvæ, tadpoles, etc., at one operation. The net, measuring about one yard across, was slowly lowered into the water, and when it reached the bottom of the pond the little lamp above it was connected with the battery. All the living creatures within reach of the apparatus rushed toward the light, and were immediately secured in the net. It is obvious that the method is applicable on a far larger scale, and may prove to be in some way useful to commercial fishermen, though it almost gives one the shivers to think of the opportunities which may thus be opened up to poachers in the vicinity of the spawning grounds of salmon and trout.

### Gut for Casting Lines.

A tourist friend who has recently returned from a trip through the south of Europe was telling me the other day of the large proportions assumed by the production of silk-worm gut for fishing lines in Spain since the decline of silk culture there. The grub is fed on mulberry leaves as usual in silk culture, but before it begins to spin—that is in May and June—it is killed by immersion in vinegar. The substance which would have formed the cocoon is then drawn out from its body in the form of a thick silken thread, which is treated with chemicals and afterwards dried. These threads are made up in bundles of a hundred each, and the Spanish peasants travel with them along the shores of the Mediterranean as far as France. The best quality of the gut, as every fisherman knows, or ought for his own protection, when shopping, to know, is round. The flat shaped article is always inferior, and is due, not, as often supposed, to careless drawing of it, but to unhealthiness in the worm which furnished it. The chief seat of this industry is Murcia. I know many American fishermen who procure these strands of gut as sold by the Spanish peasantry, either importing them for themselves or selecting them personally from tackle manufacturers in the United States, which is, perhaps, after all, the most satisfactory method, and who then tie their own casting lines of the selected material.

### The Ling or Burbot.

It is gratifying to note that the attention of the Ontario Government has been drawn by some of its fishery officers to the destructiveness of the burbot or ling, and to the desirability of means being adopted for its destruction. Recent investigations show that the loss caused by this gluttonous feeder to the best fish life of northern waters is very great. Its flesh is of very little use for food, and then only in winter, and it is credited with swallowing fish half the size of itself, besides being a notorious spawn eater. It is the more dangerous that its feeding is generally done at night. In Lake St. John specimens of this fish have been taken over two feet in length, and it is difficult to estimate the number of ouananiche which one of these night hawks of the water will destroy in the course of the year. It is really too bad that nothing has yet been done toward the destruction of these ling in the best fishing waters of northern Quebec.

### Sunday Fishing.

When I hear or read any discussion of the subject of Sunday fishing, there always comes into my mind that delightful chapter of Dr. Prime's in his "I Go A-fishing," entitled, "What Flies to Cast on a Sunday." To me the advice contained in that charming chapter is convincing enough; but it is not my province to deal with the ethical side of the subject, which is for each one to settle for himself. The legal aspect of the case has been referred to in one of the reports of Mr. S. T. Bastedo, Deputy Commissioner of Fisheries for Ontario, and it may be interesting to anglers to point out the difference on this subject between the laws of Ontario and Quebec. In Quebec the fishing for salmon either by rod or line or by net is prohibited from six o'clock on Saturday night until the same hour on Monday morning, as it is, for the matter of that, in all parts of the Dominion. But, with this exception, there is no provincial law in Quebec against Sunday fishing. The contrary is the case, however, in Ontario, though because of the lax enforcement of the enactment known as the Lord's Day Act, which contains the prohibition in question, the fact is not generally known. The fishery overseers of Ontario are frequently requested to interfere with persons who "go fish-

ing" on Sunday, under the supposition that it is an offense against the fishery law. This, however, is an error. Sunday fishing is an offense against the Lord's Day Act, the provisions of which it is not a part of the duty of fishery officials in Ontario to enforce, as Mr. Bastedo points out. And in support of his own interpretation of this act, he cites a decision rendered under the authority of the Attorney-General of Massachusetts, in an exactly similar case, by which it was held that fishing on Sunday being a violation of a section of the act entitled, "An Act for the Better Observance of the Lord's Day," the enforcement of that provision of the act was no more one of the duties of the fishery overseers than the enforcement of any other provision of the same act.

### Live Perch as Food.

A SINGULAR complaint comes from Lake Memphremagog. It is charged that the perch which have been introduced into the lake are killing off the big gray lake trout, or rather that the trout are killing themselves off by attempting to feed upon the perch, the dorsal fins of which stick in the gullet of the feeder and produce death. It would be interesting to know whether any similar experience to this has fallen under the observation of the readers of FOREST AND STREAM. That pike can swallow small perch without much inconvenience there is abundant proof. In the absence of other bait, perch make good live bait for pike. I have known anglers to cut off the dorsal fin before using the fish for bait, but if the perch is small, this does not appear to be at all necessary, for the pike always swallows his prey head foremost, while the spines of the perch are capable only of projecting backward—shutting down like the props of an umbrella upon pressure from the front—so that they would not appear to impede the operation of swallowing. It sometimes, however, causes considerable inconvenience to a pike to attempt to swallow too large a perch, and Gosse, in his "Natural History," illustrates this by a circumstance of not infrequent occurrence in Sweden. Large perch swallow the baited hooks of stationary night-lines, and then enormous pike gorge the hooked perch in their turn. Though the pike is seldom or never actually hooked, yet on the fisherman's drawing in his line the perch sticks so fast in his throat that he is unable to get rid of it, and both are taken.

### The Perch is a Cannibal.

The perch is just as much a cannibal as the pike or the trout. Mr. Francis Francis is authority for the statement that it is not at all deterred by the spines from feeding upon its own species, and that in a vivarium he has often observed them take with avidity smaller members both of their own and of the ruffe species. The extent to which this fish will gorge himself with his favorite food may be illustrated by a fact within the knowledge of most anglers. When he has filled his stomach with minnows so that he can positively swallow no more, he will still endeavor to bite, and, if possible, masticate others; and it is by no means uncommon under these circumstances to hook and capture a perch with the tails of the minnows which he has already partially swallowed and been unable to pouch, protruding from his gullet, and when thus gorged he often ejects a portion of his prey on being landed. From this it may be inferred, says a well-known angler-naturalist, "that fish, like many other animals—including man himself, in some instances—find a gratification in the exercise of their predatory instincts, even when the natural appetite has been fully satiated."

A rather remarkable instance of the voracity of the perch is related by Mr. H. Cholmondeley Pennell. In removing the hook from the jaws of a fish which he had caught in Windermere, one eye was accidentally displaced, and remained adhering to it. Knowing the recuperative capabilities of piscine organization, he returned the maimed perch, which was too small for the basket, to the lake, and, being somewhat scant of minnows, threw the line in again with the eye attached as a bait—there being no other of any description on the hook. The float disappeared almost instantly, and on landing the new-comer, it turned out to be the fish he had thrown in a moment before, and which had thus been actually caught by its own eye. "This incident," says Mr. Pennell, "proves, I think, conclusively that the structure of cold-blooded animals enables them to endure very severe injuries and wounds without experiencing material inconvenience; a fact which may tend to remove any qualms of conscience felt by anglers on the score of the sufferings supposed to be inflicted by their capture."

Perhaps a less striking illustration of the same fact came under my own observation in the Lake St. John country some time ago. A fingerling trout had taken one of my flies, and though the hook had torn one of the gill rakers, I was anxious that if possible the little fish should live. I gently placed it in the shallow water at my feet to see if it could revive and swim away. In a very short time it had recovered from its dazzlement, when, to my utter astonishment, it rushed directly to the fly upon which it had just been caught, and which had carelessly been allowed to drop into the shallow water, and once more impaled itself!

E. T. D. CHAMBERS.

### Big Catfish.

ERIE, Pa., May 29.—*Editor Forest and Stream:* A young correspondent of mine living in Elizabeth, a small town on the Monongahela River above Pittsburg, sends me the following fish story, that I can vouch for as being true or he would not have given it to me.

About two weeks ago the stern-wheel steamer Diamond was passing up the river one afternoon, when some men who were at work on a coal tippie on shore noticed an object floating in the wake of the boat that seemed to be alive. Thinking that it might be a deck hand that had fallen overboard, they took a skiff and rowed out to it, and found it to be a big mud catfish that had been struck by one of the wheel buckets and had only been stunned. They caught it after some trouble, and towed it ashore. It measured five feet in length, but only weighed 54 pounds.

This is the largest fish that has ever been taken in that river, and probably came up from the lower Mississippi. I thought its weight was rather small for its size, though. I have taken them out of the Colorado River in Texas that were as long as this one was, but mine would weigh nearer 100 pounds.

CARLA BLANCO.

## Is Fly-Fishing Social or Solitary?

I WRITE of dry fly-fishing on rivers and streams only. That "two men in a boat," chucking and chancing for sea trout or brownies on a lake, are happier than they would be if each were alone with a gillie, goes without saying. Nor do I deny the pleasure of companionship when walking or driving to and from the water, be it lake, river, or stream; the charm of a chat at lunch, the comparison of fly patterns, and last, but not least, the after-dinner gossip on the day's doings, and the hopes and fears for the morrow.

All these delights I admit. But they are consistent with either mode of fishing. To solve the question suggested by the title to these notes some other incidents of the day's outing must be considered. For instance, if, instead of dividing the water into separate beats, and each fishing alone, you and your friend walk together up the water, and take it in turn to fish over rising trout. Say you have risen one short, and, without actually putting it down, have awakened suspicion. Do you feel comfortable in waiting quite so long before you cast again as you would do if you were alone? Again, several trout have looked at your fly and refused. Do you think it fair to your companion to lose half an hour in trying to catch a fly out of a hatch-hole or carrier in order to compare it with the pattern you have been fishing with?

In both cases the extra time might have been well spent. At any rate, you think so. In like manner, did you ever lose a fish while trying to extricate it from a weed bed, according to an infallible method then and there authoritatively prescribed by your friend, without an inward conviction that if you had been alone you would have saved the fish? Or did you find comments such as "Half a yard more to the left," or, "That would have been just over his nose if the line had only gone straight," assist you materially when struggling to cast lightly and correctly over a distant fish against a tricky head wind? Did you ever find consolation in the remark, "What a splendid cast! What a pity that wasn't the first chuck!" when at last, after ineffectual trials, you have cheated the wind and successfully covered your fish—or, rather, the fish that is not to be yours?

No; let me be alone when the fish are on the feed, though I dearly like company when on the feed myself. I do not mean to say I have not received hints from the late G. S. Marryat, my good friend F. M. Halford, and other past masters of the craft, for which I shall be ever grateful; but, then, they sacrificed their own sport in

water to teach me, and acted at once as gillies and mentors.

In the same way, to compare great with small, I am never better pleased than when able to help those who have less experience than I have; but, "save and except as hereinbefore reserved and excepted," I love to fish alone. I use the word "fish" deliberately, for though one may fish alone, one cannot be alone. Creep down to the water meadows unseen by all. Wade in, and hide among tall reeds and rushes. In solitude you may be, but not in silence nor alone.

For the friendly twitter of the swallow, the splash of water rat, the moor hen's "cluck," the "murmur of innumerable bees," or later in the day the shrill and less soothing pipe of a myriad gnats, now playfully dancing in a harmless cloud, but soon—at "shut of evening flowers"—to settle on neck, wrist, and forehead, on serious mischief bent; these and a thousand other sounds, faint though they be, and rather felt than heard, witness that Nature, even in her most lonely by-ways, is teeming with life, and that in so-called solitude you are yet not alone.—Basil Field in London Field.

## An Original Way to Fish.

Editor Forest and Stream:

There is a low bottom, a part of the Soldiers' Home grounds here, that borders on the bay and is only a foot or two above the surface of the water; when a windstorm is on, it is generally under water. This place a few years ago was full of green frogs, but the boys have them all killed off now.

I was passing the place to-day, when I saw two Polanders busy wading through the puddles that have been left after the last few days' rain.

"You need not waste your time hunting frogs there," I told them, "there are none there now. At least fifty boys have hunted that place all over lately. If they could not find them you cannot."

They were fishing, one of them told me, and going to a bunch of grass on the bank he dragged out a German carp 17 inches long which he had caught. The fish was still alive, very much so. They kept on "fishing," and soon brought out another carp as large as the first one was. The fish had been carried in there a week before when the bottom was last flooded. They continued to fish for the next hour or more, and must have got several more carp.

CABIA BLANCO.

## Appetite of Cats.

TOPEKA, Kansas.—The reports of the fondness for some forms of vegetable food of house cats, leads me to add a few lines to the subject. At my home here we have a black cat of uncertain age, which made her appearance about the barn about one year ago, and at that time very wild, finly making friends first with the writer, then one of his sons, and, with the exception of one son, with all the other members of the family. One Sunday morning in the latter part of last July I had been to the garden for a basket of green corn, which I was then husking at the barn, when I noticed Tabby was acting very strangely, and begging as I had never seen her beg before. While not thinking she would make any use of the green corn, to stop her funny actions I broke off the end of an ear and dropped it down. To my surprise she at once began eating the corn, and during the entire green corn season no one of the family, except the son she would not make friends with, could go to the barn with unhusked green corn but the cat would come and beg for her share, which she always got, but if any corn was left from the table and thrown out to the chickens, she would not touch it, saying by her actions that she wanted her corn straight with no water in it.

W. F. RIGHTMIRE.

## The Salmon on Time.

NEW YORK, May 25.—Editor Forest and Stream: The predictions have been almost uniform that this would be a late "salmon season," and conditions have been such as to tend to confirm that view.

Yet, with clock-like regularity (to-day being the uniform day for their appearance), I am notified by telegram from the North Shore of the Gulf of St. Lawrence that yesterday, May 24, "Il y a trois saumons de pris aujourd'hui" (pray pardon the Habitant French) in the nets at the mouth of the Moisie.

CHAS. STEWART DAVISON.

By reason of postal delays, Mr. W. B. Cabot's letter on the Hubbard party in Labrador comes as a far echo of the discussion in these columns; but we cheerfully give it place as presenting the views of one who knew Mr. Hubbard and who feels that these things should be said on the other side.

## American Power Boat Association.

Manhasset Bay, Long Island Sound, Monday, May 30.

The first event of the American Power Boat Association was scheduled for Decoration Day. A large list of starters was looked for, but even though the day was most satisfactory for motor boat racing, only twelve of the boats entered started in the contest. No event has been more thoroughly advertised than this one, and just why more boats did not come to time no one seems able to explain.

It seems likely that the guaranteed speeds of the many boats built during the winter were greatly exaggerated, for the twenty-five mile boats were conspicuous by their absence.

The "dark horse" of the day was Japansky, a 40ft. Seabury boat. The boat was built at Morris Heights, and little or nothing had been given out about her. She was the cleanest looking boat in the race, and she was put together in a splendid manner. Had she not run out of lubricating oil near the end of the race, making it necessary for her to slow down, she would have made still better time over the course.

While the day was ideal for power boat racing, as the water was quite smooth, it was muggy and uncomfortable. Manhasset Bay never presented a more lively and spirited picture; boats of all sizes and types were on hand.

A bad accident was narrowly averted just before the start, and it gave every one an idea of what may be expected in other events where many boats are present and some are handled by incompetent or careless men.

Mr. W. K. Vanderbilt's launch was built by Jacob, at City Island, and she is called Hard Boiled Egg (because, as Mr. Vanderbilt says, "she can't be beat"). The boat is equipped with a 60 horse-power motor, which was previously used in a racing car. This motor figures out only about 40 horse-power under the association rule. Mr. Vanderbilt's boat was moving along at a fast clip when the Panhard boat crossed her bows. Mr. Vanderbilt put his boat's helm hard down and just missed what would have been a nasty collision. In dodging Panhard, Mr. Vanderbilt's boat narrowly missed hitting another launch filled with women and children. The quick handling of Hard Boiled Egg had bent the bronze rudder so badly that the boat was unable to start in the race.

The Panhard boat was in charge of a Frenchman, who was absolutely at sea, as he did not understand English or any of the racing requirements or rules of the road. He was so helpless that Mr. Paul Johnson, a member of the Manhasset Bay Y. C., was put aboard the boat to assist him. As Mr. Johnson did not speak French, in order to be of assistance, tied pieces of light line to each of the Frenchman's arms, and by exerting a pressure on one arm or the other, the helmsman would steer the boat accordingly. It was primitive and ridiculous, and the race committees in charge of such events should not permit any boat to start that is not in charge of a competent man, familiar with the English language.

Boats in Classes R, S, A, H, I and C covered the following course: From the starting line to Gangway Buoy, thence to red spar buoy off Scotch Caps, thence to black spar buoy off Matinick Point, thence to black spar buoy off Old Hen, thence to Gangway Buoy (black spar), to the finish line in Manhasset Bay. All Government buoys were left on the channel side, except turning buoys off Scotch Caps and Matinick Point. Distance, nineteen and one-half miles.

The course for Class K was: From the starting line to Gangway Buoy (black spar), thence to red spar buoy lying northeast of Execution Light, thence to red and black spar buoy lying north of Execution Light, thence around the north and west side of

Execution Light to Gangway Buoy (black spar), to the finish line in Manhasset Bay. All Government buoys were left on the channel side. Distance, nine and one-half miles.

Japansky was alone in Class R, and she was sent away at 2:40. She made the American record for the distance, covered the 19½ knot course in 1 hour 6 minutes and 29 seconds, or at the rate of 17.60 knots, or 20.22 statute miles per hour.

In Class S there were three starters, F. I. A. T., Panhard and Shooting Star. Panhard is the smallest boat of the trio, but as she had no competitor in her own class was pitted against F. I. A. T. and Shooting Star.

The starters in Class R seemed to have no idea when they were to start, and in consequence got away in ragged shape, losing minutes by their apparent unfamiliarity with the starting signals. Panhard nearly ran down Shooting Star by careless handling. F. I. A. T. was first away, but was soon overhauled by Shooting Star. This boat was showing a nice burst of speed when something went wrong with her motor and she withdrew.

Allure, Miss Swift and Queen Bess had no competitors: so went over the course taking walkovers.

In Class I, Ardis beat Flash and Javelin handily, and in Class K, Nada left 999 fast astern.

The owner of F. I. A. T. protested Japansky's measurement. The summary:

Class R—Start 2:40—Course 19½ Miles.					
	Length.	Finish.	Elapsed.	Corrected.	
Japansky, F. H. Waldorf, 40.99.	70.65	3 46 29	1 06 29	1 06 29	
Class S—Start 2:40—Course 19½ Miles.					
F. I. A. T., C. Tangerman, 35.17	65.05	3 53 23	1 13 23	1 13 23	
Shooting Star, H. Lozier, 24.30.	62.06	Did not finish.			
Panhard, A. Massanet, 18.71.	54.52	4 02 49	1 22 49	1 16 43	
Class A—Start 2:50—Course 19½ Miles.					
Allure, A. Stein, 58.90.	50.97	4 32 06	1 42 06	1 42 06	
Class H—Start 2:50—Course 19½ Miles.					
Miss Swift, R. Jacobs, 26.09.	56.87	4 19 57	1 29 57	1 29 57	
Class I—Start 2:50—Course 19½ Miles.					
Ardis, R. Haddock, 10.81.	45.54	4 41 16	1 51 16		
Flash, A. Stein, 16.22.	44.74	4 55 10	2 05 10		
Javelin, C. W. Lee, 16.36.	41.50	4 56 35	2 06 35		
Class C—Start 2:55—Course 19½ Miles.					
Queen Bess, R. H. Stern, 27.14.	34.65	5 11 29	2 16 29	2 16 29	
Class K—Start 2:55—Course 9½ Miles.					
Nada, C. Godshalk, 3.03.	30.15	3 57 35	1 02 35		
999, J. Schoonmaker, 4.26.	31.05	4 16 02	1 21 02		

The winners were: Japansky, F. I. A. T., Allure, Miss Swift, Ardis, Queen Bess and Nada.

## Duxbury Y. C.

Duxbury, Mass., Saturday, June 4

A race between 18-footers of the Duxbury Y. C. was held Saturday, June 4, in a light E. breeze. Osprey got the start, but again took the lead on the second leg of the course, and held it to the finish. The summary:

	Elapsed.
Again, Goodspeed	1 12 00
Domino, Clapp	1 13 50
Kittawake, V. Jones	1 14 30
Osprey, Train	1 15 15

## Atlantic Y. C.

Sea Gate, New York Bay, Monday, May 30.

The first race given by the Atlantic Y. C., on Monday, May 30, was marked by a small list of starters. Only three classes filled, and but eleven boats came to the line.

The 30-footers sailed over a triangular course. The start was off Sea Gate, thence to Craven Shoal buoy, thence to a mark off Fort Hamilton, and back to the starting line. The first two legs were reaches and the third was a beat. Boats in Classes P. and N. covered one of the association courses twice. The breeze was very moderate and not true, as it veered from S.W. to S.E. during the race.

The craft that did not get caught in a calm belt off Fort Hamilton, got a big jump on their competitors and won easily. The favored ones were Bobtail, Ogeemah and Trouble. This streak of luck gave Bobtail a big lead in her class, and Redwing and Bagheera were left minutes behind. It was Redwing's first race in these waters, and some were disappointed at the showing she made. It will be recalled that Bobtail is a smart boat in light airs, and in moderate weather not an easy boat to beat.

The yawl Kate that started in Class P. did not finish, and Ogeemah beat Smoke, her only competitor, about 2 minutes. Mary had a long lead in Class I. until she got into the flat spot where she was hung up until Trouble got too far ahead to be overhauled. Cicada was second.

The boats sailed under their old classification, as few had been measured under the new rating rule. The summary:

Sloops—Class N.—Start 2:30—Course 9 Miles.		
	Finish.	Elapsed.
Bobtail, E. F. Luckenbach	4 10 30	1 40 30
Redwing, J. P. O'Donohue	4 17 00	1 47 00
Bagheera, Hendon Chubb	4 18 30	1 48 30
Sloops—Class P.—Start 2:35—Course 7 Miles.		
Ogeemah, A. McKay	4 33 07	1 53 07
Smoke, L. H. Dyer	4 35 20	2 00 20
Kate, John S. Negus	Did not finish.	
Sloops—Class Q.—Start 2:35—Course 7 Miles.		
Mary, Max Grunder	4 38 56	2 03 56
Wraith, Calvin Tomkins	Did not finish.	
Careless, F. J. Havens	4 39 52	2 04 52
Trouble, W. A. Barstow	4 36 07	2 01 07
Cicada	4 37 17	2 02 17

The winners, subject to measurement, are Bobtail, Ogeemah and Trouble.

## Bridgeport Y. C.

Black Rock, Long Island Sound, Monday, May 30.

Five 18-footers started in the annual spring regatta of the Bridgeport Y. C., held on Decoration Day. The breeze was light and fluky from the S.W. Question broke her peak halliards and withdrew. Answer won and Fiji was second.

A dozen dories, belonging to members of the Yale Corinthian Y. C., also started but did not finish, withdrawing from the race before covering the course and sailed back to Morris Cove. The summary:

	Start.	Finish.
Answer, D. Warner	2 30 00	4 09 34
Fiji, Lucien T. Warner	2 30 00	4 10 11
Miss Modesty, C. Barnum Seely	2 30 00	4 10 36
Mirage, J. Percy Bartram	2 30 00	4 12 20
Question, N. Bishop	2 30 00	Withdraw

## Harlem Y. C.

City Island, Long Island Sound, Monday, May 30.

The twenty-one boats that started in the regatta of the Harlem Y. C., on Decoration Day, did not have very satisfactory racing, owing to the light breeze. It was the club's twenty-second annual regatta.

The start was made off Belden's Point. The first mark was a stakeboat anchored off Prospect Point, thence to the second mark off Delancey Point, and back to the starting line. This makes a course of about fifteen miles, and was covered by the boats in the 30-foot class. The second mark for the starters in the 25ft. class was Old Hen buoy, which shortened the course for these craft to about twelve miles. As the wind was S.W., it made the first leg a run, the second a reach and the third a beat. At the start the wind was very light, but it strengthened materially toward the end, and the boats had a lively beat against an ebb tide on the last leg.

Alert had matters her own way in the 30ft. class, and her competitors were not timed.

Firefly took another first prize in the 25ft. cabin class, keeping up her reputation of last year. The other three starters in this class did not finish.

There were three starters in the 25ft. special class, and Grasshopper took another winning flag. This boat has made a good start this season, having won both the races in which she entered. Rogue did not finish.

Two of the 25ft. catboats started, but neither finished.

The best racing was seen in the 21ft. special class. Four boats started and three finished. Jeebi won, with Skip 10 seconds behind, and Wave crossed 10 seconds later.

Plover and Tartan were the only contestants in the raceabout class. The former was badly beaten, Tartan winning with nearly eighteen minutes to spare.

Houri beat Adelaide by a small margin in the class for the Larchmont 21ft. one-design boats; Vaquero did not finish.

The thunderstorm that had been making during the afternoon, broke before some of the boats finished, and a number took in sail and were towed in to the anchorage. The Regatta Committee were on board the 40ft. launch Osprey. The summary:

30ft. Class—Sloops—Start 1:20—Course 15 Miles.	Finish.	Elapsed.
Anna, W. Strauss	.....	.....
Alert, J. H. Aiker	4 36 40	3 16 40
Mopsa, F. Sullivan	.....	.....

25ft. Cabin Class—Start 1:25—Course 12 Miles.	Finish.	Elapsed.
Firefly, C. P. Granbery	5 33 30	4 13 30
Naiad, Palmer	.....	Did not finish.
Tammany, F. Muchfeld	.....	Did not finish.
Innocent, W. Linderman	.....	Did not finish.

25ft. Special Class—Start 1:30—Course 12 Miles.	Finish.	Elapsed.
Rogue, A. B. Alley	.....	Did not finish.
Gazabo, C. T. Vulte	4 12 00	2 42 00
Grasshopper, H. C. Pryer	4 01 45	2 31 45

25ft. Cabin Catboats—Start 1:30—Course 12 Miles.	Finish.	Elapsed.
Golden Rod, W. Townner	.....	Did not finish.
Lauretta, W. Shearer	.....	Did not finish.

21ft. Special Class—Start 1:35—Course 9 Miles.	Finish.	Elapsed.
Wave, A. Johnson	4 14 20	2 39 20
Jeebi, A. F. Brown	4 14 00	2 39 00
Skip, C. M. Pinckney	4 14 10	2 39 10
Elf, W. Valentine	.....	Did not finish.

Raceabout—21ft. Class—Start 1:35—Course 9 Miles.	Finish.	Elapsed.
Plover, H. Place	4 15 50	2 40 50
Tartan, A. H. Price	4 01 00	2 22 00
Larchmont 21ft. One-Design Class—Start 1:35—Course 9 Miles.	Finish.	Elapsed.
Adelaide, J. J. Dwyer	4 03 00	2 28 00
Houri, J. H. Esser	4 02 40	2 27 40
Vaquero, J. M. Marbic	.....	Did not finish.

The winners were Alert, Firefly, Grasshopper, Jeebi, Tartan and Hour.

## Boston Y. C.

City Point, Mass. Saturday, June 4.

The first club race of the Boston Y. C. was held off the City Point station of the club on Saturday, June 4, in a light E. breeze. In the 30ft. class Sauquoit evened up things with Chewink IV., beating her by 1 minute and 31 seconds. Sauquoit got the start, and led all over the course, closely pressed by Chewink IV. Medric got the start in the 22-footers and led Opitsah V. all over the course. Cuyamel got the start in the 18-footers, with the whole fleet of ten starters bunched. On the beat to windward Bat opened up a lead, which she held to the finish. A tow got in the way down the bay, which Bat cleared, thereby helping her chances of victory. The 15-footer Tabasco, Jr., took a sailover. In the first handicap class, Idella won on time allowance. In the second handicap class, Scapegoat led all over the course. The summary:

Class C—30-Footers.	Elapsed.
Sauquoit, T. K. Lothrop, Jr.	1 42 56
Chewink IV., F. G. Macomber, Jr.	1 44 27

Class E—22-Footers.	Elapsed.
Medric, H. H. White	1 49 37

Sue, T. W. Powers	1 47 48	1 31 59

## South Boston Y. C.

City Point, Mass., Monday, May 30.

The season in Massachusetts Bay was opened at City Point on Memorial Day, with a Y. R. A. of M. open regatta, given by the South Boston Y. C. Many new yachts made their appearance, especially in the 18ft. class. The appearance of the 30-footers was looked forward to with interest. Two of these boats were at the starting line, Chewink IV., designed and built by Messrs. Burgess & Packard, for Mr. T. K. Lothrop, Jr. The opinion was generally expressed that, for a modern cruising class, for which wholesome types of yachts should be built, neither of these 30-footers was much to look at. Sauquoit is particularly tender, it being found necessary to reef her in the fresh breeze, not strong enough, however, for one to think of reefing a cruising yacht of 30ft. waterline. Chewink IV. was much the stiffer of the two, and, for that day at least, seemed to be easily the faster.

Sauquoit got the start, but was jammed on the wind, while Chewink IV. sailed wide through Sauquoit's lee. When Chewink IV. tacked, she crossed Sauquoit's bow, and from then to the finish she kept increasing her lead. In the 22ft. class, Warrior, a new boat designed and built by Lawley, for Mr. S. C. Winsor, competed with last year's Medric. Medric went over the line first, with Warrior on her weather quarter. After passing the first mark, Warrior took the lead and held it to the finish. In the 18ft. class, Bat, designed by Mr. E. A. Boardman, and built by Lawley, for Hon. Charles Francis Adams, 2d, tacked clear of the bunch as soon as the starting line was crossed and soon took the lead, which she kept bettering to the finish. She won by 5 minutes and 11 seconds, an unusual margin in this class. In the new 15ft. class, Little Misery got the start and led until

they were returning to the finish line, when an accident gave Tabasco, Jr., the lead, which she held to the finish. In the handicap class the Yawl Emma C. took the lead soon after the start, and had no difficulty in holding it all over the course. The summary:

Class—30-Footers.	Elapsed.
Chewink IV., F. G. Macomber, Jr.	1 40 00
Sauquoit, T. K. Lothrop, Jr.	1 40 00

Class E—22-Footers.	Elapsed.
Warrior, S. C. Winsor	1 52 57
Medric, H. H. White	1 53 16

Class I—18-Footers.	Elapsed.
Bat, C. F. Adams, 2d	1 37 59
Hayseed, John F. Small	1 43 10

## Lynn Y. C.

Lynn, Mass., Monday, May 30.

The first club race of the Lynn Y. C. for the season was sailed in inner Lynn Bay on Memorial Day. In the handicap class Problem was disabled and Helen took the lead, holding it to the finish, but losing to Trump on corrected time. In the one-design class of 15-footers, designed by Mr. Charles D. Mower, Winneardin was the winner by a big margin. The summary:

Handicap Class.	H'cap.	Elapsed.	Corrected.
Trump, Russel Bros.	10	1 19 20	1 09 20
Helen, Twombly Bros.	05	1 19 20	1 09 20
Gladys, Com. Porter	18	1 30 20	1 12 20
Bazoo, M. Randall	18	1 30 33	1 12 33
Lillian, H. Bissant	15	1 23 35	1 13 35
Reliance, Charles Curry	18	1 35 02	1 17 02

One-Design Class.	Elapsed.
Winneardin, Spratt and Watson	1 14 04
San Toy, W. H. Ridon	1 20 40
Haymaker, W. S. Johnson	1 20 45
Miss Flipp, C. E. Hodgdon	1 21 58

Saturday, June 4.

The second club and invitation race of the Lynn Y. C. was held in Lynn Harbor, on Saturday, June 4, in a moderate E. breeze. Problem, the scratch boat in the handicap class, won easily. In the one-design class of 15-footers, Winneardin scored her second victory. The summary:

Handicap Class.	H'cap.	Elapsed.	Corrected.
Problem, C. J. Blethen	Scratch	1 19 10	1 19 10
Gladys, Com. Porter, West Lynn	0 17 00	1 41 55	1 24 55
Bazoo, Mell Randall	0 16 30	1 43 00	1 26 30
Sniff	0 18 00	1 46 05	1 28 05
Reliance, Chas. Curry	0 16 30	1 46 25	1 29 53
Trump, Russel Bros.	0 09 15	1 43 05	1 33 50
Lillian, H. Bessant	0 15 00	1 55 10	1 40 10

One-Design Class.	Elapsed.
Winneardin, Spratt and Watson	1 21 15
Haymaker, W. S. Johnson	1 23 10
Miss Flipp, C. E. Hodgdon	1 25 40
San Toy, W. H. Ridon	1 30 30

## Riverton Y. C.

Riverton, Delaware River, Monday, May 30.

The Riverton Y. C. opened its fortieth season on Decoration Day, by holding a regatta. The event was a success, and a good breeze enabled the boats to make fast time over the course.

The new one-design boats sailed their maiden race. No. 6 won by 50 seconds. The catboats got away in a bunch, with Carolyn II. holding a slight advantage and the Sea Gull a close second. Carolyn II. drew away from her competitors on the run up the river before the wind, but was passed by Gertrude on the way back. She, however, regained her position on the second time over the course and finished 55 seconds ahead.

From a fleet of fifteen, the mosquito boats have dwindled down until there were only three entries. The summary:

Catboats—Start 3:05.	Finish.	Elapsed.
Carolyn II., C. Rianhard	5 05 00	2 00 00
Gertrude, G. W. Holloway	5 05 55	2 00 55
Sea Gull, Lee C. Cook	5 09 00	2 04 00
Fiona, John Perkins	5 10 30	2 05 30

One-Design Boats—Start 3:10.	Elapsed.	Corrected.
7. E. W. Crittenden	5 22 49	2 12 40
1. Albert G. Cook	5 22 50	2 12 50
6. J. H. Reese	5 29 20	2 19 20
3. H. McI. Biddle	5 29 43	2 19 43
2. Dr. C. S. Mills	5 34 23	2 24 23
8. C. M. Biddle	5 34 40	2 24 40

Mosquito Boats—Start 3:16.	Elapsed.	Corrected.
10. Harry H. Cooke	5 14 50	1 58 40
14. T. Harry Walnut	5 17 30	2 01 30
15. E. B. Showell	5 24 30	2 08 30

## Wollaston Y. C.

Quincy, Mass., Monday, May 30.

The first championship race of the Wollaston Y. C. was sailed in Quincy Bay Memorial Day, in a whole sail S.W. breeze. In Class A, Neptune got the start, with the yawl Haroldde about 2 minutes behind. Haroldde soon caught and passed Neptune, leading to the finish, but losing to Neptune on corrected time. Class B was bunched at the start, and, soon after, Sheila broke the jaws of her gaff and was obliged to retire. Goblin took the lead and held it to the finish. The summary:

Class A.	Elapsed.	Corrected.
Neptune, E. L. Hallett	1 19 23	0 56 56
Harolde, A. B. Robbins	1 19 00	0 57 07

Class B.	Elapsed.	Corrected.
Goblin, R. M. Lothrop	1 26 12	1 00 42
Dentza, Lowell Baker	1 26 05	1 02 59
Memento, Dr. Dawes	1 27 20	1 04 14
Premier, J. L. Smith	1 29 48	1 05 52
Idler, W. F. Nichols	1 37 20	Not meas.
Sheila, L. F. Hewitson	.....	Disabled.

Saturday, June 4.

In the first of the series of three races, given by the Wollaston Y. C., on Saturday, June 4, for a cup presented by Mr. Eben Hardy, Pocahontas finished first by some minutes, but lost to Sheila on corrected time. The wind was easterly and light. The summary:

Class A.	Elapsed.	Corrected.
Sheila, L. F. Hewitson	1 13 00	0 49 30
Pocahontas, F. C. Merrill	1 07 43	0 50 34
Goblin, Roy Lothrop	1 18 22	0 52 42
Premier, J. L. Smith	1 20 28	0 56 32
Idler, W. F. Nichols	1 23 19	0 58 03
Harolde, A. B. Robbins	1 21 40	0 59 47

## Knickerbocker Y. C.

College Point, Long Island Sound, Saturday, June 4.

The annual regatta of the Knickerbocker Y. C. was sailed on Saturday, June 4. Eighteen boats started, and all but one finished. The wind was light and variable, varying from N.E. to S.W. In the 43ft. class, Paiute II. was the only starter, and she sailed over the course alone. Paiute II. was designed and built last winter by "Gil" Smith, at Patchogue. She is a good looking boat on the whole, but her appearance is rather marred by a very high cabin house. She did not show any great burst of speed, and both Leda and Alert were nearly a match for her. Gurnard and Nautilus, two old-timers, were the only starters in the 43ft. class (cruising trim). Gurnard won by nearly 4 minutes.

Irene won in the class of the Knickerbocker Y. C. yawls. Cruiser, her only competitor, was not timed. Alert, sailed by Mr. C. D. Mower, had no trouble beating Little Peter in the 30ft. class. Tartan sailed a good race in the raceabout class, and beat Hobo, the second boat, by over a minute. Firefly beat Naiad handily and finished a winner with over 2 minutes to spare. Jeebi and Shovonne won in their respective classes. Leda won the Mildt cup for making the fastest corrected time over the course. The cup was won last year by Little Peter, but in order to become the property of an owner, the trophy must be captured two years in succession.

The summary follows:

Sloops—43ft. Class—Start 12:10—Course 14½ Miles.	Finish.	Elapsed.
Paiute I., W. Beam	3 24 42	3 14 42
Sloops—43ft. Class—Cruising Trim—Start 12:10—Course 14½ Miles.	Finish.	Elapsed.
Scimaid, L. H. Zocher	3 29 45	3 19 45
Nautilus, John J. McCue	3 34 40	3 24 40

Sloops—36ft. Class—Start 12:15—Course 14½ Miles.	Finish.	Elapsed.
Leda, S. H. Mason	3 10 00	2 55 00

Knickerbocker Y. C. One-Design Yawls—Start 12:15—Course 14½ Miles.	Finish.	Elapsed.
Cruiser, W. P. Goddard, Jr.	.....	Not timed.
Irene, Daniels and Allen	3 57 08	3 42 08

Sloops—30ft. Class—Start 12:25—Course 14½ Miles.	Finish.	Elapsed.
Alert, James W. Aiker	3 13 00	2 48 00
Little Peter, F. M. Weeks	3 38 50	3 13 50

Raceabout Class—Start 12:30—Course 14½ Miles.	Finish.	Elapsed.
Hobo, T. L. Park	3 34 58	3 04 58
Rogue, A. B. Alley	3 36 40	3 06 40
Tartan, A. H. Pirie	3 33 40	3 03 40

Sloops—25ft. Class—Start 12:35—Course 14½ Miles.	Finish.	Elapsed.
Firefly, S. P. Granbery	3 50 08	3 15 08
Naiad, J. B. Palmer	3 52 24	3 17 24

Mixed Class—Sloops and Catboats—Start 12:40—Course 10½ Miles.	Finish.	Elapsed.
Arline (cat), A. E. Rendle	.....	Not timed.
Jeebi, A. D. R. Brown	3 28 16	2 48 16
Plover, Howard Place	3 32 52	2 52 52

Catboats—18ft. Class—Start 12:40—Course 10½ Miles.	Finish.	Elapsed.
Shovonne, George J. Stelz	3 51 15	3 11 15
Dorothy, L. Englert	3 54 32	3 14 32

The winners were: Paiute II., Gurnard, Leda, Irene, Alert, Tartan, Firefly, Jeebi and Shovonne.

## Fall River Y. C.

Fall River, Mount Hope Bay, Monday, May 30.

The first Narragansett Bay racing of the season was held by the Fall River Y. C. with its regular Memorial Day open regatta. There were thirteen starters, and at times some very pretty racing was afforded.

The wind was stiff from the S.W., and the boats crossed the line under single reefs. The start was made at 1:15 P. M. There were four classes that filled, the course for sloops being from the club house to Mount Hope buoy and return, and that for cats being to Common Fence buoy and return, each a distance of about twelve nautical miles.

Priscilla was the winner in the 25ft. sloop class, but a protest was entered by Mr. C. F. Tillinghast, owner of Little Rhody, the new sloop built for the 22ft. restricted class, on account of a misunderstanding as to the starting signal, which gave his boat a handicap of about 6 minutes.

The 30ft. cats made a pretty race on the first leg, but Mblem got fouled with a buoy in some close work near the outer mark, and lost too much

## Southern Y. C.

New Orleans, La., Saturday, June 28.

The annual regatta of the Southern Y. C. was sailed Saturday, May 28. There were eleven classes of sail boats, each of which was well contested, and the amount of the prizes aggregated \$425. The prizes ranged downward from a purse of \$80, or a cup of the same value, in the largest class of cabin sloops down to a prize of \$20 for the smallest catboats. There were over thirty starters, and there was a large attendance to witness the races, and more general enthusiasm evinced than was ever before known. The only manner in which the club's fifty-fifth annual regatta was not a success was in the matter of wind, there being nothing better at any time than a light and shifting eight knot breeze.

As is usual with the first event of the season throughout the yachting world, the races were nothing conclusive as to the matter of real relative speeds. What with the nervousness of some of the helmsmen, the lack of tuning up and unpreparedness of several new, as well as old craft.

The imported Boston cabin sloop Calypso led the fleet, but she lost her first race in the South to the time-honored champion, the Susie B. The latter, with Vice-Commodore A. M. Cooke at the tiller, sailed one of the best races of her life, was in fine fettle, while Calypso was not in her true form. The new southern-built production, from a design by Messrs. Burgess & Packard, of Boston, Invader, made a good showing in this class, considering it was her first time under sail. This boat, which is on the highly developed scow order, should also make an excellent showing during the summer.

The only other class that might as yet be of more than purely local interest is that of the racing machines of the Seawanahaka cup type, several of which had come South from the Inland Lake Y. A. ranks. Three of these boats met for the first of the season's events—Gladiola, ex-Galatea, Virgin, ex-Caroline, and Kayoshk, the former from Lake Oconomowoc, and the last two from Oshkosh, Lake Winnebago. The first is of the vintage of 1899, the second of 1900 and the last named of 1903. The Virgin won the race, but it was little better than no contest at all for these scows, there being barely enough wind to get them over to an interesting sailing heel. Virgin made the best time by a couple of minutes, and she was well handled throughout the race.

L. D. SAMPSELL.

## Seawanahaka Corinthian Y. C.

Oyster Bay, Long Island Sound, Monday, May 30.

Four raceabouts and three 15-footers sailed a race at Oyster Bay, on Monday, May 30. The contest was sailed over outside courses, and the breeze was from the S.W. The raceabouts were sent away at 11 A. M., and Mystery beat Natalie nearly 3 minutes. In the 15ft. class, Wee Weam won easily; Sabrina was second. The summary:

Raceabouts—Start 11:00.

	Corrected.
Mystery, J. De Forest.....	2 07 59
Natalie, F. G. Stewart.....	2 10 57
Merry Ring, H. M. Crane.....	2 11 43
Galatea, A. F. Stokes.....	2 50 00

15-Footers—Start 11:05.

Wee Weam, R. L. Cuthbert.....	1 22 12
Cayenne, Colgate Hoyt, Jr.....	1 36 50
Sabrina, C. W. Wetmore.....	1 28 21

Saturday, June 4.

Three raceabouts and three 15-footers sailed a race over the Seawanahaka Corinthian Y. C.'s inside course on Saturday, June 4. The wind was from the E. and was light and variable.

Mystery won in the raceabout class, beating Natalie by less than a minute. Sabrina won in the 15ft. class. The summary:

Raceabouts—Start 3:20:10.

	Finish.	Elapsed.
Nathalie, F. G. Stewart.....	5 47 20	2 27 10
Jolly Roger, T. B. Bleeker.....	5 48 35	2 28 25
Mystery, J. de Forest.....	5 46 52	2 26 42

15ft. Class—Start 3:15:10.

Sabrina, C. W. Wetmore.....	5 11 05	1 55 55
Wee Weam, R. L. Cuthbert.....	5 14 35	1 59 25
Cayenne, Colgate Hoyt, Jr.....	5 19 28	2 04 18

## Indian Harbor Y. C.

Greenwich, Long Island Sound, Monday, May 30.

The annual spring regatta of the Indian Harbor Y. C. was sailed on Monday afternoon, May 30. The club went formally into commission in the morning.

At the time of the start there was little wind, but a squall broke as the boats finished. Virgette won easily in the handicap class, and Kenosha was the first to finish in the new one-design class. The summary:

Handicap Class.

	Start.	Finish.
Virgette, A. G. and W. H. Hanan .....	3 15 00	6 04 07
Robin Hood, George Gartland .....	3 15 00	6 10 15
Nellie, J. R. Buske.....	3 21 00	Withdraw.

Indian Harbor One-Design Raceabout Class.

Kenosha, Clifford Mallory.....	3 05 00	6 14 50
Owatauna, George Lauder, Jr.....	3 05 00	6 18 06
Wawa, I. E. Montells.....	3 05 00	6 24 37
Anananda, E. C. Ray .....	3 05 00	6 28 40

Saturday, June 4.

Four of the Indian Harbor one-design class sailed once over a five-mile triangular course on Saturday, June 4. The breeze was very light from the S.E. Anawanda, sailed by Mr. Addison Hanan, won. The summary:

	Start.	Finish.
Anawanda, E. C. Ray.....	3 05 00	5 46 37
Wawa, J. E. Montells.....	3 05 00	5 46 55
Kenosha, Clifford Mallory.....	3 05 00	5 47 05
Owatauna, George Lander, Jr.....	3 05 00	5 52 37

## Washington Park B. A.

The Washington Park Boating Association also held a small regatta Memorial Day, two classes, for 16ft. knockabouts and for sailing skiffs, taking part. The course was four and one-half nautical miles, and there were eleven entries. The summary:

Knockabouts—Start 2:30.

	Finish.	Elapsed.
Grace, E. Baker.....	3 49 00	1 19 00
Martha, W. S. Baxter.....	3 52 00	1 22 00
Scout, F. Browning.....	4 06 00	1 36 00
Spray, J. Peirce.....	Did not finish.	
Ready Bits, Jackson and Gladding.....	Disabled.	

Sailing Skiffs—Start 2:34.

Idono, C. Guy.....	4 11 00	1 37 00
Hesperus, A. Potter.....	4 13 00	1 39 00
Skunk, C. Williams.....	4 16 00	1 42 00
Kid, H. U. Shaw.....	4 38 00	2 04 00
Chub, A. D. Bliss.....	4 44 00	2 10 00
Zeta, J. C. Ardern.....	Withdraw.	

## Winthrop Y. C.

Winthrop, Mass., Saturday, June 4.

The first handicap club race of the Winthrop Y. C. was held Saturday, June 4, in a moderate E. breeze. The summary:

25ft. Class.

	Elapsed.	Corrected.
Helen, C. A. Young .....	1 04 03	0 51 03

21ft. Class.

Scamper, Tewksbury and Byram.....	1 02 12	0 57 12
Cleopatra, J. R. Hodder.....	0 59 50	0 59 50

18ft. Class.

Sioux, G. J. Buchanan.....	1 07 54	0 55 54
Fannie N., G. A. Nash.....	1 03 00	0 59 00
Guide, J. W. Etherington .....	1 05 02	0 59 02
Marion, C. A. Newmarch.....	1 07 56	1 01 56

## Red Bank Y. C.

Red Bank, Shrewsbury River, Monday, May 30.

The opening regatta of the Red Bank Y. C. was held on Monday, May 30. In the morning the knockabouts had a race and

five boats started. The wind was light and westerly. Annie, owned by Mr. C. R. James, won with Papoose, owned by Mr. John G. Gillig, second. In the afternoon the one-design class of raceabouts sailed over the regular ten-mile course. Soon after the start a thunderstorm caused Caprice, Tut Tut and Whim to reef, but Eagle and Scandal carried full sail. Scandal won, with Eagle second. The summary:

	Start.	Finish.
Scandal, Jacob Siegel .....	2 40 00	5 05 00
Eagle, George J. Gallig.....	2 40 00	5 05 05
Caprice, Otto Wagener .....	2 40 00	5 05 32
Tut Tut, John Haskins .....	2 40 00	not timed
Whim, Adolph Hupfel .....	2 40 00	not timed

## Quincy Y. C.

Quincy, Mass., Saturday, June 4.

The first club race of the Quincy Y. C. was held off the club house at Hough's Neck, Saturday, June 4, in a moderate E. breeze, with the following summary:

Class I.

	Elapsed.	Corrected.
Marvel, I. N. Wittemore.....	2 27 00	1 46 23
Hustler, H. W. Robbins.....	2 31 30	1 49 54
Moodyne, W. H. Shaw.....	Withdraw.	
Canacum, J. C. Morse.....	Withdraw.	

Class II.

Zhelma, F. O. Chanery.....	4 55 30	Not meas.
Wiji, M. M. Cannon .....	5 00 00	Not meas.

Special 21ft. Class.

Azona, A. L. Lincoln.....	2 32 00	2 22 00
Enigma, S. W. Sargent .....	Withdrawn	

## Marine and Field Club.

Bath Beach, Gravesend Bay, Monday, May 30.

The new one-design 15-footers met for the first time in a race, sailed on Monday, May 30. There were four starters, and Beta finished 2 seconds ahead of Delta, the second boat. A nice southerly breeze held throughout the race. The start was made off the club house, thence to a mark off Fort Hamilton, thence to a mark off the Atlantic Y. C., and back to the starting line. These boats will compete in Class R. R. in all open races. The summary:

	Finish.	Elapsed.
Beta, Snedeker and Camp.....	4 06 04	0 44 04
Delta, J. J. Mahoney.....	4 06 06	0 44 06
Gamma, E. C. Platt.....	4 06 40	0 44 40
Alpha, C. Halcombe .....	4 07 25	0 45 25

## Southern Letter.

NEW ORLEANS, June 3.—With the great boom now noticeable in local yachting there has been a plethora of yachting news here, nearly every week chronicling the purchase by a New Orleans yachtsman of a noted craft of the North, there being so much of this kind of news that the boats building in this vicinity have been to some extent neglected by the press of the city. As about all the fine Northern racers have been cornered and are either here or on the road, an effort will now be made to describe some of the home productions.

Among the finest yachts ever built in the South, the four boats of the Southern Gulf Coast Y. A. one-design

SINNER.

Southern Y. C. One-Design Knockabout.

cabin knockabout class deservedly take front rank. The originators of the one-design class idea here was the coterie of young yachtsmen known all along this coast as the "Scamp Crew," they having built and raced very successfully the crack sloop of that name year before last. Last year they built and raced the open sloop Trouble, and for this season they wanted to go up a peg or two higher, and have a genuine cruising vessel. For the one-design scheme they selected the best Northern design they could get for a small cabin yacht that would be fast, safe and comfortable, and one that could be easily built by amateurs and handled under sail in bad weather by two men, but which would safely carry four to six persons for a cruise of several weeks. The design selected was made by Mr. Charles D. Mower. The yachtsmen who decided to build up this nice class of handy little cruisers were Messrs. H. P. Johnson, D. S. Wuescher, J. W. Luther and M. D. Wuescher. They started their boat, building it themselves, and invited their brother yachtsmen to watch the method of construction, desiring that others follow their example. Their boat was named Sinner.

Juanita was built by the Johnson Iron Works Company, of Algiers, La., for Messrs. Carroll, Prochaska and W. H. Gottman. This boat was the first to be tried. She made a most favorable impression, combining staunchness, ease of handling, and good appearance to a marked degree.

The third boat is now nearing completion here in the yard of one of her amateur builders and owners, her name being Rascal, and the syndicate being composed of Messrs. E. G. Jordy, Adloe Orr, H. E. Wheeler, and M. M. Orr.

The fourth boat of the one-design class is called Siren, and she has just been finished at the Johnson Shipyard

at Biloxi, Miss., the owners being Messrs. J. M. Gore, Jr.; H. B. Emmett, T. L. Pollock, and Stewart Maunsell.

These one-design yachts are 32ft. over all, 20ft. waterline, 10ft. breadth, and 1ft. 9in. draft. The cabin has 4ft. 6in. headroom, and it is 10 ft. long. The sail area is 615 sq. ft. There is 1,000 pounds of ballast inside. The cockpit is self-bailing. The keel of the fifth boat of the class is laid, and several others are in contemplation. With four boats to start with, the class should put up some very interesting racing during the summer.

There is probably no place in the country that is making so much of a spurt for the upbuilding of yachting as New Orleans, the number of fine Northern yachts which have been here recorded as being purchased by Southern Y. C. members being conclusive evidence that the Southerners are waking up.

Four of the finest Northern cabin sloops have lately been enrolled in the club, and negotiations have been reopened for several others. As mentioned in this paper recently, the bringing of Northern boats here had received quite a setback owing to the difficulty to get transportation by either steamer or railroad. Yachtsmen here were made happy a day or so since to learn that the New York steamship companies had changed their minds, and would bid for freighting boats up to 50ft. over all length. This relieves the situation, and it is probable that the Boston 25-footers, Calypso and Chewink III., will soon have other formidable rivals from the North. It is rumored that a number of light draft boats like Monsoon, Alert, Bobtail and Marion, have attracted the attention of New Orleans yachtsmen, and it is the intention to try to build up a class of yachts of from 25ft. to 30ft. waterline and under 50ft. deck measurement. The Southerners must be content to buy the most of their yachts second-hand for some time, as there are few up-to-date designers and builders in the section. With the general boom in yachting this and other evils will soon be remedied.

L. D. SAMPSELL.

## Rhode Island Notes.

PROVIDENCE, R. I., June 4.—The steam yacht Little Sovereign, built by the Herreshoffs for Mr. M. C. D. Borden, of New York, was launched at Bristol this week. Her design is similar to that of Mr. August Belmont's Scout, but she is much faster than that boat. She is a little more than 100ft. in length, and has a breadth of about 10ft., and her estimated speed is 28 miles. It is believed that she will beat Mr. H. H. Rogers' Kanawha, the first winner of the Lysistrata cup. Little Sovereign will have her trial spin over the measured mile course in lower Narragansett Bay.

Mr. William Schedley, of the Rhode Island Y. C. and Edgewood Y. C., has a new 42ft. Murray & Tregurtha launch. She is called Tuscora, and is a full cabin cruising boat, 42ft. over all, 9½ft. breadth, and 3½ft. draft, with a 13 horse-power, four-cycle engine, capable of about 10 miles an hour. She has a canoe stern, and has a mahogany house, with interior finish throughout in the same wood. The main cabin is about 15ft. in length, with sleeping accommodations for four, and has complete cruising facilities. On her trip around the Cape from Boston, Tuscora made the run from Provincetown to Newport in 15 hours.

Mr. Jesse Brown has bought the 40ft. cabin launch Nellie B. from Boston parties, and the boat is enrolled in the Edgewood Y. C. She has 16 horse-power Globe engines, and is handsomely finished in mahogany throughout. The Edgewood fleet also has a new sloop yawl of handsome design, owned and built by Messrs. Frank B. and O. H. Hathaway, Jr., of Central Falls. She is named Eufaula, and is 32ft. over all, 26ft. waterline, 12ft. breadth, and 2ft. 9in. draft. She has a pole mast rising 45ft. above deck, and carries a club topsail. There is full headroom in the cabin, which is finished in oak and cypress, and she has sleeping room for eight.

Vice-Commodore Pott's new launch, of the Washington Park B. A., has been launched from the shop of Davis Bros., South Providence. She is 35ft. over all, 20ft. waterline, 9ft. 4in. breadth, and 2ft. 8in. draft. The motive equipment is a 15 horse-power four-cycle Jaeger engine. She has a commodious cabin with wide transoms and folding berths.

F. H. YOUNG.

The schooner yacht Ingomar will not have an opportunity to race for the Cape May cup in British waters this season. The conditions governing the Cape May cup state that should the yacht holding the trophy change ownership, the cup must be returned to the New York Y. C., unless "the cup will become the bonafide property of any yacht holding it successfully through three consecutive contests," as is stated in the donor's letter.

After winning the cup the British cutter Britannia, owned by King Edward, then Prince of Wales, defended it successfully against Navahoe. When Britannia was sold the cup should have been returned to the New York Y. C., as she had not held it "through three consecutive contests."

Through an oversight on the part of those in authority in the Royal Yacht Squadron, the cup was not returned, and when that organization was approached in regard to a challenge for the cup, it was evident the trophy was no longer its property, and must be returned to the original custodian. It is understood that steps are being taken to secure the cup from King Edward, in whose safe keeping it now is, and that it will be forwarded to the American club promptly.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

MARGARET CHARTERED.—The auxiliary Margaret, owned by Isaac E. Emerson, has been chartered through the agency of Mr. Frank Bowne Jones to Mr. William Ross Proctor for the season.

SAMUEL H. PINE DIES.—Samuel H. Pine, the well-known yacht and shipbuilder, died in Brooklyn on June 3. He was seventy-seven years of age. The best known yacht turned out of Mr. Pine's yard was the old schooner Enchantress.

## A. C. A. National Meet, Sugar Island, Thousand Islands, St. Lawrence River, August 5-19, 1904.

### Atlantic Division Annual Camp.

The annual camp of the Atlantic Division, held at Hermit Point on the Palisades, opposite Riverdale-on-Hudson, May 28, 29, 30, after three days of splendid weather, wound up in a rainstorm that would have dampened the ardor of anyone but a canoeist; the crowd in camp, however, voted the meet an entire success, and many are looking forward to a three days' camp at the same spot over Labor Day.

The camp site was excellent; a broad, grassy plateau some 35 feet above the river, with two springs of fine water, a good landing for launches and small boats, and probably the best beach along the west bank of the Hudson. Camp was opened Saturday noon, May 28, by Vice-Commodore Kretzmer, with the A. C. A. burgee flung to the breeze, flanked by the American and English flags on either side, and the Knickerbocker and New York C. C. flags at the centers of their respective camps.

The roster of the camp showed 89 registered, a goodly number of applicants for membership in the A. C. A., some 40 visitors, 42 tents, and a fleet of 52 canoes, and yachts and launches in addition.

Vice-Commodore Louis C. Kretzmer was assisted by Purser Mat Ohlmeyer, while Rear-Commodore Furman came from Trenton to participate in the camp, as did Secretary-Treasurer Wright from Rochester. Among the older and more prominent members in camp were W. S. Elliott, giver of the Atlantic Division sailing trophy; Geo. P. Douglass, twice winner of the "Record" in '90 and '93, and secretary-treasurer in '94; Leopold Schupp, an old-time Knickerbocker; John Ely, from Rochester, chairman of the '99 regatta committee; ex-Commodore Thorn, of '99, and a host of others.

Saturday afternoon was spent in putting up tents, and rigging the canoes, which were tried in many spins on Sunday, while the racing began at 10 A. M. on Monday morning, a complete report of which is appended.

It is interesting here to review for a moment the various camps that have been held on the Hudson and other waters in the Atlantic Division. The writer recalls the first "local camp," held at Plum Point on the Hudson, between Cornwall and Newburg, in May, '84; the following year the camp was held in the same place; in '86 at Coddington's Dock, near Rondout; in '87 at Croton Point, under the aegis of the Shattemuc C. C., while in '88, upon the organization of the Atlantic Division, the first division camp was held on Newark Bay, and this was the genesis of the activity of the canoeists in New Jersey, which continued unabated until the Passaic River became too rich for them—or for anyone else. In '89 the camp was on Raritan Bay at Cheesequake; in '91 at the same place, the Atlantic Division having merged in the general camp at Jessup's Neck on Peconic Bay the previous year. The camp was omitted in '92 in respect to the memory of Charles P. Weekes, of the B. C. C., who was drowned in the Delaware that spring. In '93 Chimon's Island, off South Norwalk, was chosen for a ten-day camp under Vice-Commodore Lake, and in '94 the camp again merged with the main camp at Croton Point. In '95 the camp was abandoned in the hope of getting more men to the main camp at Lake Champlain. In '96 Lake Hopatcong was chosen, while in '97 was the first of the cruising camps on the Delaware, with a wind-up at Park Island. '98 saw the division merge with the main camp at Stave Island; '99 and 1900 were repetitions of '97 on the Delaware, with Vice-Commodore Allen in charge, and most successful they were. In 1901 the camp was held on the Hudson opposite Yonkers; in 1902 at Delanco on the Delaware, between Burlington and Philadelphia, with a preliminary cruise down the river, and in 1903 the division again merged, according to rule, with the main camp at Sugar Island on the St. Lawrence. This is a resumé of the Atlantic Division camps and their predecessors, apart from which were the Passaic River meets and many joint-club camps on the Hudson, the Shrewsbury, and elsewhere.

To the men of the present day the regatta programme of '84 sounds formidable with a mile course for all paddling races and two turns. Think of it, ye paddlers! The sailing races were for the two classes, A and B; the former, Stella Maris, Rob Roy, and other types, 14½ ft. by 28 in.; the latter, including the Shadow, Pearl, Nautilus, and other types. The great race of that camp was between Vaux, of New York, and Gibson, of Albany, the former sailing Dot, a Shadow, and the latter Snake, an Ellard model, built, if the writer's memory serves, by Rushton. The course was around Polipel's Island, but the squalls off Storm King and Beacon Hill were too much for the contestants, and the race was finally called off.

The camp of '84 brought out men from the N. Y. C. C. and Knickerbocker C. C., the "Dock Rats" of Newburg, the Mohicans, headed by Commodore Robert Shaw Oliver, of the A. C. A., now Assistant Secretary of War, the Rondouts from up river, and men from as far away as Amsterdam, for the Mohawk was lively in those days. The Brooklyns, organized in 1885, made their debut that

year, as did the Shattemucs from Sing Sing; the Yonkers Dolphins appeared first in '87, while many of the New Jersey clubs were not active till '89 and '90. In '84, as in 1904, we had the A. C. A. secretary-treasurer with us; Dr. C. A. Neide, No. 14, in the first instance; "Jack" Wright, No. 2,779 in the latter. In '84 we had Bob Wilkin, from the Knickerbockers, with Harry Keyser, Arthur Brentano, Edwin Gould, and a host of others; L. W. Seavey—"Big Foot"—beloved and mourned by the A. C. A., made his appearance that year with "Hiawatha." Then there were "Vauxy" and Will Stephens, and "Tramp" Stevens and Burchard from the N. Y. C. C.; the Wackerhagen boys from Albany, Grant Edgar and Nate Smith from Newburg, Jansen Hasbrouck, Grant Van Duzen and Harry Crispell from Rondout, and many others, some still active in the A. C. A., some retired or lured away by yachts, automobiles or golf, and some gone to their last rest. The writer, the only one present at both camps in 1884 and 1904, after twenty years, is all ready for Sugar Island this summer, and for all succeeding camps, under as good officers as Wolters and Wright, in 1914 and 1924, and (D. V.) in 1934 as well. The American Canoe Association, with its many attractions for all lovers of good, wholesome sport and pastime, is indeed a fountain of youth.

### Report of regatta at Atlantic Division Camp, Hermit Point, May 30, 1904:

I. One-man, single-blade paddling, ½ mile straightaway:  
George H. King, Knickerbocker C. C. .... 1  
George Morrissey, New York C. C. .... 2  
Hattenbrun, Undercliff C. C. .... 3

Start, 10:19 A. M.; finish, 10:25:15 A. M. Winner's time, 6m. 15s. High water; south wind; light; course, up-river.

II. Novice sailing race, and "Nomad" type sailing race, 65ft. area, 3 miles, triangular course:

Foggy Dew, R. H. Kretzmer, Knickerbocker C. C. .... 1  
Mudjikeewis, Carl Moore, Knickerbocker C. C. .... 2  
Canuck, W. G. Harrison, Knickerbocker C. C. .... 3  
Dolphin, H. C. Thompson, Knickerbocker C. C. .... 4  
Tenny, Cort, Knickerbocker C. C. .... 5

Start, 10:35; finish, 11:37. Winner's time, 1h. 2m. Second, 1h. 4m. 20s. The above were all in the novice class alone, as two canoes of Nomad type failed to finish. All rigs carried by above canoes were of cruising area, the largest being 80sq.ft. High water; south wind; light to puffy; hazy.

III. Tandem, single-blade paddling, ½ mile straightaway:

King and Boell, Knickerbocker C. C. .... 1  
Hattenbrun and Danburg, Undercliff C. C. .... 2  
Keller and Cromwell, Knickerbocker C. C. .... 3  
Bain and Allen, Undercliff C. C. .... 4  
Kraus and Flynn .... 5

Start, 11:34:10; finish, 11:39. Winner's time, 4m. 50s. Second, 5m. 5s. High water; south wind; course, up-river.

IV. One-man double-blade paddling, ½ mile straightaway:

W. G. Harrison, Knickerbocker C. C. .... 1  
Van Dohlan, Ft. Washington C. C. .... 2  
Zdankiewicz, Ft. Washington C. C. .... 3  
Hattenbrun, Undercliff C. C. .... 4  
Wm. H. Allen, Undercliff C. C. .... 5  
B. F. Cromwell, Jr., Knickerbocker C. C. .... Did not finish  
R. H. Kretzmer, Knickerbocker C. C. .... Did not finish

Start, 12:09:10; finish, 12:17. Winner's time, 7m. 50s. Beginning of the ebb; wind south; hazy; course, up-river.

V. Tandem double-blade paddling, ½ mile straightaway:

Hattenbrun and Danburg, Undercliff C. C. .... 1  
King and Harrison, Knickerbocker C. C. .... 2  
T. Hale and M. Ohlmeyer, Yonkers and Knickerbocker .... 3

Start, 2:38:30; finish, 2:46. Winner's time, 7m. 30s. Second, finish, 2:46:45. Third, finish, 2:47:50. Strong ebb tide; wind south and puffy; very hazy; course, up-river.

VI. Atlantic Division sailing (Elliott) trophy, 4½ miles, triangular course:

Roc, Frank C. Moore, New York C. C. .... 1  
Buzzard II, Daniel B. Goodsell, New York C. C. .... 2

New type boat, 17ft. by 42in.; 140ft. sail area.  
Start, 3:01; finish, 4:04. Winner's time, 1h. 3m. Second, finish, 4:04:45.

Canuck, W. G. Harrison, Knickerbocker C. C. .... 1  
Pappoose, L. C. Kretzmer, Knickerbocker C. C. .... 2  
Tot, W. D. Andrews, Knickerbocker C. C. .... 3  
Foggy Dew, R. H. Kretzmer, Knickerbocker C. C. .... 4

Chiquita, M. Ohlmeyer .... Did not finish  
Mudjikeewis, Carl Moore .... Did not finish  
Tenny, Cort .... Did not finish

Cruising type canoe, 16ft. by 30in. No rig over 112sq.ft.  
Start, 3:01; finish, 4:12:15. Second, 4:14. Third and fourth, time not taken. Strong ebb tide; wind puffy to light; and foggy.

The Elliott trophy was awarded to F. C. Moore, and mug to D. B. Goodsell for second place. The trophy carries with a flag as a following prize. The regatta committee awarded a loving cup to Harrison, winner in the cruising class, and a mug to L. C. Kretzmer, second in the same class. This was the first test of the new type boats against the regulation model canoes. It was not a fair comparison, as none of the latter carried the extreme limit of 112 sq.ft., and were accordingly very much out-classed. The new type carried mainsail and jib, as against main and dandy on the old type.

VII. Fours, paddling, single blade, ½ mile straightaway:

King, Boell, Dempewolfe, Andrews, Knickerbocker C. C. .... 1  
Cromwell, De Camp, Stockwell, Harrison, Knickerbocker .... 2  
Four crews, two did not finish. Winner's time, 5m. 17s. Strong ebb tide; foggy; course, up-river.

VIII. Tilting: First Bout—Damburg and Hattenbrun, Undercliff C. C., won from King and Harrison, Knickerbocker C. C. Keller and Cromwell, Knickerbocker C. C., bye. Second bout—Damburg and Hattenbrun, Undercliff C. C., won from Keller and Cromwell, Knickerbocker C. C.

First prize was awarded Messrs. Danburg and Hattenbrun. Second prize was not contested for by losing teams. Judge, John Ely, Rochester C. C.; Chairman regatta committee, A. C. A. in 1899.

At the conclusion of the races the prizes were awarded at headquarters by Secretary-Treasurer Wright, who made a neat little speech and said a good word for the camp at Sugar Island in August.

The thanks of the regatta committee are due to several of the old members of the A. C. A. who contributed so substantially to the regatta fund; also to the Yonkers and Knickerbocker Clubs for the use of buoys and tilting poles, and to "Pop" Moore for the use of camp cannon and starter's gun.

J. K. Hand, chairman; W. D. Andrews, E. M. Underhill, C. Eastmond, regatta committee. H. Lansing Quick, referee; W. S. Elliott, Woolsey Carmalt, judges; C. Eastmond, starter; W. P. Schulz, time-keeper; J. K. Hand, clerk of the course.

### Eastern Division in Camp.

A depressing rainstorm rather spoiled the several events of the Eastern Division of the A. C. A. on the Merrimac River at Manchester, N. H., on Monday, May 30. The war canoe race, distance one mile, was won by the Quinnoque Club's team, in 4m. 6s. The single canoe race was won by D. S. Pratt, Wawbewawa Club, in 4m. 25s.

The tandem double went to the Medford C. C. in 4m. 2s.; the tandem single to the Wawbewawa C. C. in 4m. 6s.; the single double to Medford, in 4m. 2s., and the club four single was taken by the Wawbewawa, in 3m. 44s. The fours, double blade, went to Medford, with Wawbewawa second and Quinnoque third. Time, 3m. 31s.

The Decoration Day regatta was for a club cup offered by Vice-Commodore Henry Schaefer. The Wawbewawa's won, with 13 points; Medford was second, 12 points, and Quinnoque third, 1 point.

### Officers of A. C. A., 1904.

Commodore,—C. F. Wolters, 14 Main St. E., Rochester, N. Y.  
Secretary-Treasurer—John Sears Wright, 519 West Ave., Rochester, N. Y.

#### ATLANTIC DIVISION.

Vice-Commodore—L. C. Kretzmer, L. C. Schepp Building, New York.  
Rear-Commodore—W. A. Furman, 846 Berkeley Ave., Trenton, N. J.  
Purser—M. Ohlmeyer, Jr., 201 Palisade Ave., West Hoboken, N. J.  
Executive Committee—H. L. Pollard, 138 Front St., New York; N. S. Hyatt, Ossining, N. Y.; H. C. Allen, 54 Prospect St., Trenton, N. J.

Board of Governors—R. J. Wilkin, 164 Montague St., Brooklyn, N. Y.  
Racing Board—H. L. Quick, Yonkers, N. Y.

#### CENTRAL DIVISION.

Vice-Commodore—H. W. Breitenstein, 511 Market St., Pittsburg, Pa.  
Rear-Commodore—Frank D. Wood, Buffalo, N. Y.  
Purser—Frank C. Demmler, 526 Smithfield St., Pittsburg, Pa.

Executive Committee—Jesse J. Armstrong, Rome, N. Y.; H. C. Heyt, 26 S. Goodman St., Rochester, N. Y.  
Board of Governors—C. P. Forbush, 164 Crescent Ave., Buffalo, N. Y.

Racing Board—Harry M. Stewart, 85 Main St., East, Rochester, N. Y.

#### EASTERN DIVISION.

Vice-Commodore—Henri Schaefer, Manchester, N. H.  
Rear-Commodore—H. M. S. Aiken, 45 Milk St., Boston, Mass.  
Purser, Edw. B. Stearns, Manchester, N. H.

Executive Committee—B. F. Jacobs, Jr., West Medford, Mass.; D. S. Pratt, Jr., Wellesley Hills, Mass.; Marcus Butler, Lawrence, Mass.; William W. Crosby, Woburn, Mass.

Board of Governors—Paul Butler, U. S. Cartridge Co., Lowell, Mass.  
Racing Board—Paul Butler, U. S. Cartridge Co., Lowell, Mass.; H. D. Murphy, alternate.

#### NORTHERN DIVISION.

Vice-Commodore—Chas. W. McLean, 303 St. James St., Montreal, Canada.  
Rear-Commodore—J. W. Sparrow, Toronto.

Purser—J. V. Nutter, Montreal, Canada.  
Executive Committee—C. E. Britton, Gananoque, Ont.; Harry Page, Toronto.

Board of Governors—J. N. MacKendrick, Galt, Ont.  
Racing Board—E. J. Minet, 125 Vitre St., Montreal, Canada.

#### WESTERN DIVISION.

Vice-Commodore—Burton D. Munhall, care of Brooks Household Art Co., Cleveland, O.  
Rear-Commodore—Chas. J. Stedman, National Lafayette Bank, Cincinnati, O.

Purser—Geo. A. Hall, care of Bank of Commerce, Cleveland, O.  
Executive Committee—Thos. P. Eckert, 31 West Court St., Cincinnati, O.; Dr. H. L. Frost, 10 Howard St., Cleveland, O.

Board of Governors—Henry C. Morse, Peoria, Ill.

### How to Join the A. C. A.

From Chapter I., Section 1, of the by-laws of the A. C. A.:  
"Application for membership shall be made to the Division Purser, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

All communications for FOREST AND STREAM must be directed to Forest and Stream Pub. Co., New York, to receive attention. We have no other office.

## Rifle Range and Gallery.

### Fixtures.

June 12-29.—Union Hill Schuetzen Park, N. J.—National Schuetzenbund Festival.  
June 26.—Zeltner's Morrisania Park.—German-American Shooting Society's shoot.

### The Palma Trophy.

The Evening Post, of June 2, contains the following:  
Referring to the cables to the press from London in relation to the Palma trophy match, shot last year at Bisley, England, and won by America. Gen. Bird W. Spencer, president of the National Rifle Association of America, said to-day to a reporter of the Evening Post:

"Gen. Spencer was not the captain of the American team, Col. Leslie C. Bruce, of New York, having filled that position. Gen. Spencer did not accompany the American team to England. A rifleman by the name of Milton Farrow, Washington, D. C., sent an article to the Washington Evening Star, which was published on July 29, 1903, in which it was stated that the American riflemen used non-regulation arms, and that foul play was charged against the American team.

"After the publication of this article, the secretary of the National Rifle Association of Great Britain, Col. C. R. Crosse, addressed a communication to the National Rifle Association of America, asking for an explanation as to the article and for categorical answers to certain questions, giving description of the rifle used in the contest, and particularly stating: 'In asking you to lay this letter before the National Rifle Association of America for their consideration and reply, I have to say that my council have no other object in view than to dispel the doubts which have arisen in connection with this match.'

"The letter from the National Rifle Association of Great Britain was submitted to the Board of Directors of the National Rifle Association of America at a meeting held in Washington, D. C., January 19, 1904, and the president (Gen. Spencer) was instructed to reply thereto, which he did.

"In the first place, by authority of Major James E. Bell, who was quoted in the article referred to in the Star, he denies that Major Bell had made any such statement. The statement attributed to Major Bell, being that he took the view that the rifles in question could not properly be used.

"Gen. Spencer's communication further stated that the team was equipped with two rifles, both of Government standard, model of 1892, but that to one of the rifles was attached a barrel, which barrel conformed in rifling, this being the only difference between it and the 1892 model, to the new army rifle which was not yet obtainable. Instructions were given to Col. Bruce, the captain of the team, at the last moment before sailing that if there was the slightest objection to the use of the rifles to which were attached the special barrels, his team was to immediately discard them and shoot with the old-model rifles taken with them.

"At a meeting of the directors of the National Rifle Association of America, January 19, 1904, Col. Bruce distinctly stated that the character of the rifles which were used was thoroughly understood by every team captain, and no objection whatever was raised; further, that it was known by everybody that these rifles were to be used by the American team; also, that the rifles referred to were freely passed over to officers and members of other teams, to the officers of the competition, and others for examination and trial if desired; he also stated that the rifles with the special barrels attached were fully and publicly sanctioned by the National Rifle Association of America. He then proceeded to give a description of the rifles as requested, which agreed with the pitch of the spiral and the grooving of the new army rifle.

"In the article published by Mr. Farrow in the Star the statement was made that an enlarged barrel was used, caliber .303. This Gen. Spencer distinctly denied and stated that the barrels were the regulation 30 caliber rifle. Gen. Spencer further quoted from articles published in the Shooting Times, of London, and the Volunteer Service Gazette, which articles gave description of the rifles used by the American team and stated that the whole matter had been carefully gone into by a selected committee of the National Rifle Association of Great Britain, and that the rifles were unanimously permitted to be used."

Dr. W. B. Short, a corporal in the Seventh Regiment of the State militia, and one of the members of the American team which won the Palma trophy at Bisley in 1903, said to-day that the conditions under which the match was shot had been the same for the English as for the Americans. He said also that the Englishmen were thoroughly aware of the fact that the American team was using rifles with special barrels and specially made ammunition. He said:

"Fully two weeks before the shoot, Mr. Crosse, secretary of the National Rifle Association, asked me if our rifles and ammunition were the same as we would receive were we sent out on service. I told him that our rifle barrels had been made by the Stevens Arms Company after the specifications governing the rifle which had been adopted by the War Department for use in our army. Also I told him that our ammunition, while being specially made for the match, had been made by the company furnishing ammunition to the Government and identical with it.

"In turn I asked him the question he had asked me, and his reply was that the rifle barrels of the English team had been made by a private firm and afterward sent to the Government arsenal for inspection, approval, and stamping with the Government mark. Mr. Crosse told me that the ammunition also had been especially made, so it is clear from his answer that while the rifles and ammunition used by the British team were not literally of service character, they were practically so; and this may also be said, with equal veracity, of the pieces and cartridges used by the American team.

"The advantage we derived from having the barrels made in private works was a more careful workmanship, but in every way these barrels were constructed to conform to the Government pattern. The reason we had them made was that we knew that the English team would do the selfsame thing. To sum matters up, it is a fact that not a man who shot on the English team used a rifle made in the Government works.

"Further than my talk with Mr. Crosse, let me say that the captain of the two teams had a conference a week before the day of the match and this matter of rifle barrels was taken up and thoroughly discussed, and there was never the vaguest thought of a protest on the part of the Englishmen."

At the office of the Winchester Arms Company it was said to-day that on July 11, 1903, the date of the Palma trophy shoot, there were two rifles in service used in the United States army, the Krag-Jorgensen and the Springfield model.

The new rifle of the army, which has supplanted the Krag piece, is made at Springfield, and the members of the American team claim that the special barrels they used at Bisley were manufactured in entire accordance with the specifications governing the construction of the new Springfield piece.

The Evening Post, of June 3, adds the following information on this subject:

It was stated to-day by H. M. Pope, designer of the rifle barrel which was used by the victorious American team which won the Palma trophy at Bisley, England, last July, that there was "somewhat of a difference" between the interior dimensions of the Stevens-Pope barrel and that of the Krag-Jorgensen rifle, the service arm of the United States army. The Evening Post telegraphed to Mr. Pope for information upon the now mooted question of the correct winning of the Palma trophy by the American team, in view of its use of special rifle barrels, and Mr. Pope replied:

"Chicopee Falls, Mass., June 3.—Stevens-Pope barrels were used by the American team in the Palma match. In outside dimensions, sights, caliber, and ammunition they conformed to the Government barrel, but inside were of superior shape and finish. The writer was not present at the match, but, from conversation with members of the American team, feels perfectly confident that all concerned knew exactly what rifles were to be used before a shot was fired. He also understands that the British team used rifles with barrels constructed by private makers, these, however, with Government view marks, a system which our Government does not possess. Still, these barrels were not made by the British Government.

"At Ottawa, in 1902, the American team used two experimental rifles previously known to all as not standard, to which no objection was made whatever, possibly because the British team won.

"H. M. Pope." It should be stated here, regarding the last part of Mr. Pope's telegram, that the present objection of the British riflemen against what they pronounce as a contravention by the American team of the rules governing the match is generally understood to have come first from the Canadian team.

In order to supplement Mr. Pope's telegram, the Evening Post telephoned to him this afternoon and received from him these additional facts:

"The rifle used by the American team at Bisley was of special character. There was somewhat of a difference as to inside dimensions, between it and the United States army service rifle. This difference rested upon three points, as follows: There were eight grooves of rifling instead of four, the depth of the groove was two and three-quarter thousandths of an inch, against four one-thousandths of an inch in the Krag; and, thirdly, the twist of the rifling was such as to give it one complete turn in eight inches, instead of in ten inches, in the service arm.

"There was another feature in the Stevens-Pope rifling which must be taken into consideration, and this was the rounding of the corners of the grooves instead of making them angular. In the Krag piece these corners are somewhat rounded, but this is due mainly to the dulling of the cutting tools.

"As to the advantage resulting from the use of a barrel of this character, it afforded a velocity thirty feet per second greater than the actual service piece, and consequently, a slightly flatter trajectory. The reason for this is that with the shallower rifling in the Stevens-Pope barrel the jacket of the bullet much more readily reaches all parts of the grooves, fills them better, and, therefore, makes a gas-tight contact.

"The rounded edges of the grooves also keep the barrel from fouling.

"The rifle used by the American team was not, therefore, strictly the service rifle, although it differed from it very slightly. But neither were the British guns service pieces. They had barrels made by private makers and taken to the proving house and stamped with Government marks. The caliber of the Stevens-Pope was that of the service rifle, .30. This is the caliber of the new Springfield rifle for the army. I believe it has four grooves.

"In the Canadian match in 1902, two of the rifles used by the American team were of special pattern, one with two grooves, one with four. The pitch was one turn in eight inches. They were not protested."

London, June 3.—With reference to the statement made yesterday by Gen. Bird W. Spencer, president of the National Rifle Association of America, that the Committee of the National Rifle Association of Great Britain had carefully considered the matter of the American special rifles, and had agreed to their use, it is pointed out here that the reply of Col. C. R. Crosse, secretary of the National Rifle Association of Great Britain, April 13, to Gen. Spencer's letter containing similar statements, absolutely denied that the question of the American barrels was ever brought before the council or committee of his association at or before the Bisley meeting.

This cablegram from London to-day, claiming that in his reply to Col. Crosse, Gen. Spencer had stated that the American special rifles used at Bisley had been approved by the committee of the National Rifle Association of Great Britain, and adding that such a statement was not based on fact, was referred to-day to Gen. Spencer for reply. He said:

"The statement in the cablegram from London is erroneous. I never made such a statement. I have no knowledge whatever that the special rifle barrels were referred to the committee of the British association. So far as statements are concerned, what I did was to quote from certain London sporting papers, the Shooting Times and the Volunteer Service Gazette, which stated very clearly that the entire matter of the American barrels had been gone into by a select committee of the British organization, and that by unanimous consent the American team had been permitted to use them.

"The members of the British team knew before the Bisley match that the Americans had these rifles, and, furthermore, the character of the rifles. There is not the slightest doubt about that. But I want to reiterate that I have never made a statement that the American rifles had been inspected and approved by a committee of the British association; I merely quoted two English periodicals which stated this to be a fact."

### Union Hill Park.

The shooting house of the Union Hill range on Saturday of last week was well filled with riflemen who have expectations of honor and prizes at the Bundesfest next week.

Only a few scores were kept for record. They are as follows: W. A. Tewes 1107, L. P. Hansen 1190, R. A. Goldthwaite 214, 211, 208, H. Fenwirth 207, 205, 202, Geo. J. Bernius 205, 196, 184, Avg. Begerow 211, 204.

### The New York Corps.

NINETY-TWO members of the New York Corps turned out to attend the last practice shoot at Union Hill Park, May 27.

Ring target, 10 shots, 200yds: O. Schwanemann 211, B. Zettler 189, J. H. Klee 188, G. Ludwig 186, P. Heidelberg 186, F. Busch 182, J. Schmidt 174, H. Winter 174, H. Mesloh 172, A. W. Lemcke 171, J. H. Hainhorst 170, H. Gobber 167, A. F. Stolzenberger 165, G. Offermann 165, H. B. Michaelson 164, J. G. Tholke 163, Ch. Plump 163, N. C. L. Beversten 158, J. D. Wilkens 158, H. Haase 158, Ch. Quadt 157, H. Beckmann 156, J. H. Kroger 153, W. H. Kuhlken 153, F. Von Deesten 150, H. Lohden 148, J. N. Hermann 147, G. W. Meyer 146, J. Facklamm 145, G. Hans 145, H. Bruning 145, J. Paradies 144, Dr. Ch. Grosch 144, J. C. Brinckmann 142, J. Moje 142, A. Sibberns 141, W. Wessels, Sr., 141, H. D. Meyer 140.

Man target, 3 shots, possible 60: O. Schwanemann 55, J. H. Hainhorst 54, G. Ludwig 53, J. Schmidt 53, H. Lohden 52, J. Paradies 51, D. H. Brinckmann 49, J. Facklamm 48, P. Heidelberg 48, A. W. Lemcke 48, H. Decker 46, H. Mesloh 44.

Bullseye target: F. Busch 2, D. von der Lieth 2, A. Brunke 2, Ch. Wahmann 2, M. Detjen 1, G. Ludwig 1, F. Feldhasen 1, J. Paradies 1, B. Zettler 1, H. Hainhorst 1, J. Moje 1, H. Heinecke 1, C. Mann 1, J. W. Tonjers 1, G. W. Meyer 1, Ch. Degenhardt 1, H. Quadt 1, H. Lohden 1, H. D. Meyer 1, H. Beckmann 1, C. S. Schmitz 1, J. C. Brinckmann 1, H. Mesloh 1, Ch. Plump 1, J. Schmidt 1, P. Heidelberg 1.

### Col. John Bodine.

COL. JOHN BODINE, whose fame as an expert rifleman was international, died on Monday evening of last week at the home of his sister-in-law, in New Paltz, N. Y. He had been suffering from ill health for more than a year. He participated in many national and international matches. He was captain of some American teams which competed abroad. One of the most famous matches in which he participated was as a member of the American team against an Irish team near Dublin, in 1875. The Irish team was defeated. His steady shooting and iron nerve in competition were the admiration of his friends, and gained for him the sobriquet of "Old Reliable," which was bestowed on him after a great match at Creedmoor, in which the last shot was fired by him, and on its result his team won or lost. It was a particularly trying situation, but he won. When a young man, he was employed in the office of the Ramsdell Transportation Co., and afterward accepted a position in the National Bank of Newburg. Afterward he engaged in freighting business between Highland and New York city. He was tall and straight physically. He was a charter member of Hudson River Lodge F. and A. M. After his team returned from a victorious trip abroad in 1875, his lodge presented him with a magnificent Maltese cross studded with diamonds.

### Moulton Jr.—Guptil.

S. PAUL, Minn., May 22.—At Inter-City Shooting Park to-day there was a very interesting match at 100 targets. The conditions were \$100 and 22yds. rise. Mr. Moulton is a beginner. His scores improved steadily as the match progressed. The scores:

E H Moulton, Jr.....	111111011010111100101010—17
	111111011001110101101101—18
	1011010111111101101111—20
	1111011111111111111101—23-78
R T Guptil.....	11110110101011111101101—19
	111101111111111111110111—23
	11111111111101011111110—22
	11111101010101011111111—21-85

### Swiss Shooting Society.

The annual festival of the Swiss Society, of Hudson county, N. J., was held at Union Hill Park on May 30.

Three-shot scores, 25-ring target, three best to count, possible 225: M. Dorrier 213, L. P. Hansen 210, Geo. Schlicht 208, W. A. Tewes 206, O. Smith 201, Ch. Bischoff 197, N. Steiner 196, J. Vogel 194, J. Reich 191, R. Goldthwaite 190, Ch. Colomb 190, M. Boehm 185, C. Muhlestein 184, C. L. Gerken 184, E. Keller 184.

### New York Central Corps.

The New York Central Corps will hold a practice shoot June 9. From Thursday to Sunday, the 12th, the range will be closed against all shooting.

### National Bund Notes.

There will be a meeting of the executive board of officers of the Bund at the Union Hill Park on Saturday afternoon, June 11.

### Rifle Notes.

At the spring meeting of the National Rifle Association, held in London, England, on May 31, the correspondence concerning the rifles used by the American team when they won the Palma trophy was read. The president, Lord Chylesmore presided, and he reiterated that there was no desire to change the result of the Palma contest or to evoke any bitterness concerning it. The correspondence concerned informal objections to the American rifles on the ground that they were not service rifles. It was made clear that the American riflemen acted in good faith, and therefore no formal protest was made. The discussion was for the purpose of clearing up the question, as it had been publicly raised. General B. W. Spencer, of the American Rifle Association, held that it was well known to everybody that the special rifles were to be used, and no secret was made as to the character of those rifles.

## Trapshooting.

If you want your shoot to be announced here send a notice like the following:

### Fixtures.

June 9.—Westchester, Pa., Gun Club target shoot. F. H. Eachus, Sec'y.  
June 9-10.—Peru, Ind., Gun Club eighth annual tournament. Wm. Daniels, Sec'y.  
June 11.—Norwich, Conn., Shooting Club target tournament. I. P. Taft, Sec'y.  
June 13.—Middleton, Wis., Gun Club tournament. Frank L. Pierstorff, Mgr.  
June 14-15.—Minot, N. D.—North Dakota State tournament.  
June 14-15.—Wilkes Barre, Pa.—Hanover Park Shooting Association target tournament. E. L. Klippel, Sec'y.  
June 14-16.—Akron, O.—Ohio Trapshooters' League target tournament. G. E. Wagoner, Sec'y.  
June 14-16.—New London, Ia., Gun Club midsummer tournament. Dr. C. E. Cook, Sec'y.

June 14-17.—Warm Springs, Ga.—Target and live-bird tournament. Chas. L. Davis, Mgr.

June 15-16.—Battle Creek, Mich.—Tournament of the Michigan State Trapshooters' League. L. K. Forsythe, Sec'y.

\*June 15-16.—Millvale, Pa., Rod and Gun Club.

June 15-17.—Lincoln, Ill.—Illinois State Sportsmen's Association tournament. James Davis, Sec'y.

June 16.—London, Conn.—Second annual tournament of the Springfield Gun Club. R. W. Glover, Sec'y.

June 17.—Fitchburg, Mass., Rifle and Gun Club third annual invitation prize team shoot. I. O. Converse, Sec'y.

June 21-24.—Indianapolis, Ind.—The Interstate Association's fifth Grand American Handicap at targets. One thousand dollars added to the purses. Elmer E. Shaner, Secretary-Manager, 219 Cortart Square, Pittsburg, Pa.

June 25.—East Walpole, Mass.—Second annual tournament of the Neponset Gun Club; \$60 in prizes. M. H. Grant, Sec'y.

June 26.—French Lick Springs, Ind.—Tournament of the National Gun Club; strictly amateur; \$500 added money. John M. Lilly, Pres., Indianapolis.

July 1-2.—Brownwood, Tex.—West Texas Gun Club League tournament.

July 4.—Brunswick, Me., Gun Club all-day target tournament. G. M. Wheeler, Sec'y.

July 4.—Richmond, Va.—East End Gun Club annual merchandise shoot. J. A. Anderson, Sec'y.

July 4.—Lexington, Ky.—Ashland Gun Club tournament and Blue Grass championship. Robert R. Skinner, Mgr.

July 4-6.—Memphis, Tenn., Gun Club tournament; \$600 added money and trophies. A. H. Frank, Mgr.

July 4-6.—Winona, Minn.—The Interstate Association's tournament, under the auspices of the Winona Sportsmen's Club. Oswald Leitch, Sec'y.

July 6-7.—Homer, Ill.—Homer and Ogden Gun Clubs' tournament.

\*July 6-7.—Kane, Pa., Rod and Gun Club.

July 8-9.—Wausau, Wis.—Wisconsin League of Gun Clubs' State tournament. H. G. McCrossen, Sec'y.

July 12-13.—Litchfield, Ill.—Consolidated Trapshooters' Congress.

July 12-14.—Denver, Colo.—Grand Western Handicap tournament.

July 12-14.—St. Paul, Minn., Rod and Gun Club amateur handicap tournament. J. L. D. Morrison, Sec'y-Mgr.

\*July 13-14.—Scottsdale, Pa., Rod and Gun Club.

July 19-20.—Shamokin, Pa., Gun Club midsummer shoot. S. C. Yocum, Sec'y.

July 19-22.—Cincinnati, O., Gun Club annual handicap; \$2,200 added money and guaranteed purses. A. B. Heyl, Sec'y.

July 20-21.—Armada, Mich.—Tournament of the Eastern Michigan Gun Club; \$100 added. E. W. Sutton, Sec'y.

July 27-28.—Grand Forks, N. D.—The Interstate Association's tournament, under the auspices of the Grand Forks Gun Club. W. M. Ferguson, Sec'y.

Aug. 9-10.—Litchfield, Ill.—Consolidated Trapshooters' Congress.

Aug. 9-10.—Raleigh, N. C.—North Carolina Trapshooters' Association tournament.

Aug. 9-10.—Birmingham, Ala.—Alabama tournament.

Aug. 9-12.—West Baden, Ind.—Indian tournament; \$1,000 added money.

\*Aug. 10-11.—Bradenville, Pa., Rod and Gun Club.

Aug. 10-12.—Brantford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.

Aug. 15-20.—Buffalo, N. Y.—New York State shoot.

Aug. 24-25.—Hot Springs, S. D.—The Interstate Association's tournament, under the auspices of the Hot Springs Gun Club. H. A. Gayhart, Sec'y.

\*Aug. 25-26.—Tarentum, Pa., Rod and Gun Club.

Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.

\*Sept. 6-7.—Irwin, Pa., Rod and Gun Club tournament.

\*Sept. 14-15.—Ruffsdale, Pa., Rod and Gun Club.

\*Sept. 27-28.—Monessen, Pa., Gun Club.

\*Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.

\*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y. Pittsburg.

## DRIVERS AND TWISTERS.

A return match between Messrs. John Hendrickson, of Freeport, L. I., and S. M. Van Allen, of Jamaica, is arranged to be shot in the near future.

At the Memorial Day shoot of the Aquidneck Gun Club, Newport, R. I., Mr. E. C. Griffith, of Pascoag, made high average with 146 out of 150, a percentage of 97.3.

The Sauer gun, which has been the subject of keen competition at the shoots of the New York Athletic Club each week, was won by Mr. F. L. Barnes on May 28.

The programme of the Westchester, Pa., Gun Club's all-day shoot, June 9, provides ten events, a total of 135 targets, \$6.75 total entrance. Mr. F. H. Eachus is the secretary.

Mr. and Mrs. J. L. Head, of Peru, Ind., married in New York a few hours of Friday, last week, being en route for the great and glorious West, after a short stay in the Lake Champlain region where the black bass fishing is good.

The Berea, O., Gun Club announces an amateur target tournament, to be held on June 18. There are ten events on the programme, at 10, 15 and 20 targets, entrance \$1, \$1.50 and \$2. Added money, \$15. The secretary is Mr. J. F. Beswick.

Mr. A. H. Frank, secretary, informs us that the Memphis, Tenn., Gun Club will hold a big shoot on July 4, 5 and 6, and that not less than \$200 will be added each day; also, there will be four or five valuable trophies, worth about \$400, for competition.

The third contest of the series given by the Clearview Gun Club, at Darby, Pa., on Saturday of last week, was won by George Anderson, with a score of 48 out of 50. There were seventeen contestants in the event. Six more contests are required to complete the series.

A correspondent writes us that the Grand Valley Gun Club was recently organized at Grand Junction, Colorado, with thirty-eight charter members. It is expected that a number of others will soon join the club, and as the membership already contains several good shots, lively times are expected for the coming summer.

The programme of the Interstate Association trapshooting tournament, given for the Winona, Minn., Sportsmen's Club, has like events for each day, July 4, 5 and 6. Of these, seven are at 15, three at 20 targets, entrance \$1.50 and \$2, and \$10 added to each event. Targets, 2 cents. Lunch will be served on the grounds. Rose system, 4, 3, 2, 1. On July 2, the grounds will be open for practice. Guns and ammunition, prepaid and marked in owner's name, care R. D. Cone Co., will be delivered on the grounds free of charge. Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, will manage this tournament.

The Springfield Gun Club, of London, Canada, have issued the programme of their tournament to be held on June 16 and 17. On the first day, competition commences at 1 o'clock. There are six programme events, at 15 and 20 targets; 100 targets and \$11 entrance being the totals. On the second day, shooting begins at 9 o'clock, and there are twelve programme events, each at 15 targets, excepting the 7th, which is for the Labatt trophy, emblematic of the championship of Western Ontario. Targets, 2 cents. Sliding handicap, 16 to 22 yds. Average prizes, \$7, \$5 and \$3. The secretary is Mr. B. W. Glover.

Six contestants engaged in the John H. Morris handicap, at the shoot of the Keystone Shooting League, at Holmesburg Junction, Philadelphia, June 4. It was a very close contest. C. Jones and I. W. Budd tied on 24 out of 25, and Frank, Morris, Coleman and Parker tied on 23. Jones won in the shoot-off, miss and out.

Mr. Carl Von Lengerke was a visitor in the gun-colony reservation of Broadway, New York, on Monday of this week, much to the rejoicing of his many friends. He uses a cane for the time being, as his injured leg is not quite strong enough yet to bear much pulling and hauling, but it is now a matter of a few days only till it is as good as new.

Mr. Robert R. Skinner, manager, writes us "that a tournament will be held at Lexington, Ky., July 4, on the occasion of the shoot for the Blue Grass championship. All events open to all amateurs, except the championship event at 50 targets, the entries to which are confined to shooters from the twenty counties composing the Blue Grass Section. Take advantage of reduced rates on railroads for Fourth of July, and have a day's sport. Programmes issued later and mailed on application."

The Fitchburg, Mass., Rifle and Gun Club have issued the programme of their third annual invitation prize team shoot, to be held June 17. There are eleven events on the programme, of which Nos. 9 and 10, each at 25 targets, constitute the annual team match. All shooters are invited. Shooting commences at 9:45. No sweepstakes. Dinner served near grounds. Guns and ammunition forwarded to I. O. Converse, care Fitchburg Hardware Co., will be delivered on the grounds free of charge. Targets, 1½ cent.

The Cincinnati, O., Gun Club has issued a prospectus of their third annual handicap target tournament, to be held July 19-22. Handicaps will be from 14 to 23 yds. In added money and guaranteed purses, \$2,200 is offered, and all surplus added. Targets, 2 cents. Competition open to the world. On the first day, event 6 is at 25 targets, for a guaranteed purse of \$400; on the second day, events 6 and 7, at 50 targets, are for a guaranteed purse of \$600; on the third day, events 6-10, at 100 targets, are for a guaranteed purse of \$1,000. For prospectus, which is in the form of a legal summons, address Mr. A. B. Heyl, 1870 Madison road, Cincinnati. The official programme will be issued on June 15.

BERNARD WATERS.

## New York Athletic Club.

TRAVERS ISLAND, N. Y., May 30.—The chief event of interest was the contest for a silver cup offered by the board of governors for holiday competition only. The conditions were 50 targets, club handicaps.

Dr. J. G. Knowlton and Capt. J. N. Borland each had won the cup once. Mr. F. W. Perkins, although having won it twice, was not looked upon as having a chance this time, as he had not shot on the club grounds since February. He won nevertheless, and is the present owner of the cup. Only one more regular match will be shot at Travers Island this season, at the annual spring games on June 11, when a special cup will be offered by the club.

### Holiday cup:

	Broke.	Hdp.	Tot'l.		Broke.	Hdp.	Tot'l.
F W Perkins.....	40	12	50	W J Elias.....	37	8	45
J G Knowlton....	39	2	41	J S Woodhouse..	35	12	47
J N Borland....	34	8	42				

### Won by F. W. Perkins.

Special cup No. 1, 25 targets:				J S Woodhouse..	14	6	20
J G Knowlton....	24	2	25	J N Borland....	13	4	17
F W Perkins....	18	4	22				
W J Elias.....	18	4	22				

### Won by Dr. J. G. Knowlton.

Special cup No. 2, 25 targets:							
J G Knowlton...	21	1	22	J N Borland...	18	4	22
F W Perkins...	18	4	22	J S Woodhouse.	18	6	24
W J Elias...	18	4	22				

### Won by J. S. Woodhouse.

Special cup No. 3, 25 targets:							
F W Perkins....	21	4	25	J S Woodhouse..	17	6	23
W J Elias.....	21	4	25	J N Borland....	16	4	20
I G Knowlton....	23	1	24				

Tie: F. W. Perkins and W. J. Elias, shoot-off at 15 targets, scratch: F. W. Perkins 13, W. J. Elias 12. Won by F. W. Perkins.

May 28.—Mr. F. L. Barnes won the shoot and easily captured the shoot-off, defeating George Bechtel and Dr. J. G. Knowlton for the Sauer gun, presented to the New York Athletic Club by Messrs. J. P. Sauer & Son, of Germany, which has been shot for weekly during April and May. The attendance was the largest of the season:

### Sauer gun, 50 targets:

	Broke.	Hdp.	Tot'l.		Broke.	Hdp.	Tot'l.
J G Knowlton....	43	0	43	W J Elias.....	40	8	48
J N Borland....	30	12	42	G Bechtel.....	37	8	45
L G Schroeder..	25	15	40	F L Barnes.....	41	8	49

Tie, two legs each: Messrs. Knowlton, Bechtel and Barnes

shot off at 25 birds:

J G Knowlton....	21	0	21	F L Barnes.....	21	4	25
J G Bechtel....	19	4	23				

### Won by F. L. Barnes.

J G Knowlton...	22	0	22	G Bechtel .....	23	4	25
J N Borland....	11	6	17	F L Barnes.....	21	4	25
W J Elias.....	23	4	25				

Tie: Elias, Bechtel and Barnes shot off at 25 targets:

W J Elias.....	16	4	20	F L Barnes.....	21	4	25
G Bechtel.....	20	4	24				

### Day's shoot won by Barnes.

May cup, final competition:							
J G Knowlton...	22	0	22	F L Barnes.....	24	4	25

## Garfield Gun Club.

CHICAGO, June 4.—The appended scores were made on our grounds to-day on the occasion of the sixth shoot of the first series. Class A trophy was won by W. A. Jones on 24; Tom Jones, Class B, on 22, and Hathaway Class C on 23.

In the cup shoot, which followed, Richards won in Class A on 22; Hathaway won in Class B on 22. No Class C shooters entered. The day was not a pleasant one for trapshooting, as it rained every few minutes, and a strong and at times gusty head wind made the flight of the targets very erratic and consequently the shooting very difficult. Attendance was good, thirty shooters showing up for the occasion:

## IN NEW JERSEY.

## Montclair Gun Club.

Montclair, N. J., May 28.—Six events were run off this afternoon on the grounds of the Montclair Gun Club. There were twenty-seven shooters participants.

Event No. 1, a ten-men team match, 25 targets, with the Mountainside Gun Club of Orange, was won by the latter; score, 174 to 206.

Event No. 2, 25 targets, unknown traps and angles, went to Mr. E. Sickley; prize, a pedometer.

Event No. 3, 25 targets, was won by Dr. Gardiner with a perfect score of 25 breaks; prize, a drinking cup.

Event No. 5, five doubles, was won by Mr. Wheeler, with 9 breaks; prize, a pocket knife.

The Montclair Gun Club expect to shoot a return match in the near future, when they hope to acquit themselves in a much better manner.

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

May 30.—The Montclair Gun Club held an all-day shoot to-day. Probably owing to the fact that many of the members had gone out of town for the holiday, only fourteen men faced the traps.

Events Nos. 1 and 2 were for practice only.

Event No. 3, a handicap match, 25 targets, for a prize of a Roger's pearl-handled pocket knife, went to Mr. Holzderber.

Events Nos. 7, 8 and 9 were a series of handicap matches. No. 7 was won by Mr. Geo. Batten, who put up the prize again, a pocket electric lamp, with handicap of unbroken targets of event No. 7, to count in event No. 8.

Event No. 8 went to Mr. Cockefair, and he in turn put up the prize again for event No. 9.

Event No. 9 was tied for by Messrs. Cockefair, Crane and Winslow with scores of 25; on the shoot-off it going to Mr. Winslow.

The prize for the greatest number of targets broken during the day was awarded to Mr. Wheeler.

Events:	1	2	3	4	5	6	7	8	9
Targets:	25	25	25	25	25	25	25	25	25

R M Batten, 7						13	22	19	
Crane, 3							19	25	

Handicaps apply only on Events 3, 7, 8 and 9.

June 4.—Thirteen members were present to-day and took part in the regular Saturday shoot. Event No. 5, a walking match, 10 birds, resulted in a tie for Messrs. Kendall and Moffett, both scoring 7 breaks. In the shoot-off Kendall won out with 21 against Moffett's 18, receiving a pedometer. Event No. 7, a handicap match, 25 birds, went to Holzderber, prize a field glass.

The other events were for practice, best scores to apply on the Parker Gun or Winchester rifle. Eleven hundred targets were thrown. Handicaps apply only in event No. 7.

Events:	1	2	3	4	5	6	7	8	10

## Ohio Trap.

## Cincinnati Gun Club.

JUNE 4 was a warm sunny day, and the attendance at the grounds was large, twenty-two shooters taking part in the cash prize event of the Cincinnati Gun Club. The shooting conditions were rather hard, as a strong wind made the flight of the targets very erratic.

Gambell was high gun with 45. Faran, shooting in excellent form, broke 44 and was second. Medico and Peters tied for third on 42 each. Captain got up among the leaders to-day, breaking 40.

A number of practice events and a team match were shot, in which some good scores were made. Gambell was high man in the team matches, with 44, but Harig, his partner, did not show, his usual form, and only accounted for 36. Williams did good work for his team, breaking 42, Medico scoring 39, and tying for first with Faran and Peters on 31. In the shoot-off Peters shot a better gait, and his team came out ahead.

A team will go to Dayton on June 7 and shoot the Buckeye team for the Phellis trophy. The members will be Gambell, Faran, Ahlers, Barker, Medico, Harig and Williams. Following are the scores:

Gambell (16) 45, Faran (20) 44, Medico (18) 42, Peters (17) 42, Captain (16) 41, Maynard (18) 40, Sundry (20) 39, Block (18) 39, Harig (19) 38, Jay Bee (17) 38, Ahlers (21) 36, Williams (17) 36, McBrech (17) 35, Falk (16) 35, Boeh (16) 35, Lindsley (16) 35, Herman (17) 34, Pfeiffer (17) 34, Eaton (17) 31, Merkel (16) 29, Du Bray (16) 25, Blue (17) 19.
---

Team match,
-------------

## Analostan Gun Club.

WASHINGTON, D. C.—The fifth annual merchandise tournament of the Analostan Gun Club was held on their new grounds on May 30. There were only two out-of-town marksmen that honored us by attending: Mr. E. H. Storr, a trade representative, and Dr. E. F. Wayman, of Staunton, Va. Mr. Storr broke his gun and was using a borrowed one, and his score suffered in consequence. Dr. Wayman has just recovered from a long and severe illness, and was not in his usual form, but hopes to regain his old-time vigor before very long. Several years ago the Doctor won the championship of Virginia, and wears a handsome gold medal, emblematic of his success. The home shooters turned out very well, and about half of the membership of the club was represented. The officers labored very hard to make the meeting a success, and arrangements were made to handle a large crowd. A Leggett trap was used for the programme and a set of experts for practice shooting. About 4,000 targets were thrown.

Event No. 4 was a merchandise event at 30 targets, shot under the sliding handicap system. Ten prizes were offered, which went to the high guns. Taylor carried off first on 28 out of a possible 30; Brown second with a score of 26; James and Wilhite tied on 25 and tossed up for choice; Wilson, Petrola and George Wise tied on 23 for fourth and followed the same plan in choosing their plunder. Coleman, Wayman, Nutting and Lainhart scored 22, and as all the prizes had been exhausted but three, the four men drew straws for the three remaining prizes. Lainhart lost out, but Nutting generously turned over his chance to him and Coleman gave his chance to Nutting.

Event No. 7 was also a merchandise affair for club members only. Petrola won first in this with a clean score, and enough prizes were on the table for all members who contested, and were distributed according to the high guns. Following are the scores:

Events:	1	2	3	4	5	6	7	Shot
Targets:	15	15	15	10	10	15	25	at. Broke.
Coleman	15	15	13	7	8	7	13	130

M. TAYLOR, Sec'y.

## Riverside Gun Club.

UTICA, N. Y.—The Memorial Day tournament of the Riverside Gun Club was one of the most successful they ever held. This despite the worst possible weather conditions for a tournament. There were thirty-two contestants, besides a large number of spectators. Sportsmen of Ilion, Sherburne, Sidney, Waterville, Earlville, Norwich and Syracuse were present.

Mr. H. H. Green was compiler of scores; Mr. B. Wickham was cashier. The committee in charge of the shoot was Messrs. D. Loughlin, G. L. Waters and E. J. Loughlin.

The prize winners in the merchandise event were as follows: Messrs. E. Loughlin, John Deck, E. B. Fleck, Fred Brown and John Watts. The club will hold a semi-monthly shoot on June 10.

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	15	15	15	15	15	15

## West End Gun Club.

ALBANY, N. Y., May 30.—The West End Gun Club shoot held here to-day was very poorly attended. A more unfavorable day could not have been selected. It began to rain early in the morning, and it continued throughout the day. By 10 o'clock a squad of veterans had put in an appearance and decided to shoot the programme through, rain or shine. Unfortunately, there was no cover at the firing point. It was a remarkable sight to see men who have passed the three-score mark going out to face the trap in a steady downpour of rain, until 180 shots had been fired. I doubt if there is another class of sportsmen who would take such chances to enjoy their favorite sport.

There were twelve shooters who took part during the day, and this is just twelve more than could have been expected under the conditions.

The trade was represented by Fanning and Doremus. Fanning's score, under the conditions, was nothing short of a marvelous performance. The shooting of Capt. Traver and Tallman

was a fine exhibition of amateur work. This was Mr. Snyder's first tournament. He will bear watching in the future. The programme consisted of twelve 15-target events. The club offered \$6 average money to those who shot through the events from 3 to 12, inclusive, divided \$3, \$2 and \$1. This was won by Traver and Tallman and Valentine. Fanning's longest straight run was 65. Traver broke 43 straight, and Valentine 39. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	at. Broke.
Fanning	14	15	15	14	15	14	15	15	15	15	15	15	180
Traver	13	14	14	15	13	15	14	15	14	15	15	15	180
Tallman	13	15	14	14	15	14	15	14	14	14	14	14	180
Valentine	13	14	13	15	15	14	13	15	14	14	14	11	180
Snyder	14	14	13	13	13	13	14	13	14	13	12	12	180
Wallburg	10	10	11	15	14	13	10	12	13	13	14	13	180

H. H. VALENTINE, Sec'y.

## Scranton Rod and Gun Club Annual Shoot.

SCRANTON, Pa.—A circus, excursions, a rainy day, and numerous other shoots were a pretty heavy handicap on the Scranton Rod and Gun Club on May 30. Still, it shot through the entire programme and made a pretty good score; and, if it didn't make much money, it didn't much care, for the part of it that came out had a mighty good time. After the regular events were shot out, the boys tried the new handicap, "shoot at 25 and then at all you miss," and they think it's the proper thing; better than any other handicap they have tried at last.

The caterer, Mr. C. Bunn, served lunch under a large canvas tent, and did it to the entire satisfaction of both the shooters and visitors.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	*

## Ossining Gun Club.

OSSINING, N. Y.—Herewith are the scores of the Decoration Day shoot of the Ossining Gun Club. While the attendance was not up to expectation, the scores made were first class. The feature of the day was the shooting of Mr. J. A. R. Elliott. He is without a peer in the shooting world.

First amateur high average was won by C. G. Blandford, of Ossining, who also won the special prize, a silver dish, for best percentage in the total of the last four events, 94 per cent. Jap (Mr. Chas. Floyd) won second high average money.

The trap worked fine, and everything passed off without a hitch, the programme being finished by 4 o'clock. Events 1 and 2 were specials, prize in No. 2 being a telescope, which was won on the shoot-off by Jap.

### WESTERN TRAP.

#### Marshalltown Tournament.

MARSHALLTOWN, Ia., May 25.—This town came into prominence as a shooting city the second time, when the tournament was held last year, being the result of a reorganization of the famous old gun club. So this year the same old members were present and formed a prominent and happy good-looking squad in their suits of white.

The grounds are of the finest, though requiring both street cars and hack to reach.

The weather was good the first day, and some good scores were made, Fred Gilbert being high professional, with Budd and Adams following. Two sets of expert traps were used, and they worked to a fine system of pulls.

The second day was not a perfect one, as clouds, accompanied by rain, kept some shooters from being present. Taylor, of Dakota, was high man with 195, a wonderful score, and he was pleased to wind up a target ahead of Gilbert; but as Fritz won the average by 11 he did not care.

It was a fine race, as between H. C. Taylor, of Mecklin, S. D., with 377; W. Hoon, Jewell, Ia., 373; G. G. Wallace, Marshalltown, 370, and E. Russell, Union, 259.

A feature was the 50-target special, with handicaps, for a watch. In this Gilbert outdid his previous records by "cracking" 50 straight from the 22-yd. line. Others made viz.: Wallace 45, Lane 42, Cook 40, Densel 42, Abbott 46, Taylor 42, Russell 39, Remington 43, Lambert 45, Hoon 44, Peterson 43, Carstens 43, Nichols 43, C. B. Adams 48, B. Wing 45, Bell 40, Gilbert 50, Budd 48, Forney 41, Friend 43.

#### Other Places.

The Bluff City Gun Club, of Memphis, Tenn., at their last meeting, had a fine contest for the three medals that are up for club membership. The first one was won by B. F. Ricks, after shooting out two others. In the 50-bird race for the old Domineck medal, Mr. Ricks was again victorious, as, with a score of 41, he was high. Several new members have been added, and soon some others will have the honors. The scores: R. B. Snowden shot at 100, broke 73; J. B. Snowden 125, 93; W. E. Love 150, 119; McGee, 150, 111; H. Mallory 175, 133; B. S. Ricks 150, 117; H. P. Jordon 125, 77.

The Mattoon, Wis., Gun Club members are getting in action. A new organization has been perfected, and a set of expert traps has been added to the paraphernalia. Some of the merchants have been interested, and on Decoration Day, the shoot will be for merchandise. Both live birds and targets will be used.

The North Dakota State shoot will be held at Minot, June 14 and 15. C. H. Parker, president.

The Woodville, Miss., Gun Club, propose issuing a handsome programme for their tournament on June 15 and 16.

Alex. Mermod, of St. Louis, has challenged Alex. Holmes for the pigeon wing trophy, which Holmes won on a straight 25 at the Missouri State tournament held last week.

W. Fred Quimby, one of the best known traveling men in the powder and sporting goods trade, was a visitor in St. Louis part of last week. He was dividing his time between the trade and Dupont Park, where the State shoot was in progress.

Panama, Mo., reports shoots regularly the May days.

The Carrollton, Mo., Gun Club has been reorganized, all owing to a stop-over having been made in that town by Mrs. Nellie Bennett. In a space of two days, there were twenty signatures obtained.

The shooters of Albuquerque, N. M., were out May 22, and Joe Barnett proposed that all should shoot fast, so that style was adopted, with fairly good success. So fast did the guns crack that some of them were dipped in cold water so that the solder would not melt. Scores: Joe Barnett broke 22, 17, 20, 20, 20, 19; C. E. Quin 18, 19; Roy McDonald 17, 18; Harvey Johnson 17, 18; Tony Ortis 20, 14.

Trapshooting is advancing out in Nebraska. Last week the club at Wayne paid a visit to the town of Carroll with a team of ten men, and there shot a friendly team race. Shooting at 25 targets each, Wayne scored 155 to Carroll's 130. Some of the scores were good; others low.

The Owatana, Minn., Gun Club has made a start for the 1904 season, and last Tuesday held a shoot. The scores reported are low, but target shooting comes with practice, and the enthusiasm will bring results that other clubs may envy before the season is over.

Another first-of-the-season was held by the Marshfield, Wis., Gun Club, on their grounds last Sunday. The scores are said to have been good.

Recently nineteen members of the Terre Haute, Ind., Gun Club held the first of a series of four shoots, which will settle the ownership of the Bennett cup. The shooters are handicapped by allowance of added targets. This enabled the following to have a perfect 50, viz.: Meisel, Watson, Barbazette, Tetzl, Beggs, W. N. Cox, Fady, Crawford, McPeak, Winters; Thon, Smith and Mitchell 48; Stimpson, Brown and Kevitts 47; Tully and Beggs 44; Cassaday and Pierson 40.

Out at Oaks, N. D., recently Wilson, Porter and Marshall each broke 19 out of 25. Hereafter shoots will be held Saturday evening at 6:45.

Recently the gun club from Canton, Mo., paid a visit to Quincy, Ill., and there meeting others from Lima, Warsaw, Palmyra, Mexico, Lewiston and Boneparte, carried off the four-man team shoot, with Quincy second and Lima third. Martin Goetz was high man, with Ed Grimmer, of Quincy, second.

A new shooting park is to be established on the Interurban street car line, between Janesville and Beloit, Wis. This will accommodate both gun clubs and furnish a suitable place for indulging in the favorite pastime of target shooting.

The tenth annual shoot of the Washington State Association was held at Hornington last week. The weather and all conditions were good, and high averages were made. E. E. Ellis, of Seattle, won the medal after defeating a strong field. Same was formerly held by Dell Cooper. With the medal goes 40 per cent. of the purse. The score made by Ellis was 38 out of 40.

The Meriden, Ala., Gun Club was organized last week, with the following officers: W. Perry, President; W. W. Cracke, Vice-President; B. M. Fiebleman, Secretary; A. J. Teter, A. G. McCants, D. C. Paythless and W. Jennings were elected directors. The intention is to join the Mississippi-Louisiana Trapshooters' League.

At the second shoot of the Quincy, Ill., Gun Club nine members were present. Draper and Zimmermann tied for first place with 17 out of 20, while Walker was high with 17 in the trophy.

The new club house at Watertown, S. D., where the State shoot will be held, is about finished, according to latest reports. The club members are pushing the work. The first shoot will be the club event, that of the Hunter medal.

From Sterling, Ill., comes the information that the shoot at Sanborn Park held Friday was well attended. The live-bird races were especially attractive. Capt. Ben Eich made the very good score of 95 out of 109 targets. Many shooters came from the surrounding towns, and the tournament proved successful.

De Kalb, Ill., Gun Club, held a shoot at Electric Park last Thursday.

The La Crosse, Wis., Sharpshooters will shoot on Sunday. Many teams from other towns will be in attendance, but Winona will not have a team, as their club has not had a meeting of late.

Notice has been received that the Winona, Minn., Gun Club will not hold their accustomed shoot on May 30, but will attend the shoot at Sparta, Wis., on that day, and will put in all the

"best licks" toward the big event, the Interstate shoot, to be held there, July 4, when Elmer Shaner will be the ruling genius. There will be a big shoot at Sparta. Teams of five men from Lacrosse, Winona, Viroqua, Tomah and Sparta will shoot for the trophy cup put up by Lacrosse last year.

There is a strong probability that a shooters' league will be organized in North Alabama, and as an inducement for such an organization, the Peters Cartridge Co. has offered a silver cup for club contests. Huntsville, Madison, Decatur, Courtland, Tusculumbia, Town Creek and Sheffield, will likely be in the organization.

At the last shoot of the Remington Gun Club, of Milwaukee, the leading shots were C. C. Church, Joe Weber and Alfred Weber. Steve Mumer was high at the Jolly Gun Club, with 44 out of 50.

Notices come to us of a strange coincidence that happened at Minneapolis. It appears that one Guptil, formerly from Illinois, dropped into a shooting crowd at the park, and after asking for the loan of a gun, being dressed like unto a veritable hayseed, was challenged by a city chap, E. H. Moulton, Jr., for a 100-target race; \$50 was soon up, and when the match was shot—and it is claimed it was from the 22yd. mark—the farmer had the coin by a score of 85 to 78.

To be the son of a prophet it is not necessary to live in Prophetstown, but the citizens therein sport a gun club, and some of the members are prophets in their own country, and meantime shoot targets well. C. W. Fenn came out ahead in the last shoot, with 24; others made 20, 21 and 23. It is so unlikely a thing to beat Fenn that a disposition to set him back a few yards is growing in favor.

At Nappanee, Ind., the old gun club has been reorganized, and with fifteen enthusiasts there bids fair to be a good club and some fine sport at the traps. The officers are: Dr. M. D. Price, President; B. B. Maust, Secretary, and Ed. Martin, Treasurer. The club will meet twice a month, which should be followed by other clubs, as shooting every week often causes an abandonment of the sport altogether, owing to the expense.

The Decoration Day shoot at Streator, Ill., held by the Rutland Gun Club was well attended, there being twenty-one participants. The \$50 cup was won by Dreuer, of Granville, while Stouber and Grube tied in second place.

In the Victoria, Wash., tournament it was almost a clean sweep for the Seattle team. Ellis, McLaughlin, Steele and Stewart not only won the team, but most of the individual, as well as the high average prizes. The team shoot was won on 85, with the Victoria team 10 behind. Ellis, first average; Steele, second; Stewart and McLaughlin third.

The Northport, Wash., Gun Club was organized Sunday last with T. B. Robinson, President and R. Asinms, Secretary. The shooting grounds are situated just outside the city limits on the farm of T. A. Perrott.

The trio of cities that are closely allied in the eastern part of Wisconsin—Neenah, Menasha and Appleton—will soon open the shooting season at the traps. There are now forty members, and a shoot will be held Thursdays. The clubs at Oshkosh and other towns will soon hear of a challenge.

The gun clubs at Battle Creek and Kalamazoo, Mich., are holding a contest for supremacy.

Returns from the Harrington, Wash., State shoot show that McBroom, of Seattle, won high average, as shooting at 600 targets he scored 92 per cent. C. D. Ellis, of Harrington, won the Hunter Arms Co. trophy. Ellis, of Seattle, the L. C. Smith trophy. Spokane won the team shoot with 55 broke to Seattle's 53. In all there were some sixty shooters present from Oregon, Washington and Idaho.

C. B. Wiggins announces his July 6 and 7 tournament to be for amateurs, and yet those known to be 90 per cent. men will be required to shoot at targets thrown a distance of 70yds., and those under that at 40yds. Thus two sets of traps will be necessary.

W. J. Rand and Stafford Campbell, of El Paso, Tex., are willing to put up their cash for a match at 25 targets. Each feels confident and boasts of ability, yet both got rattled since the advent of the new traps. Results later.

The Parker Gun Club, of Milwaukee, will hold a shoot Sunday. A new trap, set in concrete and steel construction, will furnish the target propelling force.

It is reported that Wm. Clayton has the prior right to the match with A. C. Holmes, of Kansas City, for the pigeon wing trophy, as his challenge was published in the St. Louis Globe Sunday, May 29, and the Mermod challenge, though made verbally at the close of the shoot, and the St. Louis Sportsman representative being present, was authorized to publish same, and he understands that Holmes accepted same at that time.

Messrs. Raymond and Bartosh, of Jackson, Minn., report having a good time at the Minneapolis tournament. Raymond shot two days, scoring 168 to 171.

The Natchitoches, La., tournament resulted as follows: At 200 targets Wade made 183, Hubby 176, Bosley 175, Bryan 178, Faurote 170, Sligo 169, Breazeale 168, Fulton, Venturn and Picket same, Marston 162. In the 100-target race, Wade made 98, Faurote 93, Ventura 91, Sligo 91, Beasley 90; others ran as low as 70.

Bad weather interfered with the Memorial shoot at Muncie, Ind. W. H. McFadden won on 41 out of 50; Paro 36, Frank 32, Dewitt 27, Bailey 15, Menard 30.

The shooters of Madison, Rockford, Beloit and Janesville, Wis., united in a shoot at the park on the electric line, on last Saturday, and the shooting interests are now looming up in the southern part of this State.

Considerable trapshooting is being indulged in at the Golden State. On Decoration Day the Pasadena boys shot for an accumulated collection of merchandise. The Pacific Coast Trapshooters' Association started at Ingleside May 29. The sliding handicap was to be used, and no doubt there was dropping for fear of being held at the far away mark.

The St. Cloud, Minn., Gun Club, has taken up the making of scores. There are good men there who have much fun with the bursting of targets.

Members of the Menominee, Mich., Gun Club, who are enthusiastic are taking steps to organize an Upper Peninsula Association of Gun Clubs that will take in the towns of Escanaba, Green Bay, Iron River, Marquette, Kenton, Houghton, Calumet, Iron Mountain and other cities. As soon as the circuit is organized there will be dates set for a tournament for each town.

The Middleton, Wis., Gun Club have flooded the West with a poster announcing their amateur shoot, June 13. On this occasion a new trap will be used. The feature will be that of the Seifken handicap. Shooters must bring their shells, as there will be none for sale on the grounds.

A Decoration Day shoot at Aurora, Ill., brought out fourteen entries, and a good crowd were present as onlookers. Harry Turner won a silver spoon. Bruncmeyer, the veteran, won the second event. Then the best prize of the day went to the old reliable, Henry Tanner. Weekly shoots will be held at Downer Place.

The La Crosse and Sparta, Wis., teams failed to capture the Chronicle trophy from the Viroqua Club in their Memorial Day shoot, held at Sparta. If the Viroqua men win once more it will be their property. The La Crosse boys shot poorly, as did the winners, hence their regrets at not being able to make a better showing.

The renowned club house of the New Orleans Pecan Gun Club on the banks of Lake Borgne, where many records were made with the rod and gun, has been sold and passed to other hands, being for the present used as a boarding house.

With a score of 47 out of 50, Mr. Tilly won the medal for June at the meets of the Boon, Ia., Gun Club. There was a large attendance on Decoration Day.

The Terre Haute, Ind., Gun Club held a shoot on Memorial Day, and the system of handicapping, target allowance, brought together the full membership, and a jolly time they had.

The Winnebago Gun Club, of Oshkosh, Wis., though a little late in the season, held their first weekly shoot for this year on the last day of May. The scores were not large, though John Steiner made 17 out of 20. Those who took part were Sawyer, Chase, Clark, Rice, Athern, Steier, Heisinger, Gillan, Jackish, Dunham and Brown. New members proposed were J. R. Chapman, Rice and Ackerman.

There has been an unusual amount of heavy wind in Texas this year. So it was not unusual, though it much interfered with the scores made by the Midland Gun Club when it met last Friday and contested for merchandise prizes. Shooting at 50 targets, Day made 46, Elliott 38, Flanigan 36, Baker 37, Pegues 35, Holt 32, Rankin 33, Reid 23, Homan 26, Pemberton 17.

The Great Bend, Kan., tournament brought out some good scores, especially the last day, when the wind went down. The best shooting was done by C. F. Rankin, of Dorrance; E. W. Arnold, Larned, and Chris. Gottlieb, of Kansas City. Pawnee county won the three-man team race; out of 75 targets, they scored 64. The high averages for the two days were: E. W. Arnold, Larned, Kan., 489; Joe Reminette, Salina, Kan., 480; Chris. Gottlieb, Kansas City, 478; Paul Gano, Pawnee Rock, Kan., 477; Ed. O'Brien, Florence, Kan., 473.

At the Meriden, Miss., tournament one of the members asked the other to be present at the Friday shoot, as he would open something. A local wag said, "It may be only the box that contains the shells."

It is reported that "Ducky" Holmes has set June 18 for the shoot with Clayton for the pigeon wing trophy.

William Clayton, of Kansas City, is walking around with "a chip on his shoulder" and desires some amateur to go after the Elliott trophy, which he won from O. N. Ford. He will have the defense of the Wyeth trophy on his hands, as Holmes will take him on. It is reported that two matches will occur on the same day, both 50 or 100 live birds. If Clayton can duplicate his St. Joseph score, he will be the "talk of the town."

The All Kansas team of pigeon shooters met the All Missouri at the Blue River Park, Kansas City, on Memorial day and retained the big Bob Elliott silver cup. Scores: Kansas—O'Brien 18, Arnold 20, Paxton 18, Anderson 18, Johnson 16. Missouri—Cunningham 20, Tipton 16, Gottlieb 17, Wilmot 16, Clayton 17.

The Kansas City live-bird shooters will next take on the Kansas team. Harry Tipton, Paul Franke, A. C. Holmes, Dr. Planke and W. M. Clayton will be the team, and the contest will be a close one if Ed O'Brien can get his best team together.

The Saginaw, Mich., West Side Gun Club has started in for the season's shooting. Several of the members will be at the Owasso shoot on June 14.

H. G. Kragman and Geo. Bell long for a try at live birds, and will soon shoot at 25 a side for a purse.

Assurances come that the Illinois State tournament will be one of the best shoots in the West. Full report in June 25 issue of FOREST AND STREAM.

The new shooters of the El Paso, Tex., Gun Club are coming to the front rapidly.

The Marion, S. D., Gun Club met last week and elected the following officers: Chas. Clark, President; F. Bentz, Vice-President; O. G. Kuchenbecker, Secretary; H. Van Kuschen, Treasurer.

The Omaha, Neb., Gun Club held their regular weekly shoot Saturday. The scores were poor. Driesbaugh shot out Townsend and Rood, and won a fine umbrella. Then at 25 targets Townsend scored 23 and Wilkins pushed him with 22. The Dickey Bird Club will open the season this week with a full programme.

The shoot held last Thursday by the Plainview, Minn., Gun Club was a good one.

A new gun club has been organized by the shooters at York, N. D.

When July 4 shall have come around there will be inaugurated a shoot at Taylor, Tex., as Capt. C. F. Gilstrap, of that city, has prepared a programme for team shoots that will be a success, as team shoots always draw. Shooters from all parts of the State will be present.

When the shoot at Brenham, Tex., closed last Friday it was found that at 205 targets, Atchison broke 182, Miller 170, Sens 175, Tucker 160, Curran 178, Waters 167, Hutchins 147, Barnes 145.

Mr. Curran, of Ennis, Tex., now holds both the cups given by the Houston Chronicle, the amateur championship and the expert State championship. Mr. Curran is a fine shot and a clever young gentleman, deservedly popular throughout the Lone Star State.

A tournament was held the last of the week at Marseilles, Ill., at which shooters were present from Ottawa, La Salle, Granville and Harding. The attraction was a Schmelzer loving cup, which was won by Drenen, of Granville.

Omaha, Neb., trapshots will be in evidence at the shoots to be held at Sioux City, Ia., June 7, 8 and 9; at New London, Ia., June 14, 15 and 16, and then at the G. A. H., June 21.

The Fairmount, Minn., Gun Club held a practice shoot May 29. They were so well pleased with their showing that a challenge was issued to the Lakefield boys for a try for the Peters trophy.

Panama, Mo., shooters are shooting their shoots very regularly.

The Clarksville, Ia., Gun Club has challenged clubs at Hampton, Waverly, Green, Shell Rock, or Nassau, for a five-man team race.

#### Chicago Trap Shooters' League.

CHICAGO, Ill.—The scores made at the shoot of the Chicago Trapshooters' Association, May 29 and 30, at Watson's Park, Burnside, follow:

#### May 29, First Day.

### THE PALMA TROPHY.

THE status of the Palma Trophy, as it concerns the victory of the American riflemen last year at Bisley, is now in a fair way to be officially settled. The National Rifle Association of America, at a meeting in Washington, D. C., last Saturday, decided to return the Trophy to the National Rifle Association of Great Britain.

Owing to a justifiable belief that the N. R. A. of America would consider, and wisely decide on its merits, the unpleasant controversy concerning the legality of the special service rifles used by the American team of riflemen, FOREST AND STREAM has refrained from any prejudgment. We expected that the final decision would be rendered fully and vigorously after a fair, full, and fearless consideration of the case. As it is now officially passed upon, it is freely open to public discussion.

The N. R. A. of America presents its case in the form of a preamble and resolution formulated according to the report of its committee.

The resolution to return the Trophy is a most illogical consequence to the four "Whereases" which precede it. The first recites that the committee has given the matter careful consideration. The second is in the nature of a censure of Col. L. C. Bruce, the captain of the American team of riflemen. After regretting the differences which have been made public, this "Whereas" continues as follows:

"And, while we find the captain of the American team made no secret whatever of the exact character of the rifles, believing their use perfectly proper, which differences of opinion would never have existed had he officially submitted the rifles for approval, in accordance with the explicit instructions given him by the president of this Association."

The foregoing as censure is undeserved, and as a defense it is fallacious and absurd. Furthermore, it has many superficial signs of an attempt to divert attention from the true issue. In our opinion, the real, pertinent mistake was the sending of the American team abroad with two sets of radically unlike rifle barrels, the special set to be used if no one objected, the regular service set to be used in the event that objection was made to the special set. Thus the two sets of service barrels, differing radically, had inherent disturbing elements which worked a stupefying complication for the American team at the outset of the match. At that time there was, and since then has been, a standard U. S. service rifle, and it is not to be assumed that the N. R. A. of America did not have a full, minute knowledge of its specifications. The American team, equipped with two sets of unlike service barrels, perforce must have had one set of barrels which were not allowable. If one set was right, the other set, being materially different, must consequently have been wrong, as they concerned the competition for the Palma Trophy. Both sets could not be so radically different and still be the U. S. service rifle. This leads us up to Col. Bruce's connection with the matter, as set forth in the Association's censure of him. If the special rifles were correct U. S. service rifles, there was no occasion whatever for him to submit them for the approval or disapproval of his fellow captains, or for the ruling of the British authorities on them. He, under such circumstances, could not have been guilty of mistake, because mistake then was impossible. The special service rifle was either a service rifle or it was not. If it was a service rifle, Col. Bruce's instructions to submit it were unnecessary, and if it was not a service rifle, it should never have been used at all. But further, following Col. Bruce's instructions as given him by the president of the N. R. A. of America, if objection should be made to the special service rifles before the match was shot, he was to retire them forthwith, without demur, and was then to use the other set of rifles. Therein is an admission either of irregularity or of inefficiency of management which excuse or evasion cannot obscure. If an objection before the match was conceded to be amply sufficient for the peremptory disqualification of the special service rifle on the ground of ineligibility, then, *pari passu*, an objection after the match was shot, dealing with the same matter of fact, should have precisely the same force and relevance. In other words, if the special rifles were confessedly ineligible in the face of an objection before the match, the mere use of them in the match did not change their status in the least. Furthermore, if the special service rifles were made according to service specifications, it would be clearly improper to retire them because of any objection, if such

should be made. The declaration concerning the readiness to accept an objection as sound necessarily carried with it a confession that the Americans recognized the irregularity of the situation. But why did the president of the American Association consider it necessary to submit the special set of barrels, and why, at the same juncture, did he consider it unnecessary to submit the other set? If they were service rifles alike they were equally entitled to recognition without favor. It is noteworthy that none of the other team captains submitted their rifles for approval or disapproval, nor did they in any way suggest a necessity for so doing.

The chief official plea, offered to justify the use of the special rifles, is that no one objected to them, and therefore the team used them. That plea under the same conditions, if accepted as sound, would have permitted the use of any kind of rifle. The true test was not whether there was an objection or not, but whether the rifle was a bona fide U. S. service rifle.

The third "Whereas" states that "prolongation of the arguments as to what is or is not conformity with regulation patterns of rifles might be continued indefinitely, with no prospective good resulting therefrom." As a matter of fact, the arguments should be continued till the issue is definitely settled on its merits. The length of time required to accomplish it is immaterial. Indeed, to settle such matters would seem to be a valid reason for the Association's existence. But the plea is evasive. The British Association did not raise the question of what constituted regulation patterns, but it did raise the very pertinent question whether the special set of rifles conformed to regulation patterns. In view of the fact that the American team was equipped with two unlike sets of rifles, one of which they voluntarily offered to retire on objection, the question was both proper and pertinent. The question is easily answered by yes or no. No U. S. Army officer would dare to confess that he does not know what constitutes a service rifle, and if he knows, he assuredly could pass on the special service rifle without any controversy.

The resolution presents the following:

Resolved, That we hereby ratify all statements made in the letter of the president of this Association to the secretary of the National Rifle Association of Great Britain, dated March 7, 1904, and instruct the president to withdraw the Palma competition from the programme for the current year, and to cause the Palma trophy to be immediately returned to the National Rifle Association of Great Britain, to be held by that organization for future competition.

The statements referred to in the resolution as being made in a letter of the president to the secretary of the National Rifle Association of Great Britain, dated March 7, alleged that the special service rifle contained one turn in eight inches, the same as the present service arm of the United States, and that the barrel containing such turn was approved for service adoption by the Secretary of War on June 19, 1903. The National Rifle Association of Great Britain held that an arm approved June 19 could not satisfy the rule of the match which required that the rifles used therein were to be "in all respects of the pattern adopted and issued to the troops for service." They furthermore contend that neither at that time nor since were rifles issued by the U. S. Government with a twist of one in eight inches. These are allegations which should be met squarely and fully. The issue is not confined to the narrow lines of the British Association vs. the American Association. The real issue is between the British people and the American people. If the rifles were regular, the American people have a right to know it fully, definitely, and conclusively. If the rifles were irregular, the American people have an equal right to know it. As the matter now stands, there is an evasiveness which by the world at large will be construed as guilt.

The resolution concludes with a direction to the president to return the Trophy. If the Association had no right to its possession, it should have been returned months ago. If the Association has a right to it, it should not be returned now. It is regrettable that official action concerning it did not take place sooner. Direct accusation and universal gossip at the outset afforded ample ground for it. The official action of the British Association was of itself a necessary cause for action by the American Association. From the first there was a reasonable certainty that only official action could definitely settle the issue either for or against the American team.

The accusation of unfairness, publicly made, appeared in the public press both in England and the United States soon after the Bisley contest.

As for the American status: In a Washington, D. C., daily paper, an American rifleman of note in July, 1903, soon after the Bisley meet, more directly alleged that the special rifles used at Bisley by the American team were not service rifles. The issue in the United States was met in various ways—by the scream of the American eagle, by personal denunciation of the aforementioned rifleman, and by peevishly accusing the British of being bad losers; or that if the American team violated the conditions governing the Palma Trophy competition the British did likewise. The *tu quoque* fails, because, while the British did have some special barrels, the British Government had officially approved them as regular, therefore they are out of the controversy. Even if the British had been wrong, it is a weak plea to justify wrongdoing by others. But opposed to mere sentiment and spiteful verbiage were serious specifications which were not fairly met. While it was shown that the American team were open and above board in every particular concerning their rifles, that the different captains offered no objections to the use of them, and that therefore the American team deemed themselves justified in using them, all those circumstances were beside the real issue, were unofficial in any event, and are hence irrelevant. The conditions of the match were mandatory. The captains, singly or jointly, had no power to abrogate or add to the conditions governing it.

The gossip, newspaper discussion, accusation, etc., had so much vitality that as a consequence the National Rifle Association of Great Britain was forced to take reluctant official action. In October, 1903, over three months after the Bisley contest, the Association sent a letter of inquiry to the National Rifle Association of America. In it were questions asking for specific data concerning whether the rules of the Palma contest had or had not been violated by the American team. The reply was not vouchsafed till March, over four months after the inquiry. The reply admitted that special barrels had been used, a fact which had been fully admitted theretofore.

The reply of the British Association, sent promptly, in April was sharp and pertinent. It pointed out the differences between the rifles used in the match and the U. S. service rifle. All this was presented as a matter of fact concerning the match in question, and not in any way as consequent to official protest. Indeed, no protest was necessary, for the fact once determined that the rules governing the Palma Trophy were violated by the American team, disqualification of that team followed as a necessary matter of course.

All this data leads up to the long-delayed action of the National Rifle Association of America at its meeting in Washington last Saturday. The decision to return the Palma Trophy is not a result of having squarely and fairly met the issue. The American people are still in the dark as to whether the American team used a legitimate service rifle or not. The whole controversy on the American side rests on strong assertion and indignant denial.

It furthermore has been over-freely alleged in the American press that the British were bad losers. Such assertion is the weakest rant. There is not a single circumstance to sustain it in connection with the issue. When the American team won, the British team and the British people were lavish in their congratulations, and in the honors and hospitality bestowed on the Americans. Under the conditions then existing, the British took defeat manfully and pleasantly. Subsequent developments on matters of fact concerning the service rifles, both in America and England, and questions as to the eligibility of those rifles, were the causes of the trouble. The English had a perfect right to know the facts fully and freely. In all this there is nothing to show a bad loser. In all this there is much to show that the Americans have not met the issue fairly. The return of the Palma Trophy by the National American Rifle Association for reasons other than those set forth in the issue, will tend to convince the public that the contention of the Britishers is sound. However their action may be cloaked by indirection, it seems to be tantamount to a confession that the use of the special rifles under the circumstances was a mistake, and that the win of the American team is null and void.

# THE SPORTSMAN TOURIST

## Duck Hunting Among the Moros.

It had been raining like the mischief for three weeks, which had brought us, besides a great deal of discomfort, an actual shortage of food. "Government straight"—namely,hardtack, coffee, and bacon—had been the bill of fare daily for I don't know how long, and none too much of that even.

We were camped—a battalion of infantry, two troops of cavalry, and a "mule battery"—way up on a bluff overlooking Lake Lanao, the so-called sacred lake of the Moros, in the mountains of Mindanao, which is, next to Luzon, the largest island in the Philippine group. It was twenty-three miles, by the meanest kind of a trail, to the coast, and we had been there for about three months, fighting with and making speeches to the natives in about equal parts.

It had, as I say, been pouring, as it only can pour in the tropics, for almost three weeks, and the day before had introduced a cyclone feature to the performance which had blown down every tent in camp, and would have carried our few household effects over into the next county had there been such a thing in that part of the world.

Taking advantage of a temporary cessation of hostilities on the part of the elements, a dozen or so of us were sitting in front of the commanding officer's tent getting a breath of fresh air and recounting our experiences in the late hurricane, when from nowhere apparently there appeared on the scene a Moro, naked as the day he was born, except for a breech clout and turban, in whom we recognized one of Datto Grande's men. Datto Grande, bc it known, so called from his immense size, which distinguished him from the rest of the Moros, who, as a rule, are "pony built," was one of the most powerful and influential chieftains about the lake, and a staunch friend of the Americans. So we welcomed his messenger with many expressions of "Mopear," which is Moro for "Howdy," and asked him, in our best Castilian, how they had come through the tornado of the day before. The messenger only smiled and shook his head to signify that he did not understand our Spanish, for which small blame to him, and taking a piece of paper from the folds of his turban, handed it to the Major. Upon being translated the note, for such it proved to be, we found was from Grande, asking that a doctor be sent down to his house, about six miles below camp, to treat his little son, who was very ill. Of course his request was granted, and presently the doctor and an escort of half a dozen cavalrymen were trotting along the trail, cursing the fate which sent them out in such weather, but at the same time rather glad of a break in the monotony of being cooped up in camp as they had been for the past fortnight.

The next morning I met the doctor, who had returned some time in the night, and asked him how the boy was, and learned, much to my regret, that the little fellow had died just before they arrived. "But," said the doctor, "good Lord, Cap, you ought to see the ducks down near Grande's place. There is a slough there with ten million in it if there's one."

"What kind of ducks?" said I, for it had never before occurred to me to connect the festive Moro with anything half so peaceful as duck farming.

"Lord," said he, "I don't know what kind they are, 'cause I couldn't get near enough to them to find out."

"No," said I, "I mean are they wild or tame?"

"Oh, they're wild, all right," answered Doc, "and I wish I had had a shotgun; I surely would have had a change of chaw from this eternal bacon and hardtack, hardtack and bacon we've been up against for the last month. I'm getting homesick for a piece of real meat."

Now, years ago I formed the habit of never going anywhere, if it was only to stay over night, without sneaking my good old 12-gauge Parker along in the bottom of my trunk. Furthermore, due partly to this habit, and partly to the fact that there is nothing in the world quite so handy in a "halo rush" as a shotgun and some buckshot, it was right there at that minute. Not in the bottom of my trunk, it is true, for we had no trunks with us, but wrapped up in the canvas of my bedding roll, together with about a hundred No. 6's I had brought along on the off chance of finding something on which to use them. I told the doctor I had a shotgun with me, and suggested that we make up a party and go down there the next day to see what we could do toward relieving the stringency for fresh meat that existed in the community.

Upon inquiry we found there were two other shotguns in camp, and about two hundred more shells suitable to the occasion; so the next afternoon Kirk, the Doctor, the Lieutenant and myself, with an escort of fifteen men from Kirk's troop, started off in high spirits to try our first chance at game since we had been on the island. Up to this time we had been too busy hunting men to bother with anything else; and, just between ourselves, once in while having the tables turned, and being hunted.

The trail forked a little way beyond camp, and Doc, ad gone along to show us the way, took the wrong it discovered his mistake before we had gone very least became uncertain whether we were on the or not; so I sent a man back to camp to ask ho had come in that morning to get some anything else he could talk the commanding

officer out of, for his son's funeral ceremonies, to send us one of his people to act as guide. Our messenger had hardly gotten well started, before he met Grande himself, with his retinue, coming along on his way home, and as we saw them about the same time, we rode cross lots and joined them.

About a quarter of a mile from where we joined Grande and his followers, we flushed a pair of doves in the edge of a rice stubble. Kirk, not being able to withstand the temptation, jumped off his horse and started for them. Just as he flushed them, Grande, who was riding, jumped off his pony and shouting something in a very excited manner to his men, drew his kris and went charging toward an old Moro fort which stood near the trail, a little beyond us, and into which the doves had flown. Of course we promptly dismounted and formed a skirmish line, for in this country you never can tell what's going to happen, and it's always best to be prepared for the worst. Nothing occurred, however, and in a few minutes Grande and his men came back. He told us this fort belonged to a Moro named Ahmi Gra, who was, he said, "muy malo," and very hostile to the Americans. It seemed Ahmi Gra's people had some rice fields near this place, and Grande had noticed them working there that morning when he had passed on his way to our camp. He was afraid some of them had seen us coming, and might be lying in ambush in the fort. As Kirk was going directly toward it, Grande feared, if such was the case, they would kill him before we could get to him. Hence his action. We made a careful search, not only of the fort itself, but of all the cover in the vicinity that could conceal a Moro. Not finding anything, we mounted once more and started for the ducks. We proceeded much more carefully, however, and as Grande insisted that this particular part of the trail was dangerous, I sent out a small advance party and flankers, until we should reach his land, where I knew there would be no danger. As we rode along we could look way over the valley of the Mataling River and see Ahmi Gra's people standing in bunches on the tops of the many little hills, or running excitedly from one group to another, and the flash of the sun on the blades of their krises and campilans as they waved them at us, and gave their yells of defiance. Some of the men begged for permission to try a shot at about 1,200 yards, but orders were strict not to fire unless fired upon, so I had to refuse. It was certainly a beautiful view which unfolded itself to us as we trotted along, and one I shall always remember. The country was rolling and cut up by heavily wooded ravines, with the exception of which it was, for the most part, open and covered with "cogon," a tall grass which often grows higher than a man on horseback. It was dotted here and there by groves of cocoanut and other palms, and by clumps of bamboo, nearly every one of the latter hiding in its heart a fort, or cotta, as the Moros call them. In this country every Moro of position is his own master, his hand against every man, and every man's against him. It is a land where "to the victor belong the spoils," just so long as he can prevent anyone taking them from him. All the Moros of this class then build unto themselves good, strong forts of earth and stone, plant bamboo shoots close together on the slopes, and live therein, surrounded by their warriors, in true feudal style. We had some lovely times taking these forts, but they have nothing to do with this duck hunt.

After about half an hour's sharp trot, Grande stuck his kris back in his sash and said we were all right, that we were on his land, that no one would molest us, and that everything we saw was ours. A little further on he said adios, and, leaving us three or four of his men to guide us the rest of the way, disappeared up a side trail, which was a short cut to his house. A little after he left us the trail made a sharp turn to the right, skirting a rice field, and before I knew it I was right in the middle of a bunch of Moro women, who, much to my surprise and embarrassment, as soon as they saw me, pulled up their sarongs, which answer all the purposes of a skirt, and covered their faces with them, it apparently making no difference how much of the rest of their persons they exposed so long as their faces were covered. Of course I politely turned my head the other way, and cautioned the men to pay no attention to them, and we were soon past. The experience was interesting, for these were the first wild Moro women I had seen. I was rather surprised to see them cover their faces, as the Moro women on the coast, except those of the very highest rank, do not do it.

Just after passing these women we descended a very steep bank and forded the river, which here is only about fifty feet wide, although further down it opens out into a very large stream. In climbing up the other side through the woods, a snag caught in the pocket of my blouse and tore it off, thereby causing me to lose half my cartridges, for I didn't notice what had happened until later, when we dismounted. I sent a man back on the trail to look, but he couldn't find them. Probably some Moro had come along behind us and picked them up. The Moros will sell their souls for a gun, and anything else they have for cartridges, so I suppose the one who found my shells is still thanking Allah for his great goodness in sending him such a piece of luck.

It strikes me it is taking a very long while to get to this

duck pond, but as I write so many incidents connected with that day pop into my mind, I get off the track.

Well, "anyway," as the Irishman says, we got there at last, and dismounting took a survey of the situation. The place in which the ducks were supposed to be was a slough, partly just plain swamp, and partly overflowed rice fields. It was about 1,000 yards long and maybe 300 or a little more wide, crescent-shaped, and entirely surrounded by low, grass-covered hills. With the exception of small patches of open water here and there, the entire surface was grown up in grass and lily-pads, making the finest kind of cover for both hunter and hunted. The water was anywhere from one to three feet deep, but was warm, and as we had already been wet so much that we had almost become web-footed, anyway, we didn't mind another wetting, so waded in. The Doctor and three or four of the escort went to one end of the pond, and the Lieutenant, taking some men, started for the other. Kirk and I, keeping about 100 yards apart, started in at the center of the convex side of the crescent. When we arrived at the pond there wasn't a duck in sight, except two or three playing about in some open water out in the middle of the slough, but while we were putting our guns together and getting ready to start, we saw several flocks fly up from the grass, and after circling around a while, go down again; so we knew there were some ducks in there, anyway, which cheered us up considerably. I know I could already taste the broiled breast of one in anticipation.

And then the sport that followed. Since that day whenever anyone talks to me about fine duck shooting, I simply shake my head and think to myself, "Well, you've got to show me." The only trouble with it was that it was almost too easy. There were simply thousands of ducks in there, and the chances are not one of them had ever been shot at before. They just kept flying back and forth, now a single, then a flock of six or eight, then a pair, and although each and every one of them seemed to know just exactly where he wanted to go, and was apparently in a big hurry to get there, they came past so close to us that, as I say, it was almost too easy to be good sport. Kirk and I hadn't waded in twenty feet before the ducks began to jump out of the grass all around us, and inside of three minutes after getting my feet wet I had eight down with about twenty Moros floundering around in the grass after them. We waded out some forty or fifty yards from shore, and took our stands, and from then on the fun became fast and furious. It was bang! bang! bang! until our gun barrels got so hot we had to dip them in the water so we could hold them, and then do it all over again. We were both in exceptionally good form, and while neither of us killed straight by any means, we came pretty nearly doing so. Our consciences didn't trouble us any, for, as we thought of our hungry comrades back in camp, we felt no scruples in killing all we could, knowing that not only would there not be an ounce wasted, but that at best, with our limited supply of shells, we could do no more than give every one a taste. I wish you could have seen the Moros, who, attracted by the sound of firing, had gathered from all the houses round the neighborhood, and stood there on the bank watching us, with their mouths open in astonishment, and their eyes sticking out so you could have knocked them off with a stick. Every time Kirk or I cut down a duck, they'd raise a shout that scared up everything in the slough. They still tell tales about it round the lake, and whenever a strange Moro came into camp the friendlies would bring him around to my tent to see the old Parker, and tell him what a marvelous shot I was. Then, to convince him they were telling the truth, they would get me to go out and shoot a crow or a white-headed hawk as it flew over the camp, so he could see for himself. They had never seen a shotgun before, and thought we were using a single ball. You may be sure we said nothing to deceive them, for if there is one thing a Moro admires, it is the skillful handling of any weapon, especially a rifle. They themselves are miserable shots, not having discovered the use of the rear sight, and, as a rule, as soon as they get a gun knock it off. They say it is of no use, and only catches in the brush.

The ducks we killed were of two kinds—a large variety and a smaller one. The former was about the size of our black or dusky duck, as we used to find them on the Stockport marshes in the old days on the Hudson River, and almost identical with it in every way. The latter was about as large as a blue-winged teal, but marked like a green-wing. I had accurate descriptions of both, but have lost the note-book containing them. Both varieties had a peculiar whistling note resembling the call of a yellow-leg plover, and, as I have said, I never saw so many ducks in such a small space in my life.

After about an hour, the birds evidently having come to the conclusion that it was decidedly unhealthy in that particular slough, ceased to fly. It was then about half-past four, and, as I wanted to go through that strip of hostile country while it was still daylight, I had recalled sounded. Upon taking account of stock, we found we had bagged sixty-five ducks, two doves, and three or four jacksnipe; this to four guns in about an hour's shooting. Kirk and I killed most of the ducks, as the Doctor was using a rifle, and the Lieutenant had preferred to potter around after snipe. We reached camp in about an hour,

trotting where the trail would permit, without being molested, although the groups of Moros were still on the hills as we passed through Ahmi Gra's country, and no doubt would have jumped us had they dared.

This trip was the first of many we had afterwards, until the dry season came on, when the ducks all left for other parts, though why I never could figure out. There certainly remained water enough for them, as in that country the only difference between the rainy and dry season is that during the former it rains all the time, and during the latter it lets up once in a while and only rains most of it. However, they all left for some reason, but we didn't miss them much, for by that time we had learned our way around, and found plenty of other game. There were jacksnipe, plover of several kinds, and deer and wild pigs, world without end. There was also a pretty little black quail about the size of an English sparrow, that was very abundant, but too small to shoot, and along the edge of the jungle were wild chickens, which afforded good sport early in the morning and in the late afternoon. During the middle of the day they remained in the forest where it was cool, and didn't move about. The Moros, being Mohammedans, are forbidden by their religion to touch pork in any form, and therefore never kill a pig, with the result that the country was simply overrun with pigs. We found them delicious eating, as they feed mostly on grain and wild fruits, their flesh resembling venison more than pork. The deer were the ordinary barking variety common to the Philippines, and were very plentiful also. They made an always welcome addition to our not too varied bill of fare. The wild pigs and the deer cause great damage to the crops, and during the time when the rice and sweet potatoes are ripening the Moros keep men in the fields night and day to scare them away. They attain this end by shouting, and after our arrival by pounding on the empty hardtack cans they picked up about camp, which not only scared the deer and pigs, but made it almost impossible to sleep if you were anywhere in the vicinity of a rice or "camote" field.

After we started in going after the ducks, we were rather forced into doing more or less hunting. The other Dattos and Sultans living in the neighborhood of camp became jealous. They went to the commanding officer and said that they were just as good friends to the Americans as was Datto Grande, and they couldn't see why we should go down to his place to shoot all the time and never come to see them. So to keep them from feeling hurt, we visited their places, and finding game plentiful and a warm welcome, we went again and again.

I was at Camp Yicars about a year, having been with the first American column that entered the Lake Lanao country, which, up to that time, the Moros had kept inviolate, and while there met with many experiences, pleasant and otherwise. The Moros of that section are a highly interesting people, with many strange and curious manners and customs. They are superstitious to a degree, believe in all kinds of witchcraft and magic, and for the most part are unspoiled by contact with the whites. They are great warriors, and successfully kept the Spaniards out of their country for over 300 years, and though the Spaniards tried time and again to obtain a foothold, they never succeeded in so doing. They gave us a hard fight before we established ourselves, and even today there are about the lake Sultans and Dattos who would resist to the death the passage of troops or any Americans through their territory. I hope one day to be sent back to help complete the work of civilizing, or rather modernizing, them, so ably begun by Captain John J. Pershing, 15th Cavalry, now on the general staff of the army, for during my stay among them I found many things to admire and respect, and became very much attached to them.

AHMI COMMISSARIO.

## Trails of the Pathfinders.—X.

### Lewis and Clark (Continued).

They had now passed Milk River, and the Dry Fork, and the journal says: "The game is now in great quantities, particularly the elk and buffalo, which last are so gentle that the men are obliged to drive them out of the way with sticks and stones." Bears were abundant, and almost every day one was killed. About the middle of May they came near losing one of the canoes containing papers, instruments and medicines, for careless work by the steersman caused it to be overturned. She was righted and brought safely to shore, with only a trifling loss.

They were now approaching the mountains, and the spring storms, which here last until the middle of July, troubled them somewhat with abundant rains and by obscuring the view. On the 20th they reached the mouth of the Musselshell, and pushing on, in a short time found themselves among the bad lands of the Upper Missouri. They were now obliged to "cordell," a number of the men walking on the shore with a tow-line, while others kept the boat off the shore. This was slow and difficult work, and was made more dangerous by the fact that their elk skin ropes were getting old and rotten, and were likely to break at a critical time. On May 29 some buffalo ran through the camp, and caused much confusion and alarm, no one knowing exactly what had happened until after it was all over. When they passed the mouth of the Judith River they found traces of a large camp of Indians, a hundred and twenty-six fires, made, as they conjectured, by "The Minnetari of Fort de Prairie." Here, too, they passed precipices about 120 feet high, below which lay scattered the remains of at least a hundred carcasses of buffalo. The method by which the buffalo are driven over the cliffs by the Upper Missouri tribes is described; and at this place we are told that the wolves which had been feasting on these carcasses were very fat, and so gentle that one of them was killed with a spontoon or halberd. They were now among some of the most impressive bad lands of the Missouri River, and the extraordinary effects of erosion by air and water made the explorers wonder. The journal says:

"These hills and river cliffs exhibit a most extraordinary and romantic appearance. They rise in most places nearly perpendicular from the river, to the

height of between two and three hundred feet, and are formed of very white sandstone, so soft as to yield readily to the action of water, but in the upper part of which lie imbedded two or three thin horizontal strata of white freestone unaffected by the rain, and on the top is a dark, rich loam, which forms a gradually ascending plain, from a mile to a mile and a half in extent, when the hills again rise abruptly to the height of about three hundred feet more. In trickling down the cliffs water has worn the soft sandstone into a thousand grotesque figures, among which, with a little fancy, may be discerned elegant ranges of freestone buildings, with columns variously sculptured, and supporting long and elegant galleries, while the parapets are adorned with statuary. On a nearer approach, they represent every form of elegant ruins; columns, some with pedestals and capitals entire; others mutilated and prostrate, and some rising pyramidally over each other till they terminate in a sharp point. These are varied by niches, alcoves and the customary appearance of desolated magnificence. The delusion is increased by the number of martins which have built their globular nests in the niches and hover over these columns as in our country they are accustomed to frequent large stone structures.

"As we advance there seems no end to the visionary enchantment which surrounds us. In the midst of this fantastic scenery are vast ranges of walls, which seem the productions of art, so regular is the workmanship. They rise perpendicularly from the river, sometimes to the height of one hundred feet, varying in thickness from one to twelve feet, being equally broad at the top as below. The stones, of which they are formed are black, thick and durable, and composed of a large portion of earth, intermixed and cemented with a small quantity of sand and a considerable proportion of talc or quartz. These stones are almost invariably regular parallelopipeds of unusual sizes in the wall, but equally deep, and laid regularly in ranges over each other like bricks, each breaking and covering the interstices of the two on which it rests. But, though the perpendicular interstices be destroyed, the horizontal one extends entirely through the whole work. The stones, too, are proportioned to the thickness of the wall in which they are employed, being largest in the thickest walls. The thinner walls are composed of a single depth of the parallelopiped, while the thicker ones consist of two or more depths. These walls pass the river at several places, rising from the water's edge much above the sandstone bluffs, which they seem to penetrate; thence they cross in a straight line, on either side of the river, the plains over which they tower to the height of from ten to seventy feet, until they lose themselves in the second range of hills. Sometimes they run parallel in several ranges near to each other; sometimes intersect each other at right angles, and have the appearance of walls of ancient houses or gardens."

Captains Lewis and Clark were much puzzled at this point to know which of the rivers before them was the main Missouri. The Minnetari had told them that the main Missouri headed close to the Columbia River, and it was this main stream that they wished to follow up, in order that they might strike Columbia waters, and thus continue their way toward the west. The choice of the wrong branch might take them a very long distance out of their way, and they would be forced to return to this point, losing a season for traveling, and also, perhaps, disheartening the men so much as to take away much or all of their enthusiasm. Accordingly, two land parties set out, one under Captain Lewis and one under Captain Clark. Captain Lewis followed up the Missouri River, and himself became convinced that it was not the main stream, and that it would not be wise to follow it up. The remainder of his party, however, believed it to be the true Missouri. Captain Clark, who had followed up the stream, had seen nothing to give him much notion as to whether it was or was not the principal river. After long consideration, and getting from the interpreters and Frenchmen all that they knew on the subject, they determined to make a cache at this point, and that a party should ascend the southern branch by land until they should reach either the falls of the Missouri or the mountains. This plan was carried out. The heavy baggage, together with some provisions, salt, powder and tools, were cached; one of the boats was hidden; and Captain Lewis, with four men, started June 11 to follow up the southern stream.

On the 13th they came to a beautiful plain, where the buffalo were in greater numbers than they had ever been seen, and a little later Captain Lewis came upon the great falls of the Missouri. This most cheering discovery gave them the information that they desired, and the next day an effort was made to find a place where the canoes might be portaged beyond the falls. This was not found; and a considerable journey up and down the river showed to the explorers the great number of falls found at this place. Game was very numerous, and buffalo were killed, and the meat prepared; and a messenger was sent back to the main party to tell what had been discovered. On one of the days in this neighborhood Captain Lewis, having carelessly left his rifle unloaded, was chased for a considerable distance by a bear, and finally took refuge in the river. The next day he was threatened by three buffalo bulls, which came up to within a hundred yards of him on the full charge, and then stopped; and the next day, in the morning, he found a rattlesnake coiled up on a tree trunk close to where he had been sleeping. There seems to have been excitement enough in the neighborhood of the Great Falls. It was found necessary here to leave behind their boats, and the travelers made an effort to supply their place by a homely cart, the wheels of which were made from the trunk of a large cottonwood tree.

For a good while now the party had been traveling most of the time on foot, over rough country, covered with prickly pears, and the ground rough with hard points of earth, where the buffalo had trodden during the recent

rains. Their foot-gear was worn out, and the feet of many of the men were sore. All were becoming weak from exertion and the fatigues they were constantly undergoing. However, the enormous abundance of game kept them from suffering from hunger. Two or three weeks were spent in the neighborhood of the Great Falls, preparing for their onward journey. Provisions had to be secured by killing buffalo and drying their meat. They had to prepare a skin boat for going up the river, and for various explorations and measurements in the neighborhood, but the attempt was unsuccessful. The iron frame had been brought from the East, but wood for flooring and gunwales was hardly to be had. They were obliged to give up the boat, strip the covering from it, and cache the pieces.

While they were in this neighborhood, they were much annoyed by the white bears, which constantly visited their camp during the night. Their dog kept them advised of the approach of the animals, but it was annoying to be obliged to sleep with their arms by their sides and to expect to be awakened up at any moment. The daring of the bears was great; once some of the hunters, seeing a place where they thought it likely that a bear might be found, climbed into a tree, shouted, and a bear instantly rushed toward them. It came to the tree and stopped and looked at them, when one of the men shot it. It proved to be the largest bear they had seen.

Captain Clark, journeying with Chaboneau, the interpreter, his wife and child, and the negro servant, York, took shelter one day under a steep rock in a deep ravine, to be out of the rain and wind. A heavy shower came up, and before they knew it, a tremendous torrent came rolling down the ravine, so that they narrowly escaped losing their lives. Captain Clark pulled the Indian woman up out of the water, which, before he could climb the bank, was up to his waist. The guns and some instruments were lost in the flood.

The question of transportation was finally solved by their making two small canoes from cottonwood trees, and they pushed on up the Missouri. A small party went ahead on foot, examining the country. Game was fairly numerous, and near the Dearborn River they saw a "large herd of the big horned animals." Indian camps were occasionally seen, and it was noted that in some places pine trees had been stripped of their bark, which, the Indian woman told them, was done by the Snakes in the spring, in order to obtain the soft parts of the wood and the bark for their food.

The river here was deep, and with only a moderate current, and they were obliged to employ the tow rope, cordelling their vessel along the shore. Geese and cranes were breeding along the river; the young geese perfectly feathered and as large as the old ones, while the cranes were as large as turkeys. The land party followed for much of the distance an Indian trail, which led in the general direction they wished to go.

They had now reached the Three Forks of the Missouri, which were duly named, as we know them to-day, Jefferson, Madison, and Gallatin. They were in the country of the Snake Indians, whom they were in daily hope of meeting, feeling sure that through the medium of Chaboneau's wife they would be able to establish satisfactory relations with them. Captain Clark still kept ahead of the party, on foot, to learn the courses and practicability of the different streams for the canoes, and left notes at different points, with instructions for the boats. One of these notes, left on a green pole stuck up in the mud, failed to be received because a beaver cut down the pole after it had been planted, and the consequence was that the canoes proceeded for a considerable distance up the wrong fork, and were obliged to return. Reaching the Beaverhead, the Snake woman pointed out the place where she had been captured five years before. On August 9, Captain Lewis, with three men, set out, determined to find some Indians before returning to the party, and the rest of the expedition kept on up the main fork of the Jefferson, as best they could. On August 11, Captain Lewis had the pleasure of seeing a man on horseback approaching him. The man's appearance was different from that of any Indian seen before, and Captain Lewis was convinced that he was a Shoshoni. When the two men were about a mile apart the Indian stopped, and Captain Lewis signalled to him with his blanket, making the sign of friendship, and attempted to approach him. The Indian was suspicious, and unfortunately the two men who were following Captain Lewis did not observe the latter's sign to wait, and so, though the Indian permitted the white man to come to within a hundred yards of him, he finally turned his horse and rode off into the willows. They followed the track of the Indian as well as they could until night, and the next morning continued the search. By this time their food was nearly gone. They kept on up the stream until it had grown to be a rivulet so small that Captain Lewis could stand over it with one foot on either bank.

Keeping on to the west, they reached the divide between the Atlantic and Pacific waters, and the next day came upon a woman, a man, and some dogs, but they, although they watched him carefully, declined to await his near approach, but disappeared. A little bit later they came on three Indians, an old and a young woman and a little girl. The young woman escaped by running, but the other two, being too near to get away, sat down on the ground and seemed to be awaiting death. Captain Lewis made them presents, and after a little conversation by signs, they all set out for the camp. Before they had gone far they met a troop of about sixty warriors, rushing down upon them at full speed. Captain Lewis put down his gun and went forward with a flag. The leading Indians spoke to the women, who explained that the party were white men, and showed, with the utmost pride, the presents that they had received. The warriors received them with the greatest friendliness, and they all smoked together on the best of terms, and subsequently proceeded to the camp, where they were received with the utmost hospitality. The Indians had abundant fresh meat and salmon. Most of them were armed with bows, but a few had guns, which they had obtained from the Northwest Company. They had many horses, and hunted antelope on horseback, surrounding the antelope and driving them from point to point, until the antelope were worn out and the horses were foaming with sweat. Many of the antelope broke through and got away, so that, as the journal says, "forty or fifty hunters will sometimes be engaged for half a day

without obtaining more than two or three antelope."

Captain Lewis tried to arrange with the chief to return with him to the Jefferson, meet the party, and bring them over the mountains, and then trade for some horses. The chief readily consented, but it subsequently appeared that he was more or less suspicious, and he repeated to Captain Lewis the suggestions made by some of the Indians that the white men were perhaps allies of their enemies, and were trying to draw them into an ambush. The chief, with six or eight warriors, started back with Captain Lewis, and it was evident that the people in the village thought that they were going into great danger, for the women were crying and praying for good fortune for those about to go into danger, while the men who feared to go were sullen and unhappy. Nevertheless, before the party had gone far from the camp, they were joined by others, and a little later all the men, and many of the women, overtook them, and traveled along cheerfully with them. Two or three days later Captain Lewis sent out two of his men to hunt, and this seemed to revive the suspicions of the Indians; and when, a little later, one of the Indians who had followed the hunters was seen riding back as hard as he could, the whole company of Indians who were with Captain Lewis whirled about and ran away as fast as they could. It was not until they had raced along for a mile or two that the Indian who returned made his communication understood that one of the white men had killed a deer, and instantly the whole company whirled around, each man eager to get first to the deer that he might make sure of a piece to eat.

Meantime the main party had struggled on up the river, and on August 17 were met by a messenger from Captain Lewis, Drewyer, together with two or three of his Indian friends. The two parties met, and, through the medium of Chaboneau's wife, all suspicions were allayed, and the friendliest relations established. The usual councils were held and presents given. Efforts were now made to learn something about the country to the westward, and the best method of passing through it. The Indians said the way was difficult, the river swift, full of rapids, and flowing through deep cañons, which passed through mountains impassable for men or horses. The route to the southward of the river was said to pass through dry, parched desert of sands, uninhabited by game, and was now impossible for the horses, as the grass was dead, and the water dried up by the heat of summer. The route to the northward, though bad, appeared to present the best road.

Obviously, if it was practicable, the river presented the easiest passage through the country, and in the hope that its difficulties had been exaggerated, Captain Clark set out to inspect its channel. On the way they met Indians, all of whom were friendly, but passing as far down the river as he could, the leader convinced himself that it was useless to attempt its passage. Game seemed to be quite scarce and for food the party depended almost entirely on the salmon which they could purchase from the Indians, and which in some cases was freely given them. The Shoshoni Indians led a miserable life, depending chiefly on salmon and roots. They ventured out on the buffalo plain to kill and dry the meat, though continually in fear of the Pahkees, "or the roving Indians of the Saskatchewan," who sometimes followed them even into the mountains. These Pahkees were undoubtedly the Piegan tribe of Blackfeet, known for many years as bitter enemies of the Snakes.

GEORGE BIRD GRINNELL.

[TO BE CONTINUED.]

## Santa Fe.

*Editor Forest and Stream:*

How many of the thousands of tourists who visit the Pacific Coast and go thence by the southern route on the A. T. & S. F. R. R. every year, stop over while en route long enough to pay a visit to Santa Fe, and examine one of the oldest, if not the very oldest, cities on the continent? That it is off the main line is no doubt one reason why it is passed by, but it will well repay a visit, and an hour or two of a ride from Lamy Junction carries one up to it. Here are buildings that are centuries old side by side with those that have been built only yesterday.

How old this city really is, no one knows. There was an Indian town here, not a camp, but a permanent town, when Juan Coronado, the Spanish explorer, first visited it, about the year 1541. He named the city he afterwards built here Santa Fe de San Francisco (Holy Faith of St. Francis), and the present metropolis of California was given the same name by the Spanish; we cut it down to San Francisco. Coronado and his wanderings are seldom heard of now. When riding across the country that he explored three centuries ago, I have often thought of him. His chaplain, who followed him in all his wanderings, has given us an interesting account of them. He seems to have been part soldier and part priest; he could use the sword or the cross, and did use each in turn, if he could not make good Catholics of his Indians, he could make good Indians—dead ones—of them.

When New Mexico becomes a State, if it ever does, I would be glad to see it given his name. It would be just as appropriate as is Colorado; in fact, far more appropriate; he first found this country and told us about it.

The greatest curiosity here is the old church of San Miguel. To a tourist from the East it looks like a ruin; the only wonder is that it is not one; but while it does not appeal to the eye of an artist from the outside, the inside of it will well repay a visit, and the visitor will never regret the dime or quarter he has paid to the brother who admits him. There is always one who can speak English (some of them cannot), and who points out the different things he thinks will interest a visitor.

The church itself is a square, ugly looking structure of sun-dried brick or adobe; the walls are from five to seven feet thick; these are the walls that were first erected, about the year 1600. The roof has been destroyed by fire a number of times when one of the many wars that swept over this country took place, but the old walls always endured, ready for a new roof.

These whitewashed walls are hung with paintings that a collector would give a fortune for. Two that hang above the altar, both pictures of the Annunciation, were painted in the thirteenth century by some Italian painter. The pictures look strangely out of place hanging on the whitewashed walls above the plain wooden benches.

Standing on the floor is an old bell, about whose age

there need be no dispute; it is older than the church even, for it was cast in 1356, and on its rim is engraved in Spanish a prayer to St. Joseph. It formerly hung in the church, but seems now to be regarded with as much veneration as are the pictures.

CABIA BLANCO.

## "L'Habitat."

NEW YORK, June 4.—*Editor Forest and Stream:* The story, "L'Habitat," which appeared in your last week's number, is one of the best that I have ever read in your publication. The writer of the story possesses the happy faculty of so picturing the surroundings of his camp that one could almost inhale the fragrance of the mountain air and actually see the beauties of nature from the porch of the cabin. There are probably very few of your readers who, after having read this enticing story, do not feel like hieing away to the wonderful green hills of Vermont. I want to thank you for the great pleasure this story has given to me, and to express the hope that more of such material may appear in your paper from time to time. The splendid illustrations are a most interesting part of this article, which, as I have already said, is one of the best that has appeared in any magazine within the past year.

W. L. TAYLOR.

MONTCLAIR, N. J., June 8.—*Editor Forest and Stream:* Permit me to express my great pleasure and appreciation of the delightful story "L'Habitat," which appeared in your issue of June 4. Nothing that I have read in the columns of FOREST AND STREAM for many years can be compared with it. It would seem as if the author, Mr. W. W. Brown (I was so glad to see his name in full), had found the true secret of happiness, and as I read the story a second time I envied him as I never envied the richest of men. Through your columns I wish to thank the writer for the valuable information he has given me on the subject about which he has so charmingly written, and to assure him that I am one who has read his delightful tale to the very end, and shall go and do likewise.

LELAND M. BURR.

NEW YORK, June 11.—*Editor Forest and Stream:* Allow me to compliment Mr. W. W. Brown upon his article entitled, "L'Habitat," which appeared in your edition of June 4.

It makes the true sportsman long to shake the dust of Broadway from his feet and dig for the woods as fast as his legs can carry him.

Comparatively few persons realize the enjoyment to be gotten from this sort of life, and it is my desire to some day spend the greater part of my time in just such a place.

Although it is impossible for me to enjoy it myself, I take great pleasure in reading about it, and sincerely hope you will publish more such articles.

ANDREW LE MASSENA.

I will arise and go now, and go to Innisfree,  
And a small cabin build there, of clay and wattles made;  
Nine bean rows will I have there, a hive for the honey bee,  
And live alone in the bee-loud glade.

And I shall have some peace there, for peace comes dropping slow,  
Dropping from the veils of the morning to where the cricket sings;  
There midnight's all a-glimmer, and noon a purple glow,  
And evening full of the linnet's wings.

I will arise and go now, for always night and day  
I hear lake water lapping, with low sounds by the shore;  
While I stand on the roadway, or on the pavements gray,  
I hear it in the deep heart's core.

—Yeats.

## Nordenskjold as an Explorer.

*Editor Forest and Stream:*

In your issue of April 9, Mr. Charles Hallock, commenting upon the untimely end of Mr. Leonidas Hubbard in Labrador, says:

"Even the Nordenskjold Arctic exploring party perished of starvation in their tents on the Lena River in Siberia because they did not think to try for the fish beneath them, or know how to catch them, if they did."

This is a gross mistake regarding Nordenskjold. He did not starve to death in the Arctic regions, nor did any of his party, during his long career as an Arctic explorer. Nordenskjold died of ripe old age some years ago at his home in Stockholm, Sweden. In connection with this statement it may be well worth mentioning that Nordenskjold had a well established reputation among Scandinavian Arctic travelers for the great care he took in outfitting and provisioning his many expeditions above the Arctic Circle. The attempt to reach the North Pole in 1872 with reindeer instead of dogs, may serve as an example that he surely did not risk to starve to death through inability to live on the "fat of the land." When the two ships—one steamer and one sailing vessel—that brought his expedition to Mosselbay, Spitzbergen, arrived there they were suddenly and unexpectedly "bottled up" in that bay by drift ice, and compelled to remain there until the next summer. Under these unfortunate circumstances he succeeded in sustaining the crews of the above mentioned vessels and his own men, and furthermore managed to save from starving two other crews belonging to two small sailing vessels, who also were prevented by the same cause from returning home as they had intended. Of course he had to abandon the planned northward journey in order to save the lives of all these people.

That fishing in the Arctic regions during the winter is a rather uncertain thing to depend upon for a grubstake is verified by too many to be doubted. When Nordenskjold got ice-bound at Pitteka in Siberia, only a few hundred miles away from East Cape, during his northeast passage around Asia, he met at that place a small party of Tschuktschers (Esquimaux) who had settled there solely for fishing purposes. During that winter, on the night of September 28, 1878, heavy drift ice set in on that coast and remained unbroken until July, 1879. This ice prevented, with a few exceptions, the people from catching any fish worth while speaking of; fortunately there were plenty of provisions to spare on board the Vega, so the Tschuktschers did not starve that winter.

The writer has had some experience in fishing through

the ice in central Sweden, from 62 degrees north and above the Arctic Circle. The climate there may be about the same as in that part of Labrador where Mr. Hubbard died, and in spite of a very intimate knowledge of the lakes and rivers, teeming with fish, he has had many a "blank day," although amply provided with suitable bait and tackle. The chances for a starved man, like Mr. Hubbard and his partners, to sustain life by fishing in unknown waters, with probably unsuitable bait and tackle, and through ice of considerable thickness, and in all kinds of Arctic weather, anybody can understand to be extremely small.

D. T. A.

## Natural History.

### Good Work by Bob White.

In the year book of the Department of Agriculture for 1903, Dr. Sylvester D. Judd, Assistant Ornithologist of the Biological Survey, has an exceedingly interesting article on the "Economic Value of the Bob White." Writing from the scientific standpoint, and carefully exact in all his statements, Dr. Judd nevertheless shows for Bob White the sportsman's enthusiasm, and has given a charming sketch of the bird. A beautiful colored plate by Mr. Louis Agassiz Fuertes adorns the article. We quote from Dr. Judd's article the paragraphs bearing directly on the economic value of the bird.

#### The Bob White as a Weed and Insect Destroyer.

A study of the Bob White was undertaken by means of field observations, experiments with captive birds, and examination of the contents of crops and stomachs in the laboratory. The results obtained may be thus summed up: The Bob White is probably the most useful abundant species on the farm. It is one of the most nearly omnivorous birds, consuming large quantities of weed seeds, and destroying many of the worst insect pests with which the farmer has to contend. It does not injure grain, fruit, or any other crop.

#### Food of the Bob White.

In the investigation 801 stomachs were examined, collected in every month of the year, though mostly during the hunting season, and obtained from twenty-one different States, and from Canada and the District of Columbia, but chiefly from New York, Maryland, Virginia, Florida, Ohio, Indiana, Illinois, South Dakota, Nebraska, Kansas, and Texas. As indicated by this material, the Bob White is notable for the great variety of its food. It lives mainly on seeds, fruits, leaves, buds, insects, and spiders, though myriapods, crustaceans, mollusks, and even batrachians have been found in its stomach. The character of the diet varies with the season. The greatest proportion of animal matter is taken in late spring and early summer. The food for the year as a whole, estimated from the analysis of the contents of stomachs, and calculated by volume, is divided thus: Animal matter, 14.93 per cent.; vegetable matter, 85.07 per cent. The elements of the animal food are distributed as follows: Beetles, 6.38 per cent. of the total food; grasshoppers, 2.56 per cent.; bugs, 2.83 per cent.; caterpillars, 0.87 per cent.; miscellaneous insects, 0.48 per cent.; other invertebrates, largely spiders, 1.81 per cent. The vegetable food consists of grain, 23.64 per cent. of the total food; various seeds, chiefly those of weeds, 50.78 per cent.; fruit, 8.53 per cent.; miscellaneous vegetable matter, 2.12 per cent.

#### Seeds.

The Bob White is pre-eminently a seed eater. Of its food for the year as a whole, seeds form 50.78 per cent., and include those of many different plants.

The bulk of this seed diet consists of the seeds of weeds. Fully sixty different weeds are represented in the food, and constitute more than a third of the food for the year as a whole. Some idea of the value of the bird as a weed destroyer may be gained from the number of seeds taken at a meal. Thirty buttonwood seeds, 200 to 300 smartweed seeds, often 500 seeds of sheep sorrel, and 700 of three-sided mercury have been taken at one feeding. Crops and stomachs are frequently crammed with nothing but ragweed. One bird, taken at Marsh Hall, Md., November 6, 1902, had eaten a thousand ragweed akenes; another killed the previous November in the same place, had eaten an equal number of the seeds of the crabgrass, a troublesome weed in truck land. Birds have been shot in Mecklenburg county, Va., whose stomachs contained 3,000 leguminous seeds, mostly of tick trefoil and various species of bush clover. Pigeon grass, which is extremely common and mischievous in truck land, is a favorite food. No less than 5,000 seeds of this troublesome plant were found in the stomach of a bird shot in October, 1902, at Pinebrook, N. J. Finally, a Bob White taken on Christmas Day, 1901, at Kinsale, Va., was discovered to have eaten 10,000 seeds of that abundant and obnoxious pest of the garden, the pigweed.

A careful computation of the total amount of weed seed the Bob White is capable of destroying is surprising in the magnitude of its result. In the State of Virginia it is safe to assume that from September 1 to April 30—the season when the largest proportion of weed seed is consumed by birds—there are four Bob Whites to the square mile, or 160,800 in the entire State. The crop of each of these birds would hold half an ounce of seed, and as at each of the two daily meals weed seed constitutes at least half the contents of the crop, or a quarter of an ounce, a half ounce daily is certainly consumed by each bird. On this very conservative basis the total consumption of the weed seed by Bob Whites from September 1 to April 30, in Virginia, amounts to 573 tons.

#### Animal Food.

The Bob White is insectivorous as well as granivorous. Insects are eaten during every month of the year, and amount to 14.93 per cent. of the food for the year as a whole. From May to August, inclusive, when insects are most numerous, the percentage for the period rises to 31.5 per cent. The variety of insect food is large. In the

present investigation, 116 species of insects have been noted as entering into the diet, a number that will probably be greatly augmented by further knowledge. Furthermore, the proportion of injurious insects habitually eaten by the Bob White makes its service as a destroyer of insects more valuable than those of many birds whose percentage of insect food, though greater, includes a smaller proportion of injurious species. Conspicuous among the pests which the Bob White destroys are the potato beetle, the 12-spotted cucumber beetle, the bean-leaf beetle, the squash ladybird, wireworms and their beetles, May-beetles, such weevils as the corn-hill bug, the imbricated snout-beetle, the clover leaf weevil, and the Mexican cotton boll-weevil; the striped garden caterpillar, the army worm, the cotton worm, the boll worm, various species of cutworms, the corn-louse-ant, the red-legged grasshopper, the Rocky Mountain locust, and the cinch bug. Some of these pests are relished, for a dozen army worms or cutworms are frequently eaten at a meal. Thirty Rocky Mountain locusts have been found in a single crop. Weevils are greatly sought after, forty-seven cotton boll-weevils having been eaten in a morning by one Bob White. Striped cucumber beetles are destroyed by the score, potato beetles by the hundred, and cinch bugs by the tablespoonful.

From May to August, inclusive, beetles form 17.9 per cent. of the food of the Bob White; bugs, 6.2 per cent.; caterpillars, 2.4 per cent.; grasshoppers, 2.3 per cent.; miscellaneous insects, 0.8 per cent., and spiders and other invertebrates, 1.9 per cent.

The losses caused by some of these pests show how desirable it is to protect a bird that habitually destroys them. The Mexican cotton boll-weevil damages the cotton crop to the extent of \$15,000,000 a year; the potato beetle lops off \$10,000,000 from the value of the potato crop, and the cotton worm has been known to cause in a year a loss of \$30,000,000. The cinch bug and the Rocky Mountain locust, scourges that leave desolation in their path, have each caused in certain years a loss of \$100,000,000.

By far the greatest insect destruction by the Bob White occurs during the breeding season. Not only does a third of the food of the adult birds then consist of insects, as has been stated, but their growing broods consume insects in enormous quantities. The food of the young of practically all land birds contains a much greater percentage of insects than that of the mature birds; and the amount of food the young require is immense in proportion to their size. No stomachs of young Bob Whites have been examined in this investigation, but 19 droppings that were collected from two broods of chicks, on July 24, 1902, disclosed a purely insectivorous diet.

#### Grain.

An impression prevails among sportsmen who have bagged most of their game on the stubble field that the Bob White eats little else than grain. The analysis given

above shows, however, that grain forms only one-fourth of the food. Corn and wheat appear to be eaten in greater quantity than other cereals. The former constitutes 19.14 per cent. of the food, the latter 3.04 per cent. As experiments with captive birds fail to show any marked preference for either corn or wheat, the disproportion between the two cereals in the usual food is due to some other cause, probably the fact that more corn than wheat is grown in the part of the country where Bob Whites are most abundant. The remaining cereal food, 1.46 per cent. of the total, is composed of miscellaneous grain, including kaffir corn, sorghum, millet, barley, oats, and rye.

Grain-eating birds, as a rule, are likely to do much harm to crops. They may pull up sprouting grain, plunder the standing corn when it is in the milk, or forage among the sheaves of the harvest field. The Bob White, however, is a notable exception. It is necessarily in the period of germination that grain is susceptible of the most serious injury. Nevertheless not a single sprouting kernel was discovered in the contents of the crops and stomachs examined in this investigation. Some field observations made in 1899 and 1900 at Marshall Hall, Md., give confirmatory evidence. While crows injured sprouting corn so seriously during May that several extensive plantings were necessary, the Bob White, which was unusually abundant at the same time in the vicinity, was never seen to disturb germinating grain. No data are available regarding rye and millet, but in newly sown buckwheat fields of Essex county, N. J., which the writer saw ravaged by doves, there was no sign of injury by the Bob White. Publications on economic ornithology, and reports received by the Biological Survey, add testimony of like character. It may be safely asserted, therefore, that, so far as is at present known, the Bob White does no appreciable harm to sprouting grain. Damage to grain at any other time entails a loss of a comparatively insignificant part of the crop.

In order, however, to learn how far the bird might injure ripening wheat, observations were made for several years at Marshall Hall, Md. During November immense flocks of crow blackbirds made such havoc in winter wheat that diligent use of the shotgun was necessary to save the crop. But no Bob Whites were ever seen in the act of taking grain. A hen bird shot June 18, 1903, in a field of ripe wheat, however, had much grain in its crop, though whether it obtained the food from standing stalks or from kernels dropped on the ground, was not known. As the Bob White usually feeds on the ground, the latter source appears the more probable. Farmers whom the writer has consulted, who were well aware that goldfinches feed on ripening oats, that English sparrows take wheat, that crows tear open field corn, and that red-winged blackbirds ruin whole fields of sweet corn, say that the Bob White does no harm to standing wheat or other standing grain.

The bird is, however, a notorious stubble feeder.

Where fields of wheat stubble support a rank growth of ragweed, as in some of the Eastern States, the sportsman is most likely to find a covey feeding. On the Western plains no ragweed grows amid wheat stubble, therefore the birds are more often found in cornfields where the stalks have been left standing after removal of the ears. In such a place at Badger, Neb., six Bob Whites were shot in November, 1901, whose corn-distended crops contained in all 181 kernels. Birds that feed in wheat stubble often take from 100 to 200 grains of wheat at a meal. A Bob White was taken in December, 1902, at West Appomattox, Va., whose crop contained 508 grains of wheat, and was distended almost to bursting. This habit of gleaned waste grain after harvest is beneficial to the farm, as the germination of volunteer grain is not desirable, especially when certain insect pests or parasitic fungi are to be combated. As the scattered kernels are often too far afield for domestic poultry to gather, the Bob White's services in this respect are especially useful.

#### Fruit.

The Bob White eats fruit to the extent of 8.53 per cent. of its diet for the year, a very moderate proportion compared with the corresponding proportions in the diets of the catbird and the cedar bird, in whose food fruit forms one-half and three-fourths, respectively, of the whole. Although the amount of fruit eaten by the Bob White is small, the variety is large.

The Bob White is seldom troublesome to the horticulturist. Mr. M. B. Waite, of the Department of Agriculture, has reported its pecking into his ripening strawberries near Washington; but, on the other hand, birds that were kept for several months in captivity for investigation, refused strawberries at a time when they were hungry. The Bob White is partial to wild grapes, and so might be expected to injure cultivated varieties, especially as its California relative, sometimes in a flock of a thousand, plunders vineyards; but, so far as the writer knows, cultivated grapes have sustained no appreciable injury from Bob Whites in the East. The period when the largest proportion of fruit (23.5 per cent. of the total food) is eaten is not the season when man is gathering his fruit, but is during December, and sumac berries are then the fruit mainly eaten. Large quantities of dewberries, waxmyrtle berries, and bayberries, also appear in the food. It may be interesting to note that the Bob White is not nearly so frugivorous as the ruffed grouse.

#### Leaves and Buds.

Neither does the Bob White approach the ruffed grouse in destructiveness of leaves, buds, and tender shoots. It sometimes eats the leaves of yellow sorrel (*Oxalis stricta*), sheep sorrel (*Rumex acetosella*), red and white clover (*Trifolium pratense* and *T. repens*), and cinquefoil (*Potentilla* sp.). Captive birds ate grass, lettuce, and chickweed.

### Catching the Poacher.

It was in 1881, and I was at that time Lieutenant of the 12th Regiment of Dragoons. Having been always a passionate hunter, I had the good fortune to be invited to hunt on the domain of one of the best friends of my youth, W. von W. I never had seen the hunting grounds of my friend, but I had heard from others that they were famous for the number of deer (Rehe), and this and the hearty welcome I received put me into a state of extreme happiness and expectation.

But as my arrival happened at a time when my friend was very busy at work which required his personal attention, he regretted very much to be unable to accompany me on my first deer stalk. "But," he said, "it is not absolutely necessary that I be with you. The coachman who will bring you to the grounds can take you around and show you the boundary lines, and any buck (Rehbock) between these lines you may shoot at."

Soon I was in the hunting wagon, and the coachman was just gathering reins, when friend W. stopped him and said: "Wait a minute, for I forgot a very important matter. That is to hand you this permit, as my forester may meet you and—"

"But your forester will surely not take me for a poacher, or do I really look like one?"

"Oh, I don't mean that. But lately a very gentlemanly appearing poacher has made us a great deal of trouble by killing our best bucks, and so far we have been unable to catch him. If you should meet him, be sure you do not let him get away."

"Ridiculous. I'd like to see the fellow get away from me. If I only meet him I will deliver him to you, as sure as I am born."

"Ha! ha! Look out, my boy, for this fellow has fooled many a keeper."

Here we separated, and I was rejoicing inwardly to perhaps be able to kill a stately buck and to capture a poacher, who had managed to escape so often. After the coachman had given me the necessary directions, I dismissed him; but my hope in finding a buck or the poacher seemed a forlorn one as evening approached, and I determined to try a still-hunt.

During the day I had found a small alder patch not far from a small river, and inside of this patch someone had contrived to make a rough board seat, and I concluded that perhaps a buck would cross the meadow, and as the outlook was good on all sides and the seat was perfectly hidden, I crawled into this ambush.

A deep calm rested over the valley; only the murmuring of the little stream and the bells of home-going cattle were the only noises—if noise it were; for it tended only to accentuate the quietness even more. Nothing living was to be seen, except a butterfly flitting around some late flowers. The insect attracted my attention, because I knew a good many butterflies, but I could not make out to what class this fellow could belong. When he came somewhat nearer, to my surprise I recognized a species called Apollo, which is generally only to be found in the Alps mountains. Just as I was in the act of leaving my hiding place to secure the specimen, a cracking noise behind arrested my movements. Forgotten is the Apollo, the rifle ready, for that could be nothing else but a herd (Rudel) of deer. But no, it sounded more like footsteps—aha! the sound of a man's voice—deep, powerful: "What are you doing in there?"

Now, this didn't sound to me especially polite; but friend W. had described his forester as not very particularly possessed of this virtue, but as short and gruff. I took a good look at the man now before me. A solid built figure of middle size, with keen, bold, but pleasant countenance; a plain and neat regulation hunting suit; all in all of a pleasing appearance. I replied politely: "My friend, I am W.'s guest. Here is my permit."

He looked at me with a cynical smile, and began reading the lines, after which his demeanor became decidedly different. He took off his hat and said: "Excuse me, sir, but— Never mind, if we keep on talking here we shall keep the deer shy of us, only quick into this bush here."

In an undertone I asked: "Have I a chance for a shot here?"

"A beautiful buck goes his rounds here."

This put me in good humor, and I presented a cigar to him, but he declined modestly. "Thank you, sir; but we will spoil the sport surely if we smoke here."

Now, such unselfish behavior I had never experienced.

This had to be rewarded, and I emptied the contents of my cigar case into the man's hand, and with a wave of the hand made it plain to him that all these costly weeds were his. He put them in his pocket with a deep, courtly bow.

The next quarter of an hour passed without a sound. Then I felt a little pull at my coatsleeve. I turned, my companion winked his eyes in a certain direction, and there he was—a fine full-grown buck in good shooting distance. To be short, within a few minutes I was standing over my dead quarry. Such a beautiful pair of antlers I had never seen in my life, and in the joy of my heart I slipped a twenty-mark piece into the man's hand, and then we emptied a bottle filled with genuine Bénédictine wine in celebration of the fine shot. The wine was a present of my lovable hostess, Mrs. von W.

"But now how are we going to get this buck up that steep hill? My wagon is waiting for me up there." But this noble man of the forest knew his business. The Herr need not worry on that account, for he would carry the buck on a footpath known to him only to the castle, and he would be there inside of two hours. That just suited me. The forester tied fore and hindlegs together, swung the buck to his shoulders, and disappeared. My mind was made up to ask friend W. for the extraordinary fine antlers of the buck before he should have a chance to see it, for I thought that all friendship would go to pieces at the sight of such rare horns, and I would have to be somewhat diplomatic to get them.

Two hours later I had reported to my friend and wife my fine success, and had also secured consent to my taking home the much-coveted antlers. Only the buck itself had not made an appearance as yet.

"Hm! Where the deuce must your buck be? Wifey is getting impatient. The long wait will spoil her cookery. Cannot understand why Heinrich, who has pretty long legs, did not show up with the buck as yet."

"Your forester's name is Heinrich?"

"Yes."

"But isn't he a man of about my size?" (this confused).

"What are you talking about? My forester is an old grayhead, and his size is six feet two."

Just at this point a servant announced Forester Hein-

rich. The door opened and a gray-haired giant made his appearance with the good old salutation, "Greet thee God, Herr."

"Well, Heinrich, did you get a buck to bring in from my friend?"

"Yes, sir, I had to carry it to the crossroads to Z."

I was struggling to get air into my lungs.

"To where?"

"To the crossroad at Z., just where the Prussian boundary line is. If this friend of yours did not have the permit from you I should surely have taken him for a poacher."

I was trying hard to say something, but something seemed to choke me.

"Did he say anything else?"

"Yes, he said he had ordered his wagon to be there, and I should go to the castle and report. He also gave me a fine cigar, such a one I never smoked for a long time."

By this time I was ready to burst from anger; only the presence of Mrs. von W. kept me from exploding.

"Did he perhaps give you a twenty-mark piece also?"

"Ho! Nobody is such a fool nowadays. Ha! ha! ha!"

I was simply annihilated, and for the next hour I did not know whether I was the victim of a joke or not.

But old Heinrich's tale was only too true. I had delivered the prize buck directly to the poacher, and the man whom I was wishing to catch had caught me and my quarry. Suffice to say I did not hunt around there for the next five years. Translated by C. F. B.

DANBURY, Conn.

## A Narrow Escape.

(Continued from page 488.)

Life in the Woods—X.

ONE morning when Louis, Bill, and myself had first separated, Louis, in jumping over a little brook, fell and discharged his gun, but fortunately not hurting himself or anyone else. This accident was the subject of conversation that evening, and led to the account of the shooting of a friend of ours a few years previous. As an exhibition of what a loving woman can do, and what a determined, cool-headed man can endure, and as a warning to careless hunters, it is invaluable. Told in the language of the victim, L. M. Wyatt, of Fond du Lac, Wis., it is as follows:

"For many years my wife and I had gathered up our camping paraphernalia while the glorious October days were young and hied away to the great lone land of the North, our earlier expeditions usually terminating near some habitation. With each returning season came that longing of the sportsman to see what was just a little further away—just a little wilder and hence more romantic. In this way we had come to look on the furthest point that could be reached as the one to look for, and the one most satisfactory. We had for many years followed the lumbermen and had pitched our tents near a crew of loggers. This gave a base of supplies and connection with the outside world, slow as it was, for often we were located where it took four days to make the round trip. In this way we were free from the bands of hunters that infested the grounds adjacent to the more acceptable lines of travel. These locations seemed to afford all that could be desired for a satisfactory outing, and we became so interested in our fall camping season that we should have counted the year lost without the usual October camp. These conditions found us in the year 1882 located 35 miles from the nearest settlement, through a wilderness for the entire distance broken only by a solitary logging camp 26 miles away. We had a camp of log drivers near-by and this crew afforded us all the company desired, while the supply teams that furnished them gave us satisfactory communication. On November 6 we had exhausted our allotted time, had our outfit partly packed, and expected to leave the woods in a day or two. We had gathered an abundant supply of trophies, and had enjoyed the beautiful days and glistening waters of those virgin woods. I had a single saddle of venison hanging about a mile and a half from camp that I was to take out to the supply road so as to take it aboard when the teamster passed. I left camp after dinner to do so, and when near the spot two fine deer broke cover near me and started away through the open woods. We already had plenty, but the clear, open glade offered 'such a shot' that the rifle came to its place as a natural sequence to a month's tramping and shooting. After the shot I was almost wishing it had failed. I stepped over to look at results and found the telltale drops on the leaves indicating a dead shot. I followed along to a thicket, and there the deer lay stretched out, as though it had fallen from the clouds.

"I hung the deer up and prepared to dress it, when, as I was standing by, a rifle shot rang out, and I found myself turned half around and one shoulder against a tree I stood near. I found that my right foot was turned half around and that my right leg was shattered at the hip joint, the shot striking the bone near the joint. I called out, but secured no response, and no one was in sight. The location was quite thickly covered with underbrush among the pines. I realized that someone had mistaken me for a deer and had fired, and, finding out the error, had gone away and left me to my fate. There was no one near to hear any calls or to render any assistance. It was a cloudy November day, and the mist that had filled the timber gradually settled down, and toward night a cold rain set in. I had matches, hatchet, packing strap and cord, and with what strength I could command undertook to fix up the disabled leg. I reached out near me and cut a sapling, laid it against my body and then along the leg. I then cut two suitable sticks for crutches, and with the packing strap made an effort to use them as crutches, but I could not manage the disabled leg. The shot passed close to the main artery, missing it by half an inch. The wound was so close to the body there was no way to stop the flow of blood only partially.

My wife, of course, could not know what had happened until I failed to return. Then the courage and heroism of woman overcame fears, and her timely efforts saved my life. The loggers' camp, about three-fourths of a mile away, had no trail directly to it from our tents, and the passage was one to tax a veteran when shrouded in the gloom of a pine woods night. With the aid of her companion, a white setter dog, she found her way to

the camp, roused up the men, and a night search was instituted. No one knew the direction I had taken, hence where to hunt was a problem. The men were urged on, and beat the woods as far as possible. I was not able in the rain and sleet to start a fire, and in consequence was, soon after dark, so benumbed with cold as to be unable to move. My hands and feet became stiff and useless. After night set in I kept up an occasional call. I exhausted my cartridges during the afternoon, but the firing did not attract any attention. Twice during the night a pack of wolves surrounded me and set up a howl that only the timber wolf can make, but their timidity saved me.

"I had become nearly exhausted when a faint sound came to me, to which I replied as loudly as possible, and the answer came, and in a short time a light and four men came tearing through the thicket that surrounded me. It was then about 5 A. M., and I had lain there from about 2 P. M. the afternoon before. These hardy fellows stripped off their coats to cover me, built large fires on both sides of me, and two of them remained with me and two started for camp. They built signal fires on their way to guide their return, and with six more men returned to me and waited for the day to move me. An improvised stretcher was made of blankets, and a trail sufficiently wide to carry me cut through the thicket, and I was, at half-past nine, at the loggers' camp, 35 miles from any medical assistance. A half mile from the camp my wife met the cavalcade, and the blanket stretcher was laid down and I had the first opportunity of telling her the situation. Her night of suspense and my night of horrors combined to make the meeting nearly equal to one risen from the dead. The devotion, courage and strength of woman then asserted itself. A bed was soon arranged, nourishing food and drink procured from the meager supplies of the loggers, and a messenger was sent to the nearest point for medical assistance. How the next three days passed until the surgeon arrived cannot be told. His conclusion was that I must not be moved, must stay where I was. A large crew of men were put to work, and a log cabin 16 by 24 feet was constructed, furniture and supplies ordered to equip it, and we settled down to our new camp life. I remained in the loggers' camp two weeks, and was then removed to the completed cabin. Surgeons pronounced the case very serious, if not hopeless, and gave me but little encouragement. We settled down in our new camp, however, to hope and wait.

"The month of January came, and the winter roads were in good condition, and we decided to risk the move from the woods. On a clear winter morning we left the little cabin. My bed was placed in the bottom of a large sleigh, and I was covered generously with robes and blankets for the long, hazardous journey; a second team followed to provide for emergencies. We started at 7:30 A. M., and reached the first camp at 1:30, where I was taken in for an hour, and then under way again for the end of the journey to the railroad. The day's journey was ended at 4 P. M. We remained there for three days' rest, and then took the train for a day's ride home. Many weary months ensued before I could get around on crutches, and not for two years was I able to get along without them. Two years after we visited our old haunts. The ax of the loggers had destroyed the beauty, and the greed of the hunter had about exterminated the noble game that so abounded. After three years of camping in the old resorts, we abandoned the woods.

"We learned that the shot was fired by a logger from a neighboring camp, who abandoned me after firing. He left his camp before light the next day without apparent cause, and was not seen again in the vicinity. The gun he used was borrowed from a fellow workman. There was not another gun within a radius of ten miles, and this man had spent the afternoon in hunting in the vicinity."

Not far from the camp in which we were then sitting another tragedy was enacted only a few years before. Chas. Clark, an old, experienced hunter from Fond du Lac, Wis., and two companions had come up to hunt around Echo Lake. They crossed the river in an old bateau, in which they piled their camp truck. They reached the other shore and had disembarked when one of the young members of the party in drawing his rifle from the boat, grabbed it by the muzzle, hit the hammer against something, and discharged the gun. The ball shattered the young man's hand and then entered Clark's side, passing through the liver. He was at once taken out where medical assistance could be procured, but died in a few hours. As soon as he was shot, he said the wound was fatal, as he had hit many deer in the same way and noted the sure result.

The moral drawn from such accidents as these is that too much care cannot be exercised. It does not follow that hunting is dangerous, any more than it follows that riding in a buggy is dangerous because some people are killed by runaway horses, but such accidents should teach profitable lessons. They should teach care. They should teach that to shoot at whatever is seen in the woods without being sure of what it is is not safe. They show that a distinctive color for hunting clothes may some time save a man from being taken for game. In the case of Mr. Wyatt it was demonstrated once more that in times of need the courage and good judgment of woman will show, and that she can plan and act under the most trying circumstances.

CAROLUS.

*The time for moving to summer homes has come, and many subscribers to FOREST AND STREAM naturally desire to have the addresses of the copy of the paper which goes to them changed from winter to summer residences. This is a matter that it is well to attend to in time, so that no issues of the paper may be lost to the reader.*

*Readers who are not subscribers, and who, owing to temporary absences from home, cannot have it furnished them by their local dealer, may, by taking short time subscriptions, have the paper sent to them for any period from one to three months. The charge for sending the FOREST AND STREAM is 40 cents for one month, 75 cents for two months, or \$1 for three months' subscription. This may be convenient for those who are spending the summer within reach of a post-office, yet at a distance from news stands.*

## A Woman's First Moose Hunt.

(Concluded from page 482.)

WHEN we left home the weather had been quite warm, and for at least one week we found the cold very hard to endure. To start about daybreak, in a heavy fog, and paddle to the head of the lake and back, a distance of eight miles, the pine trees covered with a heavy white frost, was more than we could endure with safety, and after a few trials we gave up the morning hunting.

One morning when we came in, Sam, who always cooked breakfast, had three grouse lying on a log. He said they had walked into camp, and two of them were in front of our tent, and he had to shoo them away very carefully so he could get the gun. When he got the gun they lined up, and he killed two with one shell, then shot the other one. We were living on partridge soup, partridge stew, partridge pot-pie, partridge fried and partridge roasted—not bad fare for the wilderness.

The mornings were spent hunting birds, fishing, and exploring lakes and trails. In the afternoon we followed the trail to Moose Lake to hunt. I crossed that portage almost every day for three weeks, but at the end of that time I do not believe I could have followed the trail alone.

At the head of Four Mile Lake a very picturesque little river came winding down through the bush. Its banks could be traced from some distance down the lake by the row of pine trees growing on either shore. It always called to mind the description in stories I had read of the avenue or driveway lined on each side by the spires of tall pine trees, leading to some great castle in the forest.

Starting early one morning we followed the windings of this pretty little stream until stopped by driftwood. Soon after landing I shot a spruce partridge on a tree near the shore, and it flew across the river and fell dead on the other side. When I saw it fly I thought I had scored a miss at a sitting bird with a shotgun, and was ready to go home, especially as I had been growing quite proud of my skill. The bush is too thick for wing shooting, and how we did wish for our little target rifle; it would have furnished much more sport than getting birds with the shotgun.

We left the river and followed an Indian trail through the bush, coming to immense deposits of slate, where we rested and ate our lunch. After lunch Sam shot a rabbit, and we followed the trail to a little stream where we saw an old beaver dam, moose tracks, and numerous fresh deer tracks, while fresh signs of bear were all around. The large bones of a moose that an Indian had evidently killed in the summer were piled near a tree and covered with spruce boughs, leaving the end of a bone exposed here and there. We were going to uncover the bones, but Bob stopped us, saying that was the way the Indians set a bear trap, and, having due respect for a bear trap, we finished our investigation with a pole.

The head of Four Mile Lake and along the little river has been a great moose country, but we saw no fresh tracks. They have been shot out in the summer and driven back. The settlements are coming too close. We returned to the head of Four Mile Lake for the evening hunting, and I was glad not to have to cross the portage that night.

One morning we went to Beaver Lake for birds, and in an hour or two had five grouse. Near an old beaver dam the shores had been cleared for some distance, almost fifty feet back from the water, by the beavers. Some of the trees were at least six inches in diameter.

The morning hunting had given the Doctor a severe cold, and the guides were keeping the fire in front of our tent burning all night. They had been getting up once during the night to put on wood, but Sam decided to build a self-feeder. He built stone side walls to raise the logs a foot from the ground, thus making the fire-place. Two poles were then placed, by means of forked sticks, at an obtuse angle with the side walls, and logs to replenish the fire were laid side by side on these poles. As the logs on the stones burned in two and fell in the fire, those on the poles rolled down and took their place.

One day the Doctor's cold was so bad that he lay in bed in the tent all day. About three o'clock Sam began to make preparation to go to Moose Lake for the evening hunting. The Doctor was much improved, and as the evening was going to be an unusually good one for hunting, he insisted that I should go along with Sam, as Bob could take care of him and get supper.

We had been watching on the lake for some time, when Sam heard a moose call. It was a long distance from the lake, for it called twice before I was sure I heard anything. The moose was coming toward the lake, directly across from the point on which we sat. Sam called, and the moose answered him in a few minutes. He called several times, and the moose answered each time, but instead of coming out on the shore went around a bay on our right. It called when just back of us, but was so close Sam quit calling, and told me to be ready to shoot, as the moose would probably come out on the shore just behind us. I got down on one knee, rested my elbow on the other one to steady the rifle, cocked the gun, and waited, feeling perfectly sure that was my moose. After waiting what seemed an age, Sam said the moose had either seen us or had gotten wind of us, and getting into the canoe we pushed quickly out on the lake, and then called. The moose answered very promptly, but he had crossed over the ridge and was some distance from the lake, keeping in the same general direction. Sam called again, and when the moose answered it had turned and was much nearer the lake, and when it answered the next call could not have been more than fifty yards from shore. It gave the love call, and was so close to shore that we thought best to wait, but the moose turned, and when next it called was some distance from the lake. It was traveling very fast, and we heard it call several times, each one fainter than the last.

It was quite dark now, so we hurried across the lake and got ready for the portage. Before we had gone far it became evident that we were going to have a storm. We found it impossible to always keep on the trail crossing the bare ridges of rock by lantern light, and it took more or less time to hunt the trail, which must be found before we could attempt to get down off the ridge. Of course when we were so anxious to hurry we lost the trail oftener, and had more trouble finding it. The sky was black, the air tense, as though any minute the

heavens might be split by a blinding flash of lightning, followed by a terrific peal of thunder, a high wind and sheets of rain.

"The night is changed! And such a change! O night, And stern and darkness! Ye are wondrous strong."

The only thing to do was to walk as fast as we could and get over the portage as soon as possible. The guides never allowed me to carry anything over this portage, and no difference how heavy their load, or how full their hands, they always came to help me over the hard places. We reached the end of the portage and crossed the lake to our camp landing, where Bob had hung a birch bark lantern he had made.

The storm came soon after we went to bed. There was a blinding flash of lightning, followed by two reports in quick succession, like rifle shots, only deeper and heavier. There was no doubt about it being thunder, but it was different from any I had ever heard before, and sounded more as though the English Navy was bombarding our camp. The rain poured down on our tent, which would only "sift out the coarsest;" the rest came through. What would we do? The Doctor was already sick with a cold, and, if our blankets got wet, might have pneumonia. I took a storm coat and made a kind of canopy over our heads, and a rubber blanket taken from under us covered the woolen blankets. I was getting experience faster than I could appreciate it.

The next morning the rain-shedding properties of our tent were reinforced with a tarpaulin.

In Four Mile Lake, across a bay from our landing, rose a perpendicular cliff, rising fully 500 feet above the surface of the water. One afternoon we crossed to where an ascent was possible, and climbed to the top of the cliff, or mountain, as the guides called it. We could see for miles over the country, and counted four or five lakes. A register on top of the cliff contained the following names: G. F. Brown, F. P. Krebs, and A. Dickson. From this cliff we followed the ridges to the lake to hunt.

To sit in the canoe for two or three hours and neither hear nor see a moose, but watch the ducks come in flocks and never take a shot, was really heart-breaking, but the only thing to do if we wanted a moose.

One evening when we were watching, out walked a moose on the opposite shore. He had a large head, but was too far away to shoot, and did not stop an instant, but went into some low bushes and disappeared. Taking the two rifles the Doctor and Bob started to cross the lake, but the canoe grated on a rock as they pushed off, and they neither saw nor heard anything more of him. The moose trails followed around the head of a bay back of where I was sitting, and when I heard a noise in the bush I got frightened and wondered how I would defend myself if the moose should come out back of me. The only thing I could think of was a pair of gray blankets I was sitting on. I know I breathed easier when I saw the canoe coming toward me.

Moose hunting was hard work, and we were not meeting with much success as far as the moose were concerned. We had to give up duck shooting and tramp across the portage every day; but we were learning many things we could learn in no other way, as well as seeing some wonderful things in nature. In fact, we were laying up a store of knowledge that would be a pleasure to us in the years to come. The hours we spent sitting in the canoe or on the shore watching for moose were not lost, for had we not heard one call, even answer the guide, and learned how fast they can travel over the roughest kind of country? We had seen one on the shore, and another evening as one went through the bush it stepped on a fallen sapling, which broke, making a report that in the absolute silence sounded like a rifle shot. The silence was oppressive. A grouse walking among the leaves in the bush back of us made a noise that was startling, and a very interesting little bird that came along the shore every evening hunting its supper at the edge of the water, could be heard walking on the gravelly beach. Occasionally we heard an owl, and sometimes a duck would quack. The ducks were of no small interest to us. How gracefully they came in, wheeled and settled on the water. When the ducks were all in and the little bird had gone to bed, then came our ride across the magic lake and the portage, which was hard, but furnished a great deal of interest.

One night we saw a rabbit sitting by a log near the trail, and the Doctor shot at it with his rifle, but made a clean miss, while the rabbit sat still and looked at us. The lantern was held a little lower, and he shot again, putting out the lantern and leaving us in darkness. When we got a light, the rabbit was gone. Many of our grouse and spruce partridges were gotten along this trail; some Bob knocked over with a stone. One morning the Doctor shot a rabbit just after we made the first steep climb from the lake, and it was hung on a tree by the side of the trail, to be gotten on our return. A little further on he shot a partridge, and we had only gone a short distance when I shot a grouse by the side of the trail, and another one flying to a tree, I turned and shot it. On the portage another morning we saw a cock spruce partridge on a spruce tree that had blown out of root, but the top having caught, it hung suspended over the trail. As we approached the tree, the partridge was strutting about, his tail feathers spread, his wings lowered, apparently ready to fight, so we stopped to watch him. He strutted around for a while, then stepped daintily down along the trunk of the tree to the ground. When Bob started on, it turned toward him, its wings and tail spread, its feathers bristling, as much as to say, "Come on, if you want to fight!" When we saw two hens on the ground on the other side of the tree, we understood that the little cock partridge was defending his harem. It was a great display of courage, and furnished another picture to "hang on memory's wall." We had all the birds we could use, and left them unmolested.

It was evident the moose were traveling around the head of Moose Lake without stopping, and we left camp early one morning, determined to find out where they were going, if possible. We had gone about half way up the lake, and Bob was ashore examining some trails, when the Doctor saw two deer playing on the other side of the lake. Bob paddled quickly and carefully across. They became suspicious before we were half way over, and while one would feed, the other would watch. They made a beautiful picture, but we wanted the buck. When

we got almost within 100 yards, the Doctor shot at the buck and we thought hit it, but it disappeared in the weeds. He then shot at the doe, but missed her. The buck was again in sight, and the Doctor, doing mechanically what he had done all summer, aimed for the middle of the target, and the buck followed the doe into the bush. Bob found blood, and we rushed into the bush and saw the deer twice where they had stopped, but did not get a shot. At first we could see only an occasional drop of blood, but soon came to great splashes of it, and at one place found large clots with a tuft of hair. We expected to find the deer lying dead at every step, and I was so sorry I could hardly keep back the tears. Almost all at once the blood became less; we could find only an occasional drop. After following for almost a mile, we gave up and I never was more disappointed about anything in my life. So much for the inconsistency of a woman. While the Doctor keenly regretted the loss, for it was his first deer and had a beautiful head, I believe I was more disappointed than he was.

We certainly made a mistake, when we found blood, by not waiting two or three hours before following the deer. The bullet from the .35 Winchester had evidently gone through the deer's body without mushrooming. It was now too late to follow moose trails, so we ate our lunch and rested. We neither saw nor heard any moose that night, and started over the trail very blue and discouraged.

We had noticed the Northern Lights in the sky, and when we came out on a high, bare ridge of rock, we stopped to look at them. Almost immediately the light began to form directly over our heads, not rapidly, but with a quick, steady motion, as in changing pictures in a magic lantern, until a circle was completed, leaving a small circular opening directly at the zenith. The light spread over the sky until well down the dome, then great shafts of light shot down at regular intervals until they touched the horizon. We stood under an immense canopy of light, through which only a few of the most brilliant stars could be seen. Bob had put down the lantern, and we stood and watched in awed silence one of nature's grandest, most mysterious phenomena. The display lasted from fifteen to twenty minutes, then disappeared about as it had come, and Bob picked up the lantern and we went on. When we came to the brow of the hill where we had to climb down to the lake, we stopped, for the light was growing bright again. From where we were standing we could see across Four Mile Lake, and directly opposite us rose the high bluff. While we stood there a double curtain of gauze was suspended over the lake, and reached from one horizon to the other, hanging straight across as though suspended from a curtain pole. They were the same width from end to end, and were hung in folds. One curtain was longer than the other, and both had a hem along the foot. Both folds and hem were distinctly visible. The curtains did not touch the water, neither were they up in the sky, but were suspended over the lake. While we watched, a pale violet color passed over them, lasted a few minutes, and was followed by a rose color, which in turn was followed by a pale pink. The curtains were then drawn aside. The colors were of marvelous refinement and purity, rather than brilliant. The display passed over the sky from west to east, and was most impressive and sublime. The canopy had formed over us as we stood on a great ridge of bare rock up on the hills, with an uninterrupted view of the entire heavens, surrounded by nature in her wildest, most rugged form, and miles from a human habitation. When the curtains appeared the hills and woods were behind us, and we stood on the brow of a hill overlooking the lake where the curtains hung. We had been so fortunate as to witness an unexpected display of one of nature's most wonderful phenomena, with no element lacking that could have added to its grandeur.

"Aloft on sky and mountain wall  
Are God's great pictures hung."

Taking the rifles, Sam, Bob and the Doctor left camp early in the morning, hoping they might find the deer. I kept the shotgun, and agreed to stay in camp and have supper ready when they came back. Bob advised me to climb a tree and not use the shotgun if a bull moose should come around. I said I would get birds and have soup for supper, and light the lantern at the end of the portage; two very rash promises to make, as I found later. I made some mush to fry for supper, washed the dishes, hung our blankets in the sun, then filled the magazine of the shotgun and started out to hunt birds. They had become very scarce around our camp grounds, so I crossed the portage to Four Mile Lake and followed along its shore for quite a distance; then, going deeper into the bush, turned toward camp. After walking for some time I came out on the shore of a lake, and looking across saw our camp on the other side. I was a good deal surprised, and decided to quit hunting, go back to camp, and stay there. I had gone deeper into the bush than I thought, going entirely around the end of the lake. I neither saw nor heard a grouse.

Sam had said there were plenty of chips I could use for cooking, as though I must not use the fire-wood that was cut. I knew he did not mean that, but I thought, "All right, I'll cut my own fire-wood." The way Bob cut down the poplar and birch trees for camp use was always a matter of great interest to me. He selected a tree, gave a few strokes with his ax, then pushed the tree over. Apparently he cut down trees with as much ease as I would go out in the yard at home and cut a few flowers for the breakfast table. Here was my chance to cut down a tree when no one was watching. I took the ax and selected a tree about six inches in diameter. I had to give a good many strokes with the ax and rest a few times, but the tree came down at last, and left a funny looking stump. I heard Sam make some remark about beavers when he saw it. Cutting the tree up into fire-wood was not so hard, but when I had enough wood to cook supper I quit. I had said I would have soup for supper, and as I had no birds, the soup must be made with something else. I cut a square of lean bacon, trimmed both sides carefully, put it, with some beans, in a pail of water with a little soda, and let them boil about fifteen minutes; then, pouring this water off, I put on fresh water, adding rice and onions, and set on the fire to boil.

The Doctor wanted a Canada jay to mount, and Sam had arranged a trap to get one without spoiling the

plumage. He balanced a forked pole across a log and laid a piece of cheese on the fork; then he took the ax and sat down on the ground at the other end of the pole, and when the bird went to take the cheese, he gave the pole a hard blow with an ax. He had not gotten a bird yet, and, having plenty of time, I thought I would try to get one. I put a piece of cheese on the fork, sat down at the other end of the pole, with the ax over my shoulder, the handle tightly grasped in both hands, and waited. In a short time a bird came, and I brought the ax down, making a fearful clatter, but before the ax struck the pole, the bird had stolen my cheese and was sailing away to the treetops. I had played a fair game, and with a good deal of pique saw my small adversary win and fly off. I wonder if it laughed? I was no match for that handful of feathers, and went back to my cooking. I was much interested in watching a squirrel pick up the strips of bacon rind, and, sitting up, eat off all the meat, going from end to end of each strip twice, then throw it down and get another. Another interesting visitor was a little mouse with a body not much thicker than my finger and rather long, set on queer little short legs.

I had brought in the blankets, made our bed, and was getting ready to make the biscuit for supper when a flock of ducks settled on the lake. I was very anxious to shoot a duck on the wing, and one morning we had gone to Moose Lake, and I was given the gun and told to sit in the bow of the canoe and watch for ducks. We were going among the rushes in the hope of finding some stray ones. We had been paddling around for some time and I had forgotten all about hunting, when several black ducks rose just ahead of us in easy range. I never thought of the gun; I forgot that I was hunting ducks; I had forgotten everything but the charm of the surroundings, and just sat there and watched the ducks fly away. Bob and the Doctor yelled, "Shoot! Why don't you shoot?" So I picked up the gun and shot, but the ducks were far out of range. I don't see how a woman could be blamed for forgetting to shoot on such a morning, amid such surroundings. My failure to shoot that day had been the source of a good deal of amusement, and here was an opportunity to redeem my reputation. I got the gun off the table, where I had kept it all day, but it was loaded with No. 6 shot and I had not time to change the shells, for the ducks were rising again. I kept behind the bushes until they came in range, then I fired. One duck faltered and fell out of line, but recovered itself and went on. The No. 6 shot had not the desired effect, and I was so disappointed.

I made the biscuit, put them by the fire to bake—I had learned how to bake biscuit in the skillet—lifted the bacon out of the soup, and put it by the fire to roast. While I was attending to the cooking, after setting the table, one of those pesky jay birds lit on the table and took a bite out of the butter, and for a while I was kept busy watching the cooking and shooting birds off the table. I had said I would light the lantern at the landing, but somehow it was dark before I noticed, and then I was afraid to cross the portage. Twice I took some matches and started, but did not go far. I was not afraid anything would catch me, but I was afraid something might frighten me. Bob had laid the camp-fire, and I decided to light it instead of the lantern. The birch bark and kindling was laid on the ground under the logs ready to light, but I used a good many matches before I found the place among the kindling Bob had intended me to put one.

The day had not been long; I had enjoyed it thoroughly, and had been busy, but from dark until the men came seemed an age, though in reality scarcely two hours.

We were going to break camp Sunday morning, October 17, and expected to do our last hunting on Moose Lake Friday evening, for the canoe must be carried over the portage, and that could not be done at night. A hard rain kept us in the tent Friday evening, and the guides, taking the shotgun, started before daylight, in the rain, Saturday morning to get the canoe. They returned when we were eating breakfast with the canoe and one duck. Saturday was cold, wet and disagreeable.

Sam called us before daybreak Sunday morning, and we got up to find breakfast ready and the guides' tent down. The ground was covered with snow. What a change! When we came into the bush the tree tops were covered with a warm, yellow sunlight. We had seen that sunlight fall, leaf by leaf, until the trees were bare, and it lay on the earth a restless, brown covering, over which the Frost King had each night thrown a beautiful white lace work, and this morning had covered with a soft, white, feathery blanket. Winter had come, and it was time for us to go.

Sam had been observing Sunday by boiling a pudding for dinner, but to-day we would not get one, for our provisions were getting scarce. We were out of baking powder, sugar, dried fruit, and coffee.

We got an early start and reached Wendigo Lake in good time, getting a spruce partridge on the portage. The lake was quite rough, it was snowing, and the wind blew directly in our faces, but we did not feel the cold, and had a joyous, exhilarating race down the lake. When we went into the bush we could scarcely keep warm, but we were coming out in a snowstorm and did not feel the cold. I was astonished when I found the handle of my paddle, just above the blade, was coated with ice.

We reached the long portage near a copper mine, and camped for the night on the other end, with everything carried over. The corn cakes without baking powder were not good, and the guides went over to the mine to get some bread. They were out of bread, but had sent to Tom's Town for some, and brought us two loaves that night. We got a rabbit, cooked the last of the beans, and used all of the butter for supper. We still had rice, flour, corn meal, bacon, and tea.

The next morning we were up early, for it looked like rain, and there were a number of portages to cross, and we had to reach Tom's Town before two o'clock to get the steamer.

This branch of the White River has cut its way down through great banks of white clay, which it is constantly undermining and wearing away. We saw where a moose had come down one of these banks and crossed the river. The bank was almost perpendicular, at least fifty feet high, and was the bare, white clay, without even a blade of grass growing on it. I do not believe a man could have come down it, but that big animal had come down

either that morning or the night before. We would soon reach Tom's Town, and we had no moose. The moose of the White River Valley are practically a thing of the past. We had been in the bush three weeks, and had seen only one. Two young men that were camped on Wendigo Lake while we were in the bush came out without one. The party our guides brought out the week before we went in got no moose, yet Sam and Bob had never failed to get moose for their hunters in this district before. The White River Valley is being settled. The moose are being killed in season and out of season, and are being driven back. We could find no fault with our guides. They had worked faithfully and well, doing everything they could to get us a moose and make us comfortable, and Sam could cook as well, if not a little better, than ever.

Tom's Town had been growing while we were in the bush. A new store had been started, and the foundation had been laid for a sawmill. On board the Geisha we met Mrs. Hunter, the captain's wife, and had a very pleasant trip down the river. We found Captain Hunter always courteous and accommodating, and we wish him success in the White River Valley.

The rain was pouring down when we landed at Haileybury, and we hurried to the hotel, changed our clothes, packed our trunk, and got everything ready for an early start, as the Meteor, on Lake Temiscaming, was due at the dock before daylight. The wind was cold and very high in the morning, and it was so dark we had to have a lantern to go from the hotel to the dock.

On the Meteor we met two gentlemen from Ohio, one of them a doctor. They had gone to North Temiscaming

on the steamer the day we went to Haileybury. They got guides at North Temiscaming, and had hunted on Fish, Lizzard and Eel lakes, about ten miles northeast of where we were, and they each got a moose. The head the doctor got had a spread of 54 inches, but the other one was smaller. The doctor and his friend stopped at the Bellevue for a few days' deer hunting, but it was time for us to go home. Our hunt was over.

Moose hunting was hard work, and I got very tired, but I hope we may continue to hunt, and fish, and cruise, until we have crossed the Divide, made the last portage into eternal silence, and entered

"The low green tent  
Whose curtain never outward swings."

A. W. C.

### Among Leaping Ouananiche.

EMBOSOMED among the great Laurentian hills, and nearly two hundred and fifty miles north of the old historic city of Quebec, lies what might, without exaggeration, be termed a great inland sea. This magnificent body of water, which is over forty miles in length, and from ten to thirty miles in width, is the receiving basin of a watershed of upward of forty thousand square miles.

Some idea of the volume of water it annually receives may be formed when I state that several of the great rivers which empty into it bring down the overflow from many large lakes hundreds of miles away in the far north, the Peribonca being navigable by boats and canoes upward of six hundred miles from its mouth. This great lake finds an outlet at the point at its lower extremity called the Grand Decharge, *Anglice* Discharge, which is the head of that most wonderful river, the Saguenay.

Strange and wonderful it is, for it resembles no other river on earth; the water descending from this outlet of the lake has a fall of about 350 feet within the limits of a very few miles, and is therefore at that point a series of stupendous, angry rapids; but further down it becomes quiet, and owing to its great depth seems of inky blackness, and is, therefore, almost somber and awe-inspiring. High, rough cliffs tower above the stream, and their appearance indicates that in long past ages, by some great convulsion of nature, the rocky hills were rent asunder to permit the water to descend through the chasm.

There are many places in this river in which soundings have revealed a depth of over 1,000 feet, and where it flows by those gigantic sentinels, the headlands, Capes Trinity and Eternity, which rise perpendicularly from the water, the lead has been dropped, according to Hallock, almost a mile, and no bottom was found.

Lake St. John, with its tributaries, is the home of one of the gamiest fish that swim; it is called ouananiche by the habitants, and winninish by the Montagnais Indians, by whom it has been pursued for many generations. It is found everywhere in this great water system, having been caught in lakes and connecting streams of the Peribonca and other rivers a great many miles from the lake.

In the spring, after the ice has gone out, the habitants capture it in great numbers along the shores of the lake with bait, using a strip of pork rind or meat, and sometimes a piece of red flannel rag; the fish are then hungry, and will come to almost any lure, but as the spring wears on the Grand Discharge is the locality in which they congregate in the greatest numbers. Like other species of the Salmonidae to which they belong, they delight in "live water," and this is found in perfection at that point, for it would be difficult to find anywhere such another series of whirling eddies, fierce and foaming rapids, tumultuous and boiling whirlpools, as there are in this gigantic water gateway.

The ouananiche, one of the so-called landlocked salmon, is a salmon pure and simple, and is not in any sense landlocked, for there is nothing to prevent it going down the Saguenay if it is so inclined. It does not, however, descend below the Discharge, and if its ancestors in bygone days came from the ocean, the present race have lost their anadromous habits entirely. It is identical in every respect, such as form, color, markings, habits, etc., with the landlocked salmon of the Schoodic and other Maine lakes.

In live water it is the most gamy of all the varieties, and in the tumultuous rush of the Grand Discharge a 3-pound fish gives the angler a battle royal, which once fought will never be forgotten.

If the ouananiche found as great an abundance of food, fresh-water smelts, minnows, etc., as the landlocked salmon obtain in the Maine lakes, there is no reason to doubt that it would grow to the great size attained by the others; but it now rarely exceeds 4 pounds in weight, and in a day's catch the angler is fortunate if his fish overruns an average of 2 pounds.

The activity and dash of this fish, its wonderful leaps and spirited runs, are identically the same as those of a grilse fresh run from the ocean; it is true that the salmon angler plays his grilse ordinarily in a pool, but if one could be hooked in such a maelstrom as this, I doubt if it would give quite as fierce a battle as does the ouananiche;

for the form of the latter is more robust and muscular, the tail is broader, proportionately, than is that of the other, which affords a stronger resistance to the water.

I have taken great numbers of the landlocked salmon in Grand Lake Stream, Maine, and they were as plucky as the others, but they had not the strength and endurance that the ouananiche possesses.

Before the Quebec and Lake St. John Railway was constructed, the lake was reached only after a long, tedious, and uncomfortable journey, and therefore was but little known to anglers; but now one may enter a comfortable parlor car at Quebec at 8 A. M. and arrive at Hotel Roberval on the lake at about 6 P. M., from which point he can take steamer or train for the Grand Discharge at his option.

I first became acquainted with the merits of the ouananiche as a game fish in 1887, at which period the railway I have named had just been completed, but only to the lake, the extension to the Saguenay not then having been begun. My old friend, Dr. H., who had been my companion on a number of outings on various Canadian salmon waters, was with me on this occasion.

Considerable comment had been made in sporting publications in relation to this fish, and we were more than anxious to ascertain for ourselves whether the glowing reports that had been sent forth of the exciting sport it furnished were exaggerations.

We arrived at Hotel Roberval one evening in early June, where we passed a comfortable night, and on the following morning we took passage on the steamer Peribonca, which at that time plied up and down the lake, for the Grand Discharge. Arriving at our destination, we there made arrangements for canoes and canoes, and in a short time we were ready and "eager for the fray."

Our canoes were strong, substantial affairs, and remarkably steady for craft of their make; they were not nearly as cranky as those made by the Micmac and the Passamaquoddy Indians; they were so stiff, in fact, that both the Doctor and I had no difficulty in keeping on our feet while we were casting, although the buoyant craft was sometimes in very rough water. In each canoe was two guides; they were Indian half-breeds, rather short in stature, but very muscular and active, and they handled the birches with wonderful dexterity.

Both the Doctor and I on this occasion used eight-ounce trout rods, preferring these to the salmon rods that many anglers used at this place, the strength of the fish and heavy pull of the water seeming to require a more powerful tackle; but we both had killed many a grilse and good sized landlocked salmon on rods of this weight, and we believed we could conquer the ouananiche with them.

The guides placed the canoes in favorable positions just above the verge of the upper rapids, and they held us in place wonderfully well with the paddles alone. Although our rods were light for such work our reels contained a good hundred yards of line as a provision for the great runs these fish were said to make when hooked. As soon as we were placed within proper distance of the upper eddies, we began casting—i. e., throwing our feathered lures with rod and line in different directions upon the surface of the water, and moving them in the manner usually practiced by salmon anglers, each using but a single fly. The Doctor was an adept in the use of the rod, his fly being dropped with wonderful lightness upon patches of water so distant that the lure could hardly be seen when it alighted. Of course, I imitated him to the best of my ability, and I now and then caught expressive glances which passed between our guides, and heard their murmur of approbation in the soft accents of the French-Canadian.

Great numbers of May flies, or lace-winged flies, as they are often called, were in the air, and as they hovered over the water many of them dropped upon the circling eddies, and as they fluttered and struggled to regain their flight they furnished tempting morsels to the fish that lurked below the flecks of foam which were scattered over the surface of the water. These flies pass the larva stage in the water, from which they rise perfect insects; in this form they live but a very brief time, hence their name, ephemera. We had noticed the abundance of these insects and in consequence chose for our first casts flies which closely resembled them. We had offered our lures but a

few times when they were accepted, and we were both fast to fish whose strength and activity quickly put our light rods to a severe test. Cree-e-e our reels were merrily made to sing as the fish darted about in runs of fifty or sixty feet at a stretch; ever and anon one of them leaped high in the air, his body shining in the rays of the sun like burnished silver. In darting up from the water they endeavored to shake the hook from their mouths, almost after the manner of black bass. Both were good sized fish, nearly 18 inches in length, and their strength, dash, and endurance were wonderful. For nearly ten minutes they absolutely refused to yield, no matter how severe a tension we put upon them, and their runs and leaps were continued to the very last; they had all the speed and activity of the grilse, their leaps were fully as high as his and their fighting strength was much greater.

While our contest with the ouananiche was in progress, the guides had quietly worked the canoe up in to still water and close to the shore, thus enabling one of them to lay aside his paddle and hold the landing-net in readiness for its allotted work.

The steady strain of the rods at length brought the gamy fish into subjection, and both were successfully landed. "Vera nice feesh," exclaimed one of the guides, as he held aloft the silvery captive. "Oui, grand poissons," assented the other; "grand poissons and bon fortune, what you call ze good luck."

"Well Doctor," said I, as the two beauties were laid out before us, "we've killed a handsome brace for a starter; good three-pounders each of them, and as silvery as fresh run salmon. How do you like ouananiche fishing, anyway?" "I'm quite delighted with it," he replied. "Every inch of them is gamy, and their strength is something wonderful. Well, boys," he added, turning to the guides, "we'll try for another pair, but I doubt if we can equal these."

The canoe was again deftly moved out into the rapid water, and when our former positions were reached we offered our lures as we had done before. The ouananiche were evidently disposed to be amiable, for neither of us had made a dozen casts before we both rose and hooked our fish; beauties they were, and they seemed to be trying to outdo each other, both in the long runs they made and in their saltatory efforts. Well named are these fish—"the leaping ouananiche," for hardly any other species can vie with them in this respect.

While the Doctor was busily engaged with the fish he had hooked, I met with an accident which cost me a good casting line and a fine Durham-ranger fly. As I was standing in the canoe endeavoring to check a fierce run that the fish was making, the buoyant craft was caught by a whirling eddy, which shifted it around so quickly that I lost my balance, and, before I could steady myself on my feet again, the fish started down the rapids, as if it had a hurried errand to the St. Lawrence.

My reel screamed discordantly as the line was drawn out with lightning rapidity, and the prospect seemed good for the whole of it being carried away. Of course checking the fish, even in a slight degree, would be impossible, for its own great strength, assisted by the heavy pull of the rushing water, would have required a stout cod-line to hold the fugitive. I saw at once that quick action only on my part could save a portion of my tackle, and so, pressing my thumb firmly on the whirling reel, I threw the rod upward sharply and held it firmly with all my strength. This sudden and severe tension caused the line to break, fortunately for me, at the point where it was attached to the casting line with which, as a trophy, the fish hurried away. "You were lucky not to lose your line," exclaimed the Doctor. "I expected it would all go in that strong water." "Yes," I replied, as I prepared a new casting line and fly, "I thought for a moment that everything would be carried away; no tackle could hold that fish when he got started."

Attached to my new casting line were two flies, a silver-doctor and a gray-drake, one of which I should have removed, but owing to the excitement of the moment I neglected to do so, even after I had begun casting. My thoughts were more on the fish that escaped than they were on the work before me, and it was only when I found that two fish had accepted my lures that I realized the situation. Playing a single ouananiche in live water

keeps one pretty well employed, but when he undertakes to conquer two at a time he undoubtedly has his hands full.

"Bravo!" shouted the Doctor, "you've done it this time with a vengeance."

And the Doctor was right. I doubt very much if there was ever seen in the waters of the Grand Discharge a prettier fight than those silvery beauties put up before they were conquered. Here, there, and everywhere, seemingly at one and the same time, they worked well in double harness, for their runs were made side by side, and when they leaped both fish cleared the water together. It was a pretty sight, and one not likely to be repeated. Fortunately, in rushing about as they did, they "played" each other, for when one made a long, savage run he had the other as sort of drag upon him, and in leaping of course they could not act absolutely simultaneously.

As they had done before, the guides worked the canoe back again into the quiet cove, and it was not long before I had my fish fairly conquered and ready for the landing-net; luckily for me, it was a capacious one, and both fish were lifted in it from the water with one sweep. It was with no little satisfaction that I gazed upon my silvery prizes, for it was my first experience in playing two salmon together, and I felt that the congratulations my canoe men uttered were thoroughly genuine.

The fish were nearly matched in size, one weighing  $2\frac{1}{2}$  and the other about  $2\frac{3}{4}$  pounds. As my guides were preparing to pack the fish in wet moss in the bow of the canoe, the Doctor came into the cove to enable him to land another beauty.

"By Jove!" he exclaimed, as he gazed upon my ouananiche, "you had wonderful luck; to kill a pair like that in such a place is something to be proud of, and worth going a long distance to accomplish. Well, we've taken a half-dozen nice fish, and as it's noon, I propose that we go ashore, have lunch and a smoke, and give our boys (pointing to the guides) an hour's rest. I dare say they'll enjoy it."

"Yes," I replied, "I was not aware until now that it is so late, but I really feel that lunch would be most acceptable."

The prows of the canoes were pulled ashore, and stepping out we selected a shady spot for our resting place, and there enjoyed our noonday meal with the relish that is only given to anglers and hunters.

The allotted hour soon passed away, a good portion of it having been devoted to the siesta which one so thoroughly enjoys when on an outing in the forest and on the stream.

Our catch in the afternoon consisted of five ouananiche, three of which fell to the Doctor's rod and the others to mine, and when the hour arrived for the sailing of the steamer up the lake, we felt as we repaired to the landing place that our first day with the ouananiche had been everything we could have desired.

To anglers who are about to visit these waters, a few suggestions as to desirable varieties of flies will not here be out of place. My favorite fly for the ouananiche and other landlocked salmon is the so-called Tomak-Jo, which has a golden hackle over a red and white chenille body, and wings made from the beautiful ruff feathers of the wood or summer duck. Next in value to that is the silver-doctor, the feathers of which should always be from the crest of the golden pheasant; and following these, the light and dark Montreals, the Durham-ranger, grasshopper, butcher, light and dark fairy, and Jock-Scott, all tied in medium or small sizes, will be found amply sufficient for all conditions of weather and water.

EDWARD A. SAMUELS.

## The Leap of the Bass.

AGAIN a correspondent writes me for my opinion as to what it is that actuates a black bass after he has been hooked to leap out of his native element into the air, and if my readers will pardon me once more for "threshing old straw," in reviving once more the leaping bass, I will reply. In the first place, it is not strange that anglers should differ in their views, for with all the literature which we now have there is yet room for a most interesting book on this great fish of ours, and an appropriate title would be, "What I Do Not Know About Black Bass." Mr. George A. Hoagland, Dr. Frank Owen, Henry Homan, or George Entreken might add lots of interesting data to our black bass lore if they only would, and letters from these gentlemen would indeed be valuable. I have always believed, and still believe, that the black bass leap from the water for the sole purpose of throwing the hook from its mouth, and an experience of many years and on many waters confirms this view. It is for this reason that a bass taken with a fly yields more sport than those taken with bait, for the instinct leads it to believe that a hook in the mouth can be thrown out more readily than one lodged in the stomach. In my experience those hooked in the mouth invariably leap from the water, while those hooked deep in the throat or in the stomach very frequently do not leap at all.

Some years ago I was casting the fly in a little lake just west of Springfield, Neb., which was taken by a good sized bass, and on its first leap from the water the snell was broken from the shank of the hook. In a few seconds the bass leaped from the water at the same place and shook its head vigorously, and after an interval of a few seconds more it leaped again from the same spot, and on this occasion threw the hook from its mouth with such force that it fell on the water to a distance of fifteen feet, but after this it did not leave the water any more. It follows that on this occasion, at least, the bass must have had its mouth open, for it could not have thrown the hook from a closed mouth, and that the head must have been shaken with great force to throw the hook such a distance, and it also follows that it leaped to free itself from the hook, for after it had gotten rid of it the leaping ceased. On the other hand, I have frequently taken bass at Lake Washington while trolling with a spoon and a frog or minnow bait, which did not leap from the water at all, and have commonly found that in such cases the bait had been swallowed and the hook was far down the throat or in the stomach; and, in fact, it is frequently possible to tell to what extent a bass has swallowed the hook by its tendency to leap or not to leap from the water. As to the frequent leaping of some bass as a matter of

habit, as claimed by many of our local anglers, I can only say that I have frequently seen them break water, and in such cases have always found that they were after food abounding on or over the surface, but I have never seen one leap clear of the water unless hooked.

There are few points on which fly-fishers differ more than the correct methods of striking a bass and trout. Not a few, in fact the majority, of fly-fishers will say that a bass should not be struck. As a matter of fact, the differences of opinion among anglers on this subject are more verbal than substantial. Most men who have caught their 50 to 100 bass and 100 to 1,000 brace of trout, act in very much the same way, according to the varying circumstances of each particular case. George R. Hoagland's direction is, as regards bass, that when you see the boil and feel the pluck you may "raise your rod smartly, with a fair tug, over your shoulder." Some call this striking; others say it is simply keeping a tight line on the fish. In bass fishing, perhaps the most important point to be remembered in connection with the strike, is not to pull too soon. Men who are accustomed to the quick rising trout of rapid streams often make mistakes with bass. These small trout dash at every passing particle in all haste, fearful of food escaping in a locality where food is all too scarce. Very different is the stately Micropterus, which, as a rule, shows no too great inclination to feed, sometimes follows a fly for some yards before seizing it, and frequently breaks the surface of the water a half second or so before the fly is in its mouth.

SANDY GRISWOLD.

OMAHA, Nebraska.

## Sturgeon Galore.

A YEAR or two ago an account, fully authenticated, came up from New Orleans regarding the choking of Harvey's Canal with buffalo fish, navigation being actually impeded thereby, and because of the suffocation and putrefaction of the fish, the public health being so endangered, the Mississippi levee was cut and the odoriferous mass washed out to sea.

Now comes down from the north the following story. I know Mr. Crawford, and in this case, like all others before the bar, the prisoner must necessarily be given the benefit of the doubt. Here it is, cut from our local paper, the St. Paul Dispatch:

"E. F. Crawford, a prominent attorney throughout the northern half of the State, and who practices at Bemidji, met with the most thrilling experience of his life while coming up the Big Fork River in a canoe. He saw the river filled from bank to bank with sturgeon, the big lake fish that at this time of year ascend streams from Rainy River to lay their spawn in shallow waters. Not only was the sight appalling, but on several occasions his boat was in danger of being crushed by the countless monsters.

"In company with two rivermen, Mr. Crawford was paddling up river in great haste to reach Big Falls on the day of its being incorporated as a village, which matter was in his charge.

"To reach the town, a canoe trip was necessary, as a log-jam at the mouth of the river prevented steamboats from passing upward. The river is full of rapids at various points, and some of them are so strong that their boat had to be carried overland along the banks. They came suddenly upon a splashing surface which extended across the river and several hundred yards ahead. Here the slope was gentle and no such conditions were present as to hint that rapids should form at this point. The men were in the center of the river, but at once began to paddle their boat shoreward to avoid the rapids. Suddenly one of the boatmen cried:

"My God! This is not rapids, but a jam of fish!"

"Mr. Crawford saw in startled amazement that they were, indeed, surrounded by big fish, some longer than a man. The sturgeon leaped and darted, showing the white gleam of their bellies, as they spurted along and churned the waters with head and tail. There were thousands of them, traveling up stream in a wedge-shape, with a leader at the head. Except for a narrow streak on each side of the river, the fish made the river look like a bed of rapids. By striking with their paddles, the men managed to clear a path to the bank without their canoe being crushed by the sportive monsters. Then, by dragging their canoe cautiously along the bank for half an hour, they got ahead of this school, which was swimming at a rate of about three miles an hour up stream. Later, another school like the first was encountered, and still another, although smaller. After that Mr. Crawford's party passed straggling bunches of five or six."

And the above reminds me of a Russian sturgeon story. It was on the banks of one of the principal sturgeon rivers in Russia, and at a time when the villagers had abandoned all other duties and were attending strictly to that business which involved the catching of the sturgeon, the smoking of same, and the treatment of the eggs to turn same into genuine caviar.

Two Americans were in the village and became interested onlookers. They noticed that a strong line or rope was drawn across the stream, and from it dangled innumerable barbless cod-hooks, each fastened by a strong linen snell.

No bait was used, the bare hooks dangling in the water naked as far as any tempting morsel was concerned. And this queer way of fishing was credited up to the crass ignorance and benighted condition of the natives. So off the two Americans hiked to the nearest city and there laid in a stock of barbed hooks, lines, etc., and returning set about to show the natives a thing or two, and they set their lines. It took but a very limited time for the natives to catch on, and up went a hue and cry, and before the Yankees knew where they were at they were running for their lives from a howling mob of infuriated Russians—actually running into the Government police barracks for protection. In time it was all made clear. The native fishermen had no desire to catch all the fish in the river all at one and the same time. They wanted some of the sturgeon to get away and come again. That's why they used barbless hooks. If they wanted all the fish in the river they could use nets, but they planned it otherwise. As long as a reasonable run of sturgeon was insured, and Russians and others enjoyed caviar on toast, as a starter, so long were they assured of employment when

the fish were running and reasonable returns. It meant recurring work and profit as the season rolled around, a condition that must cease with the extermination of the fish. So if as many sturgeon pulled loose and escaped as were hooked and held and captured, it was all right, for they would return again next year.

All of which it nearly cost the two Yankees their lives to find out.

CHARLES CRISTADORO.

ST. PAUL, Minn.

## New Jersey Shore Fishing.

ASBURY PARK, N. J., June 9.—June is ever productive of bass, as of roses, is a saying much in vogue among the angling fraternity, and as each succeeding year rolls around the fact is newly affirmed. While an occasional bass is taken during May in seasons that are mild, still little is to be expected earlier than the beginning of the present month.

So far eleven fish have been taken that are known of in this vicinity, and none of these of the large order,  $10\frac{1}{2}$  pounds being the heaviest. The afternoon of the 6th witnessed the first capture—by a woman, at that, Mrs. Bruere, a well-known enthusiast, who summers at Avon, N. J., who, despite gray hairs, braves the elements in bass weather and stays with the tides, casting as well as many of the sterner sex, and is uniformly successful. Of the eleven fish taken, three have fallen to her rod, weights, 3, 5, and 9 pounds respectively.

The conditions for striped bass are very promising. There is an abundance of food of their favorite sorts, shrimps being phenomenally abundant. Several river and offshore fishermen have told me that they have never known them so plentiful and of such large size. All manner of fish feed greedily upon them, and it argues well for future sport.

The kingfish, which usually are quite abundant at this period, are scarce, although they were taken quite freely in the pounds about two weeks ago. Only one fish has been reported taken on the hook. Porgies, as they are usually termed in these waters, but properly "scup," have been very plentiful, as many as 80 barrels being taken at one lift of one pound net. They are not now so abundant. Sea bass are legion. It is perhaps safe to say that not within ten years have they been taken in such quantities and of such fine size, 2 and 3-pound fish being caught in the small rivers on the hook, which is a most unusual occurrence. That general favorite, the weakfish, is also in evidence; quite good catches have recently been made in the nets, although none have as yet come to the hook in these waters. Plaice, or, as they are usually termed, fluke, are plentiful, are in fine condition, are taking the hook well, and afford good sport when fished for with light tackle.

As to fresh-water fishing, results have been quite satisfactory. White perch have not taken the hook as readily as they did last season, however, owing to some caprice of their own. The good work done by our commissioners in trout stocking is plainly to be seen. I have seen and measured trout 13 inches in length from a stream within three miles of this place which never knew a trout until they were planted there five years ago as fingerlings. One small stream stocked by myself and a friend six years ago is now a joy, and the progeny have stocked two other quite large streams, so that the supply is now fairly abundant. Our original stock consisted of just twenty-seven fish of from five to eight inches in length. So much for a little thought, a little care, and lines scrupulously kept from the waters.

The new law which opens the black bass season on May 20 is generally regarded as a mistake in this part of the State. The fish do not multiply rapidly in our waters, and such streams as do contain them are at all times overfished by the hordes who crowd here during the months the season is open for their capture.

LEONARD HULIT.

## Salmon Fishermen are on the Move.

QUEBEC, Can., June 11.—Many salmon fishermen are already in camp on the banks of their rivers, and the bulk of those who fish the north shore streams, including Messrs. R. E. Plumb, F. S. Hodges, Vesey Boswell, Edson Fitch, and many others, are expected to go down by the next trip of the King Edward. Among those who have already gone down are Messrs. John and James Manuel, of Ottawa, John Law and Colonel Whitehead, of Montreal, all of whom fish the Godbout. Mr. Walter Brackett, of Boston, is daily expected here on his way to the Marguerite, and Mr. Cabot, of Boston, is expected on the Grand River of Gaspé about the 23d inst. Several members of the Restigouche Club are already in camp at Metapedia, and so are some of the members of the Chamberlain Shoals Club, including Messrs. I. H. Stearns and W. M. Macpherson. Dr. W. F. Campbell and Mr. Stikeman are unable to go down this year. The Governor-General, the Earl of Minto, hopes to be able to go to the Cascapedia shortly for a few days.

Ouananiche fishermen for the Grand Discharge are just commencing to put in an appearance here, and many have written to secure accommodation. The first boat for the Grand Discharge crossed Lake St. John from Roberval on the 12th inst., and at present writing no word has been received from the first party of anglers to fish the waters. Several old-time fishermen in this country were with the party, including Mr. George E. Hart, of Waterbury.

Trout fishermen are arriving here from the other side of the boundary line daily. At the headquarters of the Metabetchouan Club the other day twenty-four guests were present at one time. Reports as to the fishing continue to be most satisfactory from all the northern club territories. Some very large trout have been taken on the fly during the last week out of Lake Bouchette, the Oniatichouan River, and the waters of the Laurentides Fish and Game Club. Premier Parent, of Quebec, the Minister of Lands and Fisheries, has been one of the most successful anglers this spring in the Oniatichouan River.

On the Tourilli Club limits catches of very heavy trout are reported by the president of the club, Mr. McSloy, of St. Catherine's, and by Mr. and Mrs. Vanderwerken, of New York.

Inquiry as to the most successful flies tried this season upon the waters in the Lake St. John district, elicits the

fact that the most killing ones are the brighter colored patterns. This may be partially due to the fact that the water throughout the district remains pretty high. The Parmachenee-belle, the coachman, and the Jock-Scott are proving much more successful than such plain colors as those of the brown-hackle and the Montreal, for instance.

Those anglers who are not members of any of the clubs along the line of the Quebec and Lake St. John Railway, may be glad to learn that some splendid trout fishing is being had this spring in the unleased portion of the Batis-can River, along the railway track, and particularly between Mequik and Laurentides station. Some really splendid fish were taken last week at the foot of some of the many heavy rapids in this stretch of river.

In the waters back of Montreal the fish are reported to be rising very freely, but there has been so much rain for the last week or two that comparatively few fishermen have cast for them.

On the Nova Scotian coast sea trout are just now very plentiful. Major Ashburner and Mrs. Ashburner, of Bernuda, have recently enjoyed very excellent sport there. In the estuaries of the river flowing into the St. Lawrence these fish have scarcely yet commenced to run in any quantity. They may now be reported plentiful any day, however.

E. T. D. CHAMBERS.

## Fishing and the Sequel.

THERE were six in our hunting party, and we were camped at Witbac, in the upper Peninsula of Michigan. The open season was in October, the forest dry and noisy, the weather mild, and deer scarce and hard to find. We had neglected getting an order from the superintendent of the St. Paul Railway for our train to stop at Witch Lake, and were so unfortunate as to have for our conductor the only one on the line that would not stop his train between stations without orders from headquarters; therefore we were compelled to make a dry camp, so to speak; for what sportsman would consider it a perfect camp a mile from either lake or river or both, even though there was a well a hundred paces distant?

It was two miles down to Witch Lake, where we had meant to stop, but we hoofed it and brought back some strings of ring perch. The Michigamme River ran only one mile east of us, but it was reputed a trout stream, and trout were out of season.

The Doctor and I were hunting along the river one day, and passed many fine trout pools, where the river wound through the forest interspersed with cedar swamps. We might have caught speckled trout in any quantity and never been apprehended; but we were not hankering after breaking laws either secretly nor openly. However, by the time we reached the bridge where the Republic and Floodwood wagon road crosses the river, we rested before starting campward. There was a dam under the bridge and such a fine pool below the dam, we concluded to fish. So the Doctor went for fish-poles, and I skirmished for bait. I came back with a piece of small bird, and it was not long until we had quite a string of chubs.

"Pon my word they were chubs and nothing else. Then the Doctor held up a squirming thing all covered with pink spots and wanted to know what kind of a fish that was. I told him it was the kind we were not allowed to catch. Rain began to fall, but the chubs bit just the same.

A man in a drab waterproof and driving two horses in a buggy, came from the north or Republic end of the road, and made the turn to the point where a branch road runs up west to Witbec. As he did not drive up to the bridge, I supposed he had driven on westward, until I heard him pounding his buggy as though he had a loose tire, and then I saw him and the rig down there in the road, about 200 yards distant. He monkeyed around there possibly ten minutes, possibly twenty, I did not note the passing of time, for the chubs seemed hungry; and the Doctor had found that fish will take fish bait, or more properly speaking, that fish liked fish better than bird, so that we had plenty of bait. The last I saw of the man and his team they were going back toward Republic. That seemed strange, for it was nine miles up to Republic, and he had not transacted any business that we were aware of. We tired of fishing about that time, went to camp, and cleaned our fish.

The following day was my turn in camp. The boys were out, and I had done the dishes and was putting the camp in order for visitors, when a citified young chap came to the tent door. I invited him in, but he offered some excuse, and soon stepped away. I could not know but that he was looking after some woodchoppers who were cutting cord wood just east of our tent, and had almost forgotten him, when, hearing a twig break, I went to the tent door and saw him looking among the brush back of the tent, as though there was something lost, strayed, or stolen that he thought he could locate. Even then I did not know but that we were trespassing on a favorite bit of his property, and, though his conduct looked suspicious, it were better that I hold my tongue, so long as he asked no leading questions.

I knew quite well if he were looking for the off-falling from our fish, he would have to uproot that wind-shaken spruce stump in the bottom of that hole east of the tent, and he could not do that; and if he attempted it he would knock more dirt down on top of those fish heads and the refuse from our tent, and bury it all the deeper.

I don't know to this day why the man drove back toward Republic; nor why the young fellow poked about among the brush back of our tent. If they were looking for violators of the fish laws, they could find them most any day among their neighbors and friends.

G. W. CUNNINGHAM.

## Lake Garfield's Floating Island.

A WINSTED, CONN., note in the New York Times, June 8, says: "The large floating island in Lake Garfield, at Monterey, in the Berkshire Hills, through which men fish for bullheads in the daytime, and which last summer took its first trip across the lake in twenty-five years, made another move yesterday. It moved back to its original place. The distance of about one mile was made in less than an hour and a half. Before striking shore it broke in nearly halves, so that the lake now has two moving islands, each of which is large enough to hold a good-sized cottage."

## Colorado Fishing.

DENVER, Colo., June 7.—The fishing season has opened up only fairly this year. On the first the waters of all streams was very roily and very high; as a consequence the catches have been few and small. At Buffalo, in the cañon of the Platte, one Schumacher killed a 3-pound German trout. But this is a rather small exploit when one considers that 5 and 7-pounders are frequently taken during the fly-taking season. Worm-fishing is the only thing now; the real thing—fly-casting—will follow about July 1. Any stream will be good enough for a good angler. There has been very little dynamiting of trout the past winter. People are saving their dynamite for the purpose of blowing each other up. (See daily papers.)

J. D. C.

## Lake Dunmore Landlocked Salmon.

BOSTON, June 8.—*Editor Forest and Stream:* The first landlocked salmon of any size taken from Lake Dunmore, Vt., was caught May 28 by Mr. Ed. Thayer, of Brandon, Vt. This gentleman stocked the lake ten years ago with 10,000 fingerlings, and while a few small fish have been taken, this is the first one of any size. The fish was very gamy and weighed 7 pounds 3 ounces.

E. C. STEVENS.

GEORGE PUTNAM SMITH, who died at his home in New York city on Friday of last week, at the age of fifty-eight years, was one of that large number of lawyers who find it practicable to continue with a successful practice at the bar a full share of participation in the recreations of the field. In 1880 Mr. Smith published a little book on the "Law of Field Sports," in which was brought together a vast amount of information respecting the rights, privileges, and obligations of the men who hunt and fish. We quote from the preface this bit of sound reasoning:

To kill game before the season opens or after it closes should be deemed the act of the pot-hunter, who, in America, occupies a position and deserves more than the obloquy of the poacher in England. The latter has the moral justification that the English laws concerning land and game are against natural right—they give to land as property attributes which do not properly belong to it, and they have made the pursuit of game the privilege and pleasure of the few, to the burden and detriment of the many. But the pot-hunter has no such justification. He violates the doctrine of fair play. By taking game at times or by means which the statute—which he knows expresses the carefully considered opinion of a large majority of his fellow sportsmen—has declared to be improper, he steals a march on them and robs them of a fair chance to obtain the game which he has killed, because he chose a time or a means which he knew they would not take.

Ex-JUDGE HENRY F. MCGOWN, who died at his home in New York, on Monday, June 13, at the age of eighty-one years, was one of the best known anglers of this city. He was specially devoted to striped bass fishing, and was for years president of the Cuttyhunk Club, whose stands on Cuttyhunk Island, Mass., afford some of the best sea fishing on the Atlantic Coast. Judge McGown was a frequent contributor to our angling columns.

## Canoeing.

### How to Join the A. C. A.

From Chapter I., Section 1, of the by-laws of the A. C. A.: "Application for membership shall be made to the Division Pursers, and shall be accompanied by the recommendation of an active member and by the sum of two dollars, one dollar as entrance fee and one dollar as dues for the current year, to be refunded in case of non-election of the applicant."

## Cruising on the Delaware River.

### Lackawaxen to the Delaware Water Gap.

BY WILLIAM ELLERY TUFTS.

OUR canoes made the journey from New York city to Lackawaxen, Pa., by way of the Erie Railway without accident, and the Erie baggagemaster was good enough to check them through free for us. They were canvas-covered cedar canoes of the Old Town and Rushton type, the lengths being 17ft. and 16ft. respectively.

The cruise started the last week in August; our party was composed of four, and Lackawaxen was our starting point, all our luggage having been shipped there previously.

The outfit consisted of a waterproof tent 8ft. by 7ft. with a 3ft. wall; a waterproof pack basket for provisions and cooking utensils; two waterproof pack bags for clothes; a couple of portmanteaus, guns, cameras and fishing tackle. We carried in our pack flour, bacon, coffee, several cans baked beans and bread and butter. Our cooking utensils consisted of two frying-pans, water pail, boiling pot and coffee-pot. We also carried an adjustable broiler to set on a stone fire-place; a large bag of lemons, which turned out to be a great luxury, as at times our thirst would be very great, and not knowing where any springs were, we used the river water with a few of the lemons and some sugar and received immediate relief and refreshment. Potatoes, corn—in fact most any vegetable—can be purchased at farms along the river banks, so there is no need of taking a large stock in the canoe.

Lackawaxen is a small town, but has a couple of good country stores, and most all of the pack provisions can be procured there. We arrived about midnight, and we fortunately found a very good hotel within a stone's throw of the depot, where board can be obtained at a reasonable figure.

It was misty the morning our cruise started, so we were delayed a couple of hours waiting for the haze to lift. There are a couple of old landmarks near the station which are quite interesting; an old dam within a

hundred yards of the depot built of logs; it is about one hundred and fifty feet long and about twice as wide. The water that runs over the dam is not over 18 inches deep in any place, but it runs very swiftly. While we stood there watching the boiling current, we saw several shad swim over the dam against the current. We spent some time in cruising over this dam; it is great practice before a long trip, and gets one in good trim for the pace that is to come, and is perfectly safe.

The viaduct of the old Delaware and Hudson Canal crosses the river over the dam; by climbing to the top of this you can ascertain the trend of the river bed and get a beautiful view of the surrounding country.

About 10:30 on August 30 the mist cleared, we finished packing our canoes, and started on our journey down the river. There is a feeling of great satisfaction to the canoeist when at last he is started on a cruise.

There is a pretty good current as you leave Lackawaxen; all that is needed is to keep off the rocks, which stick out all over the river. The water is shallow in this vicinity, and a pole can be used at times effectively. The river was low and the Delaware is much nicer when the water is shallow, as then all the rocks can be seen.

About half way between Lackawaxen and Shohola there is a very swift rapid, the river widens, and there are so many sharp rocks sticking out all over that it appears like a picket fence on the canoeist's approach. We landed at the beginning of these rapids to reconnoiter. The rift seemed impassable, but our small canoe—the one that contained the lemons—decided to make the venture. We kept one boat on shore, and, perched on a high rock, watched the fun. They had to make a horse-shoe to reach the middle of the stream; when opposite us they were fully one hundred yards out in the river. Everything proceeded splendidly until they grounded on a rock and then turned turtle. It took some time to right the canoe, but nothing was lost except the lemons, which floated down stream. We managed to make a dry shoot with our canoe by hugging the shore and using the pole. Sometimes it is very advantageous to land one man and let him take the pack containing the dry clothes and walk around a very bad rift. We found that one man could manage a boat more easily than two in a violent rift, and even at the worst you are sure of a dry change of clothes. Most of the rifts of the Delaware are not over one hundred yards in length where it is necessary to land a man.

Just past this rift is good deep water; we beached our canoes and built a fire to dry our comrades, and then prepared luncheon. After luncheon we decided to try this tempting deep water for bass. We paddled as far up the rapids as possible letting out sixty or seventy feet of line with a small Shakespeare bait. We drifted into the eddies and finally landed two black bass weighing 2¼ pounds.

Shohola was reached at three o'clock, having a good current all the way. We made our temporary camp for the night and then strolled around Shohola Glens, having previously taken a ride on the gravity road. The Glens are well worth a visit; in fact, a day could easily be spent in this vicinity and then many places would remain unexplored. Shohola can be easily told, as the first bridge that crosses the river is there.

We resumed our cruise early the following morning. The current was exceedingly swift, with some rocks. Before long we encountered a rapid, and we put ashore a man out of each canoe with the clothes. There is a miniature waterfall in these rapids, but with reasonable care one can easily get through. I took my canoe safely over, and it was exhilarating work. I also had the pleasure of seeing my companion in the other canoe turn turtle. He had his bathing suit on this time, so no damage was done, and he enjoyed the ducking. My experience teaches me a bathing suit is a good thing to wear when canoeing.

It is smooth sailing after this one rift, only keep your eyes peeled for rocks. The next thing that will attract attention is a geyser spring which throws a stream of water a hundred feet in the air. This can be seen a couple of miles before you get to it, and it marks the approach of Pond Eddy, the next town.

Near Pond Eddy the water is calm, and for a mile it is necessary to paddle until another bridge is passed; the current starts about under the bridge and then all is well. The surrounding country is magnificent, and the fishing is fine. We used a small trolling spoon and caught several strawberry bass. We landed for lunch, and had an interesting chat with some of the natives. They told us the fishing was good anywhere in this vicinity, helgramites being the favorite bait for bass. We found this such an interesting country we made our camp here over night.

We struck the eddy early the next day, running into fine swift rapids known as the Big Cedar. These rapids are quite long and safe, almost to the end, when you reach what is known as Cellar's Hole, and there is where it is necessary to get out and walk. This is the only carry, and by keeping along the shore the distance can be reduced to about one hundred feet. Having passed these rapids, the current gets normal again. At Millrift and Sparrowbush the rifts are very swift, only after passing Sparrowbush does the river run slowly. Here beautiful palisade rocks rise abruptly five hundred feet from the water's edge. On top of these is what is known as the Eagle's Nest; the scenery through there is certainly very beautiful. At this point in the river there is a peculiar back eddy, and before we passed this place we succeeded in breaking two paddles.

Just before reaching Matamoras and Port Jervis the scenery becomes even more magnificent; pine trees extend upward on both sides the river, making solid walls. The current gets strong again as Port Jervis is approached, but is absolutely safe as there are no dangerous rocks. There are a couple of little waterfalls which can be scaled over if more excitement is wished; the canoe I was steering went over both.

We stopped at a hotel in Port Jervis over night, and the next morning stocked up our provision bag and purchased two new paddles. There is good bass fishing at Port Jervis, and during the morning we spent some time watching the natives fish from the bank. They used a float and shiner bait, landing several large black bass.

A fine little rift starts at Port Jervis, and this takes one down to the "Tri-State Rock." This is an interesting

point, the boundary line of three States meeting here. A short distance from this rock the current becomes strong and swift. We kept in the current until about two miles below Port Jervis, and then we landed on a small island. We explored the island thoroughly, and on the far end found such an attractive little place that we decided to spend a few days there. The island is situated near the left-hand side of the river. It is about a quarter mile long and an eighth of a mile wide, with good canoeing on each side. The far end rises about fifteen feet out of water, and is covered with large oak trees and fronted with a sandy beach. There is a good spring and lots of driftwood for fire, making the place in general an ideal camping ground. Just across the river is solid rock bank and deep water, making an ideal place to fish from, and a good swimming pool as well. We worked all the afternoon fixing our stationary camp, and by evening had things in very comfortable shape. A feature of this camp is the magnificent view that can be obtained up and down the river.

We spent most of our time fishing. The strawberry bass and pickerel were plentiful; we used an ordinary trolling spoon of small size. In the evening we fished from the bank and had splendid luck with the catfish and perch. Suckers also take the bait at night; we landed several weighing 2 pounds apiece, using angleworms for bait. At dusk the ducks fly; we saw several flocks of wood ducks, and one evening bagged three. We found an otter slide on the lower part of the island, and one evening while fishing we saw an otter, but as usual our guns were at camp. The water off the camp was calm and deep, making a good place for canoe tilting; we took advantage of this, and had several good tilts during our stay.

We spent four days on this island, which carried us to Labor Day. We resumed our cruise on the afternoon of September 7, stopping at Milford over night at a hotel. Milford is about seven miles below Port Jervis by the river; there is a swift current all the way, with only one rift. This rift is about four miles below Port Jervis. The river narrows at this place and bends in the shape of a horse-shoe. The rift made such a noise that we decided to land and look things over before taking a chance. I think this is a good idea in cases where one is not sure of one's bearings. On examining the rift we found the river dropped about five feet to the hundred, the deep water being on the right-hand side. We made a dry and perfect shoot of this rift, which I do not think could have been done had we not first landed.

We started early on the morning of the 8th from Milford. For some distance from this town the river is very smooth, and it becomes necessary to depend on your paddles to make headway. I am positive there is great quail shooting through this section, for we observed several flocks, and could hear their calls all day. If this trip should be taken later in the fall, be sure there is some fine shot in the pack-bag.

Muskmelons were very plentiful; a basket full can be purchased from any of the farmers for a trifle. The corn-fields also help in this section, and green corn roasted with the husk on is a treat.

We arrived at Dingman's Ferry about four o'clock and camped over night about a half mile below. The cat-fishing here is excellent; we had fine sport that evening catching enough for breakfast. We were very lucky that evening in keeping dry. There were two heavy showers, one above and the other below us. We could hear the rain distinctly, but not a drop fell where we camped.

We had some paddling before us the next morning, the river being very calm. At noon we lunched at Walpack Center, where we purchased a basket of melons and some apples. Milk is easily obtained from any of the farmers. We tried the fishing at this place, but had no luck, and then resumed our journey.

The current starts at that point and makes itself felt for a considerable distance. We met a lumber raft going down the river, and followed in its course. Lots of wire ferries cross the river from now on, and it is not an unusual sight to see a team of horses and a carriage full of people in a scow making a crossing.

On nearing Bushkill the river makes some sharp turns and also makes some abrupt drops, which cause wild rifts. Great farms extend down to the river brink, then woodland, then rocks and mountains, till the eye at last wonders at such a dreamland of beauty.

One can hear the trains at Bushkill for the first time since leaving Port Jervis. The river makes a sharp turn at the Bushkill landing, the town being a mile or so

back from the river, and then one passes a growth of balsam trees, the fragrance of which can be detected immediately. Just opposite these trees we pitched our camp for the night. As we landed we caught a glimpse of an otter, but we were unable to get a shot.

Our camp was situated on the left side of the river on a bank of sand some twelve feet above the water. The river is shallow and lots of rocks are to be seen. The beach is extremely stony, adding to the ease of making a stone fire-place. We sat around the camp-fire that night and talked over our journey thus far. I think we stayed up later than usual watching the pine knots sputter and burn, and smoking our pipes.

One of our men arose early the next morning and paddled to Bushkill for fresh bread for breakfast—quite a treat at this stage of the trip. We decided to stay a couple of hours exploring and fishing in this vicinity. We were only thirteen miles from the Gap, so we spent as much time as possible at this place. The water was shallow and the current very swift. Anxious to try the bass among the rocks, we succeeded in tying our canoe to a rock, which held us right in an eddy. We let out some sixty feet of line with the Shakespeare, having immense sport with the strawberry bass, although they were not as large as we caught above. Our other canoe tried the hunting, and on their arrival they showed a beautiful brace of redhead ducks and a couple of jacksnipe. The remainder of our time we spent in taking pictures and exploring the massive boulder across from camp; a hard climb landed us on its summit, from which we could easily see the Water Gap.

We had a friendly chat with a couple of the natives on our return. They are very hospitable people who live along the Delaware, and if ever in need do not hesitate to make your wants known to them, for they will do anything for you and will not expect a life recompense for it. Often it is necessary to ask about the river, and no one can tell you better than they. We were sorry to leave this beautiful place that last morning, and with much reluctance we resumed our journey. The current is extremely rapid in the vicinity of Bushkill. Go as slow as possible for the rocks protrude all over; sometimes it is advantageous to back-paddle. The right side of the river is best. The current becomes swifter as you proceed, and finally carries you into what is known as Sambo and Mary's Rapids. These rapids are the worst of all rapids in the Delaware. They can be heard a mile before they are reached. They get their name from two negroes who were drowned while trying to pass them. At some distance one can see the foam flying and the whitecaps tossing about. Keep to the left and sit quiet, the current will do the rest.

After passing the rapids "comes the calm after the storm." For fully three miles the river widens and is smooth as a lake. There are some islands along here and lots of sandy beach. We landed for a swim about noon, and ate our lunch in one of the little huts the natives use to pull their shad nets in during the shad season.

Some beautiful little streams empty into the Delaware through this section. We paddled quite a ways up one of these and found the scenery magnificent and very wild. The prettiest stream is known as the Little Bushkill.

We were now only about five miles from the Gap; the current is not very swift, but just swift enough to let us seek out some beautiful landscapes to snap with the camera. Our party separated at an island, one boat going around each side. My canoe kept to the left shore of the river, and we succeeded in getting gloriously stuck. The right-hand bank of the river is the best all the way from Sambo Rapids.

The mountains in the distance part like the opening of a vast cañon. Two conical summits, more prominent than the rest, stand like monstrous warriors guarding the silver river that intervenes forming nature's boundary line. Then comes the bridge across the river, and our destination is about reached. The current regains its velocity at this bridge and brings back old times. The channel now is on the extreme left. The river must drop twenty feet here, the current taking one within a couple feet of the shore, and in the shape of a horse-shoe. We cut the rapids when in sight of the Water Gap depot and beached our canoes when directly in back of it. The depot is not over one hundred feet from the river, making it very easy to bring the canoe to the baggage office.

We spent about ten days on this cruise, counting the days in camp on the island. The trip on a steady cruise can be made comfortably in four days. Our canoes were

very little damaged, although they had some pretty rough usage. After we became tanned by the sun we used our bathing suits while paddling; at other times a blue flannel shirt with flannel or duck pants and canoe shoes. Be sure and have your valuable things tied securely in the boat. I consider a good maple paddle as the best, and do not forget a sponge.

### Red Dragon C. C.

THE Red Dragon C. C., of Philadelphia, has opened a busy season with the active membership list filled. On May 14 the spring opening and flag raising was held, with a large gathering of members. On May 28, 29, 30, a party headed by Commodore MacIister cruised from the Delaware Water Gap to Trenton, an 80-mile run. With the Commodore were Messrs. Logan, Mitchell, Fenimore, and Mr. and Mrs. Hemingway. The entire party ran safely through Foul Riff, and also passed over all the dams, with the exception of Well's Falls, which was carried. The stops were at Easton and Point Pleasant for the nights, and a short visit was made with the Park Island boys, when they passed their pretty home above Trenton. Below the Trenton Falls, Mr. W. H. Wolstencroft, a Red Dragon member, met the canoeists with his launch, and towed them to the club house at Wissinoming.

Another cruising party, consisting of Messrs. Swift and Quashebart, and Mr. and Mrs. W. K. Park, had a delightful run from Brown's Mills, in The Pines, N. J., to the club house, about 50 miles as the stream flows. They started at the head of Rancocas Creek, and followed it to the Delaware River at Delanco. They found the first three miles by land a full ten miles by the narrow, winding creek. For the first ten miles the stream was only a few feet wide, yet three to six feet deep, winding through the piney woods, far from all sight and sound of civilization. There was a steady current, but no rapids, and only a single blade paddle could be used for the first day's run. Stopping places were found at Birmingham and Smithville. Five dams were easily carried between Brown's Mills and Mt. Holly.

Some of the "old guard" went into camp at Delanco May 28-30, and report the usual good time. In the camping party were Captain Blummer, F. Noyes, T. W. Cook, W. C. Thompson, A. D. Shaw, and W. J. Scott.

On June 18 and September 10 the regattas of the Red Dragon C. C. will be held. Seven events are scheduled for each regatta, including tandem double blade, single blade, mixed doubles, swimming and tilting. Events are open to all amateur canoeists, except No. 2 on September 10, which will be open to Red Dragon members only.

Commodore MacIister is making things lively this season, and the coming regattas will have the largest entry list in the history of the club. A large number of handsome prizes have been offered for competition.

W. K. P.

### New York C. C.

Bensonhurst, Gravesend Bay—Saturday, June 11.

THE New York C. C., held its annual spring regatta at Bensonhurst, on Saturday, June 11. A large number of members and their guests watched the events from the club grounds. The summaries:

Record sailing, decked canoes, course 4½ miles; start, 3:21.			
	Finish.	Elapsed.	
Aziz, F. C. Moore.....	4 22 11	1 01 11	
Zaidee, D. B. Goodsell.....	4 22 27	1 01 27	
Buzzard II., C. B. Vaux.....	4 28 50	1 07 54	
Roe, J. E. Plummer.....	Did not finish.		
Shamrock, W. Insle.....	Did not finish.		

Record sailing, open canoes, handicap; course, 3 miles; start 3:30.			
	Finish.	Elapsed.	Corrected.
A. M. Poole.....	4 42 09	1 12 09	1 11 09
R. S. Foster.....	4 41 30	1 11 30	1 11 30
B. F. Speidel.....	4 45 34	1 15 34	1 13 34

Woolsey Carmalt, W. Yelland, Jr., F. C. Hoyt, O. H. Sawyer, R. S. Hawthorne and J. M. Dean also started.

Man overboard race: Won by G. S. Morrissey, New York C. C.; G. H. King, Knickerbocker C. C., second.

Open canoe paddling, single blade, ½ mile: Won by G. H. King, Knickerbocker C. C.; G. S. Morrissey, New York C. C., second.

Open canoe paddling, double blades, ½ mile: Won by J. E. Plummer, New York C. C.; G. S. Morrissey, same club, second.

Open canoe paddling, tandem, single blade, ½ mile: Won by King and Boell, Knickerbocker C. C.; Wright and Plummer, New York C. C., second.

Tail end race: Won by J. E. Plummer; W. Insle second; C. H. Parsons, third, and A. M. Poole, fourth, all of the New York C. C.

Tournament: King and Boell, Knickerbocker C. C., beat Wright and Insle, New York C. C.

### Yachting Fixtures for 1904.

Members of race committees, and secretaries, will confer a favor by sending notice of errors or omissions in the following list, and also changes which may be made in the future.

#### JUNE.

16. New York, annual regatta, Lower Bay, N. Y.
17. Boston, Mass. Y. R. A., Hull.
18. Larchmont, spring regatta, Larchmont.
19. New York, Lysistrata cup, Sandy Hook Lightship.
20. New Rochelle, power boats, New Rochelle.
21. Squantum, Mass. Y. R. A., open, Squantum.
22. New York, special races, Glen Cove.
23. New York, power boats, Glen Cove.
24. New York, Glen Cove cups, Glen Cove.
25. American Power Boat Ass'n, challenge cup, Hudson River.
26. American Power Boat Ass'n, challenge cup, Hudson River.
27. Corinthian, club race, Marblehead.
28. Seawanhaka, L. I. Sound Y. R. A., annual, Oyster Bay.
29. New York Athletic Club, ocean race, Long Island Sound.
30. American Power Boat Ass'n, challenge cup, Hudson River.
31. Manhasset Bay, challenge cup series, L. I. Sound.
32. Manhasset Bay, challenge cup series, L. I. Sound.
33. Manhasset Bay, challenge cup series, L. I. Sound.

### Boston Y. C.

Hull, Mass.—Saturday, June 11.

THE first of a series of special club races of the Boston Y. C., for yachts which are not eligible for the Y. R. A. of M. classes, or which remain at the Hull anchorage during the season, was sailed off the Hull station of the club Saturday, June 11. The breeze was light from the E., and held fairly steady throughout the race. Three classes are provided for in the series, 18ft. knockabouts and two handicap classes. In Saturday's race Bat, in the 18ft. class, scored another victory, making three straight since the season opened. In this class Dorchen got the start, with Again on her weather quarter. Bat was last to cross the starting line, but she tacked clear as soon as she crossed, and stood well over to Bumkin Island, working up through the lee of the fleet. When she tacked out from the island, she crossed every boat in the class, and from that out had the race all her own way. There was a hot scrap for second place, which was captured by Again. In the first handicap class Opah got the start, and the class split tacks. Opah, Kiuna and Idella going toward Hog Island, and Jingo and Kit going toward Bumkin Island. The Bumkin Island course was the better of the two, Jingo and Kit crossing the other three when they tacked out. Jingo led all over the course, but was closely pressed by Kit, which took first prize on corrected time. In the second handicap class, Scapegoat got the

start, and led all over the course, but lost to Mildred on corrected time. The summary:

#### Class I—18-footers.

	Elapsed.	
Bat, C. F. Adams, 2d.....	1 18 35	
Again, L. B. Goodspeed.....	1 23 20	
Mirage II., J. W. Olmstead.....	1 23 45	
Napier, B. S. Permar.....	1 24 20	
Bonito, G. H. Wightman.....	1 24 55	
Humbog, C. W. Cole.....	1 27 08	
Dorchen, A. W. Finlay.....	1 29 15	
Nienack, E. R. Holmes.....	1 32 53	

#### First Handicap.

	Elapsed.	Corrected.

Clarice, J. P. Harvey.....	1 37 42	1 27 42

## Designing Competition.

### Honorable Mention Design.

WE publish herewith one of the designs that received Honorable Mention in our designing competition for a 40ft. waterline cruiser.

The design was made by Mr. Robert C. Simpson, of Boston, Mass., who has the following to say in regard to the boat:

It has not been attempted in this design to secure the largest or fastest boat on the 40ft. waterline, but rather an all-around boat without freak features. The ends were drawn with a view to a trim appearance and ability at sea, and were kept moderately fine for these reasons. The beam was set at a figure which would require but a moderate sail area, and the displacement was calculated to float a substantially constructed hull and comfortable cabin, as outlined in the specifications, with a ballast ratio of a little over 32 per cent.

The construction was planned with a view to simplicity and ample strength for any service which might be desired of the boat. The centerboard was allowed to project up into the cabin space in order to obtain a board of the most efficient size and shape.

The mainmast is placed well aft with the idea of making the boat easy in a seaway, to reduce the strains on the forward part of the boat, and to make the boat lie to mooring with mainsail up. For the yawl rig the mizzen is placed well aft in the overhang, and the shrouds spread a wide distance at the base in order to give the mast proper support, as the bury at any point in the overhang cannot be sufficient to properly hold this spar. The placing of the mizzen well aft also assists in securing a good length of main boom and an efficient mainsail. The bowsprit was kept as short as possible and still secure a proper balance. The sail area provided for is of such a size as to be comfortably carried in the average of yachting weather, and for light sails a balloon and spinnaker have been provided.

The object sought in laying out the interior was not to develop any one feature to a maximum at the expense of another, but to secure a well balanced arrangement which would provide as complete comfort as may be in a boat of this size for a reasonable number of people. Each individual should have ample locker and living space, and there should be room for all necessary cruising equipment and stores without crowding, if the best all around efficiency is to be secured; hence but two staterooms have been provided for, thus allowing for a large toilet, with an abundance of lockers for oilers and storm gear, as well as toilet accessories and ample space for a dressing room; also allowing for a large and completely equipped galley, which is a prime necessity in a cruising boat. Accommodation is provided forward for steward and two men, assuming that the owner would be his own captain. The toilet and one stateroom being placed aft, gives a vestibule for the companion stairs, and keeps them out of cabin. Sleeping accommodations for the owner and his guests are provided for in the two staterooms above mentioned (one with double berth), and two large berths in main cabin. The transoms have been arranged to extend so as to accommodate two more people when necessary.

Attention is especially called to the locker equipment, stowage for suit cases, sideboard arrangement, cabin chiffoniere, wardrobes in staterooms, size of ice-chest, dresser, sink, stove, and coal bunker in galley, and completeness of tank and plumbing arrangements.

The dimensions follow:

Length—		
Over all	.....	61ft. 2 in.
L.W.L.	.....	40ft.
Overhang—		
Forward	.....	9ft. 6 in.
Aft	.....	11ft. 8 in.
Breadth—		
Extreme	.....	14ft. 6 in.
L.W.L.	.....	14ft. 2 in.
Draft—		
Extreme	.....	6ft.
To rabbet	.....	4½in.
Board down	.....	11ft. 9 in.
Freeboard—		
Forward	.....	4ft. 9 in.
Least	.....	3ft.
Taffrail	.....	3ft. 9 in.

## Interlake Yachting Letter.

CLEVELAND, O., JUNE 11.—La Rita, of Chicago, owned by Mr. George H. Pearce, twice winner of the Lipton cup, has at last been ruled off the board by the official measurer of the Columbia Y. C., of Chicago. La Rita's owner is a good yachtsman—in fact, one of the best on the lakes. After official measurer William Cothrell had measured the craft a few weeks ago, preparatory to the season's racing, and discovered her ineligibility, he so informed the owner. Not disconcerted in the least, Captain Pearce called his crew together and sailed the boat to Kenosha, where she will be cut down so as to meet the requirements of the case. It would be highly amusing if after La Rita has been rebuilt to see her carry off the cup for the third time, and if she does, her game owner will be entitled to all the credit there is in the victory.

The eyes of fresh-water yachtsmen generally are turned to a little town about eighteen miles from Toledo, known as Monroe Piers, Mich. While a small place from a general point of view, it is a mighty place from a yachtsman's standpoint. The first big regatta of the season will be held there July 2, 3 and 4. Last year the regatta was for one day only, and a fleet of over one hundred yachts lined up with the gun. It was one of the most successful meets ever held on fresh water, and the members were so encouraged that this year they decided to have a three-day meet. A number of cash prizes have been offered, in addition to numerous other trophies. The regatta is held under the auspices of the Monroe Y. C. The club is one of the most enthusiastic yachting organizations on fresh water, and it is the intention of the members to make the coming meet the biggest and best ever held on the Great Lakes, and all are working hard to that end. At the coming regatta, clubs will be represented from Buffalo, Erie, Cleveland, Sandusky, Toledo, Detroit, and Port Huron,

and it is estimated that from one hundred and twenty-five to one hundred and fifty boats will be in attendance.

The 21ft. special restricted class will in all probability rule on the lakes this summer. Five boats have been built for Detroit yachtsmen for this class, and now comes the announcement that still another is to be added to the list. This boat is rather a radical departure from the usual run, in that where others go to the extreme top of the class, this one has taken the bottom. She was designed by Mr. Charles D. Mower for Messrs. O. E. McLaughlin and S. H. Williams, and was built by her owners. Janella, as she has been named, has just been completed, and will be launched in a few days. Her general dimensions are as follows: Length over all, 31ft. 9in.; waterline, 20ft. 1in.; beam extreme, 10ft.; beam at waterline, 9ft. 1in.; draft extreme, 1ft. 8in.; draft to rabbet, 1ft. 1in.; draft with board, 5ft. 6in. In addition to being smaller than the average boat of this class, she also has a remarkably small sail area, having only 615 sq. ft., of which 490ft. are in the mainsail, the balance, 125ft., being in the jib. A glance at the boat shows her to be a light powered craft of decidedly moderate dimensions, easy in a seaway, well adapted to the waters hereabouts, especially the short, choppy seas which are a characteristic, and her construction to be of the best. What her chances will be with boats of Eyota and Pirate type is a matter of conjecture.

The first tryout of the new 21-footers occurred on Decoration Day, between an Eastern designed and a Western designed boat. The Eastern creation is from the board of Messrs. Burgess & Packard, of Boston, and the other by Joe Poulliott, of Detroit, Mich. The former was designed and built for Mr. Kenneth Stevenson, of Detroit, and has been named Eyota; the other was built by her designer for Mr. E. L. Ford, also of Detroit. Great things had been expected of the eastern boat, and Detroit yachtsmen were exceedingly anxious to see a tryout. The day was excellent, a fresh breeze blowing on the river, while up in Lake St. Clair there was a good chop of a sea. Both boats were manned by excellent crews, who played hard for positions when the preliminary gun had been fired. Eyota got away first, followed two minutes later by Pirate. Eyota seemed to be doing better windward work than the other, but Pirate was picking her up at a lively clip, and would have passed her had it not been that Eyota carried away her bobstay and her spar. This settled the discussion for the time being. A new hollow spar has been telegraphed for. The other three boats of the class are not yet in commission, though they are expected to be ready in a few days.

Mr. J. H. Smedley's boat, which was designed by Mr. Chas. L. Seabury, has arrived, but is not rigged. Mr. Smedley expects to have her in sailing shape in a few days. The other two have also been finished except rigging, and the owners hope to have the fleet of five sailing within another week. Their first real appearance in racing togs will be at the three-day meet at Monroe Piers, July 2, 3 and 4.

Vannessa, recently purchased by Commodore John Smedley, of Detroit, has arrived, and is being placed in commission. As soon as the work is completed, the Commodore, accompanied by a party of friends, will leave for a trip up the lakes, after which he will attend the annual meeting of the Inter-Lake Yachting Association, to be held at Put-In Bay, week of July 17. The programme of this event will be announced later.

Rooster II., recently purchased by Messrs. Whitney, Nash and Hall, of the Lakewood Y. C., of Cleveland, from Mr. Chas. F. Adams, 2d, of Boston, Mass., through the agency of Small Bros., has arrived in this city. No time was lost in getting her into the water, and on last Wednesday she took her initial spin. She appeared to move through the water quite lively, making very little fuss, but local yachtsmen are averse to believing her the equal of Chloris, which was purchased at Boston last year. If Rooster II. shows up well in the races she will be a candidate for Lipton cup honors at Chicago.

C. W. SCHMIDT, JR.

## Rhode Island Letter.

PROVIDENCE, R. I., JUNE 11.—The first strictly auto boat owned in this vicinity was recently launched by Mr. Frederic S. Nock, at East Greenwich, by whom she was designed and built for Mr. J. R. Harding, of Potowomut Neck. She is called Ici Bann, which is said to mean "The One" in the Japanese vernacular. She is of the regulation type, with one cockpit of moderate size situated amidships, and the rest of the boat, forward and aft, decked over. Her dimensions are: Length over all, 37ft. 7½in.; waterline, 35ft.; extreme beam, 5ft.; beam at waterline, 4ft. 4in.; draft to rabbet, 9½in. She has a displacement of 3,000 pounds. Her lines are fine, and she has the tetrahedral, or three triangle, form of underbody. Her construction is about medium, the planking being of ½in. cedar, with oak frames 1in. square at keel and rin, by ¾in. at head. The decks are of ¾in. stock, covered with canvas. There are two assistant keelsons of spruce, sided two inches, that run the whole length of the boat, and inside of these are the engine bearers of oak, three inches thick. The motor is a 25 horse-power four-cylinder Buffalo engine, which, with the piping and necessary fittings, weighs about 1,500 pounds. The shaft, propeller, hangers, rudder, and all such equipment, are of Tobin bronze. The steering wheel is aft of the engine, and is set over to starboard to offset the throw of the propeller to port. The motor can develop 40 horse-power on speed, and on her trial trips the boat has done a little better than 18 miles an hour. With some further changes, it is expected that she will tune up to 20 miles. Ici Bann is enrolled in the Rhode Island Y. C., and it is possible that she will be entered in the American Power Boat Association for the races for the perpetual challenge cup, to be sailed at New York June 23, 24 and 25.

At the Nock yard there has also just been completed a 20ft. cruising yawl called Procyon, designed by Mr. Nock for Mr. Charles A. Goodwin, of Hartford. This boat and another one about finished were built in four weeks' time. Procyon is 31ft. 6in. over all, 20ft. waterline, 9ft. beam, and 4ft. 6in. draft. She is a keel boat, and carries outside lead ballast of 3,200 pounds. She is built in the finest manner and is finished in mahogany throughout. She has very easy bilges and not much deadrise. The forward lines are moderate, but the after lines are quite full,

The Warwick Neck one-design 15-footers are preparing for the season, and will soon be affording their owners sport. The boats are called Zest, Zu Zu, Zaza, Zoe and Zip.

Auxiliary power, consisting of an 8 horse-power Buffalo motor, has been installed in Mr. Edgar Harding's 27ft. yawl, Jaberwock. L. H. Murphy's 50ft. schooner Margaret is to be thoroughly overhauled and equipped with new masts and rigging.

The new steam yacht, Little Sovereign, owned by Mr. M. C. D. Borden, of New York, and just launched by the Herreshoffs at Bristol, has proved on her trials to be faster than the contract called for. She will go to Marblehead this week, where her owner will place her in commission. She is fitted with twin screws, and although the engines are not remarkably powerful, she can easily steam at 23 miles an hour, being a thin, wedge-shaped craft about 110ft. long and 10ft. beam. The Herreshoffs have begun the construction of another new steam yacht, to be about 50ft. long and 7ft. beam. The keel has been laid and the planking commenced.

C. F. Tillingham's 22-footer, Little Rhody, is expected to enter in the next Eastern Y. C. races off Boston. Probably another entry will be a 30-footer owned by Russell Grinnell, of Bristol.

F. H. YOUNG.

## Brooklyn Y. C. Ocean Race.

THE following cable has been received from Sir Thomas Lipton:

"LONDON, June 2.—In order that cup for ocean race under auspices Brooklyn Yacht Club shall be worthy of occasion, am having it made to cost not less than 100 guineas.

"(Signed) LIPTON."

The club replied by cable to Sir Thomas Lipton, thanking him, and stating that the offer was greatly appreciated.

The following additional entries have been received to date:

Sloop, Eumareir, enrolled Rock Island Y. C.; over all, 36ft.; beam, 12ft.; draft, 3ft. 6in.; owner, Edward K. Hill, Worcester, Mass.

Cutter, Mopsa, enrolled Harlem Y. C.; over all, 35ft.; beam, 9ft. 6in.; draft, 6ft. 6in.; owner, Franklin C. Sullivan, New York city.

Yawl, Naomi, enrolled Raritan Y. C.; over all, 36ft.; beam, 10ft. 6in.; draft, 3ft.; owner, Lewis A. Schmalholz.

This makes twelve entries received so far. Five more have been received, but so far have not been acted upon by the regatta committee.

Entries will close June 18, 1904. The race starts July 2. Full sailing directions for the race will be issued shortly.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

TWENTY-FOOT LAUNCH FOR C. D. GIBSON.—Mr. Charles Dana Gibson, of New York city, is having a 20ft. launch built at Camden, Maine, by A. Barrett's Son. The boat, which will be used on the Maine coast, is to be equipped with a four horse-power Cushman motor. It is expected that with this power the boat will develop a speed of 9 miles.

\*\*\*

ORA SOLD.—Mr. Newell Martin, of New York city, has purchased the 18ft. raceboat from Dr. F. H. Boynton. The boat is now fitting out at Bayonne, N. J., and will soon leave for Cohasset, Mass., where she will be raced by Mr. Grinnell Martin.

\*\*\*

FENELLA SOLD.—The schooner yacht Fenella, recently sold by Mr. Wm. Boyce, Manhasset Bay Y. C., to Mr. Geo. C. Brooks, Eastern Y. C., Boston, has been sold by that gentleman to Mr. John G. Meehan, Atlantic Y. C. Transfers were made through the agency of Stanley M. Seaman, New York. Fenella is a flush deck keel schooner, 67ft. over all, 53ft. waterline, 17ft. beam, 9ft. draft.

\*\*\*

KEYSTONE Y. C. FIXTURES.—The regatta committee of the Keystone Y. C. has arranged the following schedule:

June 18—Race for one-design class.

July 2—Races for all classes.

July 16—Races for all classes.

September 17—Consolation race.

The annual cruise of the club will begin Friday, July 29, and the fleet will remain away until August 6.

\*\*\*

BATH BEACH Y. C. INCORPORATED.—A certificate of incorporation has been filed by the Bath Beach Y. C. The incorporators are J. Eksergian, Bennett's Lane; F. B. Curtin, Bay Eleventh street; W. H. McMahon, Bay Eighth street; William Merzweiler, Bennett's Lane, and E. B. Wheeler, Bay Twenty-second street, Bath Beach.

\*\*\*

EDITHIA LAUNCHED.—The large gasoline yacht Edithia, designed by Mr. William Gardner, of Messrs. Gardner & Cox, was launched from the yard of the builders, Messrs. Samuel Ayres & Sons, Nyack, N. Y., on June 2. The yacht was built for Mr. John H. Hanan, who was present with a number of guests. Mrs. Hanan named the boat. Edithia is 114ft. 9in. over all, 103ft. 6in. waterline, 15ft. 10in. breadth, and 5ft. draft. The power is supplied by two 300 horse-power Standard gasoline engines, each having six cylinders 12in. by 14in., and driving twin screws. The gasoline tank has a capacity of 2,200 gallons. A sustained speed of twenty-one miles an hour is guaranteed.

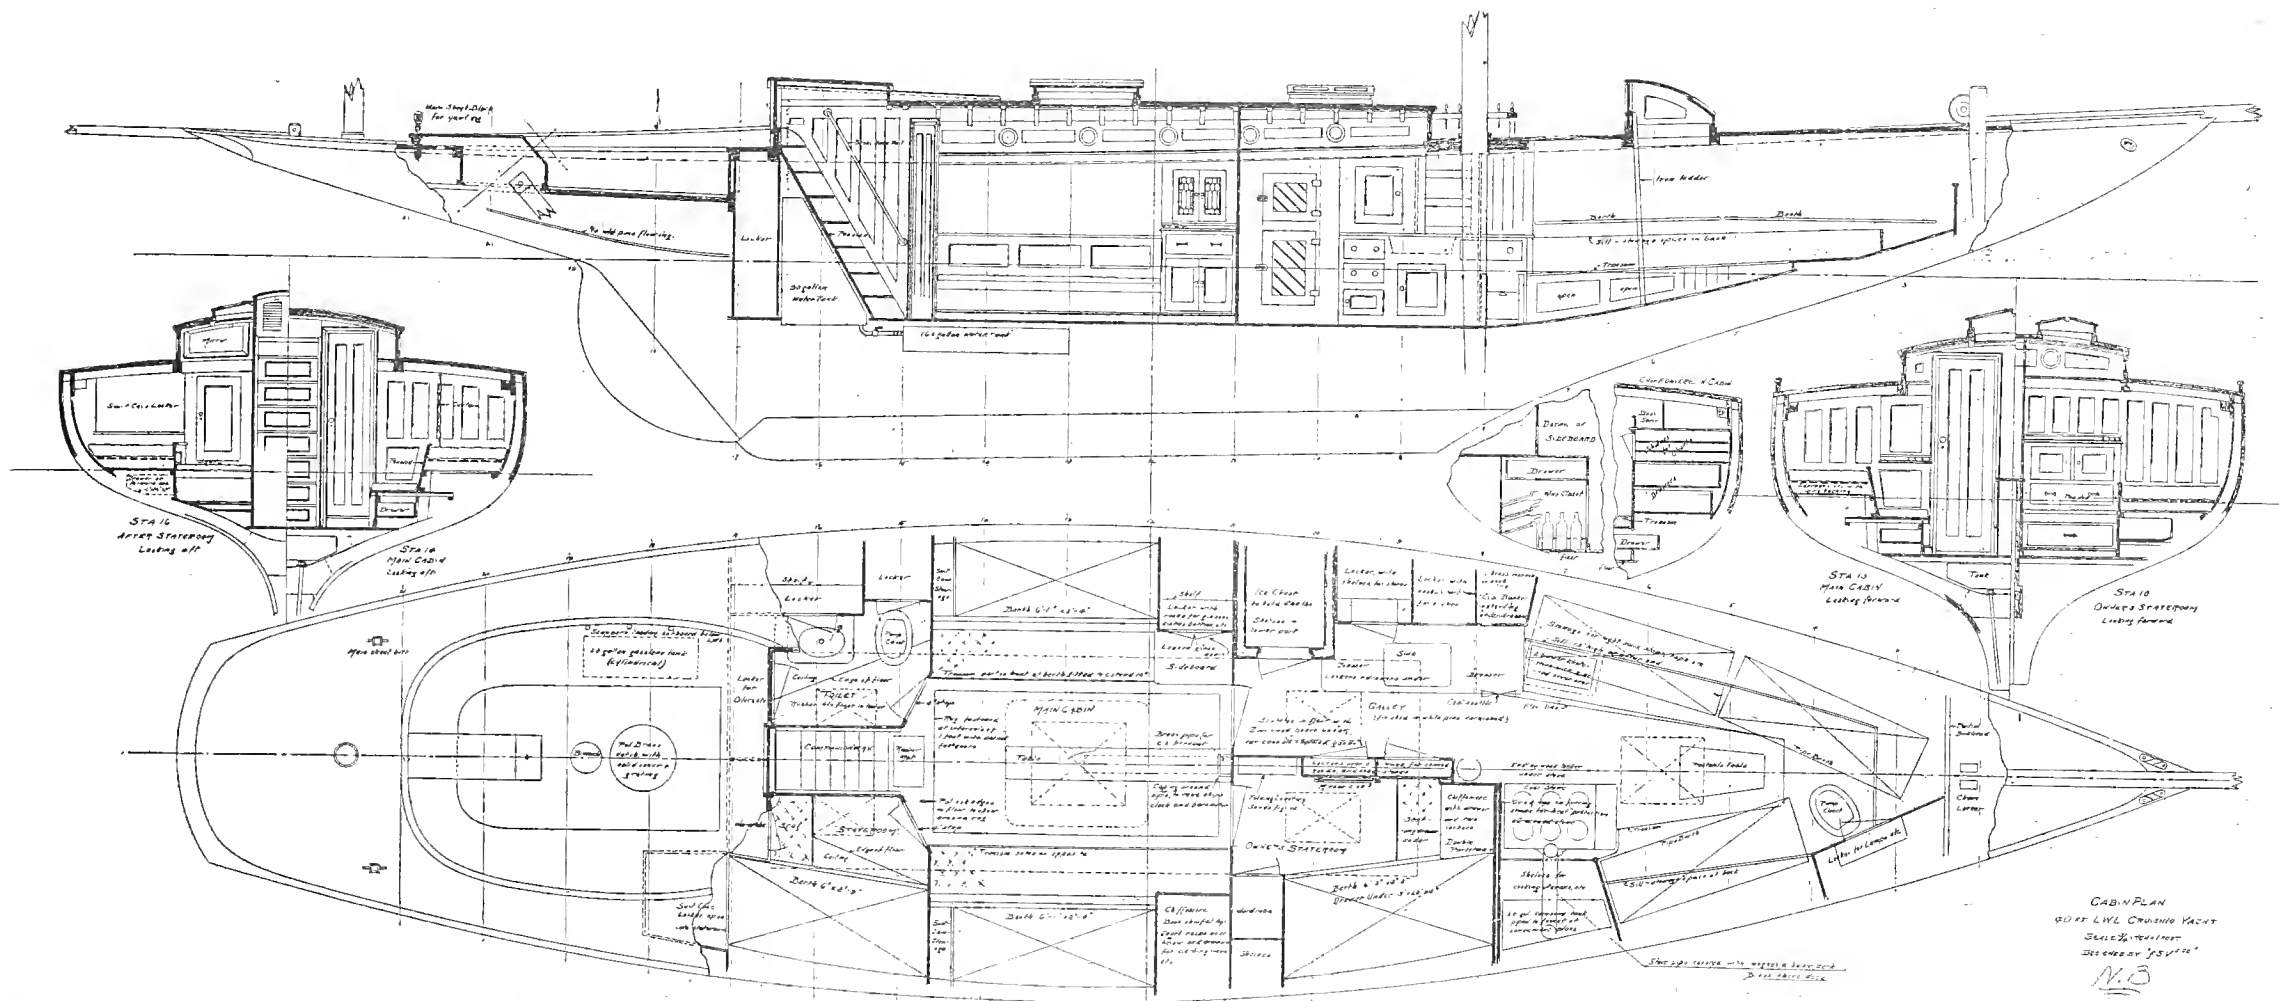

\*\*\*

KNOCKABOUT NATALIE SOLD.—Mr. William Lambert Barnard has purchased the 21ft. knockabout Natalie, ex-Hobo, through the agency of Messrs. Small Bros.

\*\*\*

CLUB BOOKS RECEIVED.—We are indebted to Secretary Charles A. Gregory, of the Bergen Beach Y. C., and Commodore William E. Peck, of the Sachem's Head Y. C., for copies of their club books for 1904.

DESIGNING COMPETITION—DESIGN RECEIVING HONORABLE MENTION—LINES, CABIN AND SAIL PLANS.

Submitted by Robert C. Simpson, Boston, Mass.

**CHRISTABEL SOLD AND ITUNA CHARTERED.**—Mr. Walton Ferguson has purchased the British-built steam yacht Christabel through the agency of Messrs. Tams, Lemoine & Crane. The steam yacht Ituna has been chartered by Mr. Frederic H. Stevens, through the same agency, to Mr. Eben S. Draper, of Boston.

**MILWAUKEE Y. C. SCHEDULE.**—The Milwaukee Y. C. has arranged for the following events:

June 18—Club and 21-ft. handicap.  
June 25—Special 21-ft. handicap.  
July 2—Open.  
July 4—Pfister cup race, M. Y. C. regatta and special events.  
July 9—Club and 21-ft. handicap.  
July 16—Second Corinthian cup race.  
July 23—Club race to Whitefish Bay.  
July 30—Lake Michigan Yachting Association meet at Macatawa.  
August 6—Third Corinthian cup race.  
August 13—Milwaukee Day. General regatta.  
August 20—Cruising race to Racine.  
August 27—Fourth Corinthian cup race.  
September 3—Club race.

**LYSISTRATA VISITS NEW YORK.**—Mr. James Gordon Bennett's fine British-built steam yacht, Lysistrata, reached New York on Friday, June 3. She anchored off Staten Island, and since her arrival has caused much comment. Although designed by Mr. George L. Watson, she is a wide departure from his other yachts. Her straight stem, large funnel and single mast give the boat the appearance of being a Government vessel rather than a yacht. This is Lysistrata's first trip to American waters, and Mr. Bennett will be on hand to witness the races between Kanawha and Hauoli for the Lysistrata cup to be held on Saturday, June 18.

In order that the members of the New York Y. C. should all have an opportunity to see the races between Kanawha and Hauoli, Mr. Bennett is to charter a steamer for their benefit.

**TURBINE YACHT LORENA ARRIVES.**—The British-built steam yacht Lorena, owned by Mr. Amzi L. Barber, arrived in New York from England via Halifax on Friday, June 10. Bad weather was experienced throughout the passage, and she put into Halifax on Tuesday, June 7, having run short of coal. Lorena consumed ten days in making the voyage from Falmouth, England, to Halifax. On Wednesday, June 1, when the bad weather was at its height, one of the crew, Israel Furze, a native of Falmouth, England, was washed overboard and lost. Every effort was made to save the man, but he lost his hold on the life-buoy that was thrown to him, and sank before the boat that was launched could get to him.

Mr. Barber crossed on the yacht, and he speaks in the highest terms of the vessel's seagoing qualities. The turbine engines were given a thorough test by the continued bad weather, but they gave the greatest satisfaction. Mr. Parsons, the builder of the yacht's engines, did not guarantee what speed she would develop. On her trials she averaged 18.1 knots, and at times ran as high as 19 knots. It is believed that will be brought up to 20 knots.

Lorena was designed by Messrs. Cox & King, and built by Messrs. Ramage & Ferguson, at Leith, in 1903. She is 252 ft. waterline, 33.4 ft. breadth, and 19.3 ft. draft.

**ALVINA SOLD.**—Mr. Clement A. Griscom has sold his twin screw yacht, Alvina, through the agency of Messrs. Tams, Lemoine & Crane, to Mr. Alexander S. Cochrane, of Yonkers, N. Y.

**LONG ISLAND SOUND Y. R. A. BOOK.**—The Y. R. A. of Long Island Sound has issued its year book for 1904. The book is very complete, and contains some eighty pages. The binding is of green cloth.

**LAUNCH FOR MR. A. G. VANDERBILT.**—There is building at Morris Heights a cabin launch for Mr. Alfred G. Vanderbilt. She is 70 ft. over all, 60 ft. waterline, and 8 ft. 3 in. breadth. She will be fitted with a speedway motor, and have a speed of 20 miles. She is intended for a ferry between Newport and Wickford Landing, as well as a day boat for use on Narragansett Bay.

**PECONIC RIVER AND BAY STAKED OUT.**—Counselor Hotchkiss, of Riverhead, L. I., has been instrumental in raising funds and having Peconic River and a portion of Peconic Bay staked out, marking the channels and thereby making better sailing conditions, for the numerous small gasoline pleasure launches and catboats. Stakes are placed along the south side of the channel in the river and bay as far as Simmons Point, opposite Jamesport. On the Simmons Point and Red Creek Point bars there have been placed a large stake and a bush, thus plainly marking those dangerous spots. To get the best sailing conditions, one should lay a course about ten feet north of the stakes, where water five feet deep at mean low tide will be found.—Brooklyn Eagle.

**TOMS RIVER Y. C.**—Toms River Y. C., of Toms River, N. J., one of the oldest clubs on the Jersey coast, has been revived, and has bought one of the best sites on the river front. The work of remodeling the club house is being pushed as rapidly as possible, and the present prospects are that the work will be completed in time for the big opening, which will be held on Saturday, July 2. The newly-elected officers are: Com., Dr. George T. Crook; Sec'y, C. Leland Haslet; Chairman Regatta Committee, Charles H. Stoutenburgh; Chairman Entertainment Committee, Sewell Ford; Trustees, John H. Stoutenburgh, Judge Albert C. Martin, Captain Britton C. Cook, Henry A. Low, and Ralph B. Gowdy.

**SEAWANHAKA-CORINTHIAN RACE COMMITTEE'S CUPS.**—In order to stimulate racing and get boats into commission early, the race committee offers two cups valued at \$75, one for the Seawanhaka raceabout class, and one for the Seawanhaka 15-footer class, to be awarded to those yachts

which shall be declared a winner in the series of races to be called "The June Series," and sailed under the following conditions:

The races shall be open to yachts of the raceabout and 15-footer classes owned by club members and eligible to compete under the club rules, and shall be sailed on the above dates under the racing rules and regulations of the club and such additional special rules as the race committee may from time to time designate.

The winner shall be determined by the Seawanhaka system of scoring as heretofore used in the Center Island cup series of 1902. The yacht must start in at least four out of the five races in order to qualify in the series prize; the club will give in addition the usual pewter mug to the winner of each race in the series.

**AUXILIARY ATRICILLA LAUNCHED.**—On Monday, June 6, the new auxiliary 35-footer, Atricilla, designed and built by C. C. Hanley for W. P. B. Weeks, was launched at the shop of her builder on Town River, Quincy. Atricilla is 50 ft. over all, 35 ft. waterline, 17 ft. beam, and 3 ft. 6 in. draft. She carries 1,600 sq. ft. of sail. Power is supplied by a 7 horse-power Alco vapor engine. There is 6 ft. 8 in. headroom under the trunk. The accommodations consist of two staterooms and six berths. The finish below is teak.

**LAUNCH FOR MR. H. E. SMITH.**—Mr. Henry E. Smith, of Newark, is having a hunting launch built at Morris Heights. She is 30 ft. over all, 29 ft. 3 in. waterline, 7 ft. breadth, and 1 ft. 8 in. draft. She will be equipped with a Speedway motor that will drive her at about 8 miles an hour.

**SEAWANHAKA CUP TRIAL BOATS.**—The plans for a Seawanhaka cup challenger submitted by Burgess & Packard have been accepted by the committee in charge of the challengers. This boat will be built by the Jones & Laborde Company, at Oshkosh, Wis. This will be the sixth boat built by the White Bear Y. C. They are to be named from the Greek alphabet, Alpha, Beta, Gamma, etc. C. D. Mower's boat will be called the Alpha, Crowninshield's small boat the Beta. The other four boats will probably be named from the letters gamma, delta, sigma and omega.

Crowninshield's new boat, which is being built by Johnson, will not be finished for ten days at least. The only boats launched are the Alpha and Beta; these will be raced against each other during the week for the purpose of tuning them up.

**LLOYD'S ENGLISH YACHT REGISTER.**—Lloyd's Register of Shipping has just issued the English Yacht Register for 1904-5. We have always spoken of this admirable work in the most glowing terms, and we do not know what better praise we can give it this year than to say it is better and more complete than ever before. Copies are found now on nearly every yacht of any size in this country, but for the benefit of those who are not subscribers, we may say that copies may be secured at the office of Lloyd's Register of Shipping, 15 Whitehall street, New York city, for \$7.50.

Lloyd's Register of American Yachts will be issued shortly. Owing to strikes of lithographers in the vicinity of New York, the publication of the work has been delayed.

**STEVENSON'S YACHTING MANUAL.**—Mr. Paul Evc Stevenson has again gotten out for Messrs. Gardiner & Cox his yachting manual. This little work is carefully compiled, and now appears more complete than ever before. The book sells for twenty-five cents, and yachtsmen would do well to secure a copy, for it is interesting and valuable.

**YACHTSMAN'S GUIDE AND NAUTICAL CALENDER.**—Messrs. J. K. Waters Co., of Boston, Mass., have recently distributed The Yachtsman's Annual Guide and Nautical Calender for 1904. The book has been carefully revised, and contains a vast fund of valuable information. It is a handy reference work, and a copy would be found useful on any boat, and particularly if the owner does any cruising.

**BUFFALO Y. C. FIXTURES.**—The Buffalo Y. C. have arranged for the following racing events:

July 2, 3, 4—Cruise to Port Maitland. Cruising race from Port Maitland to Buffalo, finishing off club dock.  
July 9—Races for all classes over club course.  
July 16—Ladies' day. Squadron run. Hop at club house in the evening.  
July 23—Buffalo Y. C. at Buffalo Launch Club.  
August 6—Races for all classes over club course.  
August 13—Ladies' day. Buffalo Launch Club at Buffalo Y. C. Race for power boats. Hop at club house in the evening.  
August 27—Races for all classes over club course.  
September 3, 4, 5—Annual cruise to Port Maitland. Cruising race from Port Maitland to Buffalo, finishing off club dock.  
September 10—Ladies' day. Squadron run. Hop at club house in the evening.

**NATIONAL ASSOCIATION OF ENGINE AND BOAT MANUFACTURERS.**—The following matter has been sent out by the recently incorporated Association of Engine and Boat Manufacturers: "At a meeting of a number of representative manufacturers of motors and boats, held at the Manhattan Hotel, May 16, 1904, an association was decided on and a committee was appointed to incorporate under the laws of the State of New York, to be known as The National Association of Engine and Boat Manufacturers, composed of active and associate members.

"The objects of the association are in part as follows: To get special freight rates; have a bureau of information; to make special arrangements in regard to and participate in the profits of shows; to protect its members against adverse legislation and questionable advertising schemes; to bring forward the new and improved methods in construction, and to take such action as will be in the interests of its members as regards alcohol as fuel; also any other action that may present itself from time to time.

"The association is now an assured success, as the meeting was attended by representatives of some of the largest firms in the country, and many of them who could not be present sent in such letters as practically authorized the meeting to count them in as members; some forty odd manufacturers have either attended or written in to that effect. The association has been duly incorporated, and a copy of the constitution and by-laws has been prepared. The committee of incorporation is as follows: J. J. Amory, representing Gas Engine and Power Company; H. A. Lozier, Jr., representing Lozier Motor Company; J. N. Schoonmaker, representing Chas. A. Strelinger Company; J. S. Bunting, representing Smith & Mabley Manufacturing Company; H. W. Whittelsey, representing Standard Boat Company; E. W. Graef, secretary and treasurer, protom."

## White Bear Y. C.

White Bear Lake, Minn.—Monday, May 30.

THE yachting season of the White Bear Y. C. opened May 30 with a west wind and a large attendance for the time of year. Ten boats started in Class B and two in Class A. Two of the B boats were last season's productions, and it was one of these, Neola, that won out. Moccasin, owned by the Fry brothers, won in Class A after a close contest with Seeress. Seeress started first, but on account of her starboard board sticking in the box she fell off to leeward, and at the end of the first leg she had quite a lead to overcome. This she almost did, for on the last leg she came down on a good puff of wind and came very near beating the Fry boat over the line, as the time shows.

In Class B Dr. Owens started his Damfino first of the fleet, but a little to leeward. Circe and Wanderer fouled at the line, and in this way were forced off their course, while some of the other boats squeezed in to windward. Neola slowly worked her way through the other boats, and when Center Buoy was reached she had a pretty good lead. Young America and Flycamaroo were having a good fight for second place, and the position of the other boats was as follows: Pluto, Rambler, Robin Hood, Wanderer, Circe, and Wraith.

It was after turning Center Buoy for Dellwood that Neola was threatened. Flycamaroo and Young America closed up the gap by means of an increase of wind, and at Dellwood Buoy the Taylor boat had passed her; but when they started up on the wind again, Neola again came to the front and won out.

Summary:	
Class A.	
Moccasin, E. Rees.....	1 34 16
Seeress, C. Fry .....	1 34 12
Class B.	
Neola, Dr. J. M. Walsh.....	1 38 41
Flycamaroo, D. Taylor.....	1 39 31
Rambler, B. Skinner.....	1 40 19
Young America, H. Pincka.....	1 40 55
Damfino, F. N. Owens.....	1 41 20
Pluto, S. Howard.....	1 41 38
Robin Hood, T. Murray.....	1 43 05
Wanderer, T. Ordway.....	1 44 26
Circe, T. Schultz.....	1 47 57
Wraith, F. Reid.....	1 51 12

Course, Wildwood and return, Center and return, Oknota. Wind, four knots. Starter, Tarbox. Time-keeper, Dresser.

Saturday, June 4.

A nasty wind and rain storm interfered with the boat races at White Bear Saturday, June 4. Only one boat in each class, A and B, finished. There were only two Class A boats in the race, the two challengers which had been finished not being launched on account of the excessively bad weather.

The regatta committee has divided the Class B into two divisions for this season; all the boats built prior to 1904 are in one class and the nine new boats are in the other.

The Class A boats were the first to start, and it was soon evident that the race was Seeress's, for she left the new challenger of Fry's far astern. The latter boat, called Moccasin, was built the last part of the season of 1903 and was bought this year by Mr. Fry, to be entered in the trial races. She didn't seem to sail well Saturday, being loggy and slow on the wind. She sailed much better on Monday, May 30, when she beat Seeress out. This is Seeress's third year, and she is heavy and somewhat out of shape, for she has traveled about the country a good deal. Seeress was designed by Mr. C. D. Mower, and was entered in the Bridgeport trials, held the latter part of June two years ago, by Messrs. Mower and Hunt.

There were eight entries in the new Class B, and they crossed in the order named: Wanderer, followed by Circe, Rambler, Flycamaroo, Damfino, Robin Hood, Young America, and Wraith. On the first leg, a beat to windward, Wanderer, Flycamaroo and Rambler pulled away from the others a little, and on the next leg, which was a close reach, Rambler dropped quite a little behind. After the return to Center Buoy, Flycamaroo and Wanderer were ahead and abreast, while the others followed in the order named: Rambler, Damfino, Young America, Robin Hood, Wraith and Circe.

On the way home from Center Buoy, Flycamaroo passed Wanderer, and just as they rounded home buoy to go to Center Buoy again, the storm struck Seeress, which had rounded Center and was on her way to the home buoy, came running in before the storm. Wraith, which was well out in the lake at the time, took down her sails, and when it was over finished and won, being the only B boat to finish.

JACK ORDWAY.

## American Power Boat Association.

Hudson River—Saturday, June 11.

THE second regatta of the American Power Boat Association was given under the auspices of the Columbia Y. C., on the Hudson River, Saturday, June 11.

This event was marked with a small number of entries, as was the first race held at Manhasset Bay on Decoration Day. As power boat racing is in its infancy in this country, it is only natural that regatta committees handling such matches, as well as those managing the racing boats, should make blunders. It is, however, essential that those in charge of racing power boats should familiarize themselves with racing rules and the courses to be covered, so that mistakes such as were made in the Columbia Y. C. race could be avoided.

The starting line was off the Columbia Y. C. house, West Eighty-sixth street, thence to a mark on the west side of the river, off 155th street, thence to a mark off Sixty-sixth street, and back to the starting line—a distance of eight knots. This course was to have been covered four times by the boats in the larger classes. The course for the smaller boats was the same, except for the up-river mark, which was placed off 129th street. This makes a course of six knots.

The house and grounds of the Columbia Y. C. were well filled with members and their guests, and many sightseers watched the race from Riverside Drive. A goodly fleet was lying off the club house, there being numerous steam and sail yachts, to say nothing of many smaller power craft.

The day was a most satisfactory one for power boat racing, there being little or no wind and smooth water.

The craft entered in the small classes were started first, and at 2:35 the five boats in Classes C and D were sent away. These boats went twice over the eight knot course, and Queen Bess, a cabin boat, won with ease, beating Regina, the second boat by nearly five minutes.

Boats in Classes H, I and J were started at 2:40. These craft went twice over the six knot course. There were only three starters. Kaa withdrew, and San Toy II. defeated Ardis by 1m. 33s.

In Classes K and L there were but two starters. Korie withdrew, leaving Naia alone. This boat distinguished herself by her unusual performance. She is fitted with a 3½ horse-power Giant motor, but with this small amount of power she covered the twelve knot course in 1h. 24m. 27s., thus making far better time than some of the larger boats with more powerful engines.

Standard, Japansky and Alert were the three entries in Classes Q and R. These boats went four times over the eight knot course. When Standard reached the mark at 129th street, Mr. E. A. Riotte rounded, but after doing so, he realized that a mistake had been made, and kept on to the 155th street mark. Alert was doing well, but slipped her clutch before finishing the first round and withdrew. Japansky did not show up to as good ad-

vantage as on Decoration Day. It was said that her engine was not running well, and that considerable time was lost in making repairs. As Japansky was at no time dangerous, Standard had the race well in hand from the start. Her powerful 110 horse-power motors ran evenly throughout. She covered the first round of the course in 25m. 30s.; the second in 25m. flat; the third in 25m. 28s., and the fourth in 25m. 59s. She averaged 19.1 knots for the 32 knots.

Water Lily should have started with the boats in Classes S, T and V, but she went with the boats in the class above, five minutes too soon, and was disqualified.

Mr. C. H. Tangeman timed his boat Fiat to a nicety, and she crossed the starting line 3s. after the gun, leading the boats in her class. Hard Boiled Egg, with Mr. W. K. Vanderbilt at the wheel, crossed second and Shooting Star, with Mr. H. A. Lozier steering, third.

Fiat turned the mark at 129th street, and the others followed. Fiat did very well, and averaged 15.8 knots. She beat Shooting Star 56s. actual time. It is thought that Shooting Star will do better as the season progresses. She is to be fitted with a larger rudder, in order that she may answer her helm quicker. Hard Boiled Egg was outclassed, and finished minutes behind.

The summary:

Classes C and D—Start, 2:35—Course 16 Knots.			
	Finish.	Elapsed.	Corrected.
Queen Bess, R. H. Stearns.....	4 34 35	1 59 35	1 42 10
Regina, A. L. Clayton.....	4 37 30	2 02 30	1 47 02
Aleres II., R. C. Fisher.....	4 31 39	1 56 39	1 56 39
Getty, Morris Vail.....	5 15 48	2 40 48	1 54 11
Senta, F. G. Mead.....	4 46 07	2 11 07	1 57 41

Shooting Star, H. A. Lozier, Jr.....	4 27 01	1 32 03	1 30 55
Water Lily, Frank Seaman.....	Started in wrong class.		

Winners: Queen Bess, San Toy II., Nada, Standard, and Fiat I.

## Manhasset Bay Y. C.

Manhasset Bay, L. I. Sound—Saturday, July 11.

The fifth annual regatta of the Manhasset Bay Y. C. was held on Saturday, June 11. There were twenty-eight starters, but a sharp squall, that broke toward the end of the race, prevented eight of the boats from finishing.

The 30 and 18ft. sloop classes did not fill, and as a result, Alert and Plover had walkovers, although the latter boat did not finish.

At the start the wind was light from the E.N.E., but a little later the wind flattened out and the race developed into a drifting match. About 5 o'clock the squall that had been making in the S.E. broke. At this time Alert, sailed by Mr. Harry Maxwell, was well toward the finish line, and the smaller fry were near the Matinicoek buoy. From this time on the boats had some lively work.

There were five starters in the raceabout class. Rogue, cleverly handled by Mr. A. B. Alley, beat Tartan, the second boat, 4m. 4s. Mayola was third.

Of the four starters in the Larchmont one-design class, Hourli had rather the best of it, and finished a winner. Adelaide's owner protests Hourli for fouling his boat at the Matinicoek mark.

Una beat her three competitors in the 25ft. sloop class. She may lose the race on corrected time, however. In the 21ft. sloop class, Jeebi made the best elapsed time over the course, but she, too, may lose the race on time allowance.

Wa Wa won in the Indian Harbor one-design class. Owatonna was second and Anawanda did not finish.

Wister did not finish in the Manhasset Bay one-design class, and the race goes to Arizona, the only other starter.

None of the boats that started in the Hempstead Harbor one-design class, the 18ft. sloop class or the Lark class finished.

The regatta committee, composed of Messrs. Charles D. Mower, Henry C. Ward and Frederick A. Hill, were on board Commodore Alker's steam yacht Florence.

The summary follows:

Sloops—30ft. Class—Start, 12:50—Course, 10% Miles.			
	Finish.	Elapsed.	Corrected.

## Edgewood Y. C.

Narragansett Bay, R. I.—Saturday, June 11.

PERFECT weather and a stiff E. breeze of the whole-sail variety made interesting sport at the first club regatta of the season for Edgewood Y. C., June 11. There were very few entries, and in only one class was there any interest, the 30ft. cats affording all the sport. There were four entries in this class, and they gave one of the prettiest races that has been seen in these waters in many a day, three of them finishing within 20 seconds of each other, after sailing a course of eleven nautical miles, and at no time after the start was there much open water between them. The only drawback was that the wind was in a quarter that gave free sailing on every leg of the triangular course, a broad reach and a run, and there was no chance for any windward work. Mblem caught the lead at the start, with Elizabeth a close second and Scatt away astern, with a bad handicap to overcome. Scatt caught up in short order, however, and gave the leaders a close rub.

The course was a short one, sailed three times over to make the distance, and Mblem lost the lead on the last round, Elizabeth, which had previously fallen back to third place, walking up again on her rivals and skipping into first place. She crossed the line at the finish 13s. ahead of Mblem, which was only 5s. ahead of Scatt. These three boats made a pretty start, a pretty finish and a most interesting race right through. In the 25ft. cat class Ina beat Mae Hope, D. C. Stranger's new

boat, by 7m. 15s. Ina also accomplished a notable feat in covering the course in shorter time than the 30-footers, beating the actual time of Elizabeth by 50s.

The summary:

30ft. Cats—Start, 2:45.			
	Finish.	Elapsed.	Corrected.

## Columbia Y. C.

Chicago, Lake Michigan—Saturday, June 11.

THE thirteenth annual Michigan City race of the Columbia Y. C. was unquestionably the most successful ever sailed. Three big steamers loaded with guests, besides several sail and steam yachts followed the racing fleet.

The most notable occurrence was that of Commodore Price's 21ft. cabin class yacht Yo San, formerly Little Shamrock, she defeating the entire fleet on corrected time, and defeating the crack 52-footer Vencedor, the second best yacht on corrected time, by over ten minutes. Vencedor won the South Shore Amusement Co. cup.

Illinois won the Vreeland Hotel cup. Nomad won the Hotel Shultz cup and Yo San won the Loftis Bros. cup.

The other prize winners were: Columbia, Sadie, Mokahi and Marie. The summary follows:

 Aug. 15-20.—Buffalo, N. Y.—New York State shoot.  
 Aug. 24-25.—Hot Springs, S. D.—The Interstate Association's tournament, under the auspices of the Hot Springs Gun Club. H. A. Gayhart, Sec'y.  
 \*Aug. 25-26.—Tarentum, Pa., Rod and Gun Club.  
 Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.  
 \*Sept. 6-7.—Irwin, Pa., Rod and Gun Club tournament.  
 \*Sept. 14-15.—Ruffsedale, Pa., Rod and Gun Club.  
 \*Sept. 27-28.—Monessen, Pa., Gun Club.  
 \*Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.  
 \*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y. Pittsburg.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Pittsfield, Mass., Rod and Gun Club announce an all-day shoot for July 4, and that all shooters are welcome. Mr. Harold S. Sidway is the secretary.

The general averages for the two-day tournament at Ligonier, Pa., June 7 and 8, were made as follows: First, E. D. Fulford 309 out of 330; second, L. J. Squier 307; third, J. T. Atkinson 305; fourth, Geo. Cochran, 300.

At the New York Athletic Club target shoot, held in connection with the club games, at Travers Island, June 11, the guests' sterling silver cup was won by Mr. A. A. Schoverling, with the excellent score of 47 out of 50 targets.

In the first of a cup series of seven contests arranged by the S. S. White Gun Club, and held at Gorgas Station, Pa., June 11, Mr. Chas. Newcomb scored a win with 24 out of 25 targets. In the club event at 25 targets, he also broke 24.

At Camden, N. J., June 11, a return match was shot between fifteen-man teams of the Clearview Gun Club, of Darby, Pa., and the North Camden Gun Club. Each man shot at 25 targets. The Clearview club won by a score of 305 to 279.

The Buckeye Gun Club of Dayton, O., still hold possession of the Phellis trophy by virtue of 263 to 244, the latter being the result of the Cincinnati team's effort on June 7. There were six men on a side, and each man shot at 50 targets.

Mr. F. J. Person, secretary, informs us that the Infallible Gun Club, of Buffalo, N. Y., has fixed upon July 4 for an amateur tournament. There will be added money and merchandise prizes for the high guns. Professional experts may shoot for targets only.

Under date of June 9, Mr. Edward F. Markley, secretary I. G. C., writes us as follows: "The Independent Gun Club's challenge to the Pattenburg Gun Club, of Pattenburg, N. J., has been accepted, and the match will be shot on the grounds of the latter club Saturday afternoon, June 18. The conditions are as follows: Ten men to team, and 25 targets per man. The losers are to pay for a supper, to be given to both teams at Milbern's Retreat."

A telegram of June 13 to us from Mr. Elmer E. Shaner, secretary-manager of the Interstate Association, conveys the information that on the morning of that day, in addition to the list of entries published elsewhere in our columns, fifty more were received. This insures that the Grand American Handicap at targets, to be held at Indianapolis next week will be a grand success, and also that the manager will be a busy man.

The Jeannette Gun Club, and the Columbia Fishing Club, of Eltingville, Staten Island, held an invitation shoot at the Hudson County, N. J., Driving Park, on June 3, and, like previous shoots held jointly by these two organizations, it was a delightfully pleasant affair. Valuable merchandise prizes rewarded the skill of the shooters, and pleasant sociability and good cheer made the outing enjoyable for the shooters and their guests.

There are nine target events on the programme of the Aquidneck Gun Club shoot, to be held at Newport, R. I., June 18. This is the first of the club's summer tournaments. Six events are at 15 and three at 20 targets, \$1 and \$1.25 entrance. Shooting begins at 11:30. Manufacturers' agents may shoot for targets only. Targets 1½ cent. Rose system. Sweepstakes optional. Ship shells care of the secretary, Mr. J. S. Coggeshall, 32 Church street. Next shoot will be on July 30.

The tie for the Pennsylvania individual State championship at live birds, of which the Williamsport diamond badge is the emblem, will be shot off at Harrisburg, Pa., June 18, on the grounds of the East Harrisburg Shooting Association. The contestants are Messrs. Pyle, of Pittsburg; Stroh, of Pittston and Hepler, of Harrisburg. The East Harrisburg Gun Club handicap will also be shot. This is an event at 20 live birds, handicaps 25 to 33yds., entrance \$12, open to all. This contest will commence at 1 o'clock. Target events will commence at 9 o'clock.

On Tuesday of last week the Emerald Gun Club shot the October and November shoots, on Outwater's grounds, Carlstadt, N. J. To finish the year's series, two shoots a month have been shot, since the New Jersey Legislature passed a law which prohibits pigeon shooting in that State after July 4. In the October event four were high with 9 out of 10, namely, J. Fischer, L. Colquitt, A. A. Schoverling and L. H. Schortemeier, the latter shooting from the 32yd. mark. In the November event, three killed straight, namely, L. Colquitt, J. Whitley and J. Morrison.

Mr. T. W. Morfe, of Dover, clinched some nails in the championship of New Jersey, on Thursday of last week, by defeating Mr. Frank Muldoon, of Freehold, in a contest for the championship trophy at Lake Denmark. Each shot at 25 live birds, and Mr. Morfe won by a score of 24 to 22. Mr. Muldoon lost two birds dead out. The referee, Mr. Henry C. Koegel, challenged the holder, Mr. Morfe, and they will contest for the State championship at Lake Denmark, on June 25. The average trapshooting reporter—other than the professionals—in expressing his emotional states of mind which he mistakes for sound judicial decisions, has two classes to which he calmly relegates the majority of trapshooters—namely, "the has beens" and "the second time on earth." Mr. Morfe has been classed both ways, and it is not nice for him to shoot in such a first-class manner as he is shooting, and has been shooting.

BERNARD WATERS.

### Lowell Rod and Gun Club.

LOWELL, Mass., June 11.—The Lowell Rod and Gun Club held their first serial shoot to-day. While there was a large attendance, only eleven shooters entered.

Climax made the remarkable score of 98 out of 100, duplicating the score earlier in the season. Reliable "45," usually in the 90 per cent. class, scored 87 breaks. McKittrick, a new member, shot a score that is seldom equalled in this vicinity, 47 out of 50. The scores follow:

Climax	10	10	9	9	10	10	10	10	10	98
Reliable 45	8	10	9	9	8	10	7	8	10	87
Currier	8	8	8	8	10	9	7	9	8	83
Dean	8	10	8	7	7	9	8	7	10	82
Edwards	6	8	8	6	5	9	8	4	9	71
North	5	5	3	7	1	6	6	7	6	46
McKittrick	10	10	10	10	8	9	10			47
Ford	5	6	7	7	10					35
Mundy	4	2	6	8	8					28
Chase	4	7	7							18

E. J. BURNS, Sec'y.

### S. S. White Gun Club.

GORGAS STATION, Pa., June 11.—The first of a seven-contest series for a cup was shot to-day under the auspices of the S. S. White Gun Club, in connection with the regular monthly shoot. Mr. Charles Newcomb finished first in both events. Robinson defeated White in a match for the club cup by the score of 15 to 10, and Watson Harper won over Arthur Denham in the challenge cup match by the score of 18 to 15. The scores:

Club event, 25 targets: Newcomb 24, George 22, Stahr 21, Harper 21, Dr. Keeler 20, Tyson 20, Parry 19, Cantrell 18, Hinkson 17, Robinson 17, Dr. Cotting 16, Brewster 16, Lodge 15, Hise, Sr., 15, Brenizer 15, White 14, Witherden 13, Wilkins 13, Vaile 12, Denham 11, Heite 10, Kendall 10.

Cup event, 25 targets, \$1 entrance: Newcomb 24, Harper 21, Dr. Keeler 21, Cantrell 20, Dr. Cotting 18, Hinkson 18, Parry 17, Brenizer 17, Witherden 16, Denham 16, Heite 13, Hise, Sr., 12, Brewster 11.

### Rochester Rod and Gun Club.

ROCHESTER, N. Y., June 8.—At the weekly shoot of the Rochester Rod and Gun Club, held at Cobb's Hill to-day, scores and back scores were shot as follows:

Score	Hdp.	Tot'l.	Score	Hdp.	Tot'l.
Snow	23	4	27	21	4
Donovan	15	6	21	16	6
Clark	19	3	22	3	25
Snow	19	4	23	0	24
Borst	16	7	23	8	25
Donovan	16	6	22	8	31
Clark	23	3	26	20	4
Donovan	19	6	25	21	3
Stewart	20	0	20	23	8
Shoemaker	20	8	28		

## Grand American Handicap Entries.

PITTSBURG, Pa., June 12.—Inclosed herewith I hand you list of entries received to date for the fifth Grand American Handicap at targets, 211 in all. You will, of course, understand that this list will be added to, as all entries received in envelopes bearing post marks dated June 11 will be accepted as regular entries.

ELMER E. SHANER, Sec'y-Mgr.

#### Winchester Gun Club.

WINCHESTER, N. H., June 9.—On June 8, on the Winchester Gun Club grounds, Mr. W. C. Goss, of Henniker, challenged and shot for the New Hampshire State individual championship cup, held by Mr. L. R. Nelson, of this place. Mr. Goss won with a score of 86 to 80. Each shot at 100 targets.

Mr. Nelson showed poor form on account of close application to business. He has shot only twice at targets since September of last year. Mr. Goss is a good shot, as well as a good sportsman.

Dr. Cole, of Henniker, was judge, and gave good satisfaction. Mr. John Whittier, of Henniker, came in the party, and in his pleasant way furnished plenty of jokes and fun.

F. D. LESME, Sec'y.

#### Ossining Gun Club.

OSSINING, N. Y.—The following scores were made at the regular bi-monthly shoot of the Ossining Gun Club. There were not enough shooters on hand to contest for the prize cups. Blandford got a run of 52 straight. No. 5 from 20yds.

### The Soo's Tenth Annual.

ST. LOUIS, Mo., June 10.—When you look at the scores and note that sixty-eight shooters came and took part in the Soo Gun Club shoot, the number will speak well for the Soo Gun Club and its officers. There have been many more shooters at some of their big shoots, and that the numbers were less on this occasion was due to the distance handicap used, which kept many shooters away. Yet the handicaps were not severe save in the case of Klein and Taylor, and they were kept moving back and forth, Klein at 19 and 20 and Taylor at 17, 18 and 19.

The weather was perfect, as the sun has shone all over the West during the past week.

The officers of this club are seasoned men, and they have fine grounds for a tournament, with the exception that the targets are thrown into the sun, and there are some trees in the background.

The yearly competition for the Interstate championship has been an interesting one, and the winners have netted a recompense that was beneficial. The oldest shooters in the State are members, viz.: J. W. Boyd and H. H. Hauman, of this city; Chas. Budd, of Des Moines, and George Hughes, of Fonda.

It is safe to say that when this club gives another tournament it will not open the shoot to traveling men, as they are not permitted to shoot for the cash, and that kept many from coming to this shoot, so if this club made mistakes this year it will try and give shooters what they want at the next annual.

The traveling men present were Fred Lord, Chicago; Fred Whitney, Des Moines; Tom Marshall, Keithsburg; Chas. Budd, Des Moines; Pat Adams, Rockwell City, Ia.; M. Sharp, Bridgeport; Fred Gilbert, Spirit Lake, and J. E. French.

There were many visitors each day, and they were well pleased with the expert squad. Gilbert dropped 16 out of 600. Kline was at his best making 90 per cent. from 19 and 20yds., and was winner of the Interstate championship. Spatz and Barber tied for second, Then, Townsend and Severson were third, Chingren fourth, Smith and Hughes fifth.

#### First Day, June 7.

## IN NEW JERSEY.

## Jeannette Gun Club.

JUNE 11.—The invitation shoot of the Jeannette Gun Club, of New York, President, Fred Ehlen, took place at Interman's Hudson County Driving Park on June 3. The members of the Columbia Fishing Club, of Eltingville, Staten Island, were invited to participate, and a most successful contest took place for the three hundred dollars' worth of artistic prizes, eleven in all, consisting of hand-painted toilet and manicure sets in polished hardwood cases, artistic hand-painted vases and gold-mounted oval and square folding mirrors. These were shot for at the club handicap rise, at 10 birds each man. The ties on 10, 9, 8, 7 and 5 shot off miss-and-out, until two prizes remained for the two men who had not missed. The prizes were taken by shooters in order named. Schortemeier and D. Mohrman in the straight class shoot-off; C. Steffens and Interman shooting out the tie on 9; Meyerdericks and Rohlf's the ties on 8; Charley Meyer and Hainhorst the ties on 7; Henry Nobel and Rottman being the only ties on 6, took the two trophies in that class; President Ehlen shot out his opponent in the tie on 5.

At 2 o'clock the gong sounded for dinner, and the members of the two clubs, their wives and guests partook of a most excellent dinner. Addresses by President Ehlen and other members followed, and shooting was resumed.

Steffens and Meyer chose sides for a team race, the former team winning by 2 birds. A miss-and-out was the next event on the programme, and a spirited contest ensued, Mr. G. E. Loebie winning on the twelfth bird. The day was cloudy, but perfect for shooting and good fellowship prevailed. The birds were good. Scores herewith:

Loebie won with a score of 12.

## Montclair Gun Club.

Montclair, N. J., June 11.—Thirteen members faced the traps to-day. The weather conditions were all that could be desired.

Event No. 2, a handicap match for 25 birds, was tied for by Messrs. Babcock and Moffett, both scoring 22 breaks. In the shoot-off Babcock broke 24 to Moffett's 22, winning the prize of a subscription to FOREST AND STREAM.

Event No. 3, a handicap match at 25 birds, was won by Mr. Babcock also, who scored 23 breaks. Prize, a pocket lamp. The scores on the Parker gun or Winchester rifle were: Babcock 46, Moffett 44.

## New Jersey State Championship.

Lake Denmark, N. J., June 9.—The contest for the live-bird championship of the State of New Jersey, between the holder, Mr. T. W. Morfe, of Dover, and Frank Muldoon, of Freehold, took place at Lake Denmark to-day.

The famous shooter, Mr. H. C. Koegel, refereed the match. He challenged Mr. Morfe, and will be a contestant for this championship on June 25. Lake Denmark will again be the place of contest.

Mr. Morfe lost only his seventh bird. Mr. Muldoon lost his fourteenth and nineteenth birds dead out, thus leaving Mr. Morfe the winner by a score of 24 to 22.

Morfe .....	1222120112211122121221222—24
Muldoon .....	1212112222121*2012*122211—22

## Emerald Gun Club.

Carlstadt, N. J., June 7.—The October and November shoots of the Emerald Gun Club were held at Outwater's to-day. The weather was hot and sultry. The birds varied from slow to fast. A six o'clock wind blew directly from the firing points to the trap. Mr. Schortemeier at 32yds., scored 9 in each event. In the October event, Schortemeier, Colquitt, Schöverling and Fischer each scored 9. In the November event, Colquitt, Whitley and Morrison scored 10. The scores:

C Henry, 28.....1012100210—6	11*1111001—7
L Colquitt, 30.....1201221111—9	1212222212—10

Dakota was a guest.

## WESTERN TRAP.

ON Tuesday, June 28, at the Adair, Ia., shoot, F. E. Gates is to be the manager.

When the Waterloo, Ia., trap shots unlimbered their guns on June 8, it was to try for a hat put up by a fellow townsman. With a handicap allowance, it was won by Webber, with 25, a full score.

The St. Paul Rod and Gun Club report many applicants for membership, and a total of forty-eight enrolled. The Saturday shoot was handicapped by bad weather, yet there were seventeen in attendance.

Programmes are out for the Homer-Ogden Gun Club shoot, which is set for July 6 and 7. C. B. Wiggins is the secretary and general manager. Shooters' headquarters, Danville. Grounds reached from Danville and Champaign via electric cars. 90 per cent. men shoot at 90yd. flights, and under 90 at 40yds. Money divided per cent. plan.

At a meeting of the Homer-Ogden Gun Club officers were elected as follows: Wm. McKinley, President; H. M. Smoot, Vice-President; C. B. Wiggins, Secretary; Frank Brewer, Captain. During the first shoot after a long drawn-out shoot-off, the gold badge was captured by S. L. Harris.

At Panama, Mo., the Central Coal and Coke Co. has donated a

MONTCLAIR GUN CLUB.

wine set for contest by the gun club, shooting 25 targets, four shoots, the high score to win.

The Belle Ellen Gun Club was organized last week at Birmingham, Ala., and has some of the best sportsmen of the country for members, viz.: John G. Cook, A. F. Lowell, Tom Dailey, A. Probst, W. Evans, Geo. Kuffner, R. E. Davis, Walter Tatum, Dr. M. C. Thomas, Dr. W. C. Head and Lco Brewster.

The Batavia, Ill., Gun Club will move their club house from the island to the east side, and will be at home in a few days.

Memphis has an idea of holding the biggest shoot ever attempted in the Mound City. Seven hundred dollars in cash, following the G. A. H., there will be a chance of drawing many of the professionals. And the five-man team challenge will have an acceptance, it is hoped. If not, then there will be a shoot with any five traveling experts who are present.

The Southwestern Washington Gun Club Association has been formed, and will hold shoots in that part of the State. First meeting at Elmo, July 2. The officers are: Dr. J. A. Walkins, of Kaquiam, President; D. W. Fleet, Montesano, Vice-President; A. O. St. John, Chehalis, Secretary.

Shooting at Canton, Mo., with the Lima Club, James Griffith, of Quincy, Ill., made the high score. In the team shoot he and his partner, Grimmer, were high. In the three-man team shoot Canton came first and Lima second. In all, there were thirty shooters present.

Bowling Green, O., Gun Club shot a practice race Wednesday. Some fair scores were made, but no straights.

The St. Hilaire, Minn., Gun Club has been organized with H. E. Ines, President; O. F. Post, Secretary. Traps, targets and grounds have been secured, and the members will hold club shoots the remainder of the season.

Capt. J. S. Sedam, one of the oldest active shooters in the West, arrived home in Denver last week, and it was the occasion for the members getting out to entertain him and start up regular practice for the great Western handicap, which comes off in July. There are still some hopes of securing the 1905 G. A. H. for the city so finely situated at the foot of the mountains.

Chas. W. Budd, of Des Moines, Ia., while at the Fort Dodge, Ia., tournament, broke 115 targets straight.

Geo. B. Stager, made the best score, 45 out of 50, at the Winona Sportsmen's Club, Winona, on Wednesday last. F. M. Norris was second with 36.

The Bayou Shooting Club has been organized at Oshkosh, Wis. The incorporators are Geo. L. Madison, L. D. Harman, Phil H. Sawyer, Chas Nevitt, C. C. Chase, Wm. C. Bouck and Dr. C. W. Oviott.

The fall tournament of the Kentucky Trapshooters' League will be held at Paducah, Ky., Sept. 13, 14, 15 and 16. Better all get ready to go at that time for a "boss" time is assured without fail.

Waco, Tex., purposes to hold the biggest shoot of central Texas on June 16. Some good prizes are offered.

The Streator, Ill., Gun Club is spreading out, having placed traps in position and spent \$100 in improvements. A tournament will be held by this club before snow flies.

Clayton and Tipton, of Kansas City, purpose to run a special car from Kansas City to Denver at the time the great Western handicap is on.

Did. Spencer broke 92 and T. W. Dollarhide 90 out of 100 targets at the Dallas, Tex., Club grounds last Wednesday.

Montana State meet, at Butte, was a great success from start to finish. Almost every event had fifty contestants, and over 100 shooters were present during the week. The annual meeting resulted in selecting Bozeman as the next meeting place, with Nelson Story, Jr., President; C. A. Tuttle, Anaconda, Vice-President; C. H. Smith, Butte, Secretary; Directors, Neal McMillan, of Idaho Falls; Fred Peckover, Anaconda; A. W. Farnsworth, Missoula. The Warm Springs Gun Club and the Idaho Falls Club were elected as members. The three-man team race, 25 targets, each, was won by the Bozeman Club, the members of which were Casey 23, Story 22, Schlechten 24; total 69. Butte No. 1 was second, as follows: Confarr 23, Goddard 19, Walker 22; total 64. The individual championship, 50 targets, was won by Twohy, 48. Handicap medal shoot, 100 targets, based on averages first two days, from 14 to 22yds., resulted in a tie, as follows: Confarr 91, Hirschy 91.

## Garfield Gun Club.

CHICAGO, June 11.—The appended scores were made on our grounds to-day on the occasion of the seventh and last trophy shoot of the first series.

T. W. Eaton won Class A trophy on 25 straight; Lord and Einfeldt, both visitors, tied his score. Thomas won Class B on 23, and Hathaway Class C on 20.

In the cup shoot, which followed, Pollard and Eaton tied for the trophy in Class A on 24. Stone won in Class B on 23, and Gould in Class C on 19. This event was at 15 singles and 5 pairs.

The day was fine for trapshooting, and about thirty shooters took part in the various events of the occasion. The entire club

will be reclassified before the next shoot:

### P. C. T. A. Tournament.

SAN FRANCISCO, Cal.—The initial tournament of the Pacific Coast Trapshooters' Association was held at Ingleside, on the grounds of the San Francisco Trapshooters' Association, on the days of May 29 and 30.

The programme proved an exceedingly interesting one, drawing forth knights of the gun from all parts of the State. Eighty-seven men shot through six events on the first day; sixty-five on the second day. The weather proved to be exceptional, having a little wind with it that made shooting quite difficult. Enthusiasm among the participants was of such an extent that on the first day 12,500 birds were trapped; on the second 9,000. On the first day seven straight scores were reported.

Arrangement of programme was the best that has been presented to the sportsmen for years past, everything working so smoothly that in running the six events through which the eighty-seven men shot throughout the day, it only consumed from 10 A. M. to 5 P. M., with an hour for lunch each day.

High average the first day was made by Broderick with 108 out of a possible 120. Nauman followed, a close second, with 107. Also among the interesting features of the day were team shoots, in which seven teams, five men each, took part. Out of a possible 100, the team scores were:

Golden Gate team No. 1, 95.  
Union Gun Club, 90.  
Hercules team, of Pinole, 87.  
Watsonville team, 86.  
Golden Gate team No. 2, 83.  
Fresno team, 79.  
Union Gun Club No. 2, 75.  
Vallejo team, 71.

Pool shooting was indulged in with great interest by all shooters.

The second day was quite as interesting as the first, with the exception of a dropping off of some of the sportsmen who participated on the first day. Programme was the same as the first day, with an additional 100-bird race for the Bekeart challenge cup, which C. Nauman held heretofore. Eight men participated in this event, and a very close contest resulted therefrom, owing to the fact that Webb and Varlen tied with 96. Iverson was second with 94, Broderick, Nauman and Sylvester tied with 92, Reed taking next place with 86, Stone finishing last with 78.

The weather was as fine as the day before, with the exception that it brought with it increased wind, making shooting more difficult. Large crowds of spectators witnessed the tournament both days.

Members of the Association held a banquet at 8:30 P. M. in the Russ House, and spent a pleasant evening in bringing back to memory the event of the two days, together with experiences of past years.

The Pacific Coast Trapshooters Association have elected to give another tournament during 1904.

The scores were:

Events:	First Day.	Second Day.
Anderson	15 16 18 17 17 16	17 16 18 14 9 16

### St. Paul Rod and Gun Club.

ST. PAUL, Minn., June 6.—Inclosed find report of our regular club shoot. The weather was very threatening, which accounts for the slim attendance. We have secured forty-eight new members, and some are very enthusiastic, and I can promise to send you some good scores before the season is over.

Perry shot at 85, broke 80; Pleiss, 150—129; Kirschbaum, 90—68; Cat, 125—113; Arthur, 105—65; Hanser, 150—137; Frankel, 95—50; Schubbel, 60—22; F. Novotny, 55—48; Picka, 55—25; Allgauer, 25—14; E. Novotny, 100—88; Bokeman, 70—53; Neilson, 75—42; J. Novotny, 55—46; C. Hauser, 30—24; Schulstad, 100—71.

A. E. P.

### Milton Tournament.

MILTON, Pa.—The spring tournament of the Milton Rod and Gun Club, May 31, which promised to be the greatest event of the kind in this section, was not very largely attended on account of very stormy weather. Rain came down in torrents each morning, and the sports from neighboring towns, who never have use for water in any form, kept away from the shoot.

The programme, according to promise, was shot through, and some excellent scores made. First day Hawkins was high gun with 167 out of 170; he broke 100 straight at Social Gun Club's tournament on Decoration Day, and with 133 straight in Richmond, Va., a few days before, made him the wonderful record of 400 out of 403 targets. Everett was high amateur.

Second day the weather was even worse. The attendance in the gallery was large, but not as many marksmen. Squiers, fresh from other victories, captured high gun with 162, to 159. Godcharles was high amateur.

This club will hold a large live pigeon match some time in July, and their annual fall tournament will be in September.

Scores follow:

#### First Day, May 31.

Targets:	10	10	15	20	15	15	25	15	20	15	Broke.

# Ohio Trap.

## Cincinnati Gun Club.

JUNE 11 was fine. Attendance was not as large as usual, however, only fourteen taking part in the Parker prize gun shoot. Of these, twelve succeeded in scoring 100, including their handicap. Faran was high man in actual breaks, accounting for 90. Peters, who is steadily improving in his shooting, was second with 88.

The club will be represented at the State shoot at Akron, by Messrs. Gambell, Falk, Ahlers and Maynard. Some Akron money will be spent in Cincinnati on their return.

The following members shot their scores in the cash prize shoot on June 5, not being able to attend on the previous day. Handicap distance in parentheses: Dick (19) 39, Rybolt (17) 38, Davies (18) 35, Blich (18) 31.

Mr. Dick Pooler, of Chattanooga, Tenn., well known to all shooters, and a general favorite with sportsmen, visited the grounds on June 5, as the guest of Supt. Gambell. Following are the scores of the Parker prize gun shoot, 100 targets, handicap: Faran (18) 100, Peters (20) 100, Harig (40) 100, Block (18) 100, Maynard (18) 100, Steinman (22) 100, Jay Bee (25) 100, Kramer (40) 100, Herman (30) 100, Pohlar (35) 100, Pfeiffer (40) 100, Boeh (40) 100, Lindsley (25) 96, Randall (15) 90.

Matches, 25 targets, two high men out: Gambell 22, 21, 23; Harig 22, 21, 24; Peters 20, 21, 23; Williams 23, 18, 21; Faran 21, 24, 21.

Shoot-off of tie in last match, 25 targets: Gambell 22, Peters 23.

## Phellis Trophy.

A team from the Cincinnati Gun Club visited Dayton, O., on June 7 and shot a match with the Buckeye Gun Club, of that place, for the Phellis trophy, emblematic of the six-man team championship of the State. The day was an ideal one for the sport, and the pleasure of the occasion for the Cincinnati boys was marred only by their failure to capture the cup. However, they are good losers.

Lindemuth was high gun in the match, missing but one target out of the 50. Spangler second with 48, missing one in each 25. For the Cincinnati, Faran made high score of 44, shooting in about his usual form, while Sweeney and Harig were second with 42 each, not as good a score as they are capable of making. The Cincinnati team was not the one originally selected, some changes being made at the last moment.

Phellis trophy match, six-man teams, 50 targets per man, 16yds. Open to six-man teams of any organized gun club in the State:

Buckeye Gun Club.			Cincinnati Gun Club.		
Lindemuth	24	25-49	Faran	21	23-44
Spangler	24	24-48	Harig	19	23-42
Raymond	22	23-45	Sweeney	20	22-42
Miller	22	22-44	Ahlers	20	21-41
Craig	23	17-40	Gambell	20	21-41
McDonald	19	18-37	Don Minto	17	17-34
134 129 263			117 127 244		

At the conclusion of the match several sweepstakes were shot, the wind-up of the day being a 25-target sweep, \$1 entrance, two moneys. In this match the visitors carried off all the money, Gambell being high with 24, and Sweeney second with 23.

## Notes.

Fifteen shooters took part in the medal shoot of the Rohrer's Island Gun Club on June 8. The weather was fine, and some good scores were made. P. Hanauer and C. Ballman tied for the medal on 25 or better, the former winning in the shoot-off, 9 to 8. Lockwood and A. Mack tied for second on 24 each.

The club may have a try for the Phellis trophy, now held by the Buckeye Gun Club, before long, and should be able to put up a good fight.

Six members took part in the badge shoot of the Greenville, O., Gun Club on June 6, Eidson, Kirby and Barker tying for first on full scores of 25. In the free-for-all events Johns was high with 43 out of 50.

There was a good attendance at the regular shoot of the Little Home Gun Club, of Toledo, O., which was held at Point Place on June 8, and some of the shooters did excellent work.

Some changes have been made in the conditions governing the contests for the Shooting and Fishing trophy. The number of men has been changed from five to six on a team; the number of targets from 30 singles and 10 doubles to 50 singles. The teams to shoot in squads of six men, three from each team, the contestants moving after each shot until each man has shot at 25 targets, when the first squad gives way to the second, and so on, to the end of the match. Ties to be shot off at once, at 25 targets per man.

On June 4 the Cleveland, O., Gun Club held a regular club shoot on their grounds, Mayfield Road. Tryon was high gun and won first in Class A, J. I. C taking second. In Class B first went to Burns and second to Doolittle. L. A. Hall was first in Class C. First and second in Class D went to Scott and Wallace respectively.

The Akron, O., Gun Club entertained the members of the Canton Gun Club at Turkey Foot Lake on May 28. A pleasant little shoot was held in the afternoon in which twenty-five shooters took part, Krider being high gun with 50 straight, and Wagoner and Galt tying for second with 49 each. After the shoot

all hands sat down to an excellent fish dinner, which was served in the club house.

The Canton, O., Gun Club Decoration Day shoot was a very successful affair, forty-seven shooters taking part, including a number of visiting sportsmen. R. L. Trimble was high gun with 197 out of 215 shot at. G. E. Wagoner, of Akron, second with 189. Haak, a close third, with 188 and Snow fourth with 185. A team match between the Akron and Canton gun clubs resulted in a victory for the former by a score of 202 to 195. Haak, of the home team, was high gun with 48 out of 50, and second and third places were filled by J. K. W. and Wagoner, of the Akrons, with 46 and 44 respectively.

## Ligonier Tournament.

LIGONIER, Pa., June 9.—The joint shoot of the Westmoreland County League and the Western Pennsylvania Trapshooting League, took place at Ligonier, Pa., on Tuesday and Wednesday, June 7 and 8, under the auspices of the Ligonier Gun Club.

Notwithstanding the threatening weather on Tuesday morning, the attendance was good, as forty-eight shooters faced the traps, most of them shooting through the programme. Tuesday was devoted to the Jack Rabbit system of division of moneys, the same seeming to please all present. Wednesday's shooting was conducted under the Rose system, and the attendance was not as large; still, this was expected, as generally the first day in all shoots, the attendance is the best.

Shooters were present from Ruffsdales, Scottsdale, Pittsburg, Blairsville, Derry, Greensburg, and Wilkesburg, Pa.

The trade was represented by L. J. Squier, J. R. Hull, H. P. Fessenden, and E. D. Fulford, who, after the last shot was fired Wednesday afternoon, amused those present by a few of his stories, told as only Ed. can tell them.

High average for the first day went to R. S. Deniker, with 143 out of 155. Second, E. D. Fulford, with 142 out of 155. Third, a tie between J. T. Atkinson and L. J. Squier, each breaking 140. Fourth, Geo. Cochran, with 139.

High average for the second day resulted in a tie between E. D. Fulford and L. J. Squier, each breaking 167 out of 175. Second, J. T. Atkinson, with 165. Third, Geo. Cochran, with 161, and fourth, Ed. Kelsey, with 158.

General average for the shoot: First, E. D. Fulford, with 309 out of 330, and L. J. Squier, second with 307; Third, J. T. Atkinson, 305, and Geo. Cochran, fourth, with 300.

The five-man team race, Westmoreland County Trapshooters' League, events 4, 5, 6, and 7 on the first day, went to the Ligonier team, with a total of 215 out of 250. Scottsdale was second with 197, and Derry third with 194.

The three-man team race, Western Pennsylvania Trapshooters' League, events 5, 6, and 7, on the second day went to Herron Hill team with a total of 134 out of 150; second, Northside, with 122; third, Ligonier and Scottsdale tie, each getting 124.

Team race, second day, events 5, 6 and 7, 50 targets: Herron Hill Team—Kelsey 49, A. H. King 46, Rahm 39; total 134.

Northside Team—Fleming 45, Deniker 44, Knude 43; total 132.

Ligonier Team—J. O'H. Denny 45, T. J. 40, F. Denny 39; total 124.

Scottsdale Team—A. B. Kelly 45, W. Carroll 43, D. Carroll 36; total 124.

Wasett Team—Squier 47, Atkinson 45, Fulford 45; total 137. This team not eligible, as they are not in the League, but shot along to keep the boys company.

H. P. F.

## Anaostan Gun Club.

WASHINGTON, D. C.—The regular weekly shoot of the Anaostan Gun Club was held June 9. Although it was a disagreeable afternoon for shooting, on account of a very high wind and threatening rain, all shooters were in attendance, and the sport was kept up until 6:30, when the trap broke down and put an end to it. J. B. Brown did some remarkable work, scoring 39 out of 40 and 47 out of 50. Uncle Billy Wagner, Jos. H. Hunter, Mr. Petrola and Capt. Craig shot well and made some creditable scores, considering the conditions. Following are the scores:

Shot at. Broke.		Shot at. Broke.	
J. H. Hunter.....	110 93	Green .....	50 31
Heintz.....	100 63	C S Wilson.....	40 30
Wagner.....	90 77	*Haven.....	40 20
Petrola.....	90 69	Orrison.....	35 17

### THE COLD STORAGE CASE.

THE New York cold storage case drags its slow length along. The latest report of progress comes in the form of an opinion handed down by the Appellate Division of the Supreme Court on Friday of last week.

The suit was brought in August, 1901, against the Arctic Freezer Company, consisting of Jacob V. Bootman and Howard R. Robinson, for the possession in close season of thousands of game birds and other birds, the penalties for which aggregated \$1,168,315.

The case progressed through various courts, the amount of penalties recoverable being reduced for various reasons, mainly because of defects in the wording of the law, until in February, 1903, the Court of Appeals held that the State might sue to recover penalties amounting to \$318,518, for certain of the game birds and song birds. When the case came to trial, it was dismissed, the court holding that as the birds had been brought in from outside of New York, the law forbidding possession in close season did not apply to them. From this ruling the State appealed, and it is this appeal which has just been passed upon by the Appellate Division in the opinion which we print on another page.

The Appellate Division sustains the finding of the lower court. It holds that the purchaser of game outside of the State, who brings it into the State at a time when its possession is lawful, acquires in it a property right of which he may not constitutionally be deprived by the Legislature. Further, such confiscation of property being unconstitutional, its unconstitutional nature cannot be affected by an act of Congress.

If the principle here enunciated, of the absolute and unrestricted nature of property in dead game, be admitted, it follows that the opinion of the Appellate Division might well be accepted as final. But the interesting fact is that in numerous instances the courts have taken a different view, and have declared that the property right acquired in game is a qualified right only, and is subject to such restrictions as the Legislature may deem expedient to attach to it. This, indeed, is the basis of very much of our game legislation. If property in game be absolute and not subject to restriction by the Legislature, we could have no laws whatever regulating possession in close season, with respect to game imported nor to game taken within the State. As a matter of fact, however, it is conceded that as to game taken within the State, the Legislature may forbid possession in close season; and as to such game it is held that the possessor may acquire only the qualified right to possess it in the open season. In this Arctic Freezer suit, the State representatives assumed that if the law made the possession of game unlawful at certain periods, the right of the individual to possess it in that forbidden period could not be acquired, no matter where the game came from. The Appellate Division does not share this view.

The principle has been repeatedly sustained, and by the Court of Appeals of the State. To that court the present case will be taken. If the State shall be defeated there, on the same ground of the law's unconstitutionality, the case will be taken to the Supreme Court of the United States. The point is one which should be settled once for all by the highest authority in the land. The interests at stake are tremendous. Without a final establishment of the right of the State to stop the sale of game in close season—of all game, without regard to its origin—our system of protection must be only partial and inadequate.

The question of the constitutionality of the laws which forbid possession of imported game in close season cannot be affected by the Lacey Act. As we pointed out long ago, if a statute conflicts with the constitution of the State, or with that of the United States, the conflict cannot be removed by act of Congress. Only a

revision of the constitution could do that. If the upper courts should confirm the view of the Appellate Division as to the constitutional right of a New York game dealer to possess in close season tons of game birds and song birds purchased in other States, Congress will be powerless to provide any other remedy than such as may restrain transportation between the States.

### JUNE DAYS.

If the days of June offer to the gunner no attractions more enticing than lazy comfort out of doors, they are the best days for the angler. In following the streams and hoping to take the big fish, all thought of comfort is lost sight of. This is the work that is play.

To sprawl on the grass and stare up at leaves which have not yet exchanged their vernal freshness for the darker hue of summer, is pleasant, if not exciting; and if loafing absolutely palls, it is not yet so warm but that one may take some vigorous physical exercise, though, if he has the choice, he will do well to journey through the woods, or along shaded lanes, rather than to follow the dusty highway or even to cross his neighbor's mowing lot.

These are days when, if one is building for himself a summer retreat such as the Vermont home that Mr. Brown recently described, he may put vigor into his ax strokes, may lay up the stone chimney of his cabin, or may pile log on log around the building and feel at night a pride at the growth which walls have made toward roof tree.

Yet not many of us have the leisure to partake of joys like this. We have to work most of the time. If we are lucky enough to be in the country, we may sit on the piazza at morning or evening or on Sundays and listen to the rustle of leaves, the hum of insects, or the boom of surf upon the beach. We may watch the robin and the wood thrush as they hop over the lawn, stopping now and then to look, or bending forward and turning the head, held close to the ground, as if listening for the movement of some unseen prey. We may see the great crow blackbird, large of head, glossy of plumage, and long of tail, stalk over the grass with dignified march as he searches for food for his clamorous and growing family, hidden away in the thick top of spruce or pine tree. After all, the birds that we watch are a good deal like ourselves, and like every other living thing—their first care is food to eat. The birds are satisfied with this, but we humans want a piece of land, a house, more or less elaborate, clothing, diamond rings, automobiles, and a lot of other non-essentials which do not actually add to our comfort, though we imagine they do. Has any of us ever had such a good time as when, alone or with a single companion, he journeys far from his fellows, a good horse between his legs, a few pounds of dried meat his sole provision, and no property except his arms and a buffalo robe or a pair of blankets? Would the angler exchange his days on the stream with their black flies and wet and heat and cold and disappointment, for any other excursion that could be named?

June is the month of weddings and of roses, and it is leafy, but it is pre-eminently a month of out of doors. Two other months in the year equal it in this respect—October and November. They offer a tang and a tonic not found in June, but again, for the most part—though not always—they lack the mildness and the softness of its best days.

### MONEY VALUE OF A STATE'S GAME.

It has often been pointed out that the game of a State has a definite money value, and this value is constantly increasing as the area of civilization expands and the territory occupied by the game contracts. One of the earliest writers to call attention to this fact was Mr. Lucius Hubbard, of Maine, who, a good many years ago, gathered some statistics as to the probable money value to that State of the game found in it. These figures have since been confirmed again and again. It has been pointed out that the non-resident hunting licenses for big game received by Maine last year amounted to more than \$25,000; in other words, to more than the annual appropriation for the maintenance of the Maine Commission of Fisheries and Game, and the carrying on of its work.

The figures compiled by the Maine Commissioners for

the year 1902 showed that the visitors from without the State gave employment to considerably over 4,000 people, who received in wages nearly \$268,000. The cash paid in for board from non-resident visitors was over \$1,370,000.

It has been estimated that each of the 133,885 visitors to the State in 1902 left there \$100, but if the amount expended was only half that, the total was very large. Of the persons who visit Maine each summer, a very large number are attracted by the shooting and the fishing, or if not directly by that, at least by the fact that some member of the family desires to be where shooting and fishing can be had. The summer and autumnal visitor is an important factor in the prosperity of many of the inhabitants of Maine or of Michigan or of various Provinces of Canada.

If the summer visitor goes to Maine, the winter visitor goes to Florida, or Texas, or Louisiana, or North Carolina. He spends money for his winter pleasures, just as his neighbor does for the pleasure of the summer. He pays his railroad fare, his non-resident fee, and his hotel or board bill, and hires his guide; he brings to the State money that otherwise would not be brought.

The mild climate, the open golf links, and the pleasant piney woods attract not a few men to the South, but it is the Bob White of the uplands and the wildfowl of the marshes that bring most of them. It is worth while, therefore, for each State of North and South alike to recognize that in the game and fish which in old times swarmed on the land and in the waters—and which, if properly guarded, would again become abundant—they have an attraction which will bring within their borders great numbers of people, eager for recreation, and willing and glad to spend freely their money in its pursuit.

The game of every State is an asset of great value, and one which, if properly handled, will pay steady and sure annual dividends.

THAT exposition of the value of the quail as an ally of the farmer, printed last week, was convincing, but one may tremble lest it prove too much. We have been working in this country for years to create an enlightened appreciation of the office of insectivorous birds as allies of the farmer, and that lesson has been pretty thoroughly learned. If to the forces of other insect eaters protected by public opinion the quail shall be recruited, where shall the sportsman as the destroyer of quail find himself? Already in isolated instances he is shut out from well stocked fields; a correspondent of the Division of Entomology reports that after the discovery of seventeen cut-worms in the crop of a quail shot on a Texas farm, "that stopped the killing of quail, so far as my grandfather's place was concerned." But there need be no fear that quail shooting sportsmen will ever actually be deprived of their sport; for as a matter of fact it is the quail shooter to whom the farmer is indebted for the bird's protection. Had it not been for the efforts of the sportsmen themselves, the quail would long ago have been exterminated from vast areas where they now abound. The quail shooter has always been, and will always be, the most active and efficient protector of the birds, for the simple reason that he has a very definite and actual interest in their preservation. His concern to insure good shooting is a more potent stimulus to game protection than the most profound appreciation of the bird's value as an insect destroyer can ever prove. Note for a late example of what sportsmen are doing in this field the recent enterprise of the Massachusetts Fish and Game Protective Association, in putting out, all over the State, 181 dozens live quail, at a cost of about \$3,000. This work was undertaken in consequence of the quail extermination by the extreme cold of last winter; and if all goes well it will mean a restoration of the birds, which will be of general public benefit.

A CLERGYMAN who must be without a saving sense of humor has published for his fellow sermon writers a book of texts and illustrations, entitled, "Fresh Bait for Fishers of Men." This recalls a story which a well-known preacher tells of himself, that being invited to preach to Vassar College, he found, to his consternation, when in the pulpit, that he had brought the wrong sermon. The one he had with him was on the text, "I will make you fishers of men." Needless to say the young ladies were edified.

# THE SPORTSMAN TOURIST

## Log Cabins.

Editor Forest and Stream:

Mr. Brown's graphic description of the evolution of a log cabin, in a June number of your paper, reminds me that I have lived in one nearly twenty years. For more than eighteen years I lived in a tiny cabin, 8 by 12; then put up a cabin 14 by 18, made of pine logs that were about one foot in diameter.

While I clung to the small cabin, the most of my time was passed in the open air. I slept outdoors from April 1, until about Christmas or New Years. My shelter was airy enough to be called the open air. A roof to keep off the rain, and walls of poultry netting to keep off the skunks.

The small cabin was a paradise to a lazy man. One could sit on the deacon seat, before the stove, and reach about everything in the cabin. Without getting up, I could kindle a fire, fill the teakettle from the water pail, set the table, eat breakfast, wash and put away the dishes, and when ready to read or write, could reach books, pencil and paper in the rude bookcase at my back.

The new cabin is on a hill. It is 14 by 18, with side walls 5½ feet in height. The ends are logged up to the ridge-pole, 11 feet. There is only one outside door. The windows, four in number, are hinged at the top, so can be turned up out of the way in warm weather. There are two rooms, kitchen and sleeping room. The kitchen is at the front, where people out in the States usually place the parlor. The sleeping room is used for books, clothes, etc., and contains a cot-bed with good woolen blankets over a mattress. I sleep in the draft from the two windows, and so far have not thought of sleeping outside. I may come to it later on.

Mr. Brown's self-invited guests, the borers, made free with the logs of my cabin. I could hear their augers all the time, day and night, and by October they had accumulated several bushels of sawdust. As I didn't care to entertain unknown visitors, I took the trouble to spy on their work. I had some short logs left over, and from time to time split one open to see what was going on inside. I found two species of borers. One footless, and the other with one foot. They were white, with black heads. They passed the winter in the logs in the pupa stage; the next spring the beetles were numerous in the cabin. One was over an inch in length with very long antennæ. It was brownish green, with light marks throughout. It was the footless borer and the book name is *Monohammus confusor*. The other beetle was smaller and dark colored, and named *Asemum moestum*.

The larva of these beetles work in the sap wood, or live wood; that is, wood containing cells filled with protoplasm. The wood beneath the sap wood is dead, and the cells are filled with woody fibres. Without doubt the borers feed on the contents of the cells, which are nutritious and not on sour sap, as Mr. Brown's lumberman asserts. I examined the sawdust and found it to be rejected woody fibre.

As wood is expensive in this locality, Cape Ann, I put into my cabin a No. 7 cooking range, and last winter used nut coal.

I cut the lumber for the new cabin a year ago last November. The bark had set, and I knew it would not peel off as it will if cut when the sap is active. When I moved into the cabin in the spring the logs were shrinking, so I did not think it safe to cement the cracks until fall. Meantime, I caulked between the logs with a moss that was ready to hand, and was much like oakum. I find this moss on the bottom of pond holes where water stands in the winter, and it can be rolled up readily, as it lies in thick sheets. I used it wet, which is the proper way, and I found that it was nearly impossible to remove it when I substituted cement. I used cement to keep the woods mice out. I cemented the floor and underpinning for the same reason.

Mr. Brown mentions entertaining visitors; but I think I can go him one or two better, for my register contains 1,406 names, entered since January 17, 1904, five months.

I am proud of my new cabin, not on account of its beauty, or usefulness, but because it is mostly my own handiwork. The logs were green and heavy, and I was obliged to do a lot of brain work to overcome the law of gravitation.

The old-time log camp, such as was built in Maine in the days of the "pumpkin pine," is seldom seen now, even in the logging swamps of that State. It was a low camp, the sides not over two feet in height. The fire was on the ground in the center of the camp, and the men slept in berths, side by side, instead of single bunks. The terms used in and about these old camps still cling to my memory, and I herewith name a few, just for old times:

"Smoke hole, smoke ribs, bean hole, spread, berth, deacon seat, dingle, wangun chest, splits, hounds, hooks, Kennebeckers, dundyfunks and doughgods."

The smoke ribs were ribs next the ridge-pole. On these two ribs the poles for the smoke hole were laid

up cob-house style, three feet or more above the top of the camp. The bean hole was a hole in the ground at one end of the fire, where beans were baked, covered with hard wood coals. The spread was a thick comforter. The berth was on each side of the fire. Usually each berth was wide enough for one-half the crew. The men sleeping side by side; the spread was long enough to cover all. Fir boughs, covered by a blanket spread, was the usual bed. The deacon seat run along the foot of the berths, on each side of the fire, and was made from halves of logs. The dingle was a space at one end of the cabin, reserved for surplus clothing, etc. The wangun chest, was commonly a dry goods box in which tobacco and clothing were kept to sell to the men. Its proper place was in the dingle. Splits were a sort of shingle, three feet long and half an inch thick, used to cover the camp. Hounds were seats for one. They were made from the top of spruce trees with limbs for legs. Hooks were made from small spruce shrubs. One about three-fourths of an inch through fills the bill. Cut the stem off about four inches below four or five thrifty twigs. Cut twigs same length and cut out the stem above the twigs. Peel the bark off and bend back the twigs, and fasten them to the stem. Hang up near the fire to season. When well seasoned, cut the twigs off and whittle to

## Provisions for the Wilderness.

Editor Forest and Stream:

All over the Hudson's Bay territory, in making trips, be it in winter or summer, there is a scale of provisions upon which a safe result can be assured. For each person of the party, per diem, the following is allowed, and that is multiplied by the supposed number of days that the trip is likely to last. Moreover, for each seven days calculated on, an extra full day's rations is thrown in, this is for safety in case of some unlooked for accident.

Provisions per man, per day: 2 pounds of flour (or 1½ pounds of sea biscuits), 1 pound of fat mess pork, 2 ounces of sugar, ½ ounce of tea, 2 ounces of peas (or same of barley), ½ ounce of carbonate of soda, and ½ ounce of salt.

The peas or barley are intended to be cooked during the night's encampment with any game the route may have produced through the day. With such rations I have traveled with large and small parties, sometimes with Indians only, and at others with Indian and Canadian voyagers mixed; have penetrated the wildest parts of two provinces, in canoes and on snowshoes, and was never short a meal. I admit that with the wasteful and improvident character of the Indians, the leader

THE OLD CABIN.  
Photo by Shelly W. Denton.

a sharp point, and you have good hooks for wet stockings and mittens. In the old camps there was always a row of these hooks hanging from the smoke ribs. The hooks were tied to pegs. Nails, one hundred miles "up river," were luxuries, and beech pegs were sharpened and driven into the logs where needed.

Kennebeckers were any thing in which the men carried their clothes. A carpet bag was the usual thing, and was often kicked about in the dingle. Dundyfunks were concoctions of the cook. They were made of meal, molasses, fat pork and doughgods. Doughgods were hunks of boiled dough, seasoned with vinegar.

There were many other odd expressions heard around these old camps. "Stags" were made from old boots by removing the legs, and were much in use about the fire. "Out in the States," was a common expression, and meant out of the woods. The cook at night would call out: "Nine o'clock! Spread down!" Then the big spread would be rolled down from the head of the berth and the men would crawl under it, each in his proper place, which he knew by its "heading."

In the morning the crew was aroused by the cook calling:

"T-u-r-n o-u-t! Bean-on-table!"

"Bough down," was heard on Sunday when the men picked fir boughs to "bough down" the berths.

I stop here, by suggesting to Mr. Brown, that he can make a few "hooks" and "hounds" for his camp, or cabin. I am barred, because spruce does not grow on Cape Ann, only in rare cases, HERMIT.

of the party must use due care and watchfulness over his outfit and see it is not wrongly used.

Take, for instance, the provisions for a party of seven men for fifteen days, the weight aggregates 347 pounds, and is of formidable bulk; and when the necessary camping paraphernalia, tents, blankets, kettles and frying-pans, are piled on the beach alongside the eatables, the sight is something appalling, and the crew is apt to think what an unnecessary quantity of provisions; but before the journey is over we hear nothing about there being too much grub. Long hours, hard work and the keen, bracing atmosphere gives the men appetites that fairly astonish even themselves.

If a party is to return on the outgoing trail, and after being off a few days finds it is using within the scale of provisions, it is very easy to *cache* a portion for the home journey with a certainty of finding it "after many days," that is, if properly secured. If in the depth of winter, and there is a likelihood of wolves or wolverines coming that way, a good and safe way is to cut a hole in the ice some distance from the shore on some big lake, cutting almost through to the water. Into this trench put what is required to be left behind, filling up with the chopped ice, tramp this well down, then pour several kettles of water on top. This freezes at once, making it as difficult to gnaw or scratch into as would be the side of an ironclad. I have come on such a *cache* after an absence of three weeks to find the droppings of wolves and foxes about, but the contents untouched. One could not help

smiling on seeing these signs, imagining the profound thinking the animals must have exerted in trying to figure out a plan to reach the toothsome stuff under that hard, glazed surface.

At other seasons of the year a good *cache* is made by cutting and peeling a long live tamarac pole. Place this balanced over a strong crutch, tie what is to be left secure to the small end, over which place a birch bark covering to keep off the rain (or failing the proper place or season for getting bark, a very good protection is made with a thatch of balsam boughs placed symmetrically as shingles), and tying all in place, tip up the small end, weighting down the butt with heavy logs or stones; and possess your mind in peace.

Two of the best auxiliaries to a short supply of provisions that a party can take on any trip in the wilds of Ontario or Quebec, are gill-net and snaring wire. As food producers, I place these before a gun. Most of the interior lakes contain fish of some sort, and a successful haul one night can be smoke dried to last several days without spoiling, even in hot weather. So long as they are done up in a secure manner in birch bark to keep out blue flies, the greatest danger of their going bad is prevented.

Another very good way to preserve and utilize fish, is to scorch a small portion of flour (about one-third the quantity) and mix with pounded up, smoke dried

ber. New Brunswick offers an excellent opportunity to the fisherman, but one must merely admire the big bull moose and leave his rifle in camp until September 15. The speckled square-tails of the Upper Dam at Rangeley are as plentiful as ever, and salmon still rise at the Bangor pool; but Maine's thousands of deer cannot be legally termed venison until the leaves have commenced to turn, and chill fall frosts have nipped the pond lilies and sent swallows and warblers well on their southward journey. The little fresh water salmon of Lake St. John, the ouananiche, is still hungry for the fly at Grande Décharge; but the Montagnais have made the immediate vicinity of Lake St. John anything but a good game region, and the Indians even then were repairing traps and canoes for their long winter in the Northland.

Twelve years ago, before a railroad turned the Adirondacks into a summer resort, I caught 2-pound trout in the south branch of Moose River, and killed my first buck at Shy Pond, near Little Moose Lake. After an absence of ten years, I went back again to have a look at the old spot, but did not stay long. The Adirondacks have changed somewhat since the days of the early nineties. The sportsman is passing on before the vanguard of the summer hotel man; the old brooks and pools are forgotten, and now golf balls whiz over the wild meadows where deer came down to feed. Where, too, are all the old regulars of the Moose River country—Ed Smith,

that at least one-third of its area is water, but the ponds are often isolated and unconnected, the distances between them are great, and during the hunting season many of the streams are too shallow for navigation. Of course, such rivers as the Exploits, Humber, or Gander, are always open for dories long distances in from the coast, but as a rule the smaller streams, after a few miles, become too low and rocky for boats or canoes of any description. And this is just the reason why Newfoundland will remain well stocked with game for years to come. The interior is almost inaccessible, and everything must be packed in from the railroad or the nearest navigable river. Few sportsmen ever penetrate any distance into the island, simply because it is difficult traveling, and usually unnecessary. Nine-tenths of the salmon are killed within ten or fifteen miles of the ocean, while in autumn during the migration, hundreds of caribou are shot as they pass southward at the eastern end of Grand Lake, or, in fact, all along the northern line of the railroad. At that season great herds of the animals cross the tracks between Howley and the Topsails, where they were formerly slaughtered by the carload.

Our tent was small and of the very lightest possible material. No attempt was made to insure it against the attacks of flies or mosquitoes, as that is next to the impossible; for no matter how carefully you crawl in or out, even with an insect-proof tent, a few of the pests will always work in, either around the flap or under the sod cloth, and at night a few seem like a legion. Mr. Dugmore took a light cheese-cloth canopy, 7 by 6 by 3 feet, which could be suspended in a twinkling from four upright stakes driven in at the four corners of the tent. On warm evenings this became very useful, and was absolutely proof, not only against the attacks of the mosquito, but it completely baffled the efforts of those wicked little sand flies that make the early morning hours so miserable. This canopy, however, was necessary only on the warmest nights, for usually the evenings were cool enough to drive all such pesky vermin in hasty retreat to the top of the tent. Fortunately the black fly does not still-hunt in the dark; it is his one redeeming quality; but on calm, sultry days toward sundown, frequent applications of the strongest "dope" are not only necessary for comfort, but essential for the enjoyment of life itself.

The Newfoundland guides, for the most part, are shockingly poor and can add nothing to your outfit, and I would advise the sportsman to procure everything, even to ax or hatchet, before landing on that desolate coast. Of course all necessities can be purchased at St. John's; but should the usual route via North Sydney be taken, St. John's will be distant some five hundred miles by rail, with not a respectable store between. A very few of the guides are well equipped with tents and outfit, and they command good wages; but by far the majority can furnish nothing but their services, and a never-failing willingness to work hard. Few have had much experience with sportsmen, and they are far below the standard set by the Maine or New Brunswick guides in understanding sportsman's needs. But give a Newfoundland a dollar a day and plenty of tea, "baccy," and bread, and he will show you more game in one week than could be observed in Maine during the entire hunting season. He will show you salmon as well, but he cannot tell you how to catch them, when they will rise best, or why they will not rise. All his experience has been with the nets. He will take you to lakes filled with trout, but you must search out the retreats of the big fellows for yourself. He wants to be directed, and he expects it; and whether you do or not, he always gives you the credit of knowing ten times as much about fishing as he does or ever will. He never assumes the lordly air, but is ever content to be the servant; and no matter what position the sportsman may have occupied in other hunting localities, in Newfoundland, at least, he may rest assured that he is boss of the camp. He believes all your stories without a question, and, strange as it may seem, is singularly reticent about his own exploits. Illiterate and uneducated, he is as simple and credulous as a child; often mentally dull and unintelligent, but thoroughly temperate in speech and habits alike. I have rarely heard a Newfoundland fisherman use a profane word, and never heard one grumble or complain, no matter how heavy the pack or how long the portage might be. Reared amid the toil and hardships of a barren coast, his life is one long struggle for existence—a battle against poverty and the elements—where only the brave and strong survive. Inured to hardship and suffering, he quietly plods along at his labor, often beyond his strength, never beyond his endurance. To read the past history of Newfoundland, or to know the lives of her people, seems like watching a losing battle fought against the forces of fate.

Before leaving New York, I was advised by a friend who had fished many seasons in the colony, to omit the long double-handed salmon rods used so extensively in England and on the broad rivers of eastern Canada. Rods of eleven or twelve feet were of sufficient weight and length for casting the narrower Newfoundland streams, and the flies par excellence for salmon were the silver-doctor and Jock-Scott, tied on small hooks. This advice I found to be that of a man who knew what he was talking about, and fortunately followed it; but at the same times discreetly added several light trout rods and many dozen flies of all sizes and combinations of color. Subsequent events proved that more than three-quarters of our salmon were killed on either of the above-named flies. Among the second raters might be mentioned the fiery-brown, blue-doctor, black-dose, dusty-miller, and professor, but as a rule, salmon would rise to a silver-doctor, Jock-Scott, or nothing; while trout struck vigorously at almost any fly, preferring, however, those containing red. The Parmachene-belle, scarlet-ibis, Montreal and professor, the hackles, coachman, and white-miller, with many others, all did good service during the summer, and, with the exception of the first-named, could hardly be ranked in any order of preference. The above selection of salmon flies may be at variance with the experience of others who have fished in Newfoundland, but during the season of 1903, at the places and under the conditions in which I fished for six weeks, there was no doubt as to the preferences of the salmon.

Dugmore carried no rifle, as his trip was a short one,

THE NEW CABIN.  
Photo by Shelly W. Denton.

fish, previously cleaned of bones. This makes a light and sustaining pemmican, easily warmed up in a frying-pan, and, if a little fat can be added in the warming process, one can work on it as well as on a meat diet.

Admitting that there are years of plenty and years of scarcity with rabbits, there must be a dearth indeed when one or two cannot be snared in some creek bottom near the night's camp. A gun on the other hand may be only an incumbrance on a long journey. A chance shot may well repay the person carrying it, but very frequently a gun is quite useless.

We crossed the country some years ago between the St. Maurice and Lake St. John. It was at the very best time of the year to see game, being in the month of May, when every living thing is full of life and moving about. The trip took us seven days going; coming back by another route we gained one day. On the whole of that journey through bush, lakes and rivers we only fired two cartridges, whereas our small gill-net gave us splendid fish each camping place.

Another trip I remember, this time in the winter, accompanying the men who carried the winter despatches between Pic River and Michipicoten, a distance of 120 miles each way. I was prevailed upon to take a rifle, as the route went over a very high mountain where deer (caribou) were seen every year by the men. Well, I suppose they told the truth; but I carried that gun 240 miles without firing a shot. No, as a possible help to stave off starvation, commend me to a net and snare in preference to a gun.

MARTIN HUNTER.

CANADA.

## A Summer in Newfoundland.—I.

EARLY in the summer of 1903, I found myself the fortunate possessor of three months' leisure time to be spent as I chose. I had already made brief hunting or fishing excursions to several localities in Canada, as well as to the woods of Maine and the Adirondacks; but here was the long awaited opportunity to spend three whole months in the forest, to get away out of the beaten paths, away from tourist and sportsman alike, but above all, once again to sit around the evening camp-fire listening to the whirl of the rapids, and once more to breathe the fresh, fragrant odors, and hear the strange voices of the wilderness night. Just where to go was the perplexing question to decide. It always is a difficult problem with sportsmen who desire a variety of sport, who must enjoy the best of the fishing as well as big-game hunting, and yet be back again in the office by the middle of September.

Jack Boyd, and Doctor Blake—men who could shoot straight, and, after the day was over, men who could fill your ears and brain with true stories of the woods? All gone—but whither? Have they, too, changed the habits and customs of a lifetime under different conditions and a new environment, or have they moved onward to remoter waters, leaving far behind their old and blackened camp-fires? Yes, to-day many old scenes in the North Woods of New York State have passed. The sound of the ax rings loudly, and the trails are well blazed and well traveled, but we will always remember them, not so much for what they are, as for what they have been.

I wanted to find a spot where the trout were not all fingerlings, and were still comparatively uneducated; where a millionaire friend was not a necessity in order to kill a salmon; and where, after rods had been put away and the old fly-book closed for the season, I could pack my venison into camp—venison with antlers—and where the whole forest was my own.

It was not until after a visit with A. Radclyffe Dugmore, companion of many a day in the woods, that a locality was chosen. A day spent at his picturesque little home in Newfoundland, N. J., with rain pelting against the panes, and with maps and game laws spread out on the table, decided me. We planned the trip in detail, listed outfit and provisions—even speculated on "the luck"—and finally ended with an amicable discussion of that old, well-worn topic, large vs. small bores. The more we conversed, the greater our enthusiasm became, but at midnight everything was arranged. The interior of the island of Newfoundland was to be the place, and I was not going alone—we were going together.

I had traveled over the bleak hills of Newfoundland before, but merely for hunting purposes, and in the fall, when big trout are difficult to locate, and salmon, thin and weak from spawning, have ceased to rise. But this season all summer was before me, and even as we talked, ouananiche and speckled trout were waiting for me in the ponds and streams, and fresh-run salmon lying ready in the lower pools. Sea trout, out in the ocean, were already playing about in the river mouths, while far back in the interior caribou stags were growing their new antlers in solitude as they cropped the young spring shoots laid bare of winter snows.

We left New York by rail on the night of June 27, with an outfit light and compact, and as nearly complete as possible. Lightness is the most desirable quality in an outfit, as anyone who has traveled over the hills and barrens of the interior will readily testify. The island is literally filled with lakes, and it has been computed

and would end long before the opening of the caribou season, but he was literally armed to the teeth with cameras of the heavy ordnance type, and with all necessary photographic paraphernalia. His primary purpose was to make pictures—true pictures of wild animals as they live—but most of all to press the button on a fresh-run salmon leaping in the air as he felt the first prick of the hook.

Early on the morning of June 29, our ship, the Bruce, steamed into the little harbor at Port au Basques. For an hour a black, rugged coast had been in sight, and far back in the interior blue hills, indistinct through the morning mist, still showed patches of snow. The first view of the island is illustrative of the whole, for truly it is a desolate expanse; not, however, altogether unpleasing to a sportsman's gaze. No sound of clanging trolleys or busy streets jar the nerves as he approaches. Merely a wharf, some quiet little cottages to the left, and a few terns and herring gulls circling overhead, welcome his arrival to that rock-bound coast. It is a land which possesses charms all its own, charms strange and peculiar, of melancholy dreariness and desolation. Vast stretches of bare hills and barrens always produce fascinations strangely haunting to the memory of a traveler; even more so, perhaps, than do the grander scenic effects of mountain or forest. Such are the subtle enchantments which recall the hardy adventurer, hunter or explorer to travel once again the treeless tundras of the Arctic zone, and once more to feel the breath of the snowy wastes. That same spell was cast over Charles Darwin when writing in "The Voyage of the Beagle," he confessed that of all lands the one which haunted him most, and which constantly grew upon his fancy, was the uninhabitable Patagonian wilderness—a country of fog and perpetual dampness, treeless, sterile, wild and melancholy. Yet in Newfoundland a traveler may find many thousands of square miles fully as desolate and forlorn as any in the wilderness of Patagonia.

On arriving at the pier an inevitable visit to the Custom House is necessary. Here licenses are procured for shooting caribou, while the salmon fisherman goes free. Just a word concerning these licenses. Last year the fee was \$100 for three stags, a ridiculous figure, and an imposition upon visiting sportsmen. Few could afford, and many would not pay, such an exorbitant price for the comparatively tame sport of shooting caribou. As a result, the season of 1902 proved very unsatisfactory, not only to the half destitute guides, but even more so to the revenues of the Game Commission, while sportsmen sought elsewhere for their game. 'Tis a poor policy to drive the latter to other hunting grounds; for truly they are geese that lay golden eggs for Newfoundland. Other alternatives are found in the well stocked forests of Maine, Ontario, Quebec and New Brunswick, and excellent alternatives they were, the latter offering moose, caribou and deer for a \$30 license fee.

The legislation of 1901 was even more inadequate than that of 1902, but instead of adopting the prohibitive policy of the latter against non-residents, it went to the other extreme, and permitted one man to slaughter seven of the animals by paying the price—\$80.

This year, however (1903), the license is much better adapted to the purses of visitors, as well as to the game resources of the country; for anyone who could afford a trip to the island would hardly object to a fee of \$50, entitling the holder to kill not more than three stags.

No licenses whatever, not even \$5 per rod, are required by the anglers who take thousands of salmon and trout every season from the rivers of the west coast alone. Adequate protection for the streams is just as potent a factor in game preservation as protection for the caribou. It is true that the Government does make an attempt to patrol the rivers with wardens, but they are too few and under paid; and I have good evidence to show that last season several of the pools on one stream at least were netted by the residents. A license fee of \$10 per rod would never become a burden, while at the same time it would insure to the Government sufficient revenue to stop this barbarous practice of setting nets inside tidewater.

After our baggage was examined, and a deposit on rifles, rods and cameras paid to the customs officer, to be returned in the autumn, our provisions were assessed and a duty of about 20 per cent. charged. It is a poor plan to carry provisions all the way to Newfoundland, as it necessitates the bother of an extra trunk, and the charge on over-weighted baggage made by the railroads, coupled with the revenue asked by the customs, amount to more than the difference between New York and St. John's prices. A much better method for the sportsman to pursue is to write ahead to his guide weeks beforehand, and inclose an itemized list of the provisions to be purchased. Do not allow him to buy from the meagre and expensive store of a local dealer, but order everything sent direct from St. John's.

WM. ARTHUR BABSON.

### Not Nordenskjöld.

Editor Forest and Stream:

Your well informed correspondent, Mr. Cabot, has correctly named the head of the Lena River party which perished in the ice of Siberia. My association of explorer Nordenskjöld's name with that ill-fated outfit was a pure inadvertence—carelessness, if you please—and Mr. Cabot was right in his surmise that the error was a *lapsus penna*. Nevertheless, I rejoice to perceive the alacrity with which your anonymous contributor, D. T. A., hastens to defend the reputation of his Scandinavian kinsman, whose Arctic experiences would have kept him from such a plight, no doubt. CHARLES HALLOCK.

### Trails of the Pathfinders.

LOUP FORK, Neb., June 15.—Editor Forest and Stream: I am reading with constantly increasing interest the "Trails of the Pathfinders," which you are now publishing.

I crossed the Missouri River in 1856, and therefore feel that I know something about old-time conditions; but the patience, persistence, and pluck of these early explorers make the struggles of we modern pioneers look "like thirty cents." PLAINSMAN.

## Natural History.

### The Woodcock's Evolutions.

BOSTON.—Editor Forest and Stream: The inclosed account of the singular doings of a woodcock are from a private letter from a friend. I hope you may think them worth reproducing, illustration and all, in FOREST AND STREAM, and that this may stimulate other observers to contribute observations of a similar sort and explanations.

I remember that some years ago there was much discussion in your columns of the way in which the woodcock makes its peculiar note, some believing it to be true vocalization, and others that it was made by the wings. Was the question ever settled, and if so, which way? Was not the performance witnessed by my friend a display connected with the mating period, and the note of the bird—however made—the same probably referred to in Emerson's poem, "Wood Notes," as "The woodcock's evening hymn," which was put in the category of phenomena seen or heard by only the most loving and persistent lovers of nature? C. H. AMES.

Mr. Ames' correspondent writes:

"I am going to slip in a rough sketch of the performances of a woodcock that I saw last fall. The ground was the southern slope of a small island once wooded, but there were only a few stumps and an occasional bush left; the ground at the lower edge marshy; time, after dark, or after sunset, anyway. The bird would strut and run along for perhaps fifty feet and then start to rise

over the marsh. After rising at less than an angle of 45 degrees until he (or she) had attained a height of say 50 feet, he began to circle, constantly rising (see sketch), until he seemed to be 200 feet high, and then returned in almost the same way. The performance was repeated at least three times. When rising in circles he seemed to give at intervals a cry or call which I cannot describe, but thought it was made by its wings. No other bird of the same species was near that I could see, and wondered if he was doing it for his own amusement or mine.

"I know very little of the habits of this bird, and have killed very few of them, as my marksmanship is none of the best, and I have always found them in wet and brushy ground. Ask some old nimbler what this one was doing, and what he was doing it for.

"I forgot to say that the first flight or rising was against a slight south wind."

[We have never seen a performance of this kind by the woodcock in autumn, and should be glad to learn whether any of our readers have done so. It seems possible that it may be an autumnal imitation of the woodcock's spring mating flight and song, and so analogous to the autumnal drumming of the ruffed grouse, which is so frequently heard. Can any observer throw light on the question? The writers who many years ago were arguing as to whether the woodcock's whistle was made by voice or wings, remained, we think, quite unconvinced by the reasons advanced pro and con by their opponents.]

### White Bears.

MORGANTOWN, W. Va., June 18.—Editor Forest and Stream: In reading Chapter X. of "Trails of the Pathfinders," I was much puzzled by the statement that while Captain Lewis was in the neighborhood of the Great Falls on the Missouri River, "they were much annoyed by the white bears." What kind of bears were they? EMERSON CARNEY.

[In No. IX. of "Trails of the Pathfinders"—FOREST AND STREAM, June 4, page 458, second column, second paragraph—it is explained that what the explorers called white bears are grizzly bears. This name, given, no doubt, from the very pale color of the grizzly, as compared with the black bear, which was the only bear that these explorers knew, had a certain currency for a number of years, and will be found in the older books on natural history.]

### The Central Park Lakes.

NEW YORK, June 14.—The lakes in Central Park, and similar small bodies of fresh water elsewhere, add a most attractive element to the beauties of the landscape. They possess three particularly undesirable features. In the summer time the confervæ form an unsightly scum on the surface, other algæ make the water "muddy," and the odor from these water plants is disagreeable to everyone excepting the small boys and the ducks, unless it be that the latter are above mentioning it.

The worst feature, however, is the fact that small stagnant bodies of fresh water are breeding grounds of the protozoa of malaria, and of mosquitoes of many species, among them the anopheles, which adds the danger of malaria to the annoyance caused by its sting and its sing.

I have a suggestion to make. About 10 per cent. of the ideas that I have on various subjects prove to possess something of practical value, and when this is worked out it is usually discovered that someone else has thought of the same thing, so if anyone is inclined to jump on me in the present instance, let him spare the exertion, if the day is hot, and remember that he is only mauling someone who is sufficiently humble by nature, and more so by training. In ponds with small inflow and small outflow it would not be very expensive to make the water salt. It would not be difficult to maintain the saltness at the density of ocean water, and if one wished to have water plants and fish in the ponds, the animal and vegetable life of the sea could be readily enough introduced.

Mosquitoes, protozoa of malaria, and unsightly algæ would be absent from salt ponds.

The cheapest way to make ponds salt would be to dump in common chloride of sodium, at intervals varying with the amount of fresh water inflow, and the salt following the laws of diffusion would be disseminated evenly by the water currents made by the wind.

If one wished to have marine life in the ponds, it would be necessary to use the sea salts that are obtained by evaporation of sea water, and that are not expensive if the crude product is to be used. The minute animal and vegetable life of the sea necessary for maintaining higher forms could be introduced by pouring in a few gallons of selected sea water. ROBERT T. MORRIS.

### Sunday with the B.rds.

WYMORE, Nebraska, June 12.—Editor Forest and Stream: This is Sunday, and I have had nothing to do but sit out under the elms in the shade, and read FOREST AND STREAM, and watch, and listen to the birds. The swing holds four of us, the garden seat two, and the cot the sick one. The weather is perfect, one of those perfect days in June, just warm enough to be pleasant; there is no wind, and nothing to make a noise. The green grass carpets the whole lawn, and the foliage on the trees is dense and beautiful. The birds seem unusually happy, not singing as they did a few weeks ago, in their courting days, but very happy, very busy, really hard at work. There is an old mother robin with a baby robin following her. The baby is as big as the mother, but seems to depend on her for all his earthly comforts, and she seems to give him every worm she digs up, and what an appetite he has; will he never get filled up? And there is an old mother brown thrush, with a baby thrush following her, and now she is in a cherry tree, and the baby is in another with cherries all around him, and yet he seems as helpless as the shipwrecked sailor, floating on a spar with

"Water, water everywhere,  
Nor any drop to drink."

The old thrush picks a cherry from her tree and flies to the ground with it, where she picks it to pieces, and carries the pieces to the baby in the other tree, and feeds him, and repeats this operation time and time again, until you are alarmed for fear he will die from indigestion; but it may be that there is no danger, because she mixes a worm with his cherries every once in a while, and it does not seem to make any difference to him whether he has his meat or his dessert first; everything is grub that comes to his mill, and he is not particular about having it in courses.

But watch that old thrush. Has the spirit of Captain Kidd, the pirate, come back to earth, and entered into that thrush? Now look, just as that old robin has dug, and dug, and dug, until she has a big worm just ready to pull out, the old thrush runs up and takes it away from her and gives it to her own baby. The robin looks big enough to thresh any brown thrush, but she does not seem to have any confidence in herself, and would rather be robbed than to fight. Well, I have seen people just like her; but more of them like the thrush. How human it all looks?

And there come three blackbirds, with their bronze heads and necks, sometimes green, and sometimes blue, and how stately they walk; none of your hopping, skipping and jumping, but a ladylike and graceful walk; and one of them turns just before he alights upon the ground, and alights with his tail pointing in the direction he had been flying, and struts along as though he were going to walk back and fly over the course again—just like the old clown in the circus when he had tried to turn a flip-flop and failed. There is a flicker, either a widower or an old bachelor, with nobody dependent upon him; at least, he seems to eat all he finds, and never thinks of laying up a thing for a rainy day, and he's just like folks, too.

And over yonder, all by themselves, are some catbirds, as busy as bees, and never seeming to eat a bite themselves, but carrying everything they find to the nests in the orchard. They must have large families, or else they are laying up enough to do them all week. I have known folks that always got a worky spell on Sunday, and fooled around the rest of the week. But how queenly they stand, and how neat they look. You can tell that they can sing, just by looking at them, and they seem so exclusive, you don't see them running around with woodpeckers and blue-jays, and I believe they belong to the Four Hundred. But they are saucy and strenuous, and I would hate awfully to be married to a woman like that; she would do all the housework,

and all the chores, and hoe the garden, and milk the cow, but if she caught me sitting down in the shade, having a quiet smoke, she'd call me lazy and shiftless, and tell me to throw away that dirty old pipe, and go to work; and I would rather risk one with a disposition like a robin; they take things kind o' easy. But what made me think about getting married! I'm married now. That little wren is awful cute; she has her nest in the coal house, and has made about a hundred trips out after grub for her babies since I have been sitting here, and each time she stops on the roof, and looks at us, and tilts her tail up and dances a jig, seems sociable, but never says a word, acts as though she wanted to be friendly, but waiting for an introduction.

My, what a scrap those blue-jays are having, acting like a lot of cowboys shooting up the town. I wish they would get up a regiment of rough riders among themselves and go to Port Arthur or some other outlandish place. They remind me of an old lawyer I once knew, who could set his mouth to going, and then go off and leave it.

There, that bunch of yellow and orange in the peach tree is a beauty, it is a wild canary, or summer yellow bird, and when it sings, you can hear water rippling along in a brook, and some one playing a harp away out in the lake, and imagine that there is not a person within a thousand miles of you, except your sweetheart. Why don't they sing all summer? Well, I don't know; but guess they are like folks, they quit singing when they begin to raise a family. And the orioles don't even show themselves after they get married and settle down. Those bee martins don't light on the ground when they come down after a fly or a bug, but just hover in the air, and they would rather fight than eat; they all seem to want to get on the police force. And those nests that we made for the little blue birds under the water tank are all occupied by English sparrows. And there comes those three little rabbits that were born under the sidewalk to the coal house—aren't they cute? If they were an inch longer, they would be as big as rats. They seem to like those red clover tops. Now we must go and eat again, and to-morrow I have to work. I wish I could stay here and help Billy monkey with that lawn mower, and I heard Billy say, "I wish you could." I wonder what he meant? I'll bet I know. If I took hold of that lawn mower for ten minutes, he would make a sneak and go a-fishing. Well, I'll take no chances.

A. D. McCANDLESS.

### A Moose Head Freak.

SOUTH BROOKFIELD, Nova Scotia, June 6.—*Editor Forest and Stream:* I inclose you a photograph of a freak of nature of a moose head. This is the face and horns of the moose head. You will observe that the nose is cut off. The antlers, or horns, as you may choose to call them, are solid and appear like a lot of knobs or balls. They are of a brownish color. It measures from tip to tip 35 inches on one side; a few inches from the face the horn is 26 inches, on the other side 25 inches in circumference; near the tips they are each 14 inches

in circumference. Its weight now is 60 pounds. The rings have grown down so that the moose was almost blinded. Had he been allowed to live another year, in all probability he would have been entirely blind. Mr. Jas. B. McLeod, our young sportsman and guide, got him last winter back about 18 miles from any settlement, and had to carry the head and meat out on his back through the woods four miles to the nearest lumber camp, where he was able to get it on a team and home. The meat was very tender and sweet.

Moose are thought to be far more plentiful this season than ever before. They are often seen out in the fields and on the main roads. Men out from the lumber woods say they never saw them so thick before.

GEORGE SEAMAN.

### The Love-Making of *P. Domesticus*.

ON one of those bitter mornings so common last winter, I was on my way to business, muffled up to the ears. Turning from an avenue into a side street, my attention was attracted by the strange behavior of a sparrow on a snow bank. I saw it spread its wings, hop about (the snow was frozen hard), and chirp. On a fine May morning this behavior would have been quite intelligible, but on the present occasion it puzzled me. Finally I said to myself, "The poor bird has been driven crazy by cold and hunger." But no sooner had I reached this conclusion, than up jumped a female from a dent in the snowbank. "What," I exclaimed, "a flirtation! Great zero, is it possible?" Surely the force of passion could no further go.

But although it appears from this that there is nothing chilly about *P. domesticus* when it comes to love-making, there is a part of his behavior which has always seemed to me curiously anomalous. After paying attention to a female as above (sometimes alone, sometimes in the company of rival gallants), he (or they, as the case may be), will suddenly desert her. She for her part takes the desertion with the utmost indifference apparently—will begin to plume herself or search for food—and after a while will take wing in probably quite a different direction from that of her fickle wooers. And this, as it is certainly contrary to all female behavior in like circumstances, generally adds to the mystery of the situation.

Now, the obvious explanation would be that *P. domesticus* is a Platonist, or a devotee of Platonic love, but seeing that he increases at a rate of something like 100,000,000 in every ten years (at least that is the official computation), the obvious explanation won't do. What are we to suppose, then? That *P. domesticus* is a roué and makes love only to married ladies (who are all strictly virtuous)? But if this were so, why does not the lady's husband show up occasionally to defend her? I have never seen him, and I am sure he is not held back by cowardice. Here speculation seems to fail. Altogether the problem is most profound, and I am sure that many discussed in problem novels can't hold a candle to it. But doubtless it is susceptible of explanation, and I trust that this communication may incite some ornithological genius to give his mind to it.

F. M.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

### Shooting in the Terai.

THE Terai (a word meaning marsh or meadow) is the name given to a tract of jungle extending along the foot of the Himalaya Mountains for several hundred miles. It varies in breadth from forty to a hundred and twenty miles. The Jumna, the Ganges, the Ramgunga, and other rivers, great or small, pass through it. Many of them have quicksands which are dangerous to animals or men when fording them. On one occasion I was walking through a shallow stream only thirty yards wide, and paused for a few seconds to speak to a native on the bank, when I sank half way to the knees in a cavity full of sand. I had great difficulty in struggling out.

A large part of the land between the rivers is, in many places, very swampy. In others, even when fairly dry, it is covered for miles in extent with tall reed-like grass. Interspersed with these tracts resembling prairies, are forests containing trees of numerous varieties, upon which grow various climbing or parasitic plants. Lianas hang from one trunk to another like huge cables. A species of dodder (*Cuscuta*) appears like a mass of half-dried grass thrown across the tops of the smaller trees, mostly on acacias. It is composed almost entirely of stalks, there being no leaves or roots, and only small flowers of a greenish white color. I think it derives all its nourishment from the air.

A *Loranthus*, allied to the mistletoe, lives, like it, upon the sap of several varieties of trees by piercing the bark and becoming firmly attached to the woody stem. It grows in the shape of a dense bunch of twigs the size of a large crow's nest. These bear dark green leaves from two to five inches in length, and showy flowers shaped like those of the European honeysuckle, and pink in color, merging into yellow at the open end.

The "elephant creeper" (*Argyreia speciosa*) climbs to the tops of the tallest trees and hangs down on every side, resembling a large green tent. Its leaves are heart-shaped, six or eight inches long and four broad. Its flowers are formed like those of the convolvulus, and are of a light violet tint. It is not actually parasitic, but sometimes kills trees by excluding the light from them. I have seen a large banyan (*Ficus indica*) so completely covered that only one branch was visible when walking round it. The leaves of the elephant creeper are a favorite food of the Sambhur deer (*Rusa aristotelis*).

During the rainy season, and afterwards until the ground becomes dry, the Terai is very unhealthy from malaria. Europeans have sometimes been fatally attacked

by fever when only passing through it for a few hours, and in many parts the natives born in it are obliged to leave it for some months every year. The Terai formerly swarmed with every kind of game from snipe to elephants, but in many places it is now comparatively scarce, owing to its having been destroyed by European sportsmen and native hunters, the latter being in the habit of killing both birds and mammals during the breeding season.

Elephants are protected by the Government, being so valuable for commissariat purposes and for dragging heavy cannon, that a fine of five hundred rupees is imposed for killing one, unless he has been advertised by the magistrate of the district which he haunts as a "rogue"—that is, a solitary male elephant which has been driven out of a herd and becomes savage. These animals lie in wait near roads and villages and kill people without any provocation.

Both leopards and tigers are fairly numerous in certain localities. The former are very rarely seen by hunters in the jungle, and are usually shot when they happen to acquire the habit of attacking domestic animals near villages or camps. A goat is then tied beside the path by which the leopard is likely to come, the sportsman hiding near it behind a bush or in a tree.

There is a very slight chance of obtaining a shot at a tiger except during the hot season, when, the smaller pools and streams having dried up, the drinking places are few in number. Tigers then remain all day within easy reach of water, and the native hunters find out the parts of the jungle where they hide. Even then elephants are usually required, the grass being so tall that when the tigers are driven out of it a man on foot is unable to see them. The sport of shooting them is therefore confined almost entirely to the local Government officials and their friends. It is fortunate for the natives that these animals are difficult to kill. Very few leopards or tigers in that part of India ever become man-eaters, and, with the exception of those which prey upon the flocks and herds of the villagers, they are a great blessing to the agriculturists, because they keep down the swarms of wild pigs and various kinds of deer which would otherwise destroy the crops. The pigs are a special nuisance in districts where too many beasts of prey have been killed, for they will travel in the night time many miles from the dense jungles where they hide, eating and trampling down the crops of sugarcane and grain.

The large game usually found by sportsmen consists of the swamp deer (*Rucervus duvancellii*); Sambhur

(*Rusa aristotelis*), Bara Singha or 12-tined deer, Cheetul or axis deer (*Axis maculatus*), Para or hog deer (*Axis porcinus*). Pig are plentiful, but rarely shot. The small game of houbara, a kind of small bustard (*Ortix houbara*); floriken, a bustard still smaller than the above (*Sypheotides auritus*); jungle fowl (*Gallus ferrugineus*), black partridge (*Francolinus vulgaris*), gray partridge (*Ortygonis ponticeriana*), common quail (*Coturnix communis*), duck and teal of various kinds. Peafowl are plentiful, but seldom shot, the chickens only being fit to eat. The full grown birds are so tough that they are only used for making soup. The Hindoos look upon them as in some degree sacred, and in the neighborhood of villages have a great objection to their being shot.

In 1875, at the latter end of February, I was in a battery of Royal Artillery which marched from a military station in northern India to the borders of the Terai, 28 miles distant, in order to engage in the annual target practice. Outside the jungle there was a wide belt of uninhabited country several miles in length, and only one small village near our camp, the ground being uncultivated, partly owing to the depredations of wild animals, such as pigs and deer, and partly because of its unhealthiness in the rainy season.

I had been frequently assured that it was useless to attempt to shoot there without the help of an elephant, owing to the height and density of the jungle; but as there was then no chance of borrowing one, I determined to try what could be done on foot. There were several elephants in camp belonging to the commissariat and constantly engaged in bringing food from the station for the soldiers of the battery.

We used to rise at the earliest dawn, take some tea or coffee to keep out the malaria, and finish the target practice in time to return to camp and have our breakfast at midday. It was therefore impossible to try one's luck with gun or rifle before the afternoon.

I left the camp one day about two o'clock, accompanied by two coolies who were always in my employ, and two men from the village who were acquainted with the jungle. My weapons were a single .45 express rifle with the Martin breech action, and a 12-bore shotgun made 7½ pounds in weight so as to carry bullets well. The rifle cartridges held 110 grains of powder and a hollow-pointed bullet of 280 grains. The rifle weighed 8½ pounds, and was sighted point blank for 150 yards, the highest part of the bullet's trajectory for that range being about 3½ inches. The shotgun carried accurately up to 50 yards when loaded with 3 drams of powder and balls

weighing 13 to the pound inclosed in a thin linen patch.

We went about a mile across a grassy plain, and then entered a tract of reed-like grass eight or ten feet high.

On several occasions we heard animals a few yards distant rushing away, but could not see what they were. Sometimes we arrived at open spaces where the grass was thinner and only three or four feet high. After walking in single file for about an hour I had just reached a space of this kind when a hog deer galloped across it at a distance of 50 yards. The express bullet struck the center of the shoulder, killing the animal on the spot, and knocking him on to his back with the feet in the air. I had scarcely reloaded when another deer rushed past from the same place. I did not swing the rifle forward quite enough to allow for his speed, so the bullet went through the back ribs and the deer disappeared in the tall grass. One of the villagers, greatly excited, ran after it, and found it lying dead about twenty yards further on.

After opening and cleaning the deer, I sent them to the camp in charge of one coolie and one villager. (A hog deer when galloped is not very heavy, although, like most other wild animals, it is much larger than the specimens usually seen in zoological gardens.) I next went along the edge of a sheet of water which appeared a mile in length and 50 to 60 yards broad, the shallow parts being choked with weeds and grass. While enjoying the sight of various kinds of water fowl and other birds that were swimming or flying round, I found a python coiled among some short grass in water a few inches deep. His head was as large as the back of my hand, and he appeared to be 15 or 16 feet long. I aimed with the rifle at the center of the head, which was not more than a yard from the muzzle, and felt sure of killing him on the spot, but the snake uncoiled and dived like a flash of lightning into the deep water, from whence he did not reappear. The bullet probably struck in front of the brain, which is very small in those animals. We then made a circuit of some miles through the tall grass without seeing any game, and returned on the other side of the sheet of water. It was a glorious day, with brilliant sunshine and the temperature not higher than during an English summer. I sat on the bank to rest and watch the birds. On the opposite side of the pond a duck was paddling about with a brood of half-grown young ones. In a short time an otter appeared and endeavored to catch a duckling by stalking them from behind the tufts of grass. After several failures, he tried another stratagem. Going into the deep water he raised his head slightly above the surface and noted the exact position of a duckling, then dived, with the evident intention of seizing it by the legs, but the young birds were too quick and watchful. Without appearing to be much alarmed they eluded the otter every time by darting suddenly aside with the help of their wings, and at last he gave up the attempt and went away. The sun was then getting low, and we started for the camp. On the way home I saw the horns and head of a hog deer standing 70 yards away. The grass was short and thin enough to allow the edge of the back to be seen; so guessing where the chest must be, I sent a bullet through the center of the shoulders, killing him in his tracks.

(It may appear strange to some naturalists to read of a duck breeding so far south as India; for all birds raise their young at the northerly limit of their migrations. There are, however, a few kinds of ducks, teal and grebes, which certainly remain in the country all through the hot season, hiding, I think, in beds of tall reeds. They appear with the young broods in January. I find in an old note-book that on another occasion, when walking near our camp, I saw a troop of seven or eight otters in a pond, trying to catch some water hens without success. The birds watched the otters when diving, and flew out of reach before they came to the surface.)

Four days after the above mentioned excursion, I had sufficient leisure to go again into the jungle, and sent for the two villagers who had previously accompanied me. One of them said that he knew a part of the forest where some cheetul (axis deer) might be found, so I hired a third man, in addition to my two coolies, to assist in case anything heavy had to be carried home.

After walking two or three miles and seeing only some wild pigs, at which I did not fire, we reached a broad belt of tall trees with high bushes between the trunks. I walked quietly, accompanied by the villager who had told me about the deer, and leaving the other men as far behind as they could be without losing sight of us. We went in this way for perhaps half an hour, when the villager stopped and pointing in front whispered that he saw some cheetul. I looked carefully, but could distinguish nothing until, after some moments, the deer moved away. The instant they started, portions of their coats were plainly visible, but the bushes were so very thick that it was impossible to judge where the vital parts of their bodies were, so I abstained from firing, having a horror of letting animals escape wounded to die uselessly. While the deer stood still their dark red coats covered with white spots blended exactly with the masses of leaves upon which the blaze of the sun was falling.

Natives living in the jungles have a great advantage over Europeans in being able to distinguish game quickly. This is owing to their being accustomed to the forests and to their eyes being less dazzled by the brilliant sunshine. I believe also that their sharp sight is partly due to their rarely drinking anything stronger than water. Europeans improve very considerably after a few months' experience, but they never seem to acquire the extraordinary power of vision common among villagers living in wild districts; such, for instance, as seeing green fruit-eating pigeons when sitting in the middle of a mass of green leaves in the shady part of a tree; or a red-coated antelope on an open red plain at such a distance that a European can hardly distinguish him with the help of a binocular glass.

After the deer had gone we walked in another direction, and I kept well in front of all the men for the sake of greater silence. We passed over a mile or more of ground, when I saw part of the coats of some axis deer among the bushes 60 yards distant, and soon distinguished the shoulder of one, at which I fired the express rifle. The deer walked round in a circle of about four yards diameter and dropped dead, the others galloping instantly out of sight. On reaching the spot where it lay, I was sorry to find that I had killed a doe, but she was

very fat and, when cleaned, proved to be barren. I cut a pole with a small American ax that I had bought twelve years before when in Canada, and sent the deer to my tent. She was slung in as compact a form as possible so as not to incommode the men, by slitting through each hind leg a little above the hock, passing each fore-leg through the slit, and fixing it with a skewer, then tying the head tightly to them.

After this we went some miles without seeing any game, but the beauty of the scenery well made up for that. The ground was formed of low rolling hills with small streams between them, and covered with trees of all sizes, with open spaces like the aisles of cathedrals. Some of the clumps of trees were joined together by tangled masses of rope-like creepers with woody stems from one to three inches in diameter. (I think these were a species of *Bauhinia*.) Other trees were covered with the before-mentioned "elephant creeper" (*Argyrea speciosa*).

I walked for a mile or so along a ridge of land bordering a swamp, a favorite kind of cover for cheetul, and came to a sloping glade where a flock of jungle fowl (*Gallus ferrugineus*) were feeding. I shot one for the sake of preserving the skin. In shape, size and color, it was almost exactly like an English game cock. The hens were much smaller in proportion, resembling brown bantams. Jungle fowl are excellent for the table, and I might have killed more, but they obstinately persisted in running. I had no dog to make them fly, and did not like to shoot them on the ground.

A few miles further on we came to an open piece of land covered with short turf and with a pond about two acres in extent, where a few ducks were paddling among the reeds. After examining it all round and finding that there were no fresh tracks of large game, I took the shotgun and killed two ducks, the others flying away.

The evening was now at hand, and we started for the camp, passing a herd of pigs which quickly bolted out of sight. The sun had set and the light was beginning to fade when we emerged from the trees into a tract of tall grass, dried to the color of straw. Apparently there had been a fire in it during the previous year, perhaps caused by lightning, for there were several open places like lanes, covered with a short, green turf. In one of these at 160 yards distance, stood the largest and most splendid axis stag I have ever seen. For a long shot like that I prefer sitting down with an elbow on each knee, but in this instance there was no time to do so. The stag had noticed us and seemed about to move, so I fired offhand, aiming a trifle above the center of the shoulder to allow for the drop of the bullet, and he instantly sprang out of sight into the tall grass. I followed the tracks and found him lying dead about 80 yards further on. The bullet had struck rather too low, grazing the heart and tearing a large hole through both lungs. The solid base rested against the skin on the opposite side of the chest.

The antlers formed an almost perfect equilateral triangle, for a string stretched horizontally from tip to tip measured 29 inches, and from each tip to the base 29½ inches. I helped the three men in carrying the deer, and it was hard work for us. The land was swampy in many places, and we had two streams to cross, so we did not reach the camp until long after dark.

Two days afterward I went on a short excursion, but only killed one buck hog deer, and made bad shooting at him. He was on a plain covered with low bushes, and gave a running shot at not more, I think, than 40 yards distance. The bullet struck too far back and did not stop him. I followed the tracks and had another running shot, missing him altogether. Following him again, he bolted from some bushes less than thirty yards away, and the bullet passed through the fleshy part of the arm, quite four inches below the elbow. It was only after starting him a fourth time that I hit the right place and killed him.

One of the commissariat elephants had become "must," broken loose and escaped into the forests. (Must is a term meaning a state of excitement to which some male elephants are liable at certain seasons, and which lasts two, three, or more months, during which they are very dangerous to approach.) Before finding the hog deer I saw this elephant standing under a tree about 200 yards away, and I took care to make a circuit well on the leeward side to prevent him scenting us. When the battery returned to the station, some of the mahouts (as the drivers are named) were left behind in order to recapture the elephant. While they were lying around a fire at night he stalked into the midst of them. All escaped by climbing trees except his own mahout, who probably had too much confidence in his authority over the beast. The poor fellow was seized and instantly killed. The elephant remained at large for some time, and at last had to be shot, as there seemed no chance of recapturing him, and he had acquired the habit of knocking down the huts of villages at night. If not destroyed he would probably have killed some of the people while escaping from them.

The approach of the state of "must" can be detected by a discharge of an oily substance from the orifice of a gland a few inches behind each eye. Elephants are not invariably vicious with their own attendants when in this condition, but they are always uncertain in temper. One, in a station where I lived, seized his grass cutter round the waist and threw him into a ravine about ten yards distant, fortunately without breaking any bones.

The birds marked in my old note-book as most common in the Terai were a large hornbill, in flocks of 10 or 12; a small hornbill, green woodpeckers, black-headed orioles, skylarks, which, instead of mounting out of sight like those of Europe, hovered while singing at a height of about 100 yards above the ground; "cardinal birds" the male being crimson and the female yellow, with black quill feathers in the wings. Black partridges rose, singly or in pairs, from the tall grass, and jungle fowl were in small flocks under trees near streams, each male bird being accompanied by four or five hens.

While I had been shooting on foot the other officers of the battery had succeeded in borrowing some elephants, sufficient in number to allow each of us one with a howdah for riding, while three which were provided with pads accompanied us to carry any game that might be killed. The howdahs had seats on one side of which were sockets for the butts of the guns to rest in, and there were deep grooves on the top front bar for holding the barrels. Each of us had a rifle and shotgun, with ball

cartridges as well as those loaded with small shot, for the latter.

We went out on three successive days, and those who had previously practiced this style of shooting made fair bags of black partridges, hog deer, and axis deer, besides one swamp deer and an occasional floriken. Most of us had never been on an elephant before, and we shot very badly. When expecting game we, of course, stood up in the howdahs, and the motion reminded me of the swaying of a boat during a breeze on a river. Before trying it, I would not have believed that I could possibly have missed so frequently.

The grass in many places was so tall that we could not see the elephant on either side, only the howdah and its occupants being visible. In other parts it was shorter, and a deer when started, perhaps 20 yards in front of the elephant, could be seen while galloping from 10 to 50 yards further. I was equally unsuccessful when trying snapshots or following the game with the sights, and could not find out where the bullets struck. One day I fired more than twenty cartridges and bagged only one animal. If two or three more were hit, they were lost in the grass.

A friend, who was experienced in shooting from elephants, told me some time afterward, that probably nearly all the bullets went over the backs of the game, and I think he was right, because one of our best shots was using a rifle with such an unusual amount of bend in the stock that firing high would have been difficult.

For a year or so before our outing a gunmaker in Calcutta had been advertising a shell, invented by a Mr. Mead, for use in shotguns. It consisted of a ball with a globe-shaped copper bottle in the center. It was stated to be remarkably accurate and to have a very flat trajectory. I had purchased some and tried them at a target. As they were lighter than solid balls, a charge of four drams of powder could be used, which certainly improved the trajectory, but there was no increase of accuracy. On the second day I tried a few at game, and after missing three or four animals, had a shot at an axis stag which was galloping away straight ahead, and about sixty yards distant. The shell struck on the top of the shoulders between the two blade bones, but instead of breaking the spine as a solid ball would have done, it was evidently crushed out of shape, for it glanced off, tearing away a large piece of skin. The deer, although not knocked down, stopped in his gallop and turned sidewise. I seized the rifle and killed him in his tracks with a bullet in the center of the shoulder.

This convinced me that spherical shells were useless for large animals, owing to their want of penetration. For several years previous to this, conical shells had been used in large bore rifles by some sportsmen for shooting tigers on foot. They were loaded with equal parts, by weight, of chlorate of potassium and sulphide of antimony, powdered separately and then mixed with a bone or wooden knife until of a uniform gray color. A shell of this kind exploding in the chest or abdomen of a tiger, either killed him on the spot or paralyzed him so that he was rarely capable of doing any mischief; but such missiles were rendered unnecessary by the invention of express rifles, which were found to be quite powerful enough for all but the pachyderms.

I regret to say that I made the mistake of shooting an axis hind. She rushed out of some dense grass within ten yards of my elephant, and, on the impulse of the moment I fired the rifle, breaking her back. As soon as I could reload, a shot through the brain put her out of misery, and I was then deeply grieved at seeing a fawn only about a month old run from the same place where its mother had been hiding and disappear in the jungle.

On the third and last day, we were pushing through some very high grass close to a stream, before dismounting for lunch, when a friend on my right hand fired four shots as rapidly as possible close in front of his elephant, and exclaimed that he had killed a python. The animal when measured was found to be 19 feet 7 inches long. With much difficulty he was hoisted on to the back of a pad elephant and tied with ropes in order to be carried to the camp and skinned.

It was here that the peculiar accident occurred which I described in an article on good and bad luck, published in FOREST AND STREAM of August 13, 1898. While we were seated on the ground eating lunch, the rifle of one of our party exploded in the howdah. It was a double .50 caliber express by Rigby, and had cost about 60 guineas. The elephant, by some peculiar motion which we could not understand, had jerked the stock out of the socket in which it rested. One of the hammers was broken off and the firing-pin had been knocked against the cap of the cartridge.

In the afternoon, after I had bagged a pig, my elephant was wading through a swamp, when I saw a black panther creeping up the bank at its farther end, about 100 yards distant. I fired as carefully as possible, but missed the animal. This was exceedingly annoying, for a sportsman might shoot in the Indian jungles ten years without finding one. They are not a separate variety, but a black cub is occasionally found in a litter of the usual color.

Although the amount of game shot was not great, I had been much interested in observing the ways of elephants. They are capable of learning readily, and are very obedient to the words of command connected with their work, or to the signs made by the knees and legs of the mahouts who ride them; but I think their intelligence, in matters requiring reflection or reason, has been greatly overrated. The mahout carries a thin iron bar called "ankoos," with a spike and hook at one end, to enforce obedience when necessary. The elephant loaned to me was a very fast walker, and liable to go in front of the others instead of keeping in the line. On the top of his head were several holes in the skin, caused by the spike of the ankoos, from which matter was constantly oozing. When he went too far forward the mahout used to strike this sore part with the iron, causing the animal to scream with pain and lean back until he almost sat down. If he had possessed much sense, he would not have allowed the mahout to mount on his neck, but whenever the man grasped the ears, one in each hand, the elephant coiled the end of the trunk for his foot to rest on, and hoisted him up. Elephants are secured in stables or camp with a chain which passes round one fore leg slightly above the foot. The mahouts teach them to

fasten the chain with their trunk, but I have heard of only one elephant with sense enough to unfasten it. He used to do this in order to wander through the camp at night and steal grain or other food. The elephant's only pace is a walk, which is remarkably light and noiseless, but by taking long and quick steps he can go fast enough to keep a horse at a canter. He is wonderfully clever at climbing. I once followed the tracks of a wild herd in the Sewalik Hills and found they had gone straight up places which were so steep that I had to assist myself with my hands.

When a tree as thick, perhaps, as a man's thigh, obstructs the way in the jungle, the mahout gives the order to break it. The elephant winds his trunk round it, presses it forward and pulls it back a few times until the roots are loose, and then, with a push of his shoulder, bends it to the ground.

Although totally incapable of jumping, he is able to cross deep and wide water channels in a surprising manner. On one occasion we came to a small river, nearly dry, which I thought would certainly stop us. It was about fifteen feet wide and ten deep, with overhanging banks. My elephant knelt down, passed his fore legs over the edge, and slid forward until his feet touched the bottom. (I would have been thrown over his head if I had not clung to the back rail of the howdah.) He then brought his hind legs into the channel, one after the other, walked a few yards until he came to a suitable place, and scrambled up the bank high enough to get his tusks on the top. Using these as a lever, he raised up first one and then the other fore leg, and shuffled along upon his elbows until the knees of the hind legs were near enough to the bank to be brought to the top.

I was informed that if an elephant got into a deep quicksand in a river bed, the only chance of saving him is to cut the grass and bushes, tie them into bundles, and throw them to him. He places these under the fore feet and gradually raises himself out of the sand. It is very dangerous to go near him at this time, for he will seize a man and use him in the same manner. It is said to be a very painful sight when the elephant fails to escape. He sinks gradually, and the last part seen is the end of the trunk, which he tries to keep above the water in order to breathe.

## About a Hoodoo.

WYMORE, Nebraska, June 10.—*Editor Forest and Stream:* My old friend Doc has quit hunting and fishing with me. We have hunted, fished, and camped together for thirty-five years, and have been close friends all that time. It was Doc who took me to the Platte River, many years ago, to teach me to shoot wild geese, and put me on a wooded island where I remained all day without getting a shot at a goose, while he crossed the river and took a good position near a sandbar, and got nine geese. He has doctored my family, and I have defended his malpractice cases, and now to have our relations strained is painful to me, indeed.

But the most unpleasant thing about it all is the reason he gives for not wanting to continue our hunting and fishing together, and that is that I am a hoodoo.

Now, I do not know just what a hoodoo is, nor whether I am one or not, but that Doc has had some very bad luck in some of our excursions, I cannot deny. For instance, the last two times that we set out trot lines for fish, it rained the same night, raised the river, and washed away our trot lines, and Doc's boat as well.

Again, when on a quail hunt, he was unfortunate enough to fill my hide with bird shot, and it took him nearly all afternoon to pick them out, when he might have been hunting quail.

At another time, when hunting geese on the Republican River, the only one he was fortunate enough to kill fell in the river, and the dog carried it to a little island, a hundred yards from the shore, and laid it down and refused to bring it to land, and Doc was compelled to strip, and wade and swim to that island, when the ice was running in the stream, to get his goose.

But that was the fault of the dog, and I cannot see wherein I was to blame; I did not even own the dog, and the water is always cold at that time of year.

Well, the climax came last winter, when we went quail hunting up the Blue. It was a very pleasant winter day; the sun was bright and warm, and we walked along together talking over old times, until we reached a place where the rocky bluffs came in near the river, and while passing along between the bluff and the river, in an old cow-path, I had fallen behind three or four rods, when, on looking ahead, I saw a bobcat in a tree, a few feet ahead of Doc, and only about twenty feet from the ground. Doc was walking along with his gun on his shoulder, upside down, with two fingers through the guards, one on each trigger, a favorite way of his in carrying his gun, and both hammers cocked. He had not noticed the bobcat, but the instant that I saw it, I unthinkingly put two loads of bird shot into it. The shot was such a surprise to the cat that it jumped straight up into the air, but when it came down it missed the limb, and fell in the path about six feet in front of Doc, and such a spitting, yowling, and caterwauling you never heard, and when that bundle of yellow and gray fur and infernal noise struck the ground in front of Doc, he unconsciously or spasmodically pulled off both barrels of his gun, and the two loads passed a few feet above my head, and as his gun went off, he let out a yell that almost scared the cat to death, and as he started to run toward me the cat went the other way, and when Doc realized that I had shot the cat, and had been the innocent cause of the trouble, he seemed very much vexed, and the profanity he used was of the rugged variety. But surely I was not to blame. I submit to all fair-minded men that I did the right thing at the right time. How did I know that the cat would miss the limb and fall in front of Doc? I never saw a cat do that before. Besides, if I had not shot that cat it might have dropped down on Doc's head as he passed under it. My own opinion is that Doc should have reserved his fire, and instead of wasting those two loads in the air over my head, he should have shot the cat. But it seems easy to say what others should do under all circumstances, and taking it all in all, I have no criticism to make. I think Doc simply did his best.

A. D. McCANDLESS.

## A Picturesque Pose.

WHILE at Pinehurst I was very much struck by a picture of a dog which I saw there. The artist and a friend were hunting and by great good luck the artist took his camera, and so he got this picture. The dog is Boy, and of all places in the world he chose exactly the right one to "set" a bird. Back of him is a long-leaf pine, half burned, the charred portion being next to him, and of the densest black. Nothing in the world could have made a finer background for this grand dog. The picture is sent you, and it shows that the artist is as clever as the dog.

A PICTURESQUE POSE.

Both artist and dog can feel complimented by this allusion. It is doubtful if any dog picture ever exceeded this. Certainly the writer has never seen any which equaled it. The vegetation is shown well—the little bay trees, the scrub oaks, wire grass, etc. The pine shows how under the old system of getting rosin these noble trees are so exposed to destruction by fire, which, flashing through the grass, seize upon the rosin in the "boc" of the tree and then run up the many feet of surface from which the bark has been removed in order to let the rosin run down. The new system of tapping these trees ought to be required by law to be used.

FRED A. OLDS.

## The New York Cold Storage Cases.

THE Appellate Division of the Supreme Court, First Department, of New York, handed down last week an opinion in the case of the People, Appellants, vs. Jacob V. Bootman and Howard R. Robinson, Respondents, or, as it is popularly known, the cold storage game case. The full text of the opinion follows, having been written by Justice Ingraham:

This action was brought to recover penalties for a violation of the forest, fish and game law (Ch. 20 of the Laws of 1900), the defendant being charged with the possession of various birds at different times between May 23, 1901, and June 1, 1901. The defendants demurred to this complaint, and the demurrer was sustained as to counts fourteen to nineteen of the complaint inclusive, and overruled as to counts one to thirteen inclusive (40 Mis. Rep., 27). Both parties seem to have appealed to this court, where the judgment below was affirmed without an opinion (72 App. Div., 619), and on a subsequent appeal to the Court of Appeals the judgment was affirmed upon the opinion of the Special Term (173 N. Y., 622). The case then came on for trial before a jury, and was submitted upon an agreed statement of facts. It was stipulated that the defendants, "between the 22d day of May, 1901, and the 2d day of June of that year, possessed at the city and county of New York, 100 grouse, 100 quail, 96 woodcock, and 100 ducks, being of the same grouse, quail, woodcock and ducks mentioned and described in the first thirteen counts of the complaint in the above entitled action;" that "all of the said grouse, quail, woodcock and ducks were caught and killed outside of the State of New York, to wit, in other States of the Union, and were purchased and acquired by the defendants and exported from the States in which they were caught and killed to them in this State, at a time when it was lawful to possess them in the State of New York, to wit, during the month of November, 1900; and that the defendants received and kept the same on storage, at the county and city of New York, from that time to the commencement of this action, and that they were of the fair market value of \$5,000." Upon the trial the complaint was dismissed, and the plaintiff appealed.

The first thirteen counts of the complaint were alike in form, except as to the specific birds and the time. The first count alleged that "on the 23d day of May, 1901, at the city and county of New York, the defendants, co-partners as aforesaid, unlawfully, willfully and knowingly possessed 496 grouse and 236 quail during the close season for said grouse and quail respectively, contrary to the form of the statute in such case made and provided. That by reason of the premises, the defendants then and there became liable to a penalty of \$60, and to an additional penalty of \$25 for each bird, grouse and quail so possessed, to wit, the sum of \$18,300." These counts were held to state facts sufficient to constitute a cause of action.

Upon the trial it appeared that these birds had been taken out of the State of New York, purchased by the defendants outside of the State, and imported into this State at a time when persons in this State were

authorized to take such birds and have possession thereof and the birds had remained in the possession of the defendants in the original packages from the time of such importation until the time the complaint alleged that the defendants possessed the same. The defendants having thus lawfully become the owners of these birds at the time when the possession and ownership of such property was authorized by the law of this State, the question is directly presented as to whether the Legislature could make the subsequent possession of these birds a crime. That these birds thus acquired by the defendants and imported into this State when such importation was allowed by the law of this State were property, cannot be seriously questioned. It is agreed that they were of the value of \$5,000, and when purchased and imported into this State by the defendants neither the State nor anyone acting under its authority could confiscate or appropriate this property without making compensation to the defendants therefor. They were protected by the provisions of the State Constitution, subject, however, to the police power of the State which would include the right of the State to prevent the sale of articles of food which would be injurious to the public health. Subject to this power, however, the defendants had a right to possess the birds, to sell them or make such disposition of them as they pleased. It was held by the learned judge who determined the demurrer in this case, which opinion was adopted by the Court of Appeals, that the possession of birds at the forbidden season within the State is prima facie evidence that the possessor had violated the law, and that the burden was then cast upon him to show that the possession was legal. Thus, upon the trial of the case, there was imposed upon the defendants to escape liability the obligation of showing that the possession of these birds in May and June, 1901, was not a violation of the statute, and the question is therefore presented whether the provisions of this law require us to hold that the Legislature intended to make the mere possession of property to which the possessor had the legal title, a crime, and whether, if the Legislature intended to accomplish that result, it was in violation of the provisions of the Constitution. Section 6 of Article I of the Constitution provides that no person shall "be deprived of life, liberty or property without due process of law; nor shall private property be taken for public use without just compensation." Since this provision has been a part of the fundamental law of the State, it has been universally held that the possessor of property is entitled to its full beneficial use and free enjoyment, and that such use and enjoyment of property cannot be directly or indirectly affected, except by due process of law. Thus, in *Foster vs. Scott* (136 N. Y., 577), the court said what it seems to me is directly applicable to the questions presented in this case:

This case is governed by a few principles so well settled and understood that they are elementary, and nothing can be added to their force or application by illustration or extended discussion. The validity of a law is to be determined by its purpose and its reasonable and practical effect and operation, though enacted under the guise of some general power, which the Legislature may lawfully exercise, but which may be, and frequently is, used in such a manner as to encroach, by design or otherwise, upon the positive restraints of the Constitution. What the Legislature cannot do directly, it cannot do indirectly, as the Constitution guards as effectually against insidious approaches as an open and direct attack. Whenever a law deprives the owner of the beneficial use and free enjoyment of his property, or imposes restraints upon such use and enjoyment, that materially affects its value, without legal process or compensation, it deprives him of his property within the meaning of the Constitution. All that is beneficial in property arises from its use and the fruits of that use, and whatever deprives a person of them deprives him of all that is desirable or valuable in the title and possession. It is not necessary in order to render a statute obnoxious to the restraints of the Constitution, that it must in terms or in effect authorize an actual physical taking of the property or the thing itself, so long as it affects its free use and enjoyment, or the power of disposition at the will of the owner.

If the free beneficial use and right of disposition of property are thus protected by the Constitution, an act which makes the mere possession of property a crime, and imposes upon the possessor a penalty, is certainly a direct legislative interference with the beneficial use and liberty of disposition of the property. If an act of the Legislature attempted to make the mere possession of a barrel of flour or a bushel of wheat a crime, there could be, I suppose, no question but that it would be a violation of this clause of the Constitution. (Matter of Jacobs, 98 N. Y., 98-105, and cases there cited.) Wherever these birds became the property of the defendants and lawfully possessed within this State, it seems to me that such ownership and possession was as much protected by the Constitution as was any other kind of property similarly situated, and that if the construction sought to be given to this statute by the learned counsel for the plaintiff is correct, it was beyond the power of the Legislature.

I have not considered the Act of Congress of May 25, 1900, as that act could only have the effect of preventing the provision of the Federal Constitution as to interstate commerce from applying to property of this character imported into this State. It did not and could not affect the application of the Constitution of this State, which prohibits the Legislature from depriving a person of property without due process of law. It may be conceded that since the passage of this Act of Congress these birds, when imported into this State from any other State or Territory, became subject to the operation and effect of the laws of this State, enacted in the exercise of its police power, to the same extent and in the same manner as though such birds had been produced in this State, but that act certainly could not abrogate the provisions of the State Constitution which prohibit the Legislature from depriving the plaintiff of this property without due process of law. Entertaining these views, we have to examine the statute to see whether it must necessarily be construed so as to accomplish what would be a violation of this constitutional provision.

Section 22 of the act (Ch. 20 of the Laws of 1900, as amended by Ch. 396 of the Laws of 1901), provides that the close season for quail shall be from December 16 to October 31, both inclusive. Section 23, as amended by Chapter 601 of the Laws of 1900, provides that woodcock shall not be taken from December 16 to September 15, both inclusive. Section 25, as amended by Chapter 601 of the Laws of 1900, provides that the close season for grouse shall be from December 16 to September 15, both inclusive. Section 28 provides that woodcock, grouse and quail shall not be sold or possessed during the

close season, except in the month of December, and the possession or sale thereof during the last fifteen days of December shall be presumptive evidence that they were unlawfully taken by the possessor. Section 39, as amended by Chapter 741 of the Laws of 1900, provides that a person who violates any provision of this article is guilty of a misdemeanor and is liable to a penalty of \$60, and to an additional penalty of \$25 for each bird or part of bird taken or possessed in violation thereof. Substantially the same provisions are contained in Article 3 of the act in relation to certain fish. The provisions of Article 3 were before the Court of Appeals in the case of *People vs. Buffalo Fish Co.* (164 N. Y., 93). The appeal in that case presented, as this case presents, two questions; first, "with respect to the true meaning and scope of the statute, and secondly, if it means what the plaintiff insists it does, with respect to its validity;" and it was held that

The statute in question does not in terms, or any reasonable implication, forbid a person to "catch, kill or be possessed" of fish in a foreign country. We all agree that our statute does not forbid a person to "catch or kill" fish of any kind in Manitoba, but it is said that when one brings the fish so caught or killed into this State, the penalties of our statute attach to him. With all respect, I am constrained to say that this is not a reasonable or tolerable interpretation of a penal statute. What it means and all it means is to forbid any person to catch, kill or be possessed of the fish described from the waters of this State. The word "possessed" obviously refers to those fish the catching or killing of which is forbidden, that is to say, fish in the waters of this State, and not those procured in a foreign country. It is simply a perversion of the statute to hold that the mere possession by any person within this State of the fish described in the statute during the close season is a violation of it, without regard to the place where it was procured, or to the manner obtained. \* \* \* In the case at bar the statute is pushed by a literal reading to a point quite as unreasonable. In my opinion the law has no reference or application to a case where the fish have been imported from a foreign country. The conceded facts of this case take it out of the reason and policy of the law.

We have thus stated for our guidance by the Court of Appeals a rule of construction which can be applied to this statute, and which saves it from being a violation of the constitutional provision to which attention has been called. The Legislature had implied authority to protect the wild game of the State. To accomplish that purpose it prohibited the taking of certain birds during a certain portion of each year, and then provided that these birds should not be sold or possessed during the close season, and provided a penalty for a violation of this prohibition. Reading these sections together, they can be construed in accordance with the intent of the statute to apply to certain specified birds taken within the State, and that the sale or possession of such birds during the close season is a violation of the provision of the law, and imposes upon the possessor the penalty therein prescribed; but the statute was not intended to, nor does it, affect the possession or sale of birds taken in another State or country, the ownership of which had been acquired and which had been followed by importation into this State while such importation and possession was lawful and vested in the possessor the title to the property.

Our attention has been called to a case at the Special Term of the Supreme Court (*People vs. A. Booth & Co.*, reported in the 42d Mis. Rep., 321), in which this question is quite fully discussed, and where a conclusion is arrived at which substantially agrees with that before indicated. I also think that the court had power to grant the allowance.

It follows that upon the agreed statements of facts we agree with the learned judge below, and that the judgment should be affirmed, with costs.

Patterson and O'Brien, JJ., concur.

Van Brunt, P. J., concurs in result.

A dissenting opinion, written by Judge McLaughlin, follows:

I am unable to concur in the prevailing opinion. The possession of the birds at the time alleged in the complaint and stated in the stipulation was, under the forest, fish and game law (Chap. 20 of the Laws of 1900, as amended by Chap. 396 of the Laws of 1901) unlawful (Id. Secs. 23, 25, and 28), and by reason thereof the defendants were liable to the penalty specified in Section 39 of that act. The act is not unconstitutional. (*Phelps vs. Racey*, 60 N. Y., 10; *People vs. Buffalo Fish Co.*, 164 N. Y., 93). Nor is it in conflict with the Federal Constitution or acts passed by Congress regulating commerce between the States. (*Matter of Rahrer*, 140 U. S., 545; *Rhodes vs. State of Iowa*, 170 U. S., 412; *Vance vs. W. A. V. Co.*, Id., 438).

The prevailing opinion entirely overlooks or ignores Section 5 of the Act of Congress, commonly called the "Lacey Act," approved May 25, 1900, and if it had not, then it seems to me clear a different conclusion would have been reached. This section provides:

That all dead bodies or parts thereof, of any foreign game animals, or game or song birds, the importation of which is prohibited, or the dead bodies or parts thereof of any wild game animal or game or song bird transported into any State or Territory or remaining therein for use, consumption, sale or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers to the same extent and in the same manner as though such animals or birds had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

It is true that the validity and effect of the section quoted have not, so far as I have been able to discover, been judicially passed upon, but a similar Act of Congress in respect to intoxicating liquors, has. The "Wilson Act," so-called, approved August 8, 1890, provides:

That all fermented, distilled or other intoxicating liquors or liquids transported into any State or Territory or remaining therein for use, consumption, sale or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers to the same extent and in the same manner as though such liquors or liquids had been produced in such State or Territory and shall not be exempt therefrom by reason of being introduced in the original packages or otherwise. (26 Statutes at Large, 313, Chap. 728.)

This act was first considered by the Supreme Court of the United States in matter of *Rahrer* (supra) in relation to a statute of the State of Kansas, which provided that any person who should manufacture, sell or barter any spirituous liquors should be guilty of a misdemeanor, and upon conviction should be punished as therein provided. (1 Gen. Stat. Kansas, Chap. 31, 1380, etc.) On the day following the approval of the Wilson Act—August 9, 1890—one *Rahrer* sold, in the State of Kansas, a keg of

beer in the original package in which it had been transported to him from another State. He was arrested for violating the statute of Kansas referred to, and thereupon, by writ of habeas corpus, he obtained his discharge (43 Fed. Rep., 556), but on appeal the action of the lower court was reversed, and the relator remanded as subject to and to be proceeded against for a violation of the State statute. In disposing of the case, the court held that the Wilson Act was constitutional, and after it took effect liquors imported into the State of Kansas were subject, both as to possession and sale, to the existing laws of that State, and it was unnecessary, after the passage of the Wilson Act, to re-enact the State law in order to make it operative upon such liquors. Chief Justice Fuller, speaking for the court, said:

It appears from the agreed statement of facts that this liquor arrived in Kansas prior to the passage of the act of Congress, but no question is presented here as to the right of the importer in reference to the withdrawal of the property from the State, nor can we perceive that the Congressional enactment is given a retrospective operation by holding it applicable to a transaction of sale occurring after it took effect. This is not the case of a law enacted in the unauthorized exercise of a power exclusively confided to Congress, but of a law which it was competent for the State to pass, but which could not operate upon articles occupying a certain situation until the passage of the act of Congress. That act, in terms, removed the obstacle, and we perceive no adequate ground for adjudging that a re-enactment of the State law was required before it could have the effect upon imported, which it had always had upon domestic property.

The same act again came under consideration in *Rhodes vs. State of Iowa* (170 U. S., 412). There, *Rhodes* was convicted before a Justice of the Peace of the State of Iowa for transporting into that State, in violation of its laws, intoxicating liquors from the State of Illinois. The conviction was affirmed by the Supreme Court of Iowa (*Stalls vs. Rhodes*, 90 Ia., 396), but reversed by the Supreme Court of the United States, on the sole ground, however, that the liquors, when seized, had not reached their destination. Referring to the contention that the statute of Iowa did not apply to liquors obtained outside the State, Mr. Justice White, citing with approval matter of *Rahrer* (supra), said:

It is not gainsaid that the effect of the act of Congress (with respect to imported liquors) was to deprive the receiver of goods shipped from another State of all power to sell the same in the State of Iowa in violation of its laws. \* \* \* It has been settled that the effect of the act of Congress is to allow the statutes of the several States to operate upon packages of imported liquor before sale.

It was also considered in *Vance vs. W. A. V. Co.* (supra). There an injunction had been obtained restraining the defendants from interfering with intoxicating liquors shipped from the State of California to the State of South Carolina in violation of the statutes of the latter State. The court held that the injunction should be dissolved; that under the Wilson Act intoxicating liquors transported from one State to another became—as soon as the act of transportation was complete—subject to the laws of the State into which they were brought.

Applying the rule laid down in these decisions, as to the effect of the Wilson Act upon State statutes existing at the time of its passage with reference to intoxicating liquors, to the Lacey Act, and its effect upon the statute of this State as to the possession of game, but one conclusion, as it seems to me, can be reached—viz., that the defendants were liable to the penalty provided by the statutes of this State for having the birds mentioned in the stipulation at the time therein stated, and this notwithstanding the fact they were in the original packages in which they were received from other States.

The Wilson and Lacey Acts are similar, except one relates to intoxicating liquors and the other to game. The Kansas statute, which was involved in the decision in the *Rahrer* case, provides that intoxicating liquors shall not be manufactured or sold in that State, and the New York statute, under which the penalties here are sought to be recovered, provides that birds of the kind mentioned in the stipulation shall not be sold or possessed at stated times. Both of these statutes were passed in the exercise of the police powers of the respective States, and after they became laws one applied to liquors produced, and the other to game taken in the State, but neither of them to that which was transported into the State until after Congress had given its consent thereto. (*Liesy vs. Harden*, 135 U. S., 100.) That consent, however, was given by acts which might well be termed enabling acts—the Wilson Act in the one case, and the Lacey Act in the other—and thereafter the State statutes applied equally to that which came from without as to that produced or taken within it. There is, therefore, no force in the suggestion that the Lacey Act has no application since the statute of the State of New York under which the penalties are sought to be recovered was passed prior thereto. The statute is general in terms. It applies, so far as the possession of the birds mentioned during the closed season is concerned, to those taken or procured outside of the State as well as to those taken within it, and Congress has given its consent by the Lacey Act to the enforcement of that statute against birds imported into the State. This same contention was made in the *Rahrer* case, and the court, as already indicated, held that a re-enactment of the State statute was unnecessary, and the same view was reiterated in the *Rhodes* and *Vance* cases. This also is the view of the court of last resort in every State, so far as I have been able to discover, where the question has been presented. (*State vs. Intoxicating Liquors*, 91 Me., 140; *Starace vs. Rossie*, 69 Vt., 303; *State vs. Bixman*, 162 Mo., 1). See also *Commonwealth vs. Savage* (155 Mass., 278); *Magner vs. People* (97 Ill., 320). *Roth vs. State* (51 Ohio State, 209); *People vs. O'Neill* (110 Mich., 324); *State vs. Rodman* (58 Minn., 393); *Ex Parte Maier* (103 Cal., 476); *Price vs. Bradley* (16 Q. B. Div., 148).

Nor do these views conflict in any way with *People vs. Buffalo Fish Company* (supra), as I read that case. There, the court held that the statute here under consideration was constitutional, but so far as fish was concerned it only applied to that taken within the State. This was but applying the rule laid down in *Liesy vs. Harden* (supra), and it must necessarily be so, inasmuch as there was no Act of Congress making imported fish subject to the laws of the State into which it was imported. The case would be in point except for the Lacey Act. That act, as already said, makes the State statute applicable to game imported into the State.

I am of the opinion, in view of the authorities cited, that the defendants are liable for the penalty provided in

the statute for having the birds unlawfully in their possession, and if I am correct in this, then it necessarily follows the judgment should be reversed.

The opinion prevailing in the case above cited was followed as to the several other game cases before the court, namely, the suits against Nathan Schweitzer, Harry Schweitzer, William Sommer, Michael Goss, Charles Cohen, Isaac Heineman, and Balthasar Arras.

## Sea and River Fishing.

### Fish Chat.

#### A Waste of Trout Fry.

On the eastern shore of the Hudson, and nearly opposite West Point, is situated the little village of Garrison. It is rather an exaggeration to call it a village, for there are not over a dozen houses, a couple of small stores, a post-office, and the railroad station, but it is called the village, and we will so record it.

Back in the country four or five miles from the river is a great stretch of forest, and there are so many hills that one is reminded at once of the green hills of Vermont, or of Cape Breton, for they are all wooded to their summits, and many of them are of considerable height.

As one travels further and further from the river, he finds the country more thinly settled, and the farms smaller and less carefully tilled; in fact, they would be considered but poor affairs by most practical and scientific farmers. There is a kind of forlorn appearance about them, an air of unthoroughness which indicates that the farming is done perfunctorily, and the crops raised are not considered of much importance, and when they are harvested they prove to be all that their promise indicated.

But the country teems with trout brooks, and some of them are as fine as one would wish to see. I have knocked about a good deal in the New England States and in the Canadian Provinces, but I never saw so many streams of bright sparkling water in any locality elsewhere. Owing to the hilly character of the country, they all flow rapidly, their noisy prattle betraying their course far away in the forest; they are nearly all living streams, their flow being but little diminished even in the driest summer.

These brooks are ideal trout streams, and in passing them the nerves of the angler tingle, and in fancy his hand involuntarily clutch at the rod and reel which he believes he could use to good advantage.

In a long drive that I recently took through this region, we passed a considerable number of these streams, and each seemed more promising of trout than the preceding ones had been.

Our driver was known as "Old Uncle Bill." I never heard his surname, and as he had lived in and about Garrison all his life, he knew the country thoroughly, every brook being as familiar to him as was his family roof-tree; he was an odd character, full of reminiscences, and overflowing with loquacity and tobacco juice.

"Yaas, there's trout into all these brooks," said the old fellow, in reply to one of my questions, "but it takes a mighty good man to ketch 'em nowadays. I can't now, and I've fished these brooks nigh onto forty year; the fish are eddicated like, and they won't touch an angle-worm. Now and ag'in somebody ketches a good one, but they average small. There," he exclaimed, as he stopped the horse on the bridge which spanned one of the largest of the brooks that we passed, "jest below that big rock there," pointing to a large boulder that lay in the stream, below it being a pool of considerable size and depth, "four year ago I ketched a buster; he had been hooked before that and lost, but I fetched him; he was an old-timer, and no mistake; he weighed over a pound and a half, which is a big fish for these brooks."

"Yaas, there's trout into all these brooks, but it takes a good man to ketch 'em. Some say they're pretty much ketched out, but I don't believe that yarn, 'cause there's miles and miles of these brooks that can't be fished, unless you crawl on your hands and knees to get at 'em."

"I suppose they might be restocked," said I, as the old man started up his horse and urged him into a brisk trot. "These streams look very inviting, and I should judge from the volume of water in them they live through the summer."

"Yaas, they're all live brooks, and hardly any of 'em ever dry up. There's been lots of fry put in 'em. Mayor Potts and others got some cans from the hatcheries and emptied a can full inter each of the best brooks. But, Lor', they didn't go to work right. In my opinion, the fry ought to have been carried way up to the heads of the brooks, where they could look out for themselves until they got some size, but they were emptied right into the brook where there was fish five or six inches long, and I'll bet they gave high livin' to the others until they was all gone. No, sir, it don't do no good to put fry where there's any trout, big or little, for they'll find no marcy, sure."

And the old man was right. Time and again have I known of fry being put into brooks where there were trout and other small fish, and the parties who put them out wondered why no good results followed.

There is no doubt that many of our streams may be restocked, and ought to be, but if fry are put out they should be carried to the highest points, where there is no danger of molestation from small trouts, perch, dace, or even ordinary minnows, all of which will prey upon the little creatures if they can reach them.

The practice of putting out fingerlings or yearlings, which many have adopted, seems to be more successful, but even these will furnish a *bonne bouche* to a five or six-inch trout or perch if there is one in the stream.

#### Havoc Among Rangeley Trout Fry.

The most remarkable waste of trout fry that ever came to my observation, occurred a number of years ago at the Middle Dam, on the Rangeley Lakes, Me. The gates of the dam had been wide open, and the water had been running over the lower flash boards the whole length of the dam for several weeks, and in consequence of this abundance of water the river below the dam was

more than banked full, the water spreading into the bushes along the shores sometimes several rods beyond the stream itself.

In the middle of the river the water was a roaring, rushing, foaming mass, which pitched and tumbled over huge boulders and ledges in the wildest manner imaginable; but along both shores it was murky but foam-covered, and there was little motion in it except that which was caused by eddies and small waves from the rushing midstream.

As I was standing on the dam one day, busily engaged in casting the fly in the still water above, I was joined by two men whom I afterward learned were employes of the Lewiston Water Power Company; they said they had come to close the gates, for a big raft of logs was coming down the lake above and a full head of water was needed.

They went about their work at once, and they did it thoroughly, for the gates were not only tightly closed, but new flash boards were put on the dam, and almost every drop of water was held back. As a result of this action, the river bed below the dam was emptied of water almost as quickly as would be a basin held in one's hand; the rapidity with which the water dropped was astonishing, and it seemed as if I could in a very few minutes walk about everywhere in the bed of the stream where the water had been before the gates were closed from four to six feet in depth.

There I found almost countless numbers of small trout which had been left by the receding waters among the bushes, crevices in rocks, and shoal places, they being unable to escape with the quickly vanishing water; they were little fellows, from about an inch to an inch and a half in length, and there must have been thousands of them. I never saw such havoc in my life.

How it happened that so many of these small trout had congregated at that point I never knew; they were all nearly of one size, and may have been of that season's hatch, which had ascended the five miles of rapid river in which there are a number of famous spawning beds, and had been stopped by the dam; but whatever the cause might have been that brought them there, they reached the dam only to find destruction.

Now, I do not know how far the authority of the Fish and Game Commissioners of Maine extends, nor whether there is any provision by law which will permit them to guard against such a catastrophe as I have named, but if there is not, there should be one, for if the men who had closed those gates and put on the flash boards had been compelled to do their work gradually, so that the stream would not have fallen so quickly, the thousands upon thousands of young trout that were then destroyed might have been saved.

#### Nature's Prodigality.

The wastefulness of nature in some of her methods is often as great as is that which is wrought by man, and in no way is this prodigality shown more vividly than it is in the reproduction of many of our fishes.

I once had an opportunity for witnessing the mating and spawning of salmon, and as I watched the operation I wondered at its crudeness, if I may use that expression, and weighed the probable outcome that would result.

I was out on a hunting excursion in New Brunswick, and for several hours followed with my guide the course of one of the salmon rivers of that Province.

"If you would like to see salmon casting their spawn, sir," said my companion, "you may get a chance in that pool yonder, for they spawn there every season."

I replied that I should be very glad to do so, for I had never before had an opportunity of witnessing the act.

"All right, sir," said he, "you'll have a chance now, without doubt," and as he spoke he led me to the pool in a round-about way, so that we could not be seen by the fish in approaching it, and crawling cautiously upon a ledge which overhung the pool we peered over its edge into the water below, which was so limpid that we could watch every motion of the fish it contained almost as distinctly as if they were floating in the air.

There were two male and two female salmon in the pool, and apparently two beds of pebbles which had been prepared and were ready for the eggs; each female remained close to her spawning bed, but the males moved about here and there in pursuit of the trout which hovered about the females; the male salmon, while they did not attack each other, seemed ready to do so at a moment's notice, their long, curved, hook-like jaws giving them a distinctly belligerent aspect; they moved by each other as if they had the traditional chip on their shoulders which they were waiting to have knocked off.

All four of the fish were very dark colored, seeming almost black as they moved about in the water below us. Toward the sea trout they displayed great animosity, and endeavored to keep them as much as possible at the extreme edge of the pool.

Presently one of the females threw herself partially on her side, and partly upon her abdomen on the pile of coarse gravel and pebbles, which she pressed with a wavering quiver or shudder, which seemed to force the eggs out from her body, a dozen or two being dropped at each pressure; this was the signal for the sea trout to advance, which they did from every side, seizing the eggs and eating them as soon as they were dropped, the number that fell into the crevices being comparatively few.

The male salmon, of course, made every possible effort to keep the marauders away, and as soon as he had scattered his foes, he pressed his abdomen against the pebbly bottom as his mate had done, causing the milk to exude in a little white cloud in the water, which was plainly visible to us as we lay upon our rocky perch. We watched the operations of these fish for nearly an hour, and I venture to say that not one egg in a hundred reached a secure hiding place, and was properly fertilized.

I have no memoranda by me showing the average number of spawn cast by the female salmon, but I know that a five-pound landlocked drops somewhere in the neighborhood of 1,500 eggs, and if it is a fact that not 5 per cent. of the salmon eggs are properly fertilized and produce fry, and this fact has been recorded more than once, and I have no doubt is correct, judging by what I saw on that occasion, it would appear that nature's method is a wasteful one; for even if there were no sea trout to an-

nnoy the spawning fish, and I believe they are rarely present in sufficient numbers to do much injury, the fertilization of the eggs which were dropped in the crevices among the pebbles by the milk which was ejected in small clouds only, and which was carried away from them by the current, rather than among them, would be impossible.

Basing an opinion on what I saw that day, I should say that instead of 5 per cent. being the correct proportion, not 1 per cent. of the spawn that were cast naturally would ever produce fry.

It may be said that so small a percentage of fertile eggs is all that is necessary to keep up the stock of fish under normal conditions, and this is no doubt true, for if all the eggs were fertilized like those of the herrings or smelts, the rivers could hardly mature the great numbers of fry that would be hatched, but somehow one cannot get rid of the idea that the salmon have adopted a wasteful method of continuing their species.

EDWARD A. SAMUELS.

## Fish and Fishing.

### Many American Anglers in Canada.

THE invasion of Canadian fishing waters by American anglers during the last few days has been exceptionally large, even for this favorite season for going a-fishing. The arrival of members of the Restigouche and Cascadia Salmon Clubs at their respective headquarters has so far been even larger than was expected, the telegraphic reports of the arrival of salmon in the rivers at an earlier date than had been anticipated, bringing many immediate demands for accommodation. The fish are reported plentiful enough for the early run in most of the rivers, but those waters which are naturally dark have not yielded, as yet, any very great measure of success to anglers, because of the height of the water. It is therefore not surprising to find that the rising fish have taken only very large flies, and some of the orders sent up from the Restigouche by the earliest arrivals there this season were for Jock-Scotts, silver-doctors, and silver-grays, tied upon No. 4/0 hooks, which, as most fishermen know, means that the Restigouche salmon are looking for flies over two inches long. This is quite in keeping, too, with Mr. Charles Stewart Davison's experiences of last summer on one of the north shore rivers, where many of his best fish were taken on hooks of this size.

I learn from correspondents on the Grand Discharge that there, too, it requires a fairly large fly at the present time to be successful, the water being still quite high. Several anglers were at Lake St. John before the Island House opened, and among those now fishing the Discharge and making their headquarters at the Island House are Mr. Geo. E. Hart, whose many Canadian friends are delighted to see him looking so well after his long and serious illness, and a party of guests. After fishing for some time at Lake St. John, Mr. Hart will go to the preserves of the Nonantum and Triton Clubs before returning to Waterbury, and may probably indulge in a little salmon fishing as well.

### Excellent Trout Fishing.

Some excellent trout fishing has recently been enjoyed at Commissioners' Lake, near Lake St. John, by a party of friends, which included Mr. Bennett, president, and Mr. A. W. Hooper, former vice-president of the Winchester Repeating Arms Company. They report the killing of several trout of two and three pounds weight each and over by fly-fishing.

Mr. Chase, of Syracuse; Mr. J. B. Emery, of Boston, and Mr. John J. Hays, of Lynn, Mass., have made very good catches of trout in Lake Edward, while it is reported from the lakes of the Stadacona and the Laurentides Fish and Game Clubs that the fish are very much more evenly distributed this spring than usual in the waters of those territories, where, as a general rule, they were taken in a few localities only.

### Plenty of Open Fishing.

I am very glad to be able to report that plenty of open fishing is to be had this season along the line of the Quebec and Lake St. John Railway. Of late years it has become customary for visiting anglers at Quebec to be told that all the readily available trout waters in the Quebec and Lake St. John district were tied up in the hands of private individuals and clubs. There was more truth in this some years ago than at the present time. The open waters in the neighborhood of the railway had been practically fished out by the men employed in its construction. It was fortunate that the neighboring waters had been leased by the Government as the railway neared them, for this insured their proper guardianship and protection. In the beautiful stretches of the noble Batiscan River, where the rapid stream hugs the railway for a distance of some thirty miles, nothing but the smallest fish were to be found after the completion of the road. All the others had been taken out. In the years that have since elapsed, however, the little fish have grown big and millions of others have come into existence, so that the fishing has been gradually improving. And this season it is better than it has ever been since the building of the railway. Numbers of people are now going up by the various trains, disembarking at the various small stations in the stretch of country through which the Batiscan flows, and camping in the wilderness while doing their fishing. Fish up to three and four pounds weight have been taken upon several occasions from these waters since the opening of the season. Pretty much the same thing is true of the lower waters of the Jeannotte River, which flows into the Batiscan near Mequik. The Mequik River itself also offers exceptional advantages to the angler, and is nearly all public or free water. Very few people have fished more than its lower waters, bordering upon the railway. These contain numbers of small trout, not sufficiently large to prove particularly attractive to anglers from abroad. In the early part of the present month I ascended the Mequik for over twenty miles, in consequence of the enthusiastic reports of some of the Indians who hunt the neighboring country. The country is not an attractive one for tourists, because of the large fires which have

devastated portions of it thereabouts. But the supply of trout is wonderful. Ascending the river from the railway station near its mouth, there are ten miles of alternate dead water and slight rapids, with only about half a mile of poling. The rest of the distance is by easy paddling. Then comes a portage of what the Indians call two miles, though it appeared to me more like four. Half of it is over a mountain. At the upper end of this portage the good fishing commences. For the next few miles of our trip I could not make a cast without hooking one, two or three trout, and some six miles above the portage we found fish of three and four pounds each. We had other experiences on the trip which I may speak of on another occasion.

Mr. Bayard Dominick, of New York, is fishing the Mistassini this season. Mr. Charles Stewart Davison is on the Riviere a la Truite. Mr. Edson Fitch and Mr. Vesey Boswell are fishing the Trinity, but Mr. Morton Paton, of New York, is not with them this year.

Mr. E. C. Fitch, of Waltham, is on the Romaine, and Mr. Ivers W. Adams, of Boston, has with him on the Moisie Dr. Heber Bishop and Mr. Walter Adams, and will later be joined by the Hon. Senator Aldrich and Mr. Henry R. Reid.

E. T. D. CHAMBERS.

## The Tuna in Atlantic Waters.

KANSAS CITY, Mo., June 15.—*Editor Forest and Stream:* Some two years ago I wrote you about the possibility of tuna fishing in the Atlantic; and at the same time I started some gentlemen in Sydney, N. S., and in Newfoundland after those fish. As per my instructions, Mr. Ed. vom Hofe manufactured several exceedingly large reels, each to hold nearly a thousand feet of his No. 36 tarpon line. One of these I purchased, and the others were sold to my friends in Sydney and Newfoundland. My outfit was tried a year ago last August at Myra Bay near Sydney by a Kansas City man, but he failed to find the fish, and I do not believe that anyone else hung a tuna that year.

Last year, though, several were hung at Myra Bay, and as I met at Ottawa some two months ago Mr. A. C. Ross, one of the Sydney gentlemen who tried to land these giant game fish, I secured from him some notes for your paper.

He tells me that last year he hung two tuna. The first went immediately under the boat, fouled the line, and escaped. The second one struck so hard as to nearly pull the rod out of his hands. The reel handle fouled the arm of the chair and broke off, so, of course, the fish escaped. I had told Mr. Ross to use a chair with a back but no arms; but he did not understand my reason for giving such advice—he does now.

Mr. Wodill, of Sydney, also fished for tuna last summer at Myra Bay, and succeeded in hanging two. The first one he held for six hours, then, being worn out, he cut it loose. He estimates the length of the fish at 10 feet, the weight at 700 pounds, and the distance it towed him at 30 miles. Allowing for the natural overestimate caused by the angler's excitement, this fish must have put up a pretty respectable fight.

The second one that Mr. Wodill hooked he held for only half an hour, when it got away for some reason that I could not learn.

Mr. Dodd, the proprietor of the two "Log Cabin" resorts of Newfoundland, made last year an unsuccessful attempt to hook a tuna in one of the inlets of that island. He found the fish, but could not keep up with them. He writes me that he is going to try again this summer by using a naphtha launch.

The honor of landing the first tuna in the Atlantic with rod and reel is still open to competition; but candidates for the distinction are advised to lose no time in getting to work, as the Sydney sportsmen mean business this year.

The best fishing at Myra Bay is during the entire month of July. It is also good in September, but the weather then is liable to be unpropitious.

I regret that my professional work calls me to the Pacific Coast in July; for otherwise I would have made an endeavor to land the first Atlantic tuna myself. If this season goes by without one being caught there, I shall certainly try hard to tackle them next year.

J. A. L. WADDELL.

## The Honesty of Anglers.

I SAW a few days ago a short sketch wherein a tackle dealer stated that during the many years he had been in business he had occasion to send thousands of dollars' worth of his wares on approval, and that he had never lost a single dollar. His verdict was that in monetary matters anglers were honest to a fault.

If he had only stopped here, all would have been well; but he didn't. He went on further to say that when it came to the size and count of fish the best of them lied like Greeks!

Now, why is it that when an angler is measuring a trout by the distance of his parted forefingers and giving its weight at the same time, that one's fingers and tongue should simultaneously become so elastic? Even staid parsons have been known to get on that two or three extra inches, and extra pounds as well! There must be some reason for this. The unbeliever would say likely that it originated with the miraculous draught of fishes so incorrectly and incongruously depicted by Michael Angelo.

Be all this as it may, while I do not proclaim all anglers liars, yet I have, in my own personal experience, known some of them to have lied and have had it brought pretty "close to home" in having been accused of doing so myself by some jealous and disgruntled brother angler.

Larceny becomes absentmindedness in the matter of umbrellas, and I presume fish stories vary in the ratio of the enthusiasm of the angler. When you hear of an angler being referred to as "the most enthusiastic angler I ever knew," it is safe to say that such is just another term for unparalleled mendacity.

As anglers vie with each other in the matter of landing the heaviest trout, so do they carry this commendable rivalry to the describing of the fish caught, long after it has been weighed, fried, and eaten.

Matters have arrived at such a pitch that nowadays when an angler has landed the veritable "daddy of the pool," he goes to the J. P. and has drawn up a formal document reciting all the facts, and signing same before the justice has the document duly witnessed by all the onlookers. And when around the fire-place recounting battles upon lake and stream, a man, fortified with such

a document, pulls it out and exposes it to the gaze of the assembled brother anglers, silence reigns or the very integrity of the document is called into question.

The camera and a tape-line and the very indicated scale-weight, form a supposedly impregnable combination of facts and figures and measures that don't lie. Yet they even do tricks with a camera that make things seem so that are not so.

So, with such an existing state of affairs, it is safer to let the other fellow tell his story first and then go him one better and let it go at that.

CHARLES CRISTADORO.

## President Starbuck of the Cuvier Club.

A RECENT issue of a Cincinnati exchange says of Mr. Alex. Starbuck's interest in the Cuvier Club and services in its behalf:

"When first elected president of the club, Mr. Starbuck found a decaying organization with a membership of only 180. This during his nine years' service he increased by hard work and skillful management to about 500. He vigorously prosecuted many offenders of the game laws, the number for this year to date being twenty cases, of which the large majority of them were convicted and fined. Mr. Starbuck soon gave the club a well deserved national reputation. With a desire to keep well posted on game laws and bird and fish increases or decreases, he developed a correspondence with almost every game and fish commissioner in the different States and Territories and with the officials of the Smithsonian Institution. Mr. Starbuck was largely instrumental in securing State and National legislation for the protection of game and fish and forest preservation. He prepared many important articles on special features for sportsmen's journals and newspapers at home and abroad, and was ever alert in obtaining the support of many noted naturalists and influential men to his methods of protection.

He has been exceedingly generous to the club, having donated birds and books and other things that must have cost fully \$5,000. He gave the beautiful and rare collection of Birds of Paradise, which stands in a revolving cabinet in the north end of the museum. Some of these

birds cost as high as \$50 apiece, and are considered the finest collection of that species of bright plumaged birds in the country, with the exception of those in the Smithsonian Institution. His library of natural history, which he presented to the club, embraces nearly 1,500 volumes, and was the collection of a lifetime. One volume alone is valued at over \$200.

"Mr. Starbuck seems to be especially fitted for the work, and the advancement of the organization to a still higher plane. He is now in his seventy-ninth year, and hale and hearty, and bids fair to add another decade to it. In a few days he will leave for the Northwest, where he proposes to have some genuine sport with the beautiful brook trout and the gamy black bass, and in addition a grand old talk with Dame Nature."

## Fishing with a Remora in Cuba.

THE fish employed was the sucking fish, or remora. A strong small twine was made fast round the tail of the fish, which was kept in a vat until its services were required, and then thrown overboard. It ran instinctively toward the first fish which its line permitted it to reach, and instantly made itself fast by its oval disc or sucker at the top of its head. The moment the fisherman felt that such was the case, he gently drew in the line unto the surface, then carefully thrust his finger under the disc, which broke the connection, and secured the game. He then permitted the sucking fish to return again to the water. We found this a most successful method of fishing.—Fish and Fisheries.

## To Keep Ferrules from Sticking.

NEW YORK, June 15.—Editor *Forest and Stream*: All anglers know that trouble is often had from the sticking of the ferrules of rods. I have discovered that if the ferrules of fishing-rods are dipped in a little bit of fine flake graphite, it absolutely prevents their sticking. The treatment is an entirely simple one and as certain as it is simple; and I have received the blessing of several anglers for putting them on to this little trick.

## Atlantic Y. C.

Sea Gate, New York Bay—Tuesday, June 14.

TWELVE boats entered the thirty-eighth annual regatta of the Atlantic Y. C., which was held on Tuesday, June 14, over courses in the Lower Bay. A fine breeze, S. by E., held throughout the race, making fast times possible. The feature of the day was the struggle between the Class M boats Redwing and Vivian II., both of Herreshoff design.

The course led from Sea Gate to Southwest Spit and return, a distance of 14 miles. It was a close race until against an ebb tide, which set the starters down quite a bit below the mark. Vivian II. had a lead of only 14s. at the turn. Coming home with spinners set the boats had gotten on practically even terms, when Vivian II. tore her spinnaker and was put out of the running. Redwing finished 1m. 6s. in the lead.

The 30-footers Bobtail and Bagheera, which sailed the same course, covered the last part of the journey in very close range. A lead of 1m. 30s. held by Bobtail at the outer mark was cut down by Bagheera to only 36s. at the finish.

The schooner Lasca had no competitor, but sailed over the 26-mile course out around Scotland Lightship and back in good time. The other starters went from Sea Gate to and around Old Orchard Shoal Light and return, a distance of 12 1/4 miles. It was a reach out and a reach home. The best work was done by the Class P boat, Naiad, and the Hand creation, Miss Judy, built under the new rules to the top of Class O. Many of the starters have not yet been measured. Corrected times were therefore unobtainable, and the absolute winners cannot be decided until they are figured out. The summaries:

### Schooners—Start, 11:10.

	Finish.	Elapsed.
Lasca, R. S. McCurdy.....	2 22 34	3 12 34

### Sloops—Class M—Start, 11:15.

	Finish.	Elapsed.
Redwing, J. B. O'Donohue.....	1 12 34	1 57 34
Vivian II., S. E. Vernon.....	1 13 40	1 58 40

### Sloops—Class N—Start, 11:15.

	Finish.	Elapsed.
Bobtail, E. F. Luckenbach.....	1 16 20	2 01 20
Bagheera, Hendon Chubb.....	1 16 56	2 01 56

### Sloops—Class P—Start, 11:20.

	Finish.	Elapsed.
Naiad, Dr. J. B. Palmer.....	1 06 34	1 46 34
Smoke, L. H. Dyer.....	1 07 36	1 47 36

### Sloops—Class Q—Start, 11:20.

	Finish.	Elapsed.
Miss Judy, D. D. Allerton.....	1 07 55	1 47 55
Mary, Max Grunder.....	1 09 34	1 49 34
Cicada, A. D. O'Neill.....	1 17 48	1 57 48
Careless, F. J. Havens.....	1 14 47	1 54 47

### Sloops—Class R—Start, 11:25.

	Finish.	Elapsed.
Sandpiper, W. W. Redfern.....	1 36 54	2 11 54

## Marine and Field Club.

Bath Beach, Gravesend Bay—Saturday, June 18.

THE annual open regatta of the Marine and Field Club was held on Saturday, June 18, in a light breeze, which at times threatened to die away altogether. Twenty-three of the best racing boats in the vicinity entered the contest, all but three of which finished. The leaders in the different classes were: Vivian II., Bobtail, Lizana, Miss Judy, Beta, Sandpiper, Boozie, and Kelpie. Sandpiper and Boozie scored sailovers. It is not thought that corrected times, which were unavailable because of insufficient data, will make the winners differ from the boats which led in each class.

Classes M and N covered a course from the start off Bath Beach to Craven Shoal Buoy, thence to Buoy No. 12, off Coney Island Point, and home. The first leg, which was close-hauled work, was made tedious by the scant success met in bucking the ebb tide

with only a faint W. breeze stirring. When the second mark was finally reached, great difficulty was experienced in rounding. The wind eventually freshened and veered more to the northward. When the fleet became straightened out, Bobtail led in the long leg for home. Redwing withdrew. Bagheera was the second boat in, Vivian II. next and Era last. The regatta committee decided not to send the boats over the second round, and ended the contest for Classes M and N at this point.

The other starters covered the regular Association course, with marks off Fort Hamilton, Sea Gate and Ulmer Park. They had a beat, a reach, a run and a reach, taking the legs in the order at first named. When the breeze shifted the leg from Fort Hamilton to Sea Gate was changed to a run, the next was a reach and windward work brought the starters home. Great trouble was met in turning the mark off the Fort on the first round. The course was covered twice. Lizana, Miss Judy, Boozie, Sandpiper, Beta, Alpha, and Kelpie were sailed in clever manner. The summaries:

### Sloops—Class M—Start, 3:05.

	Finish.	Elapsed.
Vivian II., S. E. Vernon.....	5 55 42	2 50 42
Redwing, J. B. O'Donohue.....	Did not finish.	

### Sloops—Class N—Start, 3:05.

	Finish.	Elapsed.
Bobtail, E. F. Luckenbach.....	5 50 33	2 45 33
Bagheera, Hendon Chubb.....	5 53 59	2 48 59
Era (ex-Vivian), E. H. M. Roehr.....	6 00 38	2 55 38

### Sloops—Class P—Start, 3:10.

	Finish.	Elapsed.
Lizana, D. S. Wylie.....	4 59 06	1 49 06
Smoke, L. H. Dyer.....	Did not finish.	

### Sloops—Class Q—Start, 3:10.

	Finish.	Elapsed.
Miss Judy, D. D. Allerton.....	5 01 05	1 51 05
Mary, Max Grunder.....	5 04 21	1 54 21
Ogeemah, Alfred Mackay.....	5 06 31	1 56 31
Careless, F. J. Havens.....	5 08 21	1 58 21
Wraith, Calvin Tompkins.....	5 08 32	1 58 32
Cicada, A. D. O'Neill.....	5 11 33	2 01 33

### Sloops—Class R—Start, 3:15.

	Finish.	Elapsed.
Sandpiper, W. W. Redfern.....	5 09 19	1 54 19

### Sloops—Class RR—Start, 3:20.

	Finish.	Elapsed.
Beta, Snedeker & Camp.....	5 32 07	2 12 07
Alpha, Holcombe & Howell.....	5 32 37	2 12 37
Gamma, A. H. Platt.....	5 37 37	2 17 37
Delta, J. J. Mahoney.....	5 45 30	2 25 30

### Catboats—Class V—Start, 3:25.

	Finish.	Elapsed.
Boozie, C. D. Durkee.....	5 25 37	2 00 37

### Marine and Field Special—Start, 3:30.

	Finish.	Elapsed.
Kelpie, W. K. Brown.....	5 34 18	2 04 18

Jig-a-Jig, W. A. Hutcheson.....	5 48 27	2 18 27
Quinque, P. D. Knowles.....	Disqualified.	

## Southern Y. C.

Lake Pontchartrain, New Orleans, La.—Saturday, June 4.

THE Southern Y. C. held its first annual motor boat regatta on Saturday, June 4. Just one week after the club had celebrated its fifty-fifth annual regatta for sailboats, Saturday, May 28, there was inaugurated the initial yearly event for power craft. What a far cry it is from the day that the Southern yachtsmen could first muster enough sailboats to give a regatta to the time when the fleet of motor boats becomes so important that a special regatta can be organized for their benefit. The fact is that from a small beginning three or four years ago, the power yachts now form a distinct and formidable wing of the fleet. There are more than seventy-five boats with engine power enrolled in the fleet of the Southern Y. C.

For this first big motor boat race great preparations had been made, and the owners in this division of the fleet were in a hubbub of anticipation for weeks before the time set for the event. The new rules for measurement and rating of the American Power Boat Association were used, and to say the least there were great trials and tribulations before a bunch of boats big enough to make a race could be properly measured and rated. While the measurement rule in its very newness was rather trying to the measurers and owners, it is evidently one of merit, for it turned out that several narrow, high-power racers lost on allowance to boats of more wholesome makeup and of larger accommodations.

Of the seventy-five craft only seventeen finally tacked their numbers on their bows and faced the regatta committee for a start. The course was a five-mile triangle, twice around, ten miles in all. There was a strong wind and rather rough water.

After the motor boat races were over the entire fleet of power and sailing yachts was reviewed by the commodore, all the yachts being gayly decorated, the scene being one of the grandest ever seen on the waters of old Lake Pontchartrain. The following is the summary of the motor boat races:

### First-Class Cabin Vessels.

	Elapsed.	Corrected.
Chilian .....	1 28 08	1 19 18
Jennie .....	1 25 16	1 15 16
Skirmisher .....	1 27 36	1 27 36
Sabrina .....	Withdrew.	

### Second-Class Cabin Vessels.

	Elapsed.	Corrected.

Sea Em .....	1 59 58	1 59 58
Coon .....	2 22 15	2 22 15

## Lynn Y. C.

Lynn, Mass., Friday, June 17.

A club race of the Lynn Y. C. was sailed in Lynn harbor on Friday, June 17. In the one-design 15-footers the Winneaden added another to her clean list of victories. In the handicap class Luella C. was first in at the finish, but lost to Reliance on corrected time. The summary:

### One-Design Class.

	Elapsed.	Corrected.
Winneaden, James Spratt.....	1 10 47	1 10 47
Haymaker, W. E. Johnson.....	1 12 30	1 12 30
San Toy, William Ridlon.....	1 16 18	1 16 18

### Handicap.

	Elapsed.	Corrected.
Reliance, Charles Curry, 15m.....	1 15 15	1 15 15
Bazoo, M. Randall, 13m.....	1 15 32	1 15 32
Luella, C. J. J. McGray, scratch.....	1 23 40	1 23 40

## New York Y. C.

New York Lower Bay, Thursday, June 16.

The fifty-eighth annual regatta of the New York Y. C. was sailed over courses on the Lower Bay on Thursday, June 16. There were but six starters, and had it not been for a few sporting owners like Messrs. Lippett, Pynchon and Hoyt, who are the life of the big boat racing to-day, the event would have been a flat failure. In the schooner class the famous old schooner Lasca was pitted against the cruising auxiliary Seneca. Vivian II. was to have raced against Surprise, but this boat did not materialize, so Vivian II. competed with Weetamoe, Neola and Isolde for a special prize.

Members of the New York Y. C. watched the race from the steamer Cepheus, and a few steam yachts also followed the boats over the course. The starting line was at buoy 13, just below the Narrows. The regatta committee, composed of Messrs. S. Nicholson Kane, Newbury D. Lawton and Oliver Cromwell, were on board the tug Unique.

The starting signal for the sloops was given at 11:45. Weetamoe crossed in the weather berth on the port tack; Neola was close on her lee quarter. Vivian II. was some distance behind, and Isolde last. The wind was from the S.S.E. and did not have much weight.

In the schooner class Seneca was first away. She got a good start and crossed with good headway on. Lasca was some distance behind, moving slowly, there hardly being wind enough to drive her fast. The first mark was a mark boat off Southwest Spit, and it took a long and a short leg to fetch. From Southwest Spit to Sandy Hook light vessel it was a close reach. Baby jib topsails had been broken out on the two bronze boats, Weetamoe and Neola. Weetamoe made a short hitch and gained on Neola. The boats had a fair tide under them, and the wind shifted a little enabling them to lay their course to the mark off Southwest Spit, which they rounded as follows:

Weetamoe	12 37 25	Vivian II.	12 58 00
Neola	12 41 10	Seneca	1 03 00
Isolde	12 44 50	Lasca	1 05 00

As the boats got beyond the point of the Hook they felt the breeze more, which was just forward of the beam. Weetamoe continued to pull away from Neola, and Neola dropped Isolde. Vivian II. was hanging on and doing well. Lasca did better in the stronger breeze and walked away from Seneca smartly. The boats were timed as follows at the light vessel:

Weetamoe	1 36 35	Lasca	2 01 35
Neola	1 38 30	Seneca	2 01 50
Isolde	1 47 25	Vivian II.	2 05 05

Balloon jib topsails were broken out and the boats made fast time, even though they were bucking the tide. The huge light sails on the bigger boats lifted them along at a pace that left Vivian II. far out of it. There was no change in positions on this leg, and the boats gybed around the Southwest Spit as follows:

Weetamoe	2 46 15	Lasca	3 04 30
Neola	2 50 45	Seneca	3 13 00
Isolde	3 01 10		

Spinnakers were set to starboard on all the boats. A squall that had been making in the N.W. began to kill the wind. Weetamoe crossed the finish line just as the wind gave out entirely, and she anchored in order that the tide would not carry her back again. Neola was at this time less than 2m. behind, but when the wind dropped the strong ebb tide carried her back stern first, and it took her 22m. to cross the line. The squall upset everything, for up to the time the wind dropped Isolde had a good chance of winning the Bennett cup.

Lasca had nearly finished when the wind and rain squall broke from the W. and S. Seneca caught the wind and came up on Lasca at a smart clip, finishing a little over 4m. behind her. The schooners had not been measured, so no corrected time is given. Lasca won by 4m 13s. elapsed time.

For the regatta prize sloops, Weetamoe won, beating Neola 23m. 14s. on corrected time, and beating Isolde 23m. 7s. Neola allowed Weetamoe 47s., and Isolde 12m. 35s.

For the Bennett cup Weetamoe won, defeating Neola by 23m. 14s., and beating Isolde 13m. 55s. corrected time. For the special prize of the sloops, Weetamoe was also a winner, with Isolde second, and Neola third. The summary is as follows:

Schooners—Special Prize.				
	Start.	Finish.	Correc'd.	El'ps'd.
Lasca, R. H. McCurdy	11 56 00	4 32 20	4 36 20	...
Seneca, R. Rainey	11 55 40	4 36 13	4 40 33	...
Sloops—Regatta Prize.				
Weetamoe, H. F. Lippett	11 45 30	3 55 50	4 10 20	4 09 33
Neola, G. M. Pynchon	11 45 31	4 18 18	4 32 47	4 32 47
Isolde, F. M. Hoyt	11 47 00	4 37 15	4 50 15	4 37 40
Sloops—Bennett Cup.				
Weetamoe	11 45 30	3 55 50	4 10 20	4 09 33
Neola	11 45 31	4 18 18	4 32 47	4 32 47
Isolde	11 47 00	4 37 15	4 50 15	4 28 28
Sloops—Special Prize.				
Weetamoe	11 45 30	3 55 50	4 10 20	4 09 33
Neola	11 45 31	4 18 18	4 32 47	4 32 47
Isolde	11 47 00	4 37 15	4 50 15	4 28 28
Vivian II., S. E. Vernon	11 45 25	Did not finish.		

## Lysistrata Cup Race.

Sandy Hook, Saturday, June 18.

The long anticipated steam yacht race for the Lysistrata cup, presented to the New York Y. C. in 1903 by James Gordon Bennett, occurred off Sandy Hook on Saturday, June 18. Henry H. Rogers' Kanawha, defender of the trophy, had no difficulty in defeating the challenger, F. M. Smith's Hauoli, by 3m. and 29s. over a course of sixty nautical miles. No more exciting event of the kind has ever taken place in the annals of yachting history. Over the starting line slightly in advance of her opponent the defending yacht gradually forged to the front, until at the end of ten minutes' time she had a lead of fully two lengths. In five minutes more this had been increased to double the distance. At the end of half an hour Kanawha was leading Hauoli by nearly a third of a mile.

Then came a period when those on board the yacht, which eventually crossed the finish line a winner, became worried at the game fight offered by Hauoli. The challenger was holding her own well, and at times seemed to be gaining slightly. The feeling of uncertainty was further increased at the outer mark, when the pursuing craft cut in close to the stake boat and gained nearly a half minute thereby. There was then an official difference of only 56s., and with thirty miles to go before the finish. Victory did not seem too well assured.

Straightened out for home, after the turn, however, Kanawha let out a link of latent speed. In slow and impressive manner she drew away from her worthy antagonist, and with two-thirds of the journey covered it was evident that nothing short of an accident could defeat the Rogers boat. As smoothly as a willow whistle slips worked the powerful machinery until the end. Kanawha crossed the finish line amid the echoing salutes of surrounding steam yachts, still the speediest pleasure craft of her type afloat.

No one who witnessed the grand struggle would hesitate to assign second place in the list of speed boats to Hauoli, which can undoubtedly defeat any craft of her own size and power in existence to-day. One of the important conditions governing the Lysistrata cup is, however, that the yachts must compete boat for boat without time allowance of any kind. Hauoli, with her single screw, more graceful but smaller hull and less power, had to give way to the larger and more capable Kanawha with her two propellers, which proved their wonderful driving ability so well.

In the sixty mile journey Kanawha averaged a fraction under a speed of 20 knots an hour. Hauoli did about 19.5 knots. In the initial contest for the cup off Newport, on July 24, 1903, in which Kanawha won from W. B. Leeds' Noma, the former made an average speed of 19.65 knots. According to the cup conditions, a yacht winning the trophy twice in successive years becomes the permanent possessor of the plate. The trophy is thus now the property of the winning owner for good and all time.

When the two principals in the great contest appeared at the starting line off Sandy Hook, they were as fit as months of preparation could make them. Kanawha had been lying in the Horseshoe all night. Hauoli steamed down the bay from Erie Basin. S. Nicholson Kane and Newbury D. Lawton, of the regatta committee of the New York Y. C., were on board the torpedo boat destroyer Truxtun, in command of Lieut. Crosley, U. S. N., which was loaned by the Government as committee boat for the occasion.

The long, black, rakish looking craft was anchored W. 3/4 S. of Sandy Hook Lightship, making a line at right angles to the

course, which was thirty miles S. 3/4 E. The tug Walter Luckenbach, in charge of Lieut. Commander Walter J. Sears, U. S. N., and Oliver E. Cromwell logged the course and acted as the outer mark.

The preparatory signal was set at 1:15, a quarter of an hour after the time originally announced. Fifteen minutes later the starting gun boomed forth. Kanawha was away at 1:31:26. On board as guests of the owner, Henry H. Rogers, were E. B. Cory, W. R. Coe, W. E. Benjamin, U. H. Broughton, H. H. Rogers, Jr.; Dr. C. C. Rice, W. W. Windsor, Sidney Chase, F. Q. Barstow and J. A. Moffat. Designer Charles L. Seabury kept a general eye over everything. Captain E. A. Geer was in command of the craft and William Scott acted as quartermaster.

Only four seconds away came Hauoli. On board as guests of her owner, F. M. Smith, were E. H. Bennett, L. Oliver Wrenn, De Witt Van Buskirk, E. L. Ransome, W. J. Casey, Alexander E. Orr, Jr.; R. O. Oliver and C. B. Zabriskie. Designer Henry J. Gielow looked after the general working of the engines. The boat was in command of Captain Bliss Read.

Among the steam yachts at the start were Commodore Frederick G. Bourne's flagship Delaware, with a distinguished party on board; Elreba, Henry Darlington; Zara, Harrison B. Moore; Laurita, George J. Smith; Viking, J. B. Edson; Seminole, Walter S. Gurnee; Elsa II., Andrew W. Rose; Virginia, Isaac Stern; Lysistrata, James Gordon Bennett; Rheclair, D. J. Reid; America, Archibald Watt; Scout, August Belmont, and others.

As the boats rushed away on the course, with clouds of black smoke pouring from their funnels, the fleet of attending yachts attempted to follow, but with poor success. Even the Truxtun, with steam in four boilers, was having difficulty in keeping up. In an hour the outer mark was sighted. Hardly had half of another slipped away when both yachts were around and on the course for home. Kanawha had beaten Hauoli by 56s., and averaged 19.99 knots. Hauoli did 19.16 knots. It had taken the Rogers boat 1h. 30m. 30s. to make the thirty mile journey, while her opponent took 1h. 31m. 26s. to cover the same distance. A brief summary of the outward journey follows:

	Start.	Finish.	Elapsed.
Kanawha	1 31 26	3 01 56	1 30 30
Hauoli	1 31 30	3 02 56	1 31 26

On the run home Kanawha gradually drew away and gained 2m. and 33s. on Hauoli. She averaged 19.99 knots, while the speed of Hauoli was 19.4 knots. It took the winning boat 1h. 30m. 28s. to cover the thirty nautical miles. Hauoli took 1h. 33m. 1s. A summary of the last leg follows:

	Outer Mark.	Finish.	Elapsed.
Kanawha	3 01 56	4 32 24	1 30 28
Hauoli	3 02 56	4 35 57	1 33 01

As soon as Kanawha had finished, a 70ft. steamer was sent aloft. After a short trip into the Horseshoe to pick up launches and other fittings left there before the race, a start for the Battery was made. The victorious yacht was continually saluted on the trip up the harbor. Hauoli proceeded up the bay ahead of her conqueror. There was a general period of congratulation on board Kanawha.

During the entire race Kanawha consumed fifteen tons of Pocahontas coal. Her screws averaged 300 revolutions a minute, and she carried upward of 250 pounds of steam. Hauoli burned twelve tons of selected George's Creek coal, and under about the same steam pressure her screw made an average of 298 revolutions. The summary of the entire race follows:

	Start.	Finish.	Elapsed.
Kanawha	1 31 26	4 32 24	3 00 58
Hauoli	1 31 30	4 35 57	3 04 27

Kanawha was purchased from the late John P. Duncan, who used the boat up to the period of his fatal illness. Her appointment and fittings are luxurious, yet in good taste. There is an abundance of room in the living quarters and on deck. Although five years old, the boat is still the fastest and among the best appearing in the American pleasure yacht fleet. She is used a greater part of the time between New York City, Fairhaven, Mass., and New Bedford Harbor, where the owner has a summer home.

Hauoli is used by F. M. Smith, who has a beautiful summer residence at Shelter Island, L. I., for cruising and general purposes of recreation. The boat has an especially trim and natty appearance, and is a well appointed, up-to-date craft in every particular. She was built last year by the John Robins Company, Erie Basin, South Brooklyn. A few details of the two boats follow:

Kanawha.—Owner, H. H. Rogers, N. Y. Y. C. Twin screws. Length over all, 27ft.; length on waterline, 19ft.; beam, extreme, 24ft.; beam at waterline, 23ft. 8in.; draft, 10ft.; least freeboard, 6ft. Triple expansion engines (two), three cylinders each, 14½, 24 and 42in. diameter by 24in. stroke. Four Seabury water-tube boilers. Displacement of yacht, day of race, 580 tons. Captain, E. A. Geer; Chief engineer, William Smith.

Hauoli.—Owner, F. M. Smith, N. Y. Y. C. Single screw. Length over all, 21ft. 3in.; length on waterline, 16ft.; beam, extreme, 21ft. 6in.; beam at waterline, 20ft. 10in.; draft, 9ft.; least freeboard, 5ft. 6in. Triple expansion engine, four cylinders, 17, 26½ and two 30in. diameter by 21in. stroke. Four Almy water-tube boilers. Displacement of yacht, day of race, 360 tons. Captain, Bliss Read; Chief engineer, W. Frank West.

## Larchmont Y. C.

Larchmont, Long Island Sound, Saturday, June 18.

The spring regatta of the Larchmont Y. C. was held on Saturday, June 18. Although this is not the first event given on the Sound, it marks, however, the real opening of the season, so far as the racing is concerned. This is the first event of the season in this vicinity where there has been a fair number of starters.

From the racing man's standpoint the day was about as unsatisfactory as it could be. The wind was very light from the W. at the start, but this fickle breeze soon dropped and the boats were becalmed for hours with an occasional puff helping along the first one, and then another. About 5 o'clock, when the larger boats were on the last leg of the first round, the breeze, which had held under the New York shore, worked out a little and enabled the boats to finish.

Neola and Weetamoe were to sail twice over a fifteen mile course, but it was nearly 6 o'clock when Neola finished the first round, and the regatta committee did not send her around again. Weetamoe got the start, and a big jib topsail was broken out for the reach over to the first mark off Prospect Point. Neola was not far behind and she also broke out a jib topsail. Weetamoe was first around the Prospect mark. On the next leg Neola got a puff and ran up on Weetamoe and passed her. She had the luck to get what little air there was, and finally opened out a big lead on her competitor. Weetamoe got becalmed in Hempstead Harbor, while Neola was steadily working away. Neola caught the new breeze first and finished a winner with over 15m. to spare.

At 12:10 the yaws were sent away. Tern, well handled, showed up remarkably well. This boat is a very smart craft, and will take a lot of beating, particularly in light weather. Tern beat Escape, the second boat, by over 6m. Spasm had no competitor and took a sailover.

The best racing of the day was in Class N. Mimosa, with Mr. T. L. Park, the owner, at the stick, got the start with Alert, handled by Mr. C. D. Mower, second. Balloon jibs were broken out for the reach over to the mark at Prospect Point. Nike, ex-Oiseau, got a wretched start, but a favorable slant enabled her to run up on the two leaders until she nearly overtook them. Nike is painted white this season, and her appearance is spoiled. As a black boat, she always attracted attention.

Mimosa rounded the Prospect mark first, gybing over her balloon jib. Alert was close behind, with Nike a long distance astern. Spinnakers were set to port, then the mainsails would be gybed over and the spinnakers reset on the other side. This was kept up for hours, and every puff was taken advantage of. Little progress was made and the boats barely had steerageway. At the second mark off Matinicoek, Mimosa was well ahead of Alert. It was now a long leg and a short one to the finish line. Mimosa was sailed a little close, her jib being aback some of the time, and Alert seemed to foot faster and point higher. Nike was pulling up and looked dangerous. She has always been a wonderful boat to windward in light air. Alert continued to do well until she pulled well ahead of Mimosa. Alert finished 1m. 35s. ahead of Mimosa. Nike was less than a minute astern of Mimosa.

Snapper and Una, two old raceabouts, were the only starters in Class P. Una won easily, beating Snapper by nearly 5m. Mr. Butler Duncan purchased Una, ex-Persimmon, this season to race in the raceabout class. It was found that the boat was out of that class when she was measured, and Mr. Duncan has been forced to sail in the 25ft. sloop class.

There were seventeen starters in the raceabout class, making a very good showing. The only new boat seen in the race started

in the raceabout class. She is a Crowninshield production known as Rascal II. The boat is of mahogany and has a very straight sheer. She did not show up well, being the last boat in her class to finish, but this does not signify anything as the day was too fluky for real tests.

Hobo, cleverly handled by Mr. Clifford Bucknam, finished a winner, with Cricket 33s. behind. Tartan was third and Rogue fourth. Three of the new Indian Harbor one-design boats started. Kenoshi won easily.

Of the four Larchmont one-design boats that started, Vaquero II had the best of it and won; Dorothy was second, with Hourii a very close third. Jeebi finished a winner with minutes to spare in Class Q. Luto did not finish. Second place lies between Gazabo and Ethel. Plover took a sailover in Class R, as she was alone in the class.

Only two of the Manhasset Bay one-design boats started. Pup did not finish, and Bab went over the course alone. Alga, one of the New Rochelle one-design boats, owned pro tem by Mr. James D. Sparkman, beat Caper, her only competitor, easily. Dorothy was the only catboat to start in Class V. Scud beat Goslin, her only competitor in the Hempstead Harbor one-design class, by over 11m. Skidoo won easily in the Lark class. Yellow Jacket finished a poor second, and Echo withdrew. The summary follows:

Class I—Sloops—Start, 12:05—Course, 15 Miles.			
	Finished.	Elapsed.	Corrected.
Neola, George M. Pynchon	6 02 01	5 57 01	
Weetamoe, H. F. Lippett	6 18 07	6 13 07	
Class M—Sloops—Start, 12:10—Course, 11 Miles.			
Tern, John Hyslop	6 15 30	6 05 30	
Escape, George Mathews	6 21 47	6 11 47	
Memory, H. M. Raborg	6 26 03	6 16 03	
Class M—Start, 12:10—Course, 11 Miles.			
Spasm, E. D. King	6 13 28	6 03 28	
Class N—Sloops—Start, 12:15—Course, 11 Miles.			
Alert, J. W. Alker	6 07 08	5 52 08	
Mimosa, T. L. Park	6 08 43	5 53 43	
Nike, N. I. Cummock	6 09 19	5 54 19	
Class P—Sloops—Start, 12:25—Course, 10½ Miles.			
Snapper, F. H. Page	5 29 54	5 04 54	
Una, W. Butler Duncan	5 24 56	4 59 56	
Raceabout Class—Start, 12:20—Course, 10½ Miles.			
Marvola, C. W. Allen	5 29 20	5 09 20	
Cricket, Howard Willets	5 22 03	5 02 03	
Hobo, T. L. Park	5 21 30	5 01 30	
Rogue, A. B. Alley	5 25 59	5 05 59	
Grasshopper, H. C. Pryer	5 29 39	5 09 39	
Tartan, Allen Pirie	5 23 32	5 03 32	
Rascal II, S. C. Hopkins	5 31 10	5 11 10	
Indian Harbor One-Design Class—Start, 12:30—Course 10½ Miles.			
Kenoshi, G. B. Mallory	5 46 49	5 16 49	
Anawanda, E. C. Ray	6 04 40	5 24 40	
Owatanna, George Sander, Jr.	6 06 08	5 36 08	
Larchmont One-Design Class—Start, 12:25—Course, 10½ Miles.			
Adelaide, J. J. Dwyer	5 34 51	5 09 51	
Hourii, J. H. Esser	5 33 33	5 08 33	
Vaquero II, J. N. Marble	5 32 09	5 07 09	
Dorothy, L. G. Spence	5 33 28	5 08 28	
Class O—Sloops—Start, 12:35—Course, 10½ Miles.			
Jeebi, A. D. Brown	5 36 30	5 01 30	
Gazabo, H. T. Vulte	5 42 32	5 07 32	
Ethel, Dr. Frank	5 43 49	5 07 32	
Luto H. F. B. Currier	Did not finish.		
Class R—Sloops—Start, 12:35—Course, 10½ Miles.			
Plover, H. Place	5 39 14	5 04 14	
Manhasset Bay One-Design Class—Start, 12:35—Course, 10½ Miles.			
Bab, J. P. Hoyt	5 50 03	5 15 03	
Pup, T. W. Ratsey	Did not finish.		
New Rochelle One-Design Class—Start, 12:35—Course, 10½ Miles.			
Caper, P. L. Howard	5 49 49	5 14 49	
Alga, J. D. Sparkman	5 41 47	5 06 47	
Class V—Catboats—Start, 12:40—Course, 10½ Miles.			
Dorothy, C. A. Marsland	6 06 02	5 26 02	
Hempstead Harbor One-Design Class—Start, 12:40—Course, 5½ Miles.			
Scud, D. B. Abbott	3 42 13	3 02 13	
Goslin, Morris & Pratt	3 53 31	3 13 31	
Lark Class—Start, 12:40—Course, 5½ Miles.			
Skidoo, M. S. G. Davis	Did not finish.		
Yellow Jacket, G. B. Robinson	3 51 41	3 11 41	
	3 58 32	3 18 32	

## New Rochelle Y. C.

New Rochelle, L. I. Sound—Saturday, June 18.

There were fourteen starters in the power boat race given by the New Rochelle Y. C. on Saturday, June 18.

The day was most satisfactory for racing power boats, as there was little or no wind and smooth water. Even under such favorable conditions, the starters did not make any unusual speed.

The course was from the starting line off Echo Bay to and around the red spar buoy off Motts Point and back to the starting line, a distance of 9½ nautical miles. All the boats, with the exception of Teaser, in Class L, covered this course twice, making a total distance of 19 miles.

Japansky and Teaser were the only starters in their respective classes, and were obliged to cover the course alone. Japansky made the best time over the course, averaging nearly 16½ knots. This is fair speed, although she did better in her first race.

Boats in Classes S, T, V were sent away at 2:40. There were four starters, and Hard-Boiled Egg won easily, although she got a poor start. She averaged about 14½ knots, which is slower than she ran in the regatta on the Hudson a short time ago.

Water Lily did not finish. Shooting Star and Dolphin II. were disqualified. Mrs. W. K. Vanderbilt steered Hard Boiled Egg a good part of the race, so that Mr. Vanderbilt could devote himself to the engine.

There were four starters in Classes A, B, C, D. Queen Bess, a nice looking and substantial craft, made a good showing, and defeated Aletes II. easily. Gazelle did not finish, and Allure was disqualified.

Queen won easily in Class H, I, J. Miss Swift was second and San Toy II. a close third. The summary:

Classes O, P, Q, R—Start, 2:35—Course, 19 Miles.				
	Allows.	Finish.	Elapsed.	Corrected.
Japansky, F. H. Waldorf.....	3 44 30	1 09 30	1 09 30	
Classes S, T, V—Start, 2:40—Course, 19 Miles.

Queen, J. J. Amory.....	0 08 30	4 14 00	1 24 00	1 15 30
Classes K, L—Start, 2:25—Course, 9½ Miles.				
Taser, M. & C. Houck.....	0 12 38	1 17 38	1 17 38	

## Rhode Island Y. C.

Narragansett Bay, R. I., Saturday, June 18.

The first club regatta of the Rhode Island Y. C. for the season was held June 11, in connection with the annual ladies' day celebration, and the whole event was one of the most successful in the history of the club. There was a large number of members and guests present. The weather was perfect, and the various features of the programme were carried out like clock work. Among the visiting craft were Mr. N. G. Herreshoff's steam yacht Roamer, Mr. J. B. Herreshoff's steam yacht Eugenia and Commodore A. H. Skinner's flagship Katherina, of the Fall River Y. C.

In the regatta there were twenty starters, and the winners were Little Rhody, Elizabeth, Nobska, Marguerite, El Cid, Ichi Bann and Neon. Second prizes went to the Ethelka, Mblem, Ina and Baby Roger II. The prizes in each class were silver cups.

The wind was fresh from the W., a little to the N., and held true throughout the race. In the sloop class there were four starters, and the new Tillinghast boat, Little Rhody, the only one built for the proposed N. B. 25ft. restricted class, had a walkover. The 30ft. cats put up a fairly close race as to the two leaders, Elizabeth leading the way and defeating Mblem by 1m. 14s. In the 25ft. cat class, Mae Hope had the race on corrected time, but was disqualified for fouling a buoy, and the first went to Nobska, which finished first. Marguerite and Bother made a good race, the former winning by 1m. 17s. corrected time.

The feature of the power boat racing was the appearance of the Ichi Bann, the first auto boat to be owned in this vicinity, and her speedy performance aroused great interest. She covered the seven nautical mile course in 29m. 16s., and her only opponent, Vanish, dropped out on the first round. F. S. Nock, the designer and builder of Ichi Bann, was chairman of the race committee, and the boat was handled by her owner, J. R. Harding. In the class for small launches, Herreshoff's Neon had a walkover, starting with a bad handicap and winning by nearly 17m. corrected time. The summary:

Sloops—30ft. Class—Start, 2:12—Course, 11½ Miles.				
	Finish.	Elapsed.	Corrected.

## Boston Y. C.

Hull, Mass., Friday, June 17.

The Y. R. A. open race of the Boston Y. C., sailed off the Hull station of the club on Friday, June 17, was a most successful one, with forty-two starters. A light easterly breeze prevailed, gradually lightening to the finish, but enough to make good racing. There was a close contest between the new 30-footers, it being anybody's race until the finish. Each of the three boats had the lead at some time during the race, and on the second round, Sauquoit took the lead and held it to the finish. There were eight starters in the 22ft. class. Tayac got the start in this class, but Clotho, now a keel boat, took the lead soon after and held it all over the course. There were seventeen starters in the 18ft. knockabout class. Bat, as usual, got a good start, well clear of the bunch, and she led all over the course, but was closely pressed by Arbeka II. There were only two 15-footers, Tabasco, Jr., and Little Misery. Little Misery got the start, but after that it was all Tabasco Jr.'s race. L'Aiglon and Jingo sailed a hot race in the first handicap class, L'Aiglon getting the lead on the second round of the course and holding it to the finish. In the second handicap class, Scapegoat took the lead soon after the start, and was never headed. The summary:

Class C—30-Footers.		
	Elapsed.	
Sauquoit, T. K. Lothrop, Jr.	1 47 55

## Wollaston Y. C.

Quincy, Mass., Friday, June 17.

The first of a series of inter-club races between the Quincy, Squantum and Wollaston Y. Cs., was sailed, under the auspices of the Wollaston Y. C., on Friday, June 17, in a light E. breeze. The Quincy Y. C. sent 16 boats, the Squantum Y. C., 6, and the Wollaston Y. C., 11. The result of the race was that Quincy took two firsts and two seconds; Squantum one second and two thirds; and Wollaston one first and one third. In Class A, Wawenock, a Wollaston boat, got the start and led all over the course. In Class B, Pocahontas, a Wollaston boat, showed the way round, but lost to Marvel, a Quincy boat, on corrected time. In Class C, Thelma, a Quincy boat, had things all her own way. The summary:

## Beverly Y. C.

Buzzards' Bay, Mass., Friday, June 17.

There was not enough breeze to make things interesting in the first club race of the Beverly Y. C., which was sailed in Buzzards' Bay on Friday, June 17. Only one 30-footer showed up, and she went over the course alone. In the 21-footers, last season's champion, Terrapin, won from the new Illusion. The best race of the day was between the 15-footers, sailed by women members of the club. Teaser, with Mrs. P. W. Emmons, 2d, at the tiller, won out handily in this class. The summary:

30-Footers.		
	Elapsed.	Corrected.
Young Miss, D. L. Whittemore.	2 51 27	

21-Footers.		
	Elapsed.	Corrected.

Fiddler, Miss Grace Dabney.	2 21 30	
Flickamarro, the Misses Emmons.	2 31 29	

Saturday, June 18.

The race of the Beverly Y. C., which was to have been sailed on Saturday, June 18, was postponed on account of the death of Mrs. John Parkinson, at the Parkinson summer home. Mr. Parkinson is chairman of the regatta committee and, out of respect, the colors were put at half mast, and all festivities at the club house were suspended.

## Duxbury Y. C.

Duxbury, Mass., Friday, June 17.

In the race between the 18ft. knockabouts of the Duxbury Y. C. sailed on Friday, June 17, Kittiwake V. won easily in a light N.E. breeze. The summary:

Kittiwake V., H. M. Jones.		
	Elapsed.	Corrected.
Aspenquid, C. Foster.	2 02 21	
Domino, C. C. Clapp.	2 05 44	
Osprey, Train	2 06 52	
	2 08 29	

Saturday, June 18.

Two classes competed in the club race of the Duxbury Y. C., sailed on Saturday, June 18. In the 18ft. knockabout class Kittiwake V. had things all her own way. In the handicap class As You Like It was first home by a long margin, but lost to Challenge on corrected time. The summary:

18ft. Knockabouts.		
	Elapsed.	Corrected.
Kittiwake V., H. M. Jones.	1 46 10	
Aspenquid II., C. Foster.	1 48 10

## Winthrop Y. C.

Winthrop, Mass., Saturday, June 18.

The second handicap race of the Winthrop Y. C. was sailed off the club house on Saturday, June 18, in a fresh N.E. breeze. In the 25ft. class Kit won a good race with L'Aiglon second. In the 21-footers Scamper won easily. In the 18ft. class Zetes II. was first across the finish line, but lost to Monitor on corrected time. Hattie won easily in the 15ft. class. The summary:

25ft. Class.		
	Elapsed.	Corrected.
Kit, H. B. Whittier.	1 21 00	1 21 00

Dory, McWells.	Did not finish.	

## Squantum Y. C.

Quincy, Mass., Saturday, June 18.

The Y. R. A. open race of the Squantum Y. C., sailed in Quincy Bay on Saturday, June 18, was one of the most successful in the history of the club. There was a good breeze from the N.W., and the racing was good in every class. On account of the depth of water the largest class provided was for 22-footers. In the 22-footers Opitsah V. got the start and led until the last mark was turned, when Clotho, which had pressed her hard on the windward leg and had held her on the second run, went out ahead and held her lead to the finish. In the 18-

footers Bat's colors were lowered for the first time this season, by Arbeka II., a Crowninshield production, which has been coming up in every race. These boats were third and fourth on the running and reaching, but on the windward leg they went up. The summary:

Class E—22-Footers.		
	Elapsed.	Corrected.
Clotho, Cheney and Lanning.	1 48 11	
Opitsah, S. H. and H. I. Foster.	1 49 17

Menace, J. H. Hunt.	1 15 50	
Moslem I., B. D. Barker.	1 16 45	</

of new boats which have taken part in the racing. The season opened with the regatta of the Royal Thames Y. C. over the quadrangular course starting from Southend, which was substituted two years ago for the old-fashioned and inadequate course from Gravesend to the Mouse lightship and back. In the big handicap class, Mr. Myles B. Kennedy's new Fife yawl, White Heather, made her debut, but, although she finished second to Bona, she failed to take a prize, and she showed herself to be very tender when there was any weight in the wind. No doubt this fault will soon be rectified, but for the present White Heather cannot be counted a great success.

The famous old 40-rater Creole dressed down the new Fife yawls Moonbeam and Rosamond. Fife, however, scored a win with his new 52-footer Maymon, which is in the able hands of Charles Bevis; but much of the interest in this match was destroyed through last year's crack Moyana fouling Southland pier at the start and carrying away her bowsprit. In the matches of the new Thames Y. C., sailed the following day from Southland to Harwich, the first and second handicap classes were put in together. It was paltry weather; but Creole sailed wonderfully well in the light airs, actually finished second to Bona and took first prize on the handicap, Moonbeam getting the second. The 52-footers had an unsatisfactory race, Maymon and Camellia going ashore as the result of a luffing match, and letting in Moyana and Ancida.

The weather at the regatta of the Royal Harwich Y. C., on May 30 and 31, was not all that could have been desired. There was a fine breeze on the first day, but it was cold and foggy. Neither White Heather nor Rosamond distinguished herself in the handicap, but Maymon once more led the 52-footers home. The weather on the following day was even more unsatisfactory, a calm in the morning, followed by a hard wind and pelting rain. On the whole the result of the first four days racing tends to show that as far as the handicap boats go, the old stagers have not, so far, much to fear from the new boats, and as regards the 52-footers, Maymon and Moyana are the pick of the fleet. It is not certain yet how far White Heather may be improved, but she certainly ought to be capable of doing better with the fine Nicholson yawl, Brynhild, which is now many seasons old. A great deal of apparent failure among the handicap boats is due to inferior handling. Brynhild suffered from this badly in her second season, and there is reason to suspect that White Heather is not handled as well as she ought to be.

The new Nicholson 106 ton cutter, Merrymaid, will make her first appearance in the Nore to Dover race of the Royal Thames Y. C. on June 11, while another interesting addition to the handicap class will be the Soper yawl, Therese, which has had her sail area increased this year by no less than 1,500 sq. ft. Therese (formerly known as La Fleche) showed remarkable speed at times in hard winds, but she was so starved for canvas that she was useless in light airs. It will be interesting to note how far the increased sail area will affect her all round.

Ingomar's Y. R. A. rating comes out just over 100; allowing, however, for her rig, she will sail as 85, and would therefore receive a considerable time allowance from Kariad, though she would have to concede time to Bona. If Ingomar can stand up to her enormous sail spread she ought indeed to give a good account of herself.

E. H. KELLY.

## Rhode Island Letter.

PROVIDENCE, R. I., June 18.—General orders relating to the annual cruise of the Rhode Island Y. C., from July 24 to 31, inclusive, have been issued by Commodore Rogers, and the plans show that an elaborate and interesting programme has been arranged. The fleet will rendezvous at Newport Saturday night, July 23, and sail for Stonington Sunday morning. The Monday run will be to Watch Hill, where the fleet will lay over until Tuesday, entertainment being provided in the way of athletic sports in the afternoon, and a complimentary ball tendered to the club and guests by Mr. Frank Champlin at the Ocean House in the evening. Tuesday, run to Shelter Island, where the fleet will be joined by the fleet of the Sachem's Head Y. C. Inter-club races will be held Wednesday, in which the Shelter Island Y. C. will also participate, and in the evening the two visiting clubs will be entertained by the Shelter Island Y. C. Thursday, run to Block Island, with racing by the joint fts. Friday the fleet will lay at Block Island, where, in the evening, a dinner will be served, and an entertainment given at the Hygeia Hotel, the Sachem's Head fleet to be the guests of the Commodore. On Saturday the fleet will run to Newport or Bristol, and on Sunday to Potter's Cove, where a special club clam-bake will be served and the cruise end.

The most interesting transfer in local yachting circles that has taken place in a long time was the sale of the schooner yacht Esperanza by the estate of the late Commodore Frank F. Olney, of the Rhode Island Y. C.; to Mr. J. D. McKee, of Allegheny, Pa. The sale was effected a few days ago, and the boat will at once be overhauled and fitted out. Esperanza was formerly Ingomar, and was sold to the late Commodore Olney two years ago by Commodore Morton F. Plant, who had the new Ingomar, a larger craft, built last year by the Herreshoffs to replace her. The Esperanza is a fine steel schooner, built about five years ago by Lawley & Son, of South Boston. She is a flush deck boat, 89ft. over all, 63ft. waterline, 19ft. beam, and 8ft. 2in. draft, without the board. She is one of the handsomest and fastest boats of her class in the country.

A handsome motor cruiser designed and built by Mr. F. S. Nock, was launched at East Greenwich the past week, and sent to her owner, Mr. F. W. Albree, of Kingston, Ontario. She is called Turtle, and is an exceptionally seaworthy craft, being designed for use on the rough waters of Lake Ontario. Her dimensions are: 36ft. over all, 34ft. waterline, 8ft. beam, and 2ft. 8in. draft. The motive equipment is a four-cylinder, four-cycle 20 horse-power Buffalo motor, situated entirely under the cockpit floor, access being gained by hatches, forming a bridge deck 14in. in height. Her tank capacity

is sufficient for a 1,000-mile cruise. She is lighted by acetylene gas, and carries a large search light. The cabin is fitted with extension berths, is finished in cream and gold, and upholstered in old rose plush, and has 6ft. 2in. head room. Forward there is a large galley and a toilet room. The boat is finished in oak and mahogany throughout.

A handsome club manual has just been issued to the members of the Edgewood Y. C., containing the officers and membership list, the constitution and by-laws, club courses, sailing rules, yacht routine, rules of the road, storm signals, and international signal code.

The Flint brothers' new 30ft. cat, Wanderer III., will be launched this week at Davis Bros.' shop at Warren, and will enter her first race at Bristol next Saturday. On account of the radical difference of her design from all 30-footers previously seen in these waters, local yachtsmen will view her first performances with great interest.

F. H. YOUNG.

## YACHTING NEWS NOTES.

For advertising relating to this department see pages ii and iii.

BEVERLY Y. C. BOOK.—We are indebted to Mr. F. A. Eustis, secretary of the Beverly Y. C., for a copy of the club book for 1904.

SCHOONER YACHT OENONE SOLD.—Mr. Geo. C. Brooks, Eastern Y. C., Boston, has sold his schooner yacht Oenone to Mr. Wm. Boyce, of New York city, through Stanley M. Seaman. She is a flush deck keel boat, 96ft. over all, 75ft. waterline, 19ft. 9in. beam, 12ft. draft, designed by the late Edward Burgess, built 1888 by Wm. McKie, of East Boston, Mass. The same agency has also chartered the sloop Whitby for Mr. Edward Swann to Mr. Ira A. Kip, Jr., of New York city.

STEAM YACHT REBA SOLD.—Messrs. Winteringham & Wells have sold for Mr. Nathaniel Witherell, of Greenwich, Conn., his steam yacht Reba to Mr. W. D. Hoxie. Mr. Hoxie will use the yacht between this city and Westerly, R. I. The yacht is to be renamed, on account of the former owner's desire to retain the name Reba, and she will be called Alert.

CHICAGO Y. C. RACING PROGRAMME.—The following schedule of events has been arranged for by the regatta committee of the Chicago Y. C.:

June 25—Race for schooner, 45ft., 35ft., and 21ft. classes, swimming races and water polo match.

July 2—Race for club one-design class and Saddle and Cycle Club boats.

July 4—Open regatta for all classes and first race one-design class for Vice-Commodore Atkin cup. Race for power boats.

July 9—Second race one-design class for Vice-Commodore Atkin cup.

July 16—Class races for Warrington and Lillienfeld cups.

July 23—Race to Macatawa Park and races for one-design class and club knockabouts.

July 29-30—L. M. Y. A. at Macatawa Park.

July 30—Races for schooner, 45ft., 35ft., and 21ft. classes.

August 3—Open cruising race to Mackinaw. Time allowance to be given according to club rules.

August 6—Third race one-design class for Vice-Commodore Atkin cup.

August 13—Fourth race one-design class for Vice-Commodore Atkin cup.

August 27—Fifth race one-design class for Vice-Commodore Atkin cup.

September 3—Races for club one-design class and Saddle and Clyde Club boats.

September 5—Labor Day. Open regatta for all classes.

September 10—Race for all classes.

September 17—Cruising race to Kenosha under racing rules.

September 24—Races for one-design class and club knockabouts.

October 1—Races for one-design class and club knockabouts.

October 8—Races for one-design class and club knockabouts.

October 15—Races for one-design class and club knockabouts.

WESTHAMPTON Y. C. SCHEDULE.—The yachting squadron of the Westhampton Country Club has issued its racing programme for the season. Five events are provided, all to start off the club station at Speonk Point. The schedule:

July 16—Club race.

July 29—Woman's race.

August 13—Association race.

August 26—Woman's race.

September 3—Open race.

HEMPSTEAD BAY Y. C. FIXTURES.—The Hempstead Bay Y. C. have arranged for the following fixtures:

July 4—First regatta.

August 13—Ladies' day.

August 15 to 19—Annual cruise.

September 10—Open regatta.

CHICAGO Y. C. CRUISING RACE.—The Chicago Y. C. announce that on August 3 they propose to hold an open cruising race from Chicago to Mackinac for cruising yachts under the following conditions:

1. Yachts must not be less than 21ft. class, any rig.
2. No limit as to crews; same number of professionals as allowed by L. M. Y. A. rules. Cook can be carried, but must do no work on deck.
3. Each yacht must have at least one first-class dinghy, not less than 10ft. long, which can be carried on deck or towed.
4. All boats must carry anchors, lights, and complete cruising outfits.
5. Before starting, captain of yacht must satisfy the

committee that he has on board proper navigation instruments, charts, etc., and that he has a proper log book, which must be kept with hourly entries and handed in at the end of the race, a special prize to be given for the best kept log.

6. All engines in auxiliary boats and in power dinghies will be sealed by the committee on the day of the race, which seals must be intact on arrival at Mackinac.

7. Committee to reserve the right to reject entry of any boat they do not consider a bona fide cruising craft, or that is, in their judgment, unseaworthy or otherwise unfit to make the race.

8. Time allowance shall be based on the measurements and table of the Lake Michigan Yachting Association.

The start will be made from the Van Buren Street Gap at Chicago, and boats will leave as follows: Yawls, August 3, 5 o'clock P. M.; schooners, 5:10 P. M.; sloops, 5:20 P. M.

There will be four valuable cups and cash prizes of \$100, \$50, and \$25 given for schooners, sloops, and yawls, a cup for time prize, and a club pennant for first boat to cross the finish line.

The finish line will be between two buoys placed opposite the Grand Hotel at Mackinac Island.

\*\*\*

VALDORA WINS HELIGOLAND CUP.—The 106-ton yawl Valdora, owned by Dr. J. G. Douglas, was the winner of the 320-mile race from Dover to Heligoland, which started on Saturday, June 18. The 98-ton cutter Nicaudra, owned by Mr. John Ferguson, was second; the 143-ton Wendur, owned by Mr. Richard Lee, third; and Lord Dunraven's Ketch Caroid was fourth. The American schooner Ingomar was the first boat to finish, but lost the race on time allowance. Ingomar was the scratch boat, and allowed the other starters handicaps ranging from five to over nine hours.

\*\*\*

ERIE Y. C.—The first race of the season will be sailed July 4 to start at 9:30 A. M. The following boats have been entered so far; some of them are the old standbys, but there are a number of new ones also. The entries for all races this summer close on June 25. The club has taken in a few new members this spring; the membership is about 100 now. Thirty-foot class: Nameless, Viking, Una, Eagle, Kingfisher, and Caprice; 25ft. class: Bonita, Marvel, Mingo, Iroquois, Turtle, and Tonkawa; 20ft. class: Anheuser-Busch, Poker Chip, Gola, Mary Ann, and Flora.

CABIA BLANCO.

## Canoeing.

### Duquesne C. C.

WITH the Duquesne C. C. cruising is very popular this season, and the ladies, to whom the privilege is extended this year, have proven themselves worthy of the trust by braving some very disagreeable weather. On the Decoration Day cruises the party exceeded the club membership.

The Allegheny and Kiskiminetas rivers and French Creek are included in the schedules. The July 3-4 cruise promises to have a large party. The first regatta of the season is scheduled for June 18. On the completion of the Oakmont Boat Club and Sylvan C. C. houses, other regattas will be in order.

A number of the Duquesne men and their wives and sisters are planning to go to Sugar Island camp of the A. C. A. in August, where they hope to meet many others, and anticipate a jolly good outing.

In the Lake-of-the-Thousand-Isles at the source of the famous St. Lawrence River, lies a most picturesque island. Once the scene of a primitive sugar camp, it has since been known as Sugar Island—a rather confectionery name for such ruggedness as one sees in paddling along its rocky shores indented by small sheltering coves; beaching your canoe in one of these, and climbing to the granite summit, one has a magnificent view of broad bays and groups of small islands, bits of deep forest and grassy openings suggest camp life among ideal surroundings. Should one chance by during the month of August, one will see numerous white and colored tents invitingly pitched by the water's edge, with groups of men and women or solitary individuals enjoying life in the open. Occasionally a canoe darts around some point, to be soon lost in a cove, where, on investigation, one would see a number of them beached while the owner enjoys a siesta or visits some fellow camper.

There is the home of the American Canoe Association, and the various bits of bunting tumbling to the breeze are the colors of the many canoe clubs and totems of the individual canoeists who gather annually from all points of the compass to meet again their fellow devotees of the craft.

The night pictures are memorable. Large and small camp-fires, their blue smoke wafting incense to the heavens, gleam from promontory and cove, their glow modeling bas-relief figures against the black of night; bits of song and story, with the lap of the waves, breaking the stillness. All pipes perform a calumet.

BREITENSTEIN.

### Concerning Proctor's.

IN this season of general theatrical depression it is interesting to note that the Proctor theatres' statement shows that in the past year, when most managers have so bitterly complained of bad business, five of the seven Proctor theatres show an increase of more than one-third over the business of the preceding season; the other two showing an advance in business of more than one-half. A part of this additional income is undoubtedly to be credited to the generally accepted theory that in times of business depression the popular priced house is the more profitable. In part it is due to the fact that through his long experience, Mr. Proctor has succeeded in gauging so admirably the tastes of his audiences that he is enabled to present, at a comfortable profit, performances easily worth two dollars at an average price of fifty cents. More than this, Mr. Proctor attributes his success to his knowledge of the demands of his various clients. No two Proctor bills are ever exactly the same, each being constructed with a view to pleasing the particular audience for which it is intended. The "Proctor plan" is to make a special appeal to each house, with a general policy of providing every patron every convenience at the smallest possible price.

### Rifle Clubs and Shoot'ng.

Editor Forest and Stream:

While pouring over my budget of late newspapers, I ran across a Canadian paper in which were articles anent rifle shooting and shooting clubs, from which I infer that a progressive editor is agitating a more universal interest in sports in Canada, of which the chiefest element lies in fire arm marksmanship. It has roused some good club men and is bringing out some instructive literature, as will be observed, for instance, by the letter appended: It seems to me that we might also have an awakening of interest in the matter right here in the United States, and if the agitation in Canada can become infectious and come across the border into Yankee land, I believe we ought to welcome the birth of the question or subject. I don't know what the status of rifle shooting is back East, but way off here in the metropolis of the far West, it looks as if Americans were not nowadays giving fire-arm marksmanship the high distinction as a sport that it deserves outside of military (id est, army and navy) circles.

At random I have taken from my files a copy of the San Francisco Daily Call of recent date, and find in one issue two pages fully devoted to sports, but in all of the fourteen columns of sporting news there is not one single line dedicated to shooting. I have frequently noticed similar derelictions, and wondered at it; but the discussion in the Canadian publication brings the subject out more forcibly, and you will pardon me, I hope, in carrying my troubles, so to speak, to you and your many readers, and ask your indulgence and sympathy in an affair that ought to appeal to our pride and patriotism.

The Canadian correspondent makes prominent several features connected with rifle shooting and clubs, including the popularity or non-popularity of the sport, the possible obstacles to be met with in the formation of clubs, and the moral views that might be taken as to the sport in one phase or another. And first, a word on my part concerning the latter aspect. If I have not erred in my observations, it is a matter of conscience among Americans as to the disposal of a Sunday or Sabbath, though it appears to me that the Yankees are more inclined to devote the day to religion, while the so-called "foreign element," especially in the big cities, show a general disposition to make Sunday a day of recreation and pleasure, making it an "Old World Sunday," as it is called. This, I think, is due to an instinct of the working classes of foreign birth to make a holiday of the holy day as a matter of economy, in order to get in as many working days out of the week as possible. The American, on the other hand, prefers to take his Saturday half holiday to the ball game, devoting his Sunday to rest and spiritual duties and diversissement. At any rate, in my estimation it's a point in ethics that concerns the individual, based on conscience or convenience. So let us set the Sunday question aside.

It is a well established tenet in the domain of commerce that every man's business is what he makes it, as regards honesty, lawfulness and respectability. And the same will hold good in sports and recreations. The knowledge of a game of cards may be either a genteel accomplishment or a vice. Devotion to outdoor sports may be carried to such an excess as to become a passion, to the detriment of one's legitimate calling. I am cynical of the attitude of persons whose station or vocation is such that they are to pose as examples in decorum and morals; but I doubt very much if I could find fault with a clergyman for belonging to a gun club and taking a try at the bullseye once in a while. I believe in muscular Christianity, and if I am not mistaken, it is in merrie old England that a minister of the gospel is thought all the more of if he can and does play cricket.

Firearm marksmanship (rifle practice or target shooting) ought to appeal strongly to professional men such as doctors, lawyers, educationaries and clergymen, and especially the first and the last named. We all know the value of recreation or diversissement that take our minds "off from business" and away from arduous daily duties. And none are so beneficial as those recreations which demand concentration of thought, and which entail no violence or boisterousness. It is one thing to watch a game of baseball or lacrosse, and another to take part in it. But to get any real benefit out of shooting, one must not be content to be a spectator. And in taking part there is no risk of breaking bones, spraining joints or straining tendons, and yet there is plenty of exercise to be had, with a training of the wrist and eye, both of the most essential importance to the doctor or surgeon.

A target shooting range necessarily must be beyond the urban limits or busy haunts of man; but in these days of rapid transit via electric cars, automobile or bicycle, if not always by steam railway or horse, distance is of little account. Accessibility is a foregone conclusion to begin with. Shooting parks or ranges are possibilities that can easily be converted into actualities. And we ought in this country have more rifle clubs, shooting parks and Creedmoors. The German veterans from the Franco-Prussian war who settled in this country formed societies here and perpetuated and fostered their skill in marksmanship—sharpshooting—to their general benefit. The Schuetzen Verein is an institution almost peculiar to our German-American citizens. These shooting societies, like their Turn Vereins and singing societies, became social factors. And in many instances the shooting societies were a source of financial profit to the members. Their shooting ranges or parks were investments, and a membership in a German shooting society is tantamount to a high financial rating in some of the Western German communities.

In Germany, Great Britain, Austria, Russia, France and Italy, where shooting is an accomplishment confined almost altogether (outside of the army and navy of course) to the well-to-do people, hunting and venatic sports generally are given a higher social status than they are in America. The game preserves in Europe being vested in private ownership, it is a privileged class who may indulge their propensities for hunting with firearms, and a hunt partakes often of the character of a social function. When royalty wants to bestow a particularly nice bit of attention to a visitor or favorite, it does so by an invitation to a hunt. A hunting breakfast at the lodge in the game forest may be a "swell" though quiet non-official social affair, participated in by persons of distinction of both sexes, the exhilaration of a ride or hunt being supplemented with a breakfast of epicurean excellence, prepared by the ablest chef, followed by music and dancing. In Germany special homage is paid in the fall of the year to St. Hubert, the patron saint of the German nimrods. It is Aug. 12, I believe, when the hunters throughout England and Scotland make a sort of general observance in honor of the sport of hunting, by grouse shooting and feasting. I sometimes think those

Old World people can still give us Americans some pointers on how to get the most out of our pleasures and recreations.

But before I close I might say, as a matter of general interest at this time, that the shooting gallery business in San Francisco is almost monopolized by Japanese. Most all galleries are presided over by Japanese women. The patronage is distinctively cosmopolitan, but the chief patrons are our soldiers and sailors returned from our insular possessions in the Pacific. They are almost invariably "bell-ringers."

SAN FRANCISCO, Cal.

WM. FITZMUGGINS.

Following is the letter which impelled me to pen all of the foregoing:

Sir—I have read your editorials on rifle clubs with great interest, and if I may give you the results of four years' experience in organizing and carrying on a rifle club and in watching the growth and the movement in Canada, I shall be happy to do so.

Under present conditions, the rifle club movement is not and will not be a success for many reasons. Some of these may be removed by Governmental action, the others may also be removed, if our young men—and old ones' too, for that matter—will develop a little more patriotism. Between watching a game of lacrosse, or even a game of baseball, and a visit to the rifle ranges, the latter is not in it.

First of all, although the Government has done something, they have not done enough. The loaning of ten rifles per club of forty men, and the giving of one hundred rounds of ammunition is not sufficient. There should be at least twenty rifles per club and two hundred rounds per man; the latter is the allowance made to military clubs or associations, and I see no good reason why any distinction should be made. If rifle clubs form part of the military establishment of the country, they should receive the same grants as all others in the service: if they do not, then there is no reason why they should receive either rifles or ammunition from the Government. Therefore, in order to secure the success of the movement, the grant of arms and ammunition should be doubled.

But these difficulties are slight, are mere nothings when compared to the others, which, as I have already stated, could be removed if our young men could develop a little more patriotism. Any one going to the ranges on a fine Saturday afternoon will find perhaps forty or fifty present; but let him go to a lacrosse or baseball match, and he will see thousands present. Of course, legitimate sport is all right; but of what value would weeks of sitting on the bleachers be in the make-up of a soldier? One day's rifle practice would be of more service to Canada in time of trouble than months of lacrosse or baseball playing, as most of our young men play it—that is, from the grand stand. Until the people can be brought to see the importance of rifle shooting, I do not see much chance of securing a second line of 100,000 rifle-men. I suppose I will be criticised for stating that our people are not patriotic; but patriotism does not consist alone in vociferously singing "God Save the King," and the "Maple Leaf"—and that is about as far as it goes. No doubt that in time of trouble one hundred or two hundred thousand men could be raised in a short time; but what would be the use of them if the majority could not hit a freight car at two hundred yards.

In Toronto and Ottawa, rifle shooting is more popular than it is in Montreal. I have been told that on Saturdays the ranges are crowded. In Montreal it is not so. What are the reasons?

First, the apathy of the average citizen regarding the matter; second, the apathy of the majority of the officers of our city regiments. This is apparently an extraordinary statement to make, but it is one which can easily be substantiated by the men who go to the ranges every day they are open. There are between one hundred and fifty and two hundred officers in the Montreal district, and one would naturally expect that some of these would be present every Saturday, but it is very rarely that one is to be found there. Further, every year before the shooting commences, a range officer and two executive officers are named for every Saturday during the season. I do not remember ever having seen three officers present together, except when regimental practice was taking place, and during all of last summer the appointed officers were not present more than once or twice. This is a military duty, but is neglected, like many others' things. There are not more than ten officers of the city regiments who take anything like an active interest in shooting.

Then, I do not think that sufficient care and attention are paid to the young shots. I think that a second-class target should be used at the 200-yard range for young shots. The bullseye is large and easier to get on to; and for a man who is just commencing, it is a great satisfaction to know that he is hitting something; whereas, with a smaller target, he misses it, does not know whether he is high, low, to the right or left, and gives it up in disgust. One or two second-class targets should be put at 200 yards, for the beginners, and the same number of first-class at 500 and 600 for the same men.

But the main question is, How are we to get more men to take an interest in rifle shooting, to join clubs and to come to the ranges? I have two suggestions to make. The first is, open the ranges on Sunday afternoons. I am prepared for a protest from some quarters; but let us look at the matter sensibly. A large majority of our men work six days a week; therefore, cannot spend any time shooting. Another considerable number wish to see the lacrosse or baseball or football match at Saturday afternoon; therefore prefer to go there. These two classes form the bulk of our population, and they will not learn rifle shooting unless they can do it on Sunday. What are the objections? Causing extra labor? This will not hold, because the electric cars run on Sunday, and the fact that the ranges are open will not compel any more men to work than if they were not.

The objection that it is a sport, and thus a desecration of the Sabbath will not hold. The same objection can be made to riding, driving or walking; but no sensible man makes it. Rifle shooting is a sport, but is not boisterous; it is not exciting as lacrosse or baseball; it does not lead to drinking, swearing or other evils, but quite the contrary, because a man, to be a good shot, must leave whisky and tobacco severely alone. There is infinitely less objection to be raised against rifle shooting than there is to the playing of baseball on every vacant lot on every Sunday afternoon. One will see more Sabbath desecration in ten minutes at one of these games than he would in all the rifle ranges of Canada in a whole season, if they were open on Sunday. If Sunday is the only day on which the majority of Canadians can shoot, then let us have the ranges open on that day.

There is one more point. Canadian women have never been backward, nor have they ever shown the white feather when there was danger from within or without. They can take a hand in this game if they want to. Many men whom I have canvassed have told me there was no use joining, as their wives wanted them Saturday afternoons to go shopping or walking. Now, if the women, young and old, married and single, would order their husbands, in esse or in posse, to join a rifle association, and to show a score card at least once a month during the season, I

think we would get many members from the free-on-Saturday-afternoon class.

It is now four years since the Star inaugurated the rifle club movement, and still we have only three clubs in this city. There should be a hundred. Some years ago I urged the formation of clubs in the different trades, but without success. The answer was invariably that Saturday afternoon men wanted to go to the lacrosse or baseball match, or out with their families; but if they could shoot on Sunday they would be glad to do so.

With regard to the cost, it is only right that, with regimental and civilian associations in existence, if a man does not want to join either, that he should have to pay for markers. As it is now, the associations pay the markers, and from the opening of the season till the end of September, no member has to pay anything more than his railway fare. Members of the military associations for a small annual fee each, receive two hundred rounds of ammunition and free marking. Of the civilian associations, at least one charges a fee of only \$1.50, and membership entitles one to one hundred rounds and free marking.

With the exception of a few men, there appears to be no general interest in the question. Could we not organize an association of the civilian rifle associations of the Dominion on the lines of the British organization for the encouragement of rifle shooting, the formation of clubs or societies, and bringing of pressure on the Government to increase the issue of rifles and ammunition, and give us free marking? Who will start the movement? Let us hear from the secretaries of our rifle clubs.

LEE-ENFIELD.

### Presque Isle Rifle Club.

ERIE, Pa.—The club held their weekly shoot on Saturday, June 11, with a good number of members on hand. Scores:

J. G. Germann.....	77 76 74—224	E. D. Allen.....	71 65 64—200
S. C. Long.....	81 73 70—224	A. G. Riblet.....	55 53 46—197

## Trapshooting.

### Fixtures.

June 25.—East Walpole, Mass.—Second annual tournament of the Neponset Gun Club; \$60 in prizes. M. H. Grant, Sec'y.

June 27-July 2.—French Lick Springs, Ind.—Tournament of the National Gun Club; strictly amateur; \$500 added money. John M. Lilly, Pres., Indianapolis.

July 1-2.—Brownwood, Tex.—West Texas Gun Club League tournament.

July 4.—Lawrence, Mass., Gun Club Independence Day tournament. Robert B. Parkhurst, Sec'y.

July 4.—Utica, N. Y.—Reverside Gun Club target tournament. E. J. Loughlin, Sec'y.

July 4.—Brunswick, Me., Gun Club all-day target tournament. G. M. Wheeler, Sec'y.

July 4.—Richmond, Va.—East End Gun Club annual merchandise shoot. J. A. Anderson, Sec'y.

July 4.—Pittsfield, Mass., Rod and Gun Club all-day shoot. Harold S. Sidway, Sec'y.

July 4.—Buffalo, N. Y.—Infallible Gun Club amateur tournament. Added money; merchandise prizes. F. J. Person, Sec'y.

July 4.—Lexington, Ky.—Ashland Gun Club tournament and Blue Grass championship. Robert R. Skinner, Mgr.

July 4-6.—Memphis, Tenn., Gun Club tournament; \$600 added money and trophies. A. H. Frank, Mgr.

July 4-6.—Winona, Minn.—The Interstate Association's tournament under the auspices of the Winona Sportsmen's Club. Oswald Leicht, Sec'y.

July 6-7.—Homer, Ill.—Homer and Ogden Gun Clubs' tournament.

\*July 6-7.—Kane, Pa., Rod and Gun Club.

July 8-9.—Wausau, Wis.—Wisconsin League of Gun Clubs' State tournament. H. G. McCrossen, Sec'y.

July 12-13.—Litchfield, Ill.—Consolidated Trapshooters' Congress.

July 12-14.—Denver, Colo.—Grand Western Handicap tournament.

July 12-14.—St. Paul, Minn., Rod and Gun Club amateur handicap tournament. J. L. D. Morrison, Sec'y-Mgr.

\*July 13-14.—Scottsdale, Pa., Rod and Gun Club.

July 19-20.—Shamokin, Pa., Gun Club midsummer shoot. S. C. Yocum, Sec'y.

July 19-22.—Cincinnati, O., Gun Club annual handicap; \$2,200 added money and guaranteed purses. A. B. Heyl, Sec'y.

July 20-21.—Armada, Mich.—Tournament of the Eastern Michigan Gun Club; \$100 added. E. W. Sutton, Sec'y.

July 27-28.—Grand Forks, N. D.—The Interstate Association's tournament, under the auspices of the Grand Forks Gun Club. W. M. Ferguson, Sec'y.

Aug. 9-10.—Litchfield, Ill.—Consolidated Trapshooters' Congress.

Aug. 9-10.—Raleigh, N. C.—North Carolina Trapshooters' Association tournament.

Aug. 9-10.—Birmingham, Ala.—Alabama tournament.

Aug. 9-12.—West Baden, Ind.—Indian tournament; \$1,000 added money.

\*Aug. 10-11.—Bradenville, Pa., Rod and Gun Club.

Aug. 10-12.—Brantford, Ont.—Dominion of Canada Trapshooting and Game Protective Association's fourth annual tournament. A. B. Cutcliffe, Sec'y.

Aug. 15-20.—Buffalo, N. Y.—New York State shoot.

Aug. 24-25.—Hot Springs, S. D.—The Interstate Association's tournament, under the auspices of the Hot Springs Gun Club. H. A. Gayhart, Sec'y.

\*Aug. 26-26.—Tarentum, Pa., Rod and Gun Club.

Sept. 5.—Springfield, Mass.—Fall tournament on Labor Day; \$25 added. C. L. Kites, Sec'y.

\*Sept. 6-7.—Irwin, Pa., Rod and Gun Club tournament.

\*Sept. 14-15.—Ruffsdales, Pa., Rod and Gun Club.

\*Sept. 27-28.—Monessen, Pa., Gun Club.

\*Oct. 4-5.—Allegheny, Pa.—North Side Gun Club.

\*Western Pennsylvania Trapshooters' League tournaments. C. G. Grubb, Sec'y. Pittsburgh.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM goes to press on TUESDAY OF EACH WEEK.

The Riverside Gun Club, of Utica, N. Y., Mr. E. J. Loughlin, secretary, have arranged a shoot for July 4.

At the meeting of the Illinois State Sportsmen's Association last week, it was decided that the shoot for 1905 shall be held at Lincoln, Ill., the same place at which it was held this year.

In an event at 25 live birds, Mr. J. P. Dannefelter was high with a score of 23, at the shoot of the New York German Gun Club, held at Outwater's, near Carlstadt, N. J., on June 15.

The team contest between the South Side Gun Club, of Newark, N. J., and the North Side Gun Club, of Edgewater, N. J., was shot on the grounds of the latter club last Saturday. The South Side Gun Club was defeated by a score of 216 to 208. There were eleven men on a side, and each shot at 25 targets.

Mr. J. J. Meyers, manager, informs us that a tournament will be given at Stratford, Ont., under the auspices of Local Union No. 97, United Garment Workers of America, on July 1 and 2. Added money, trophies and prizes will be shot for. Competition open to all amateurs of America. No handicaps. Paid experts barred, except in championship of America contest.

At the W. P. T. S. L. at Millvale, Pa., Mr. J. P. Calhoun, of McKeesport, made high average with a score of 171 out of 175. Mr. E. D. Fulford made high average on the second day, 169 out of 175, and also high average for the two days, 333 out of 350. Second high average was made by "Kelsey," 332; third by Bessemer, 329; and fourth by Mr. L. B. Fleming, 328.

We learn with much pleasure that the famous trapshooter, Mr. Edward Banks, recently of New York, but now of Wilmington, Del., has established a hen farm, which he cultivates during his idle moments at home. At present his collection numbers one rooster and three hens, but there are many reasons why the business will grow rapidly with care. However, it is not equal to the art of making goose-eggs with a shotgun.

The programme of the shoot to be given by the Brunswick, Me., Gun Club, July 4, provides eleven events, each at 15 targets, 25 cents entrance, excepting the eleventh, which is at 25 targets, distance handicap, \$1 entrance. Shooting commences at 9 o'clock. Twenty-five dollars will be given in high averages. Guns and ammunition sent to the secretary, Mr. G. M. Wheeler, on or before July 2, will be delivered on the grounds.

Mr. J. T. Skelly, eminent as a skillful trapshooter, and still more eminent as one of the skillful department heads of the E. I. duPont Company, Wilmington, Del., was a visitor in New York on Wednesday of last week. He will be in attendance at the Grand American Handicap this week, one of the large delegations of Wilmington which journeyed thence on Sunday last. Had every city responded in the same ratio as Wilmington, great as the G. A. H. is, it would then have been far greater.

The tournament record of Mr. Fred Gilbert (Chief-Heap Talk) in May and June of this year has been phenomenally high in the matter of scores. A review of it will be of interest both for its excellence in itself as well as for the standard which it sets for the aspirants. These scores were made between May 3 and June 9, inclusive: May 3-5, at Junction City, Kans., he scored 515 out of 545. May 11-13, Spirit Lake, Ia., 573 out of 600. May 17-18, Dubuque, Ia., 387 out of 400. May 19-21, Davenport, Ia., 582 out of 600. May 24-25, Marshalltown, Ia., 388 out of 400. May 26-27, Waterloo, Ia., 398 out of 420. June 1-2, Watertown, S. D., 420 out of 435. June 7-9, Sioux City, Ia., 534 out of 600. Total, 3,848 out of 4,000, an average of 96.2 per cent. In two exhibitions he scored 75 straight, and 99 out of 100, the first at Watertown, May 31, the latter at Spirit Lake, May 10. At Marshalltown he broke 50 straight from 22yd. mark, and also 49 out of 50 from the 20yd. mark. He has made runs of 50 or more at least six times, and 100 or more six times at the tournaments aforementioned. At Dubuque, his run of 157 was unfinished. While this is a record of marvelous performance, it also indicates that the 16yd. mark is obsolete as a standard of skill.

BERNARD WATERS.

#### Independent Gun Club.

EASTON, Pa., June 18.—The Independent Gun Club shot the Pattenburg Gun Club a team shoot of ten men each, 25 targets per man, at Pattenburg, N. J., with the following results:

Independent Gun Club—J. Pleiss 24, O. Skeds 19, J. Genther 20, H. Snyder 21, I. Hahn 23, J. E. Maurer 23, H. G. Miller 22, W. H. Maurer 22, J. H. Heil 20, E. F. Markley 24; total 218.

Pattenburg Gun Club—Rockafellow 23, H. Gano 21, J. Warford 24, E. Wilson 23, R. Stamets 19, J. Williamson 13, A. E. Holbrook 18, L. Rupel 15, N. Stamets 21, H. L. Gano 18; total 195.

The Pattenburg team was beaten by 23 targets, and the Independent shot as a team at an 87.15 per cent. average, which average the members of the club think it will take the best team club team in the State to equal.

Special events were shot, with very good results. High average for the day was made by E. F. Markley by breaking 113 out of 120 targets. He was closely followed by J. Pleiss and J. Warford. During the shoot Markley made a straight run of 55 targets. All things taken into consideration, the day's shoot was a success in every particular.

E. F. MARKLEY, Sec'y I. G. C.

#### St. Paul Rod and Gun Club.

REGULAR club shoot, June 18, on club grounds, West Seventh street and Davern avenue. White Flyer targets, expert traps, unknown angles. Weather conditions good:

Events:	1	2	3	4	5	6	7	8	9	10	Shot

### WESTERN TRAP.

#### Illinois State Tournament.

LINCOLN, Ill., June 15.—The Illinois State tournament and annual meeting of the State Sportsmen's Association has had an eventful career; ever since the last successful gathering was held at Springfield. The fight waged by a certain Chicago paper against live bird shooting had the effect of confining the shoot to targets, after much excitement and notoriety was engendered; when the attempt was made to hold the shoot at Watson's Park in Chicago, during 1902. Then, after several postponements, a very good target shoot was pulled off late in the fall of 1903 by A. C. Connor, at Pekin. Though two live-bird matches were shot without interference, the famous Board of Trade diamond badge did not fill well.

The business meeting brought out some changes in the contest for the cup and the badge, making each a handicap shoot. The shoot was set for Lincoln, with Robert Davis as the presiding genius.

The Lincoln club has gone to much expense in preparing grounds and offering a good programme, and the State shooters turned out fairly well, there being some sixty present the first day, June 15.

The target programme was very much of a success. The tournament was held in the race track, with level surface and clear background. There were three traps, and with Mr. Chas. North present with a good supply of targets, all went well until said Chas. North thought to see how the test of the spring was adjusted, and getting in front of one of the traps, was laid out for a time by a direct blow in the head. After he was brought around by Dr. Williams, who happened to be present, the shooting was continued throughout the day.

The wind, in front of the targets, caused them to tower, and with North away, the natural inclination of the Leggett is to throw, during the day, a harder—that is, a higher—and faster target, which was not regulated, and during the last two events the scores fell off perceptibly. In event 9 there were twenty-two straights, and in 11 not over one-third that number.

The management, in using the race track, were obliged to provide tents for the shooters' accommodations. This was all right until about 1 o'clock a heavy rain came up which, being accompanied by wind, caused all the tents save the one holding the shooters to go to terra firma. This delayed the shoot for two hours, and how surely the rich black gumbo of this wonderful Illinois corn country did accumulate about the feet of the shooters as they passed from trap to trap.

The management was under the direct charge of Robert Davis and Dr. E. C. Lawrence, the officers, yet they had able assistants in John Boa, field marshal and general squad hustler, and Leslie Stanley, assisted by L. A. Cummings in the elevated office, which was high but not dry, by any means, as the spectacle of the cashier wrapped in table oilcloth was a sight never to be forgotten by those in the wind-battered tent. Leslie held on to the money bag by a great catch, and was thus able to pay off promptly when the footing had been adjusted.

All shot well, as the scores will show, the amateurs having the best of it. Chan Powers made a run of 108 and a loss of only 4 out of 180. J. R. Graham failed in seven events to score all, losing one in each, and closing with only 7 to the bad from perfect.

Frank Riehl led the professionals, with 170, which was equaled by Hood Waters. Lord made 169, Marshall 167, Boa 165, Cadwallader 165, Vietmeyer 155.

The 50-target race for the cup, \$5 entrance, with handicap open to amateurs, brought out thirty-seven shooters, seven of whom were professionals, and did not shoot for prizes. The amateurs got best of it, as Caldwell, of Springfield, from 16yds. made 48 and lost his last target after there had been a delay to get the score corrected and the trap worked badly on two or three targets. Chas. Wiggins, of Homer, came on strong and tied him with 24, and then on the shoot-off won out easily. Wiggins made another 24, a total of but three lost out of 75. Chauncey M. Powers, who has outshot all shooters in the West this year from the 20yd. line, made 47 and took second money all alone. The latter part of this match was shot in the rain, and there Clay fell down, getting 21 out of his first 25; he made the last 25 straight.

Something unexpected happened, as the rule of the Interstate Association was followed permitting but two traveling men in a squad. Squad 3 had Powers for a leader, and he led off with so many straights that when it came to the fifth event all got busy and went through without a skip, and 75 straight was chalked up. Going to the other trap for the following event, the world's record was broken, as the score was duplicated and another squad record was made, thus 150 straight in two events. The other members were the only Tom Marshall, Chief of the Indians, and Frank Riehl, Scribe for the Indian aggregation, together with Post, of Decatur, an understudy of Chan Powers, and that other good shot, A. C. Connor, of Pekin. Hence the record was made by members of the Illinois State Association at their own State tournament. It shows how perfect were all conditions for target smashing in the town of Lincoln, Ill., the home of the veteran Capt. A. H. Bogardus. The scores for first day:

#### First Day, June 15.

Preliminary handicap, 50 targets, \$5. entrance, trophy by Cascajal Plantation Co., amateurs only: Cadwallader (16) 41, Lord (16) 45, Boa (16) 46, Marshall (16) 43, Richl (16) 46, Waters (16) 42, Vietmeyer (16) 42, Craig (17) 44, Post (16) 43, Snell (16) 44, Caldwell (16) 48, Mulford (16) 44, Fagot (16) 46, Kneussel (18) 41, Premo (16) 41, Dr. Lawrence (16) 44, Graham (19) 45, Davis (16) 38, Roll (19) 44, McCormack (17) w., Willard (19) 40, Vangundy (17) 43, Barto (18) 42, Connor (18) 44, Cummings (18) 45, Hall (18) 40, A. Mulford (18) 46, Drennen (18) 42, Tweeth (18) 42, Robley (18) 43, Wiggins (17) 48, Hows (16) 41, Stoner (16) 44, Powers (20) 47, Clay (18) 46, Bockwitz (18) 45, Marigold (16) 33.

#### Second Day, June 16.

The sun was a little backward in driving away the clouds, yet, assisted by the wind, the sky cleared before noon, and the footing was much more pleasant than after the rain on the previous day. There were some changes in the make-up of the squads, as new contestants were present.

The shooting, on the whole, was not as good as on the first day, yet the leaders for high average did not change much. Powers remained in the lead, with Geo. Roll moving up a peg or two. The twelve events of 15 targets each, were disposed of early, and the 100-target race, handicap, was on. This was the Peters Cartridge Co. trophy shoot, with a \$100 shotgun for first, the conditions being that all shooters use the Peters shells. The winner was C. B. Wiggins, the gentleman from Homer, who won the medal on the first day. His win was a popular one, as he was set back a yard by the handicap committee, and from the 18yd. peg made 92, a very good score.

Chauncey Powers and Frank Riehl shot from the 20yd. line, neither contesting for gun. Powers made 89 and Riehl 85, being the first handicap Riehl has shot this season. All were tired and reached the hotel early after shooting 280 shots for the day, having enjoyed a fine day for trapshooting, although the wind was fairly strong, quartering from the northeast.

Chas. North was up and assisted in getting up the squad cards and showed little the worse for his accident. John Boa was not so conspicuous in his big straw hat as on the first day, but he kept the traps all moving, and thus Standish was very busy passing out the squad cards.

The business meeting was called to order at 9 P.M., the president, Robert Davis, in the chair, and Dr. Lawrence as secretary. Minutes of last meeting were read and approved. The president made a stirring speech.

Selection of place being next in order, it was the choice that Lincoln should have the next shoot, though Homer and Litchfield each had supporters.

to amateurs only, the Peters Cartridge Co. donate \$100-shotgun, any make; traveling men shot only for targets; as did Chan Powers, who preferred not to change his shells. Riehl shot from 20yds. also. Chas. Wiggins won handily.

### Third Day, June 17.

This was known as feature day, and one of the features was a fine day; fairly warm and little wind; yet not enough to change the flight of the targets.

The shooting was of a high class. There were some new arrivals, of whom one was Mr. Crosby, who got away from his sick family long enough to compete for the diamond badge, and to be returned a tie for the same for many times in succession. This time, however, the conditions were very different. Instead of live birds being used, it was a 100-target race, handicap. Standing at 20yds. he smashed out a 25 and three 24s, and was tied with Lem Willard, to be shot out in the tie. In the next event, Lincoln handicap, he made 99 out of 100, and in the two events scored 125 straight from this back peg. He has not shot a target previously for some five weeks, having been confined very closely at home nursing his wife and two children, who have been dangerously ill with typhoid fever.

There were also some Western men present, viz.: John W. Garrett, Colorado Springs, and E. Morrill, South Omaha, who stopped over on their way to the G. A. H. Mr. Sperry, of Rock Island, dropped in long enough to shoot in the Lincoln handicap, but the committee did not forget his good score made last year at Pekin in a similar shoot, and so he was set back to 19yds; but from that elongated distance made a very good score of 92.

The morning starter was two 25 events, in which Powers lost 5, but not enough to lose him the average, which he won with 393 out of 410. Jay Graham, of Long Lake, Ill., was second, 390; George Roll, third, 385, and Riehl fourth. Powers won a neat medal, Graham a 16-gauge Marlin shotgun, Roll a fine corduroy shooting jacket. Powers also came in for \$10 for the longest run, which was no less than 108.

The scores for the Smith cup were low, it being a handicap, 16 to 20yds., not a straight being made, and only J. R. Graham was equal to a 24. There were four ties last year, viz.: Roll, Barto, Burnside and Crosby, and they received \$25 each. There were no money or merchandise prizes, as formerly given in this event by the Association, so that those who shot received nothing for their good shooting. This should be remedied next year, and several additional prizes awarded.

The Board of Trade diamond badge brought out some good scores, as Willard 97, Crosby 97, Wiggins 96, Graham 95, Roll 93, Garrett 94, all from the 19 or 20yd. line. There were only twelve men shooting for the money, so that the winners of last year, viz.: Crosby, Riehl, Powers, Ide Harris and Geo. Roll, received \$12 each. The same conditions apply to this as in the Smith cup. There must be something for the second, third and fourth prizes.

Coming to the last event, the Grand Lincoln Handicap, the big and little amateurs tightened up a bit and all strove for the big silver trophy. The professionals shot for targets only, and Crosby ran out with 99 badly busted ones, while the next high man was A. Mulford, with 96, who carried off first money and the trophy.

Second fell to that winner of many trophies, Joe Barto, of Chicago, with 95. The other winners were Powers, Cummings, Snell and Bockwitz, with 93. There were only five moneys under the high gun system. Thus, although Sperry, the winner last year, made 92, and Jones, Garrett, Wiggins and Roll made 91, they won nothing.

The traps worked well. Such a regular lot of targets were never thrown, even if the targets were higher and faster each day during the afternoon. The Lincoln club in their first effort to run the State meet did remarkably well, and their efforts were not in vain, as the members in convention assembled almost unanimously voted for a return to this city the coming year. Most of the boys left on early trains, and many will go to Indianapolis, while a few will take in the Derby in Chicago. The scores:

Targets:	25	25	H. 25	H. 25	25	25
Lord	22	20	18	23	17	21
Roll	25	22	19	23	22	24
Barto	25	23	18	20	24	20
Boa	24	21	19	23	20	23

Wiggins, 19	23	22	22	24	91	Snell, 16	23	24	24	93
Roll, 19	25	22	23	23	91	Premo, 16	24	22	25	97
Willard, 18	21	25	23	19	88	Haws, 16	17	19	17	75
Barto, 18	23	24	23	25	95	Long, 16	17	24	22	84
Boa, 19	18	22	22	22	84	Bockwitz, 16	23	22	24	93
Graham, 19	21	24	23	21	89	Vietmeyer, 16	22	21	21	84
Cummings, 18	22	25	22	23	93	Cadwallader, 16	20	25	21	88
Garrett, 20	22	23	22	24	91					

The first money and an elegant silver pitcher were won by A. Mulford, a young shooter from Mason City, Ill., on 96. Barto, of Chicago, second, 95. Seven experts shot for targets only: Crosby 99, Hood Waters 95.

"Baby Pathfinder of the Birds" is a little vest pocket guide to 110 birds of New England, by Harriet E. Richards and Emma G. Cumming. It gives the more familiar birds of New England, New York, New Jersey and Pennsylvania. Each bird is described by its A. O. U. Check List number, Latin and English names, length and colors of male and female. The song, nest and breeding localities are given. A blank page, which may be used for notes, faces each description, which usually includes not more than a dozen lines. In a number of cases tiny outline drawings are given which may be of assistance in identifying the bird.

### Ohio Trap.

### Ohio State Shoot.

The eighteenth annual tournament of the Ohio Trapshooters' League was held at Akron under the auspices of the Akron Gun Club on June 14, 15 and 16.

The weather during the entire period of the shoot was fine and the attendance was large, the number of entries being the largest in the history of the League, and including some of the best shots in the country. Many of the shooters stopped at Beila on the 18th and went from there to Indianapolis for the G. A. H.

On the first day there were twelve events at 15 targets each on the programme, Nos. 11 and 12 constituting the race for the State Journal trophy. One hundred and four shooters took part, a great number of them shooting the entire programme. J. R. Taylor, of Newark, and Stanley Rhoads, of Columbus, tied for the State Journal trophy on 30 straight.

High guns were Heer 172, Elliott 170, Squier 167, Redwing 162, Taylor 167, Young 164, Rhoads 162, A. W. Kirby 162, Atkinson 162, Grau 162.

The League held its business meeting on Tuesday evening at the rooms of the Elks Club, and elected the following officers: E. O. Latham, President; E. H. Young, Vice-President; C. F. Schiltz, Secretary and Treasurer, all of Canton. Executive Committee: S. S. Saffold, Cleveland; D. D. Gross, Urbana; K. P. Johnston, Kenton; H. A. Galt, Barberton; L. H. Ahlers, Cincinnati.

The next meeting of the League will be held at Canton.

On the second day the attendance fell off a little, but a goodly number of shooters were left and good scores were made. There were ten events at 15 and one at 25, the Press-Post trophy; also a special event, for the Sportsmen's Review trophy for two-man teams. C. A. Young and Heer tied for high gun on 171; Squier 169; Williams 165. In the shoot-off of the tie for the State Journal cup Taylor won after another tie on 13 out of 15, by breaking 14 to Rhoads' 13.

The Sportsmen's Review trophy was won by Galt and Kreider, of the Columbia Gun Club, Barberton.

On the third day there were ten events at 15 and one at 20 targets. The last three constituted the race for the L. C. Smith trophy. There was also a special event for the Shooting and Fishing trophy five-man teams; 50 targets per man.

In the race for the Smith trophy C. A. Young won after shooting off a tie.

The Press-Post trophy was won by F. W. Hull (Lucky), of Akron, after shooting off a tie on 25 straight with Ahlers and Hogen. He broke straight in the shoot-off, Hogen 22, Ahlers 20.

The prize, \$20, for the longest run on any of the three days was won by Grau, of the Cincinnati Gun Club, with 84 on the third day. Upson (Williams) 75, C. A. Young 68.

The diamond watch charm, given by Mr. Paul North, of the Chamberlin Cartridge and Target Co., to the manufacturers' agent making high score of the tournament, was won by Wm. Heer. The scores follow:

### June 14, First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot	
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	at.	Broke.

## Cincinnati Gun Club.

June 18 was all that could be asked for in the way of weather, and the scores were perhaps a trifle better than usual. Barker was high gun in the cash prize shoot with 47.

Mr. Will K. Park, of Philadelphia, who had been to the State shoot at Akron, stopped here on his way to Indianapolis. Following are the additional scores made on June 12 in the Parker prize gun contest, handicap of added targets in parentheses: Gambell

(10) 92, 100; Williams (18) 83, 100; H. Sunderbruch (40) 68, 100; Ahlers (10) 88, 98; Don Minto (12) 84, 96; Norris (30) 64, 94; A. Sunderbruch (10) 70, 80.

Cash prize shoot 50 targets: Barker (16) 47, Gambell (16) 45, Randall (16) 44, Harig (19) 44, Medico (16) 43, Maynard (18) 43, Block (17) 42, Ahlers (20) 41, Steinman (16) 41, Roanoke (16) 40, Faran (21) 38, Linn (19) 37, Williams (17) 37, Bullerdick (17) 36, Ackley (16) 31, Captain (17) 32.

Match, 50 targets, four high men out: Faran 48, Linn 47, Sunderbruch 46, Harig 44, Barker 43, Medico 40, Williams 40, Ahlers 40, Gambell 36.

Team matches, 25 targets.  
 Gambell 23, Sunderbruch 23; total 46.

Ahlers 21, Faran 21; total 42.

Gambell 24, Sunderbruch 18; total 42.  
 Ahlers 23, Faran 25; total 48.

## Notes.

The Buckeye Gun Club, of Dayton, O., has received a challenge from the Preble County Gun Club, of Eaton, to shoot a match for the Phellis trophy, and six-man team championship of the State, the match to take place July 1 on the grounds of the new Dayton Gun Club.

The Springfield, O., Gun Club omitted its June 3 shoot on account of the death of Mr. Rice, the owner of their shooting grounds. On June 11 a few members were present and a number of events were pulled off, Young missing but 6 out of 115 shot at. Watkins shot at 125 and broke 107. In the Wilson trophy shoot the medal went to Watkins, members having won the medal at any previous shoot with 23 or better shooting for targets only. In the Young handicap event Watkins and Poole tied on 20.

The Indianola Gun Club, of Columbus, O., held a shoot on its grounds on June 11, which was well attended, the principal event being a team match, with the Sherman Gun Club. This contest was one of the most exciting ever witnessed in Columbus, and was full of interesting incidents. Stanley Rhoads got the "old guard" together, but was disappointed when two of his team failed to appear. The places were filled, one of the substitutes being Mr. Stout, of Circleville, champion of Pickaway county for several years. The score, 224 to 216, was in favor of Indianola. Several fine scores were made in the match. C. O. Le Compte shot at 100 targets and broke 97, making a run of 82 straight. Hawkins, of the Winchester Arms Co., also did good work, missing but 7 out of 75 targets.

## IN NEW JERSEY.

## Fairview Gun Club.

Fairview, N. J., June 11.—At the shoot of the Fairview Gun Club to-day scores were made as follows:

Events:	1	2	3	4	5	6	7	8

## W. P. T. S. L. at Millvale.

PITTSBURG, Pa., June 17.—The fifth shoot of the Western Pennsylvania Trapshooters' League took place on the Millvale Gun Club grounds on Wednesday and Thursday, June 15 and 16, under the auspices of the Millvale Gun Club.

The first day was an ideal one for good scores, the light being perfect, and no wind; still, these conditions did not seem to bring the shooters, as only twenty-four of them put in an appearance.

Mr. J. F. Calhoun, of McKeesport, Pa., did some very good work, breaking 171 out of 175, and landing first average for the first day. Lately Mr. Calhoun has been pointing his gun very straight, and we were sorry he could not attend both days of this shoot, as he would have made the boys hustle for general average. Second place fell to Mr. Ed Kelsey, of Pittsburg, Pa., he breaking 167 out of 175. Third, Mr. James, with 166, and fourth, Mr. L. B. Fleming, with 165.

Second day was ushered in with threatening weather and occasional showers fell. The attendance was very light, only fourteen shooters facing the trap, and out of this number but two teams could be gotten together for the team race on this day.

High average for the second day went to Mr. E. D. Fulford, he accounting for 169 out of 175. Second place had a triple tie, as Mr. Kelsey, Mr. Bessemer and Mr. A. H. King each broke 165 out of the 175.

Third place, Mr. L. B. Fleming, with 163, and fourth, Burgess Hickey, with 162.

Some good runs were made on both days. On the first day Mr. A. H. King had a run of 104; Mr. J. F. Calhoun with runs of 81 and 58, and Mr. L. B. Fleming 71 and 50. On the second day Mr. E. D. Fulford made a run of 58, and Mr. L. B. Fleming a run of 63.

High average for the two days went to Mr. E. D. Fulford, with 333 out of 350; second, Mr. Kelsey, with 332; third, Mr. Bessemer with 329, and fourth, Mr. L. B. Fleming, with 328.

The team race on the second day was won by North Side Gun Club, with 137 out of 150, and the Herron Hill team just one bird behind with 136.

Trade was represented by Mr. E. D. Fulford, H. C. Watson and H. P. Fessenden.

## First Day.

114-116 Market St., San Francisco.

### The Peru Tournament.

PERU, Ind.—The eighth annual tournament of the Peru, Ind., Gun Club held here on June 9 was of the usually successful kind that have always been held here. The attendance was not quite up to that of the seven other tournaments, but think this was due to the energy of an enthusiastic local correspondent of one of the Indianapolis dailies, who sent in a report that the tournament was in full blast two days before it was intended to be held. As this paper is widely read throughout the State, and its sporting columns is a feature, it is more than likely that the entry list would have been swelled by at least a dozen more names had this article not appeared. However, we had the usual equipment found here, splendid weather and lots of enthusiasm among the contestants.

Those in attendance were H. M. Clark, Austin Flinn and Chas. S. Rose, of Wabash, Ind.; Chas. G. Spencer, of St. Louis; M. F. V. Nichols, of Medaryville, Ind.; H. W. Vietmeyer, of Chicago; Chas. B. Lamme, of Attica, Ind.; Chauncey M. Powers, Decatur, Ill.; Thomas H. Parry, E. H. Tripp and Dr. O. F. Britton, of Indianapolis, Ind.; Mr. J. W. Johnson, Green Hill, Ind.; Elmer E. Neal, Bloomfield, Ind.; B. McDaniels, Converse, Ind.; S. E. Voris, Chas. W. Iliff and Austin H. Long, of Crawfordsville, Ind.; Frank Macy and Mr. Crandall, of Converse, Ind.; Jack Cavanaugh, Will Daniels, Geo. Wagner, J. L. Head, of Peru, and Mr. Day, a late addition to our local club, and who was formerly of Maysville, Ky.

The shooting was upon a basis of a sliding handicap, and seemed to please every contestant. So, in considering some of the low scores the reader will bear in mind that there was little shooting from the 16yd. mark. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	Shot
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	15	15	at.
Powers	15	15	15	15	15	15	15	15	15	15	15	15	15	15	204

\*Manufacturers' agents.

As to the averages, it will readily be seen that Mr. Chauncey M. Powers laid over his contemporaries like four kings and an ace. In fact, he was the only thing going this day. He shot in fourteen events, scoring straight in nine of them, the straights being made from 18, 19, 18, 19, 18, 17, 19, 19 and 18 yards respectively. Thus showing that of his nine straights four of them were from the limit of 19yds., four of them from 18yds. and but one from 17yds. In fact, Chief Wipestick, who was credited—and justly so—with being the greatest amateur shot that the world has ever produced, never got his feet on the 10yd. mark during the day. He is a regular attendant at our tournaments, regularly wins high average and is a welcome visitor. Second average was tied for by Messrs. Chas. G. Spencer, Austin Flinn and Dr. O. F. Britton, that gay youngster from Indianapolis. Third went to Charley Lamme and fourth to J. L. Head.

Ernest Tripp is always in his element at Peru, and usually gets some one into trouble. This time he proceeded to put up a job on our Sodbuster President, Charley Lamme, of Attica, but originally from Peru, and the restaurant man who was serving the lunch. It is needless to say that the thing worked to a charm, and that not only Ernest, but the spectators had a lot of fun. Charley Lamme now says Ernest will be blackballed if he attempts to join the Sodbusters.

It was certainly good to see Elmer Neal in the game again. He was a little rusty at first, but after an event or two, got up his gait and came on fast at the finish. With Elmer and Ernest Tripp both at the same shoot, there is trouble in store for Jim Head. About the middle of the day a mother quail, who doubtless had a nest near the grounds, flew across the score. Instantly Elmer and Ernest began to instruct Jim in the methods of making a figure 4 trigger for a quail trap, fearing that he had forgotten how. Fact is, we believe Jim never knew, but the two worthies above mentioned are certainly artists in this line.

Hugh Clark was being badly punished by his gun, which accounts for his low scores after the fifth event. It is an unusual

thing to see this fine shot, without question Indiana's best, shooting in such form. Just watch this boy at Indianapolis, and see if he doesn't give a good account of himself.

Austin Flynn, of Wabash, was in good form save one event. He will bear watching at any tournament, and is one of the likely candidates for high honors at Indianapolis.

Mr. Johnson, of Green Hill, Ind., attracted much attention from his very steady shooting and manner of handling his gun. He is a very deliberate and cool shot, and with practice could hold his own in any company.

It is said that a prophet is not without honor save in his own country. This certainly does not apply to Ed. Voris, as he seems to have plenty of honor in Crawfordsville. He was a recent candidate for Mayor of that city, and with a plurality of some 500 to overcome, walked through that election, and was elected by nearly 200 to the good. If making a change in the political situation of nearly 700 in a vote of about 2,000 don't look like honor in his own country, the writer will turn Chinaman and open a laundry. Ed. brought along Messrs. Long and Iliff to show that the Crawfordsville Club is always in the game.

Charley Lamme, an old Peru boy, is a credit to the sport of trapshooting, and he is usually in the averages here. He landed third, trimming his old tutor, Jim Head, by two birds.

Charley Spencer was a little off form as a shooter, but as a gentleman sportsman was in the finest trim. Come again, Charley. Geo. Little looked after the office, and handling an office at a shoot where the sliding handicap is used is no snap. Everything was very smooth, and no complaints were heard.

From present indications the G. A. H. will have about seventy Hoosiers. Come again, gentlemen. WILL DANIELS, Sec'y.

### Camden Gun Club Shoot.

THE Camden Gun Club's third annual tournament, which was held June 8 and 9, was the best attended shoot ever held in South Arkansas, and therefore the most successful given by this thriving little shooting organization. Everything was run on a broad and liberal scale, and with favorable weather conditions, all present had a good time. The management had spared no pains in preparing for the event, and the manner in which the tournament was conducted redounded much to the credit of the club. The method of dividing the purses, which was the Rose-Jack Rabbit system, proved very popular, and it is safe to predict that this system will be used at other tournaments held in this section.

The best shooting was done by Turner Hubby, of Waco, Tex., who won high average for the two days with .945; Ed Brady, the Memphis amateur, was second with .930; Hood Waters, third with .923, and J. E. Wells, a Pine Bluff amateur, and Frank Faurete, the Dallas expert, were tied for fourth with .922. Farmer, of Ashvale, Ark., won the Camden Gun Club individual medal, and W. B. Sorrells won the Hunter Arms Co. medal. J. E. Chatfield, of Texarkana, and L. E. Knott, of Arkadelphia, won the two-man team medal. The scores of the two days are given below:

#### First Day, June 8.

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot

# MY TRAP SCORES

A pocket trap score book, containing 50 pages of score sheets and the Interstate Association Rules for target and live bird shooting, and for shooting under the Sergeant System. The cover bears the title "My Trap Scores," and the pages, in number and form, are arranged to make a complete record of the shooter's doings at the traps. The pages are ruled to make a record of the place, date, weather conditions, number of traps, number of shooters, gun and load used, events, etc. The score sheets are ruled for 25 targets. Bound in leather. Price, 50 cents.

FOREST AND STREAM PUB. CO., 346 Broadway, New York.
